13.12	Whether color coding is being used for easy identification of different type of cylinders and hoses?	
13.13	Whether cylinder keys are available near the cylinder?	
13.14	Whether gas torches with flash back arrestors of approved make are only being used?	
13.15	Whether pressure gauges are in working condition and checked from time to time?	
13.16	Whether welding shields are used while welding?	
13.17	Whether proper earthing for welding machines are provided?	
13.18	Whether power is taken from approved sources (welding receptacles)?	
13.19	Whether welding receptacles are properly grounded?	
13.20	Whether welding cables are maintained in good condition and without any joints/ cuts?	
13.21	Whether to avoid short circuit, welding machines are protected against rain?	
13.22	Whether earth connectors are securely connected to the job and not to the adjoining pipeline or structure?	

Section 14: Safety in electrical jobs.

Safety during gas cutting, grinding, and welding is paramount in industrial operations, particularly in environments like an oil refinery. These processes involve high temperatures, flammable materials, and potentially hazardous fumes, making strict adherence to safety protocols, proper training, and the use of appropriate personal protective equipment critical to prevent accidents, fires, and exposure to harmful substances.

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
14.1	Whether the provisions for temporary installations as per clause 09 of OISD-STD-173, fully complied.	
14.2	Does the contractor engage electrician(s) having valid electrical license in line with provisions of Central Electricity Authority (CEA).	
14.3	Has the Electrical Line C earance procedure been followed involving electrical and other concerned Dept. and filling of formats?	
14.4	Have Danger Signs with Voltage rating/ Men at work signboards been displayed at both Sub Station as well as the work site?	

Page 756 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

14.5	Does the system exist for inspection & approval of electrical equipment (DG sets, Panels etc.) by the competent person/ authority before being put to use.	
14.6	Whether the cables from switchgear panels to portable equipment/ lighting transformers/ field distribution board are running in orderly manner with no insulation damage/ no joints.	
14.7	Are the cables/ wires identifiable along their route towards the load by using colour coding and or markers.	
14.8	Is the standard practice for termination of cables (i.e. proper lugs, crimping, cable glands etc.) being followed. Is cable armour in continuity from feeding point to load point.	
14.9	Are the ELCB used on the incoming side to protect against the current leakage. Is the device tested every time before start of work.	
14.10	Are all the portable appliances provided with insulated three pin plug & socket arrangement.	
14.11	Whether only industrial type extension boards & plug sockets used at all sites.	
14.12	Whether electrical PPEs (hand gloves, insulating mats, fuse pullers etc.) are available and maintained in good condition.	
14.13	Whether CO2 fire extinguishers to control electrical fires are available and periodically tested?	
14.14	Visual inspection of electrical equipment for damaged cables, loose connections, improper earthing and exposed live parts.	
14.15	Whether all portable lights and tools are flame proof or intrinsically safe when working in a confined space where there is a potential flammable or explosive atmosphere.	

Page 757 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Section 15: Safety in abrasive blasting and painting jobs.

Ensuring safety during abrasive blasting and painting jobs in an oil refinery is essential to protect workers, prevent environmental damage, and maintain the integrity of equipment and structures. These tasks involve various hazards, including exposure to hazardous materials, respiratory risks, confined space work, and the potential for falls. This contractor safety audit checklist is designed to help refinery operators and contractors systematically assess and enhance safety measures during abrasive blasting and painting activities, promoting a secure work environment and regulatory compliance.

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
15.1	**General**	
15.1.1	Confirm that abrasive blasting is used only after getting approval from competent authority / work permit?	
15.1.2	Confirm that air compressor used for abrasive blasting are positioned away from workplace.	
15.2	**Respiratory Protection**	
15.2.1	Confirm that workers are provided with the correct type of respirators for the tasks, and they are fit-tested and trained in their use.	
15.2.2	Check that respirators are maintained, cleaned, and stored properly.	
15.3	**Ventilation and Dust Control**	
15.3.1	Inspect the availability and effectiveness of local exhaust ventilation systems to control dust and fumes.	
15.3.2	Confirm that dust collection systems are properly maintained and functioning.	
15.4	**Equipment Inspection**	
15.4.1	Check that abrasive blasting equipment, including blast pots, hoses, nozzles, and paint spraying equipment, is in good working condition.	
15.4.2	Confirm regular equipment inspections, maintenance, and safety checks are documented.	
15.5	**Paints and Coatings**	
15.5.1	Confirm that workers are trained in the safe handling and disposal of paints, coatings, and solvents.	

Page 758 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

15.5.2	Confirm that hazardous materials are stored and labeled properly.	

Section 16: Safety in Radiography.

Safety in radiography within an oil refinery is crucial to protect personnel from radiation hazards and Confirm compliance with regulatory requirements. This specialized safety audit checklist focuses on Confirming the qualifications of radiography technicians, inspecting radiation equipment, ensuring proper shielding, monitoring individual exposure levels, and confirming adherence to safety protocols. Additionally, it assesses emergency response plans and the availability of radiation detection equipment. By conducting regular safety audits using this checklist, oil refineries can maintain a secure environment during radiography activities, mitigating the risk of radiation exposure and ensuring regulatory compliance.

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
16.1	**General**	
16.1.1	Are safety precautions for handling of source as per guidelines of AERB being followed?	
16.1.2	Is the potency of the source being used within acceptable limits as per the AERB regulations?	
16.1.3	Whether Radiation Safety Officer is available at site?	
16.2	**Qualified Personnel**	
16.2.1	Does the radiographer have valid certificate of radiography from competent authority (AERB)?	
16.3	**Equipment Inspection**	
16.3.1	Is the area being cordoned with proper signs during radiography as per guidelines of AERB?	
16.3.2	Confirm that radiographic equipment, including X-ray machines or gamma-ray sources, is in good working condition and has up-to-date inspection and calibration records.	
16.4	**Radiation Safety and Exposure Control**	
16.4.1	Is radiographer using Exposure Meter / Dosi Meter?	
16.4.2	Whether minimum occupancy of the premises / workplace is being monitored?	

Page 759 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Section17-21: Safety check list in various jobs as tabulated:

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
17.0	**SAFETY WHILE WORKING NEAR OR ABOVE THE WATER BODIES**	
17.1	Are the provisions as per clause 6.16 of OISD-GDN-192, being complied with.	
17.2	Are the sufficient provisions like safety nets, life buoys, life jackets, boats etc. available?	
17.3	Are rescue & emergency procedure in place for any eventuality?	
18.0	**NOISE POLLUTION RELATED SAFETY**	
18.1	Are there construction sites where continuous noise level exceeds 85 Decibels	
18.2	Is the noise level monitored? Explain the mitigation measures for high noise level equipment/ areas.	
18.3	Are the high noise areas, (i.e., the areas where verbal communication is difficult), been identified.	
18.4	Are approved hearing protection devices used by workers/ employees working in high noise areas (>85Db).	
18.5	Are the employees exposed to continuous noise level above 85 Db, tested periodically for audiometric test.	
19.0	**TRANSPORTATION, LOADING AND UNLOADING**	
19.1	Is any written down procedure available for material movement inside the premises? How to Confirm implementation of procedure?	
19.2	Is any written down procedure available for material loading unloading?	
20.0	**STORAGE AND PRESERVATION**	

Page 760 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

20.1	Whether material like pipes, tubes, fittings etc. are stored with proper manner (stacking, tagging, capping)?	
21.0	**Safety in Road work**	
21.1	Whether site is barricaded and provided with warning signs including night warning lamps/ self glowing markers at appropriate location for diversion of traffic?	
21.2	Whether mixing aggregates with bitumen is done with the help of batch mixing plants? If no, whether adequate precautions have been taken?	
21.3	Whether road rollers, bitumen sprayers, pavement finishers are driven by experienced drivers with valid driving licenses?	
21.4	Whether the worker handling hot bitumen sprayers or spreading bitumen aggregate mix or mixing bitumen with aggregate are provided with PVC hood, hand gloves rubber shoes (gum boot) with pegging upto knee joints?	

Section22: Documentation and Quality assurance plan

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
22.1	Whether procedure is available for handover of as built/ final drawing, documents, datasheets, 3D model, Isometrics etc. to owner for future reference.	
22.2	Whether guidelines for quality control and assurance procedures and specifications for asset are available and implemented to Confirm that material, construction, and procedure (fabrication and inspection) during the fabrication stage are in accordance with the design specifications?	
22.3	What is the procedure of positive material identification (PMI) to identify metallurgy mismatch? What are the stages of PMI?	

Page 761 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Section23: Welfare facility

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
23.1	Are the welfare related facilities as per factories act provided, not limited to following: -Canteen (Neat & Hygienic) -Drinking water facilities - Shelters for rest room - Toilet facilities(ladies/gents) -First Aid Boxes	
23.2	Does the system exist for review of basic amenities on the labour camps viz.: -Drinking -Washing facilities -Adequate carpet area for family members. -Protection from mosquitoes menace. -Clean to lets	
23.3	Are the first aid & rescue facilities available at each site like: -First aid boxes -Qualified first aider -Ambulance (s) -Visiting doctor	

Page 762 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Section24: General

SR. NO.	DESCRIPTION	OBSERVATIONS BY AUDIT TEAM
24.1	Does the system exist to encourage reporting of near miss, unsafe act & unsafe condition.	
24.2	Does the system exist for encouraging the house keeping at site?	
24.3	Whether any system is available for construction waste management?	
24.4	Are there adequate safety promotion displays at the site (i.e. posters, Banners, Signages, Slogans etc.)?	
24.5	Whether waste bins are provided at each site for collection & regular disposal of wastes.	
24.6	Is communication system adequate?	
24.7	Are road barriers being used for blocking any roads/passage?	
24.8	Has the structure been adequately secured against storm/high winds during construction/ erection?	
24.9	Are only proper clothes and not loose clothes being used while working around machinery?	
24.10	Is the speed limit for vehicles inside the plant duly notified & followed. Please mention speed limit.	
24.11	Does the system exist for checking of vehicles before their deployment at site and regular checking thereafter.	
24.12	Does the system exist for penalty in case of violation of safety norms.	
24.13	Whether all moving parts of equipment provided with safety guards	
24.14	Are the floor openings, service pits etc. always covered or protected by guard rails or equivalent system.	
24.15	Whether adequate covered area is provided at each site to Confirm smooth & safe working during unfavourable weather conditions. Please mention the ratio of total area Vs covered area.	

Page 763 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

24.16	Whether separate area is earmarked for warehousing the combustible materials (i.e., diesel, lube oils etc.), with adequate fire extinguishing equipment. Are the statutory provisions complied?	
24.17	Whether Boundary wall / Barrication constructed surrounding the project area?	
24.18	Is access system available for contract workmen and employees?	
24.19	Whether motorable access road is available for all the sites?	
24.20	Whether fire and rescue tender is available?	
24.21	What type of security system available i.e., CCTV, security guards, Drone vigilance?	

Page 764 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Appendix 7 :Project Safety Basic Safety Rules..... 49

1.0 Purpose

BPCL has developed Corporate Safety Management System (CSMS) which defines specific requirements for managing OHS risks across its operations in accordance to its HSE policy and stakeholders expectations. The **Element 5 of Corporate Safety Management System : Planning, Standards and Procedures** requires that BUs establish project safety management plans and procedures to ensure safety during construction and commissioning of new installations or modernization/ expansion projects.

This Technical Standard outlines project safety management requirements,which should be integrated in all new (i.e. green field projects) as well as modernization or expansion projects (i.e. projects within or adjacent to existing locations/plants).

2.0 Applicability

This Techniacl Standard applies to Project Functions of respective Business Units and their project locations. **The scope of Tehnical Standard covers both i.e. new projects at greenfield locations and modernization/expansion projects within or adjacent to existing BPCL plant/location .** The project contracts includes here combination of all activities such as Construction, Erection, Modifications, Expansions, Maintenance, Demolishing, etc to be done within specific budget and time frame. These are typically managed by project function and can be a very large projects at times. The TS shall apply to all contractors/sub-contractors hat provide services solely to the Project.

The plan is to be implemented by the Contractors/ project management consultant, if applicable and its application will be monitored/ audited by BPCL.

3.0 References

BPCL HSE Policy
BPCL Corporate Safety Management System
BPCL Technical standard on Risk Assessment and Management
BPCL Technical standard on Contractors Safety Management (TS/01)
The Building and Other Construction Workers (Regulations of Employment and Conditions of Services) Act and State Rules as applicable to BPCL Project Site

4.0 Responsibilities

Corporate HSSE shall be responsible for training , communicating and monitoring of this technical standard in BU and their project locations.

BU- HSSE/ Location- HSSE shall be responsible for implementation of this technical standard at their project locations.

BPCL Project Leader responsibility shall include(but not limited to)

- Ensuring legal compliances related to project activities;
- Ensuring that tenders/bids for contracts contain sufficient information to enable an evaluation of the safety risk and control measures associated with the work activity;
- Ensuring a contractor pre-prequalification process is applied that evaluates the safety systems, capability and performance of companies prior to work commencing;
- Provide information relating to the hazards associated with project activities and the risk control measures designed to prevent injury and/or loss;
- Review , monitoring and enforcement of a documented project safety plan of EPC contractor;
- Establish a system for daily job safety planning, risk assessments, training, performance monitoring, auditing and inspection of contractor activities at the project location;

Page 771 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Ensuring that workers get adequate instruction, information, training and supervision;
- Sharing good practices to promote continuous improvement in contractor and BPCL safety performance;
- Effective motivation and disciplinary policy.

Project Leader shall define the project management organizational structure , roles, responsibilities and accountabilities for all personnel who play a role implementing the Project Safety Management , including:

- Project Management Consultant, if applicable
- Area In-charges;
- BPCL HSSE Professionals;
- Human Resource
- Any other department under project
- Supervisors;
- Safety staffing of contractors

Refer **Appendix 1** for Guidance on Responsibilities.

5.0 Existing Applicable Laws

BU/ Locations shall ensure that their operations comply with all relevant Indian Environmental, Health and Safety laws and regulations and obtain statutory permissions/approvals prior to start of the work.

6.0 Project Safety Management

a. Contractors' safety Management is vital to prevent any accidents and incidents that have harmful impact on employees, the community, assets and the environment. This can be achieved by:

- Clear communication of BPCL's safety management system(SMS) requirements to Contractor(s)
- Verifying the gap(s) between the Contractor's SMS and BPCL's Requirements and
- Establishing and implementing Mechanism for monitoring and ensuring compliance of BPCL SMS requirements

b. Key areas for project safety management include but not limited to:

- Project team leadership and commitment
- Prequalification and selection of competent project contractor
- Communication of project specific safety requirements in contract documents
- Comprehensive project safety plan preparation by contractor or project management consultant and approval by BPCL project owner / owner's representative
- Pre-job meetings / Tool box talks
- Induction and specialized training
- Daily job plan
- supervisory safety responsibility
- Monitoring/supervision of critical tasks
- Daily equipment and work area inspections
- Active project safety committee
- Joint safety walks
- Method statement
- Safe equipment and tools
- Effective control and monitoring on alcohol and drug abuse policy
- Execution of the work &performance Monitoring
- Post contract evaluation
- Effective motivation and disciplinary policy

6.1. Management Commitment & Accountability

Page 772 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

BPCL project team at all levels, is dedicated to assuring that its employees and others are provided a safe and healthy place to work on each of its projects and ensuring that the Zero Harm philosophy is executed. The management should take the lead and demonstrate commitment throughout the project by:

Treating safety management as a core value of the project and demonstrating leadership throughout the project.

Developing shared objectives and promoting team building between BPCL Project Management Team and Contractors organization's / Project Management Consultant.

- Providing adequate resources and competent safety professionals
- Visibly promoting safety in regular meetings and by doing regular safety walks /**Location** visits with their counterparts.
- Setting safety objectives and targets and by measuring and reviewing performance.

6.2. Pre-Qualifications & Selection of Project Contractors

a. BU/ Locations shall develop and maintain a process for pre-qualification and selection of project contractors relevant to their needs and demonstrate continual improvement of the same.

b. While selecting / pre-qualifying the contractors, consideration shall at least be given to:

A. Contractor's Past Safety Performance

a. Worker's Compensation Payout (last 3 years)
b. Number of Fatal Incidents (last 3 years)
c. Reportable Lost Time Injury Frequency Rates (last 3 years)
d. Pending court cases, if any

B. Safety Capabilities Assessment

a. Contractor's Company Safety Policy
b. Contractor's Company Safety Organization
c. Safety Management System Manual of the contractor
d. Hazard Identification & Risk Management Program
e. Accreditation (ISO 9001/ ISO 14001/ OHSAS 18001) / Performance Awards
f. 3rd Party / Client Audits Report of similar previous jobs undertaken by them

c. Contractors safety pre-qualification evaluations shall be performed by a team of designated officials from Contract Owners / Owners Representative; Procurement, HSSE, Finance etc. considering the other risks such as commercial etc.
d. Procurement / Owner department shall ensure the completion of any requirement, further highlighted by HSSE Staff before qualifying the contractor.
e. Once the contractor is qualified, his name shall be maintained in contract department's database of competent project contractors and their safety pre-qualifications information.

6.3. Communicating Project Specific Safety Requirements in Contract Documents

a. Locations shall determine project specific work specific safety requirements. These Project Specific Safety Requirements shall be communicated to all pre-qualified contractors in bid documents by contracting department.

The project specific work specific safety requirements, which may be included are (but not limited to):

- Valid Registration Letter issued by BPCL
- Contractor's Safety Organization specific to project

Page 773 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Hazard Identification and Risk Management Procedures
- Applicable Risk Assessment Studies like HAZOP, HAZID etc.
- Project Safety Management Plan
- Method Statement(s)/(safe work procedure) for all hazardous or potentially jobs as defined by owner department.
- Any additional document/procedure/study as identified by BU/location.

Contracting department shall ensure that contractor submit all the applicable safety requirements as listed above. HSSE department shall be consulted if needed.

6.4. Project Safety Management Plan

Contractor shall submit a detailed Project Safety Management Plan in BU prescribed template. This shall be a comprehensive document defining safety management system for the project and shall be reviwed/approved by BPCL project owner/ representative, prior to start of the work (Refer **Appendix 2** for a sample Template for a Project Safety Management Plan) .

Note : BU/Location may not require a detailed Project Safety Management Plan as per Appendix 2 for a small or short term project. However, a shorter version of plan shall always be necessary to show that that the hazards are recognized and understood is likely to be adequate.

6.5. Project Safety Organization

The project safety organization shall vary according to size and complexity of projects. A typical project, however should include :

A. Chief Project HSSE Manager- HQ
B. Senior Project HSSE Managers- Region
C. Project Engineers
D Fire and Electrical Officer (as may be applicable)
E. Contractor's Safety Officers
F. Contractor's Safety Supervisors

6.6. Contractor's Safety Organization

Contractors must provide a nominated manager, supervisor or foreman with authority to give and receive safety instructions at project location as mentioned below.

- If a contractor is employing less than 30 employees, he shall designate one dedicated supervisors as a safey steward.
- For every 30 persons or more contractor shall appoint one qualified safety steward (diploma in industrial safety from recognized government institute). For more than one safety steward, one of them shall be appointed as Chief safety steward.
- In addition to above contractor shall also appoint one safety officer, if he employs more than 100 workers. Safety officer shall have Diploma in Industrial Safety or any equivalent qualification from Government Recognized Institute and minimum 2 years of experience. For more than one safety officer, one of them shall be appointed as Chief safety steward.

NOTE: BPCL shall reserve the right to prescribe the number and qualification of contractor's safety personnel.

Appendix 3 provides description of Contractor's Roles and Responsibilities. **Appendix 4** provides list of facilities /equipment for the contractor's safety function.

6.7. Inadequate Safety Personnel

Page 774 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

In case if the contractor fails to provide the minimum required manpower or fail to fill up vacancies created within 30 days, the same shall be provided by BPCL at contractor's cost. Any administrative expenses involved providing the same like paper advertisement or manpower consultant charges, etc shall also be at the cost of contractor.

6.8. Approval of Safety Personnel from BPCL

The name of the nominated person(s) must be given to the BPCL Representative before work commences along with their educational qualification and training certificates. The Contractor shall be fully responsible for supervision of Contractor personnel to ensure that they strictly adhere to all applicable safety requirements. The Contractor shall provide, and fix in place, all caution and hazard notices required for the project location in accordance with the applicable laws in force and industry practice.

6.9. Subcontractors Control

The Contractor shall provide the BPCL Representative with the names of the Sub-Contractors and obtain approval to this Code of Practice prior to their engagement. Contractor shall ensure that the sub contractors shall also be governed by the requirements as applicable to them. The contractor shall ensure that the Sub-Contractors receive safety induction briefings. The Contractor shall regularly check the Sub-Contractors' compliance with safety requirements and be held accountable for their safety performance including requirement to use Personal Protective Equipment (PPE).

6.10. Kickoff Meeting

The contractor shall facilitate a formal safety kickoff meeting prior to commencement of Location works along with subcontractors and BPCL representative. The contractor shall inform the BPCL a minimum of seven (07) days in advance of these formal kickoff meetings and the BPCL.

6.11. Project Safety Committee

A project safety management committee shall be constituted with representation from senior management representation from the contractors, subcontractors (if permitted in contract).The meeting shall be held at least once per month and record maintained. The meeting shall be chaired by BPCL project manager and convened by Location HSSE Manager.

The large contractors/ sub-contractors may also be asked to constitute their own safety committees. will provide the BPCL the minutes of the same.

The outcome of pre job meeting shall be documented and record maintained.

6.12. Hazard Identification and Risk Assessment

The contractor shall ensure that a specific hazards are identified, which have the potential to cause harm in terms of human injury, ill health, damage to property or the environment, or a combination of these and risk is properly assessed, control measures are identified prior to start of work. The record shall be maintained at Location office.

6.13. Safety Instruction & Training

Project Leader shall establish safety training plan & procedures (example given below).

Training Profile Discipline: Scaffolder	Initial Training
Safety Orientation & BPCL HSE Policy, Life Saving Rules, Roles & Responsibilities, Incident Reporting, Emergency management, Project description, hazards & risks, Project Safety Management Plan etc.	Prior to starting work- All BPCL and Contractors Employee

Page 775 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Scaffolder Practical Assessment	Prior to starting work
New Start Orientation	Prior to starting work
Correct use of PPE	Prior to starting work
Safe use of Safety Harness and 100% Tie-Off	Prior to starting work
Working at Height & Dropped Object Controls	Prior to starting work
Toolbox Talk	Prior to starting work
Hazard Identification and Safety Intervention	Prior to starting work
JSP and Work Permit System	Prior to starting work
First Aid	As required
Worker Welfare Program	Prior to starting work
Environmental Awareness Program	Prior to starting work
Transport Safety Awareness	Prior to starting work
Safe Commissioning and Start up to concerned personnel	Prior to Commissioning and Start up

The contractor shall ensure that all personnel attend the Safety Induction Training / Instruction, Tool Box talks before they start to work on the project. The contractor's workman shall attend Refresher Training Periodically and shall take advantage of the various Safety training courses provided by BPCL.

A record of the Safety training undertaken by staff shall be maintained and available to Employers Representative on demand.

6.14. Daily Job Safety Plan

The Contractor Job Representative shall prepare daily job safety plan to identify specific tasks, their hazards and risks and control measures. This is a joint formal review of all tasks and to be documented. This shall be reviewed and approved by owner or his authorized representatives.

6.15. Safety Communication

The Table 1 below outline the indicative methods and schedule for Contractor Specific Health and Safety communication for processes identified for all employees.

Table 1 : Indicative Communication Workplace Schedule:

Communication Process	Schedule	Participants	Facilitator
Toolbox Meeting	Daily	Contractors and its subcontractors	Respective Contractors Supervisors in charge of work activities
Safety Meetings	As scheduled	Contractors	BPCL HSSE Manager
Project kick Off Meeting	Prior to project commencement or first day on-Location	BPCL Construction Team, Contractors and its subcontractors	BPCL HSSE Manager/ Contractors Safety Officers/ Stewards

Page 776 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Mass Tool Box Meeting	Weekly	BPCL Construction Team, Contractors and its subcontractors	BPCL Project Manager Contractor Front Line Supervision and Contractor safety stewards
Safety "Stand Down"	As and when required	Specific task group	Contractor project Manager / Contractor Construction Manager
Emergency drill exercise	Monthly	As per emergency response plan	Contractor Project Manager / Contractor Construction Manager

6.16. Toolbox Meetings and Mass Tool Box Meeting

Daily toolbox meetings shall be conducted prior to commencement of operations to raise the safety awareness of all project personnel- Meetings shall be carried out at the workface. Toolbox meetings shall comprise information of discussions concerning any inherent hazards associated with planned works as well as precautions that will be initiated. Topics for toolbox meetings shall include risk assessments conducted for work activities. Toolbox meetings shall be conducted at the common resting shed and designated Contractor personnel will provide assistance to Contractor Supervisors in the preparation and delivery of safety talks and other relevant matters. Refer **Appendix 5** for Guidance on Tool Box Talk.

Mass Tool Box Meetings will be conducted by BPCL Project Manager /Contractors to address workforce common issues, communicate corporative messages, and discuss Lesson Learns and / or safety programs new initiatives.

6.17. Monthly Location Walk Through

Contractors shall conduct Monthly Location Walk Troughs comprising Contractors Location Management and Safety Coordinators. BPCL project management and HSSE role holders will join these inspections on regular basis.

6.18. Safety Audits

Internal Project Safety Audits will be undertaken in accordance with the Project Safety Management Plan. Regional Project Head shall decide about the external safety audit from Indepdent third party agencies or BPCL auditors (other than Project) as may be required on case to case basis.

6.19. Safety Statistics

Contractors' safety statistics shall be gathered on a monthly basis and reported to the BPCL HSSE Manager. Contractors and its subcontractors shall provide details regarding their monthly statistics to BPCL for collation by the 5 th calendar day of every month. Monthly Statistics shall be communicated at a prominent place. Refer Appendix 6 for indicative safety statistics to be maintained at each BPCL project Location as minimum.

6.20. Project Safety Management Basic Rules

Refer **Appendix 7** for Project Safety Basic Rules.

6.21. Equipment and Machinery Safety

All plant and equipment intended to be used at the project contractors and its subcontractors shall conform to the manufacturer's specifications shall have a proof of adequate maintenance regime. In

Page 777 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

addition to these requirements, Contractor shall comply with all regulatory authority standards for machinery guarding and warning devices shall be adhered to prior to the operation of the plant and or equipment on the project.

Contractor shall keep records of all inspections; third party certifications (when applicable) and maintenance activities inclusive of breakdowns shall be recorded using the logbook provided for the relevant item of plant.

All plant items shall be provided with a logbook that contains:

- Current copy of registration/certificate or licence, where applicable,
- Records of service,
- Operation manual,
- Daily pre-start inspection checklists (as applicable),Maintenance records for prior history and provision for future entries, and
- Mobilization inspection checklist completed by en appropriately qualified or competent person.
- Authorized operators record

Vehicle and Plant maintenance will be carried out to manufacturer's specifications and maintenance schedule.

Colour-coding and frequency of maintenance are to be indicated clearly in the maintenance regime of all equipment and machinery.

Unless all the required licenses required to operate any equipment are held by the operating employee and have obtained the necessary work permit approval, then that equipment will not be operated.

BPCL and Third parties will audit the inspection protocols and inspection records.

6.22. Pre-Start Inspections

Supervisors and operators shall ensure equipment and vehicles are inspected prior to operation each shift. The operator shall enter details of the inspection into the logbook or daily checklist of the person delegated to complete the inspection. All safety devices shall be operative and at all times used. All required certificates should be available, current and valid

6.23. Equipment and Machinery Inspection Register

Contractor construction team shall maintain a Plant and Equipment Register to systematically record each item of plant brought to the project location, which will determine inspection levels, registration details and logbook requirements. All safety devices shall be operative and at all times used as well as all required certificates, all required certificates should be available current and valid

BPCL Team and Third parties will audit the inspection protocols and inspection records

6.24. Lifting Machines (Cranes, Rigging, Lifting and Mobile platform)

The use of lifting machines in the project location shall abide by the following conditions:

- Current applicable regulation shall be complied with at all times.
- Lifting machines (i.e. cranes, piling machines) shall possess a valid Inspection Certificate and such certificate must be displayed on the machines.
- Contractor Project engineer and lifting supervisor shall inspect the lifting machines upon arrival at project location before being permitted to be used.
- A statutory competent person shall examine the lifting machines at least once in every 12 months. All required certificates should be available, current and valid.
- The Load Capacity Chart (manufacturer or certified by Authorized Examiner) shall be displayed on the lifting machines and understood by the operators.

Page 778 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Lifting machines shall be marked with its safe working load (maximum and minimum radius)
- Lifting machines shall be used in accordance with manufacturer's operating instruction and/or the Authorized Examiner's instructions
- Lifting machines shall be provided with.

  -An adequate braking mechanism
  -A swing lock or swing brake capable of prevention of rotation;
  -A brake or other device adequate to bring the crane to a stop from any travel for which it is designed, together with a means of locking the crane so as to hold its stationary
  - a load and/or radius indicator with warning alarm
  -a load/radius table to be available in the crane cab of every variable radius jib crane
  -an automatic safe load indicator (Load Moment Indicator)
  -anti two blocking devices
  -crane hook with a safety catch to prevent displacement of the sling or load from the hook
  -an anemometer or a wind speed meter (for new cranes) for measuring wind force and velocity
- Lifting machines shall be examined by an Authorized Examiner after any major repair or any repair done on the hoisting or operating mechanism, boom jib and after over loading incident
- Excavators shall not be used for lifting operations.
- No lifting machine shall be operated unless all measures are taken to prevent toppling or overturning or contact with overhead obstruction (such as structure, power lines)
- When moving lifting machines, the boom shall be lowered and traffic controller/guide shall be required to guide the lifting machine operator.
- When lifting machines are reversing, an additional person shall be required to ensure that the path of travel is clear.
- Lifting machines cabin shall be locked when it is not attended by the operator. Unauthorized person(s) shall not be permitted to enter in the cabin or operate the crane.
- Fire extinguisher shall be provided in the lifting machines. Operator shall be trained to use fire extinguishers.
- Good housekeeping of the lifting machine shall be exercised and maintained.
- Safe access (with proper foot and hand holds/supports) to the cabin and deck of the lifting machines shall be provided and identified.
- Lifting machines shall be maintained to ensure that all components of the lifting and operating mechanism are in good, safe and sound functioning condition.
- A maintenance program shall be required and implemented effectively for the lifting machines and the maintenance records shall be kept in the cabin.
- The operator shall carry out daily inspection of the crane and testing of the safety devices In accordance to manufacturer's recommendations.
- The maintenance section of respective supplier shall inspect the lifting machines at least once every month.

6.25. Lifting Operations

- BPCL requires that all lifting to be executed as a minimum, under compliance with applicable regulations and approved code of practices.
- Contractors shall appoint trained and competent Lifting Supervisors Riggers, Signalman and Crane Operators In accordance to statutory requirements.
- Contractors shall also appoint a Responsible Person to coordinate lifting activities.
- Method statements, risk assessments and Work Permit System shall be implemented for all lifting operations.
- A Lifting Plan shall be established and implemented for all routine and non-routine operations.

Page 779 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- The Lifting Plan shall be submitted together with the Lifting Checklist prior to commencing lifting operations. Designated lifting points and the lifting path shall be drawn in the Lifting Plan .o The Lifting Plan shall also indicate the followings:
  - Location of lifting operation;
  - Description of lifting operation;
  - Weight of load;
  - Description of lifting equipment to be used;
  - Personnel involved in the lifting operation
- Appointed lifting supervisor shall also check and ensure that all safety provision are in place before the lifting operation is commenced with checklist(s) provided.
- The lifting operation area and other areas with potential hazard / danger must be cordoned off to prevent access for all unauthorized personnel. Only authorized persons and personnel involved in the lifting are allowed in the lifting operation area.
- The load shall be controlled by means of tag lines to prevent the load from turning, swaying or swinging.
- The crane operator/lifting machine operator shall be medically and physically fit for the job and possess the following qualifications.
  - valid crane operator license issued by Government department; and
  - certificate of competency for the type class/capacity of the crane.
- Contractors shall submit the respective documents and certificates on the above for verification to BPCL

6.26. Safe Work Procedures

The contractor shall develop and implement a safe system of work and procedure/ method statement at each Location. A copy of procedures shall be submitted to BPCL Representative prior to commencement of the work.

This shall include but not be limited to:

- BPCL 12 Life Saving Rules
- Safety Signage
- Hazard Identification and Risk Assessment Procedure
- General Safe System of Work
- Lay out, Housekeeping and Traffic
- Working at heights, ladders, Scaffold and Working Platform
- Use of electrical plant and hand tools
- Material Handling
- Heavy earth moving equipment
- Digging and Excavation
- Hot work
- Dust & Fumes
- Control of hazardous Substances
- Electrical hazards, especially in the connection of equipment supplied by BPCL, or their Subcontractors, to power sources provided by others
- Confined spaces (as applicable)
- Noise, Lighting, Heat Stress, Extreme whether
- Store & waste management
- Portable tools & equipment
- Induction Checklist Drugs and Alcohol
- Safe Lifting & Rigging Procedures
- Material Handling Equipment Operations Ladder Safety

Page 780 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Portable Hand Tool / Power Tools Safety
- Personal Protective Equipment (Selection, Use & Maintenance)
- Waste Storage, segregation & disposal procedures
- Competency Criteria for High Risk Activities (Qualification / Experience / Training / Skills)

6.27. Scaffolding and Work Platforms

Erection, alteration and dismantling of any scaffold shall be carried out by a person holding the appropriate certificate of competency and under the direct supervision of a qualified scaffold supervisor. The use of scaffolds shall be governed by the IS codes.

6.28. Personal Protective Equipment (PPE)

PPE that shall be required for all personnel including visitors whilst they enter project Location. Areas where personal protective equipment is required to be worn shall be prominently displayed with signs. Instruction on the correct use and maintenance of personal protective equipment shall form part of the nominated training and toolbox sessions and reiterated through the pre-start meeting process. Contractors shall establish and implement a PPE maintenance programme.

The Contractor shall remove from the location any worker who consistently refuses to wear the appropriate personal protective equipment. The PPEs and safety appliances provided by the contractor shall be of the standard as prescribed by Bureau of Indian Standards (BIS) or equivalent standard.

All construction workers should be provided with high visibility Jackets with reflective tapes confirming to the requirement specified under BS EN 471: 1994. The contractor shall at all time maintain a minimum of 10% spare PPEs and safety appliances and maintain proper record. The standard PPE may include:

- High visibility Vests
- Fire Retardant Clothing (particular activities and designated areas)
- Portable gas detector (particular activities and designated areas)
- Toe Protection and steel capped safety footwear with ankle support
- Hearing protection (particular activities and designated areas)
- Respiratory protection (particular activities and designated areas)
- Hand Protection (particular activities and designated areas)
- Safety helmet with chinstrap
- Safety Goggles.
- Eye protection for grinding, welding and cutting, compressed air use and chemical interaction
- Full body harnesses attached to a shock absorbing device and with double lanyard ("Y" type)
- Life Jackets (designated area)

Safety Induction shall be used as a forum to advice on the general personal protective equipment.

6.29. Location Familiarization

Location familiarization is an essential part of the Location Safety arrangements. The contractor shall provide its employees a familiarization tour to their work area for their personnel prior to commencement of the work. This shall include:

- Boundary of work location.
- Authorized safe access / egress routes.
- Authorized walking Routes.
- Storage areas for various materials in particular where dangerous materials or substances are concerned.

Page 781 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Location of key Personnel, e.g. BPCL Project Manager, HSSE office etc.
- Arrangements for sanitary conveniences and washing facilities.
- Location security arrangements.
- Identification of physical hazards associated with BPCL operational or other work activities.
- Assembly points during emergency.

6.30. Certificates of Competency

BPCL requires the Contractors to maintain a register with all statutory certificates of competence as their qualified personnel. These records shall be kept on Location for auditing purposes.

Where BPCL requires personnel to have certificates of competency to perform designated tasks, a record of the certificates will be taken at the time of employment or induction prior to employees being able to perform those tasks. The records shall be maintained in a register for Auditing purposes

Competency certificates shall be maintained for:

- Issuing work permits
- Conducting Electrical Work
- Scaffold work
- Lifting Operations / Safe Slinging & Rigging
- Crane / forklift operators
- Fire Fighting

6.31. Location Access Control and Traffic Management

Contractors shall manage the security at BPCL project premises. Security guards, traffic patrols, traffic wardens, heavy equipment escorting, vehicle access, warehouses, access and exit gates will be managed by Contractors under procedures and regulations agreed with BPCL Project Team Management.

Only authorized employees with a current and valid driver's license will be allowed to operate vehicles on the project. Contractors shall train all their drivers in defensive driving principles.

6.32. No Smoking Policy

BPCL follows No Smoking Policy at the work Location and same shall be practised at all its project locations. The cigarettes / bidis, lighters, match boxes etc. shall not be permitted to the project Location.

6.33. Drugs and Alcohol

The use, possession, distribution or sale of illegal drugs and controlled substances by any BPCL employee, visitors, contractors or sub-contractors and their employees while on BPCL premises or while performing services on the BPCL project Location is strictly prohibited. Breath analyzer test shall be conducted at the Location regularly.

6.34. Notices and Signs

Contractors shall display prominently relevant safety notices and signs in such a manner as to ensure personnel in the vicinity are made obviously aware of the potential hazard. Posters shall be utilized within amenities as a general reminder and changed on a regular basis to reduce familiarity. Signs shall be generated following Indian regulations.

6.35. Barricading and Shuttering

Barricades are designed to restrict access into work areas where hazardous conditions are prevalent. Shutters and roof supports are designed to protect access to trenches, tunnels, drains, sewers etc.

Page 782 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Contractors shall identify and adequately highlight potentially hazardous areas or processes and particular risky activities by displaying appropriate tag, warning sign and where deemed necessary, bunted off with fixed rail barricades. Contractor shall erect fixed temporary guardrails at entry points to areas requiring the removal of permanent guard railing or other means of fall protection, Other situations include:

Overhead Work.

- Confined Space Entry;
- Scaffold erection and protection;
- Chemical and product spills;
- Traffic and pedestrian control;
- Blasting and charging situations;
- Excavation
- Hot work
- Painting
- Electrical equipment

6.36. Working at Heights

Working at heights may cause serious injuries or fatalities. It is therefore essential to ensure the following measures are taken by Contractors prior to commencing any work at height:

- Permit to work system shall be implemented for working at height
- Where work is performed/or lifted to heights greater than 2 metres above the ground, the potential drop zones must be cordoned off
- Pipe work and structures that could deflect falling objects will be considered when assessing the potential drop zone
- All work areas, walkways, platforms etc. elevated 2 meter or more, must be encompassed by an approved guard rail or rope
- All barriers such as guardrails, opening covers are adequately provided with warning signage must be to protect all workers and public from injury
- Tools and materials will be raised and lowered in secured containers
- When work is carried out at elevated levels, the area below must be cordoned off and warning signs must be posted up
- All openings in floors must be covered temporarily or securely fenced.
- Appropriate Personal Protective Equipment (PPEs) for fall arrest such as full body harnesses attached to a shock absorbing device and with double lanyard ("Y" type) shall be used for work at heights. It is to be used at height of 2 meters and above.

6.37. Housekeeping

Housekeeping shall be considered an extension of every activity on the project. Contractors shall ensure maintaining a high standard of housekeeping in the Project at all times. Contractors' supervisors shall be responsible for ensuring housekeeping inspections are conducted on a daily basis and corrective actions are taken accordingly. The areas within their control are to be maintained

in a tidy, safe condition, materials and equipment not in use are neatly stacked away from the work areas and clear of access ways and emergency exits.

Housekeeping shall be constantly monitored to ensure a safe and productive work environment. The following shall be complied at all times:

Page 783 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Emergency exits, stairway, roadways, walkways and fire points must be identified and kept free of obstruction
- Place of work shall be kept free from any obstruction and from any substance likely to cause a person to slip, trip or fall
- Equipment for use or installation placed on Location and work area shall not cause any obstruction unless otherwise approved
- Wires, cables, and gas hoses shall not be laid across floors, steps, stairs, passages, gangways and means of access.
- Construction materials shall be stored or placed at demarcated areas, and stacked in a safe, stable and orderly manner
- Cleaning of offices canteens, and sanitary facilities shall be carried out daily on e routine basis
- All waste shall be categorized and disposed to designated containers, bins, or designated places only.
- Construction and engineering waste and scraps shall be collected and place into designated bins at the end of the work day
- Surplus waste civil material such as soil, stone etc. must be dumped at the designated dumping areas or remove from Location
- Mass housekeeping exercise shall be carried out once every week, and as and when
- Contractors Project Managers or HSSE personnel deemed necessary
- Chemicals shall be stored in a designated area and locked to prevent unauthorized usage

6.38. Hazardous Substances

Any material or substances that are or may be considered hazardous to Personnel or the environment shall be handled, stored, transported, used or applied according to:

- Manufacturer's Recommendations
- Statutory Requirements
- Contractor shall keep a register of all chemicals used in the Project. Contractor HSE Manager shall approve all chemicals to be used in the Project before they brought into Project premises. It is advisable for the Contractor to generate an Internal Chemical Approval and Control Procedure

6.39. Portable Electrical Power Tools and Equipment

- Earth Leakage Circuit Breakers (ELCB) ere standard devices to be used on project locations. Contractors shall use ELCBs when using portable tools and/or equipment. This ensures the maximum safety and protection for all personnel.
- All their tools shall be tagged and tested.
- Double adaptors and piggy-back plugs shall not be used.
- Electrical extension leads and cables shall be, where practical, kept off the floors or ground and be secured at a height by insulated hangers that does not interfere with or hinder the work area.
- Electrical cords, as much as possible, shall not be coiled when in use, they shall be inspected daily before they are used
- Electrical extension leads across pedestrian access ways / floors shall be adequately protected from damage and to reduce trip hazards.
- All equipment shall be visually inspected by the operator prior to use and by a licensed electrician on a three-monthly basis with details of the inspection being recorded in the "Electrical Inspection Register" and on the appropriate colour coded tag for the period.

Common types of power tools used are:

Page 784 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Drills Rivet
- Grinders
- Guns
- Circular saws

6.40. Electrical work

- For all works that require the identification and control of electrical energy, an approved Log Out - Tag Out (LOTO) Procedure shall be utilized. Contractor shall ensure to generate and utilize a LOTO procedure to manage the intervention on electrical equipment. As minimum, this procedure shall include:
  - Selection and appointment of competent personnel
  - Roles and responsibilities
  - Training requirements
  - Approved tools
  - Safety devices and mechanisms
  - Communication protocols
  - Authorization protocols
  - Administration and physical controls
  - Precautionary measures
  - Maintenance and testing protocols
  - Consideration on simultaneous operations
- All pertinent personnel shall be trained, If energized equipment, installation, or electrical system must be intervened it shall be de energized and/or isolated prior to commencement of work on them by using the Log out Tag Out Procedure
- All practicable measures shall be taken to protect any person against the risk of electric shock arising from or in connection with the use of any electrical installation or equipment.
- Underground or concealed electrical power lines must be identified and marked prior to any work to be carried out onto the ground or wall.
- In work areas where the exact location of underground electric power lines is unknown, person using hand tools which may contact a line must be provided with insulated protective gloves and insulated protective footwear.
- All dangerous occurrences and electrical incidents shall be reported to the Contractors Project Manager and HSSE personnel immediately and followed by submission with an appropriate written report.
- Electrical installation and equipment shall be of good construction, sound material and free from defect.
- Electrical installation shall be performed, tested and checked by a Licensed Electrical person.
- Testing, inspection and maintenance on electrical installations shall be done by a licensed electrician.
- All temporary electrical in building and work location shall be provided with earth leakage circuit breakers (ELCB).
- All wiring shall be made of weatherproof types, properly insulated and provided with adequate mechanical protection.
- No bare wires or other unprotected conductors shall be located within 4 meters of any surface where employees may work or pass, unless completely guarded by a fence or other barrier.
- No person shall work in such proximity to any part of an electric power circuit that he may be in contact with in the course of his work unless he is protected against electric shock.
- Person shall be advised of the location of such lines, the hazards involved and the protective measures to be taken. No extension to the electrical wiring system shall be made without the Contractor Project Manager and HSE Manager approval.

Page 785 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Underground and/or concealed cables shall be identified on Location layout drawings and other related drawings, and shall also be Identified with markers on location.
- All electrical , testing or alterations to any electrical equipment shall only be undertaken by a suitably licensed electrician.
- All electrical equipment including cables, leads or extension cords are to be examined and tested at regular intervals. The findings of these inspections are to be recorded and action taken for the repair, replacement or destruction of the damaged equipment after suitable approval has been granted.
- Switchboards shall be kept locked at all times. The key shall be secured in a safe place to prevent unauthorized access.
- Mobile portable lighting shall be inspected daily for broken switches, exposed or damaged wiring, blown bulbs and damage to trailer and trailer frame. Portable items which are damaged are to be tagged and the details of the damage recorded and then action taken for the repair, replacement or destruction of the damaged equipment after suitable approval has been granted.
- Conductors, switchgear and electrical apparatus is always regarded as being alive until it is proved to be dead by means of approved test lamps, suitable indication devices or voltmeters.
- All electrical equipment and tools are to be inspected by a Licensed Electrician on a monthly basis.

6.41. Working on or near Exposed Live Circuits and Equipment

When working on exposed Live Low Voltage Mains and Apparatus adequate precautions must be taken, otherwise may result in injury or death,

- Insulating mats and hose are to be used by Construction staff when working on or adjacent to exposed Live Low Voltage Mains and Apparatus. When insulating mats and hose are used to cover conductors or earthed metal, the mats and/or hose must be securely fixed to prevent displacement. Conductors and apparatus taken out of service must be proven" dead h by testing
- Precautions must be taken to ensure that the supply remains de-energized by Locking Out the main control switch and any other control points which are capable of restoring supply.
- "Danger" Notices are to be securely attached to the operating lever or push buttons so there is no risk of them becoming dislodged, or of an operator being able to restore power or operate the equipment whilst being unaware of the danger by doing so

6.42. Isolations

Electrical Isolations shall be co-ordinated via Local Electrical Authority, appointed Responsible Competent Person, HSSE appointed personnel and respective Supervisor.

Contractors will adopt its internal Isolation and Lockout procedure.

6.43. Lock-out & Tag-out of Equipment

A lock-out and tag-out procedure shall be in place for machinery or equipment at the Location for the purpose of inspection, maintenance, routine servicing, or repair. During this period, if the machinery or equipment is inadvertently activated or energized leading to a start-up, it is liable to cause bodily injury to any person who may be working on the machinery, by the sudden release of energy.

The lock-out & tag-out procedure is a set of procedures established for the following purposes:

- To ensure that all energy sources to the relevant part of the machinery / equipment, shall be isolated or disconnected.
- To prevent any interconnected part of the machinery / equipment from being inadvertently activated or energized.
- To implement for the inspection, cleaning, repair or maintenance of any plant, machinery or equipment

Page 786 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Note: The Contractor Log Out and Tag Out Procedure shall integrate all pertinent piping, mechanical, pre-commissioning, commissioning activities as well as communication and joint activities at battery limit form multiple contractors/service providers

6.44. Work Permit System

The intention of the permit to system is to control construction activities having the potential to result in personnel injury, property damage or environment impact.

Locations shall implement a Work Permit System to be applied during construction stage and communicate to contractors. The work permit system shall cover;

- Entry into confined spaces
- Work at Height
- Excavation
- Use of explosive devices
- Hot work
- Electrical work
- Radiography
- Piling work
- Demolition
- Lifting operations involving lifting machines and appliances
- Tunneling work
- Working at height where a person could fall more than 2 meters
- Any other high risk activities, as identified by risk assessment shall also be included It may extend into cold commissioning activities, which may require a Clearance Certificate.

6.45. Hot Work

"Hot Work" is any work activity which requires or involves open flames or any other sources of heat that could ignite flammable or com**bu**stible materials in the work area. Such work shall include but not be limited to, welding, burning, grinding, soldering etc. The following requirements shall be in place prior to commencing any hot work activity.

- A work permit system shell be implemented for hot work activities o An adequate number of dry powder fire extinguishers shall be located within close proximity to hot work areas
- A trained fire watchman shall be assigned to be positioned at the area where hot work is being carried out
- All Slags and sparks shall be contained within the work area. Fire blankets shall be used to contain the sparks, if required.

No hot work close to operating plant and in commissioning areas shall be done by Contractors without BPCL permission.

6.46. Welding

- Welding works shall comply with Indian Standard requirements. Only competent and authorized workers use welding and cutting equipment. Welders and fire watchers shall be competent in the operation of fire extinguishers, fire hoses and any other fighting equipment.
- No Welding and gas cutting close to operating plant and in commissioning areas shall be done by contractors without BPCL permission.
- Fumes and gases evolved shall be identified and exposure controlled. Welders and other persons in the vicinity shall be protected against exposure to ultra violet light and infra-red radiation emitted from the welding operation.
- Welding sets shall be in good condition, properly maintained and earthed.

Page 787 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Terminals and live components shall be adequately protected.
- Cables shall be inspected to ensure the insulation is intact.
- Damaged cables or electrical holders shall be properly repaired or replaced
- Welders shall wear face mask, appropriate face shields and welder gauntlets during welding activities
- Only competent and authorized workers shall use welding equipment.
- Precautions shall be taken against exposure for welder and other personnel to ultraviolet radiation, fire, explosion, asphyxiation, or exposure to toxic gases, fumes or dust during welding activity.
- Adequate ventilation shall be furnished when working with welding equipment.
- Fire extinguisher/charged hoses/firefighting equipment must be provided at the welding work locations.
- Welders and fire watch personnel shall be competent in using the fire extinguisher/fire hoses/fire fighting equipment.
- Welding shields must be used to protect the eyes of nearby workers and visitors from ultraviolet exposure.
- Welders shall not wear metal rings, bracelets or necklaces during work as these might be heated by induced currents from the welding equipment.
- The welding equipment shall be checked for defects by the welder prior to usage:
- Damaged insulation on welding leads electrode holders and connections;
  - Faulty earth clamps and earth leads,
  - Torn insulation mats/cradles;
  - Worn or damaged hoses;
- Welding equipment shall be installed in such a manner that it can be continuously seen by the welder during welding activities.
- The welding equipment shall be placed at ground level only. The welding equipment shall not be placed in the path of falling sparks or in elevated structures.
- Diesel welding machines, generators and transformers must be protected by suitable covers for general protection.
- Such equipment must be turned off when not in use.
- Welding machines shall be inspected by a licensed electrician on a monthly basis
- Metal frames and casings of mains powered welding rectifiers, transformers and voltage regulators shall be earthed.
- Welding leads and return leads shall be well protected against mechanical damage.
- The earthing cable shall be attached to the work area as close as possible.
- The earthing cable shall not be attached to an existing installation or apparatus.
- Welding of the earthing cable is prohibited. No concrete reinforcing steel bar shall be used as earth point.
- The work piece shall be positively earthed, using a well-protected earthing wire connected at both ends by bolted lugs or secured by screwed clamps.
- Grounding to plant equipment pieces is prohibited.

6.47. Gas cutting

- Gas cutting shall comply with Indian Standard requirements.
- Gas cylinders shall be in good condition and free from corrosion
- Gas cylinders shall be properly colour-coded and individually identified
- Hoses shall be properly colour-coded to the internationally recognized standard for the gas being used, in good condition and fitted with hose connectors attached with permanent clips. Jubilee clips shall not be used

Page 788 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- A suitable non-return valve or any other similar device which prevents the backflow of gas shall be fitted in accordance with the manufacturer's instructions between each gas torch inlet and gas hose of every oxygen-fuel gas equipment.
- A flashback arrestor which stops flashbacks shall be fitted in accordance with the manufacturer's instructions at the pressure regulator outlet of each gas cylinder
- Gas cutting equipment must be inspected on a daily basis for leaks, damaged hoses, regulators and pressure gauges, etc, Defects must be reported.
- Suspected leaks may be confirmed with a soap solution. Equipment must be replaced if leak cannot be repaired
- There shall be a designated area for proper storage of cylinders. Cylinders shall not be left lying around, They must not be stored or used in a horizontal position, but must be secured in an upright position, Cylinders must not be taken into confined spaces for use or storage, and shall not be placed on scaffolds
- Cylinder storage area shall be well ventilated and away from heat source or direct sunlight, "No Naked Flame", II NO Smoking" and "Flammable" sign boards shall be displayed
- Cylinders must be handled with care and must not be misused. They must be properly shut off when not in use and safety cap must be fitted when being moved
- Cylinders must be placed in a cylinder cage or frame prior to lifting by crane. Manual lifting of cylinder should be minimized. Cylinders shall not be subjected to drop, knocks, and roll during handling
- Cylinders must be placed in trolleys. A bottle key shall be kept with cylinders in use. Cylinders not in use shall be fitted with a safety cap.
- Oxygen and fuel gas cylinders shall be kept separate with a minimum distance of 5m. Empty cylinders must be separated with full cylinders, and shall be marked "Empty" or 'Full"
- Gas cutting equipment, including hoses shall not cause obstruction. Hoses not in use must be coiled up and put in a safe place. Hoses should be supported off the ground
- Gas cutting equipment, including hoses must be removed from confined spaces and excavations during any break or at the end of the day

6.48. Hazardous Areas

- Hot work shall not be carried out in a hazardous area unless a hot work permit is issued.
- Before hot work in a hazardous area is performed, the Contractor and person(s) performing the hot work shall:
    - Provide suitable locations for equipment including emergency fire fighting equipment.
    - Consider any possible changes in circumstances during the hot work, which may render the area unsafe..
    - Ensure fire watchman and fire fighting equipment are available.
    - If required, fire blankets will be used to protect areas that could com**bu**st due to sparks
    - Issue hot work permit.
    - Ensure that when hot work is performed, welders will not work alone and shall be provided with assistance as considered necessary. One of the duties performed by the assistance shall be of trained fire watcher.
    - Ensure that on completion of the hot work, the permit has been signed off by the issuing officer.

6.49. Confined Spaces

All conditions, precautions, etc. as outlined in the Regulations and relevant code of practice shall be adhered to. In addition, the requirements as defined in Additional requirements are as follows:

Page 789 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- A competent Confined Space Assessor shall be engaged to closely monitor and supervise the safe work operations in the confined space. He shall be the assessor of the confined space where works are intended to be carried out
- The Confined Space Assessor shall test the atmosphere of a confined space prior to entry by any person into the confined space. The results, indicating the levels of oxygen content, flammable and toxic gases shall be recorded and attached to the work permit system.
- A copy of the approved work permit system shall be displayed at the entrance of the confined space.
- Atmospheric testing of the confined space shall be carried out prior to start of confined space works and subsequently at 6-hourly intervals if the work is continuous. The work permit system will be revoked if independent testing shows the confined space to be an unsafe hazardous environment Re-entry into the confined space shall only be allowed with the issuance of a new PTW
- Confined Space workers (entrants) shall have passed the BPCL approved Safety Orientation
- Confined space attendant(s) who have to communicate regularly with the entrants shall be trained in the same areas as the entrants He shall also be trained in rescue efforts so that he can coordinate rescue efforts in times of emergency. The attendant shall not leave his position at the outside entrance of the confined space at any time.
- Forced ventilation shall be provided at all times to a confined space when work activity is being carried out. The ventilation system would consist of a blower connected to flexible ducting. Only explosion proof blower shall be used for combustible atmospheres. The requirement and determination of equipment to be used and its set up while obey a Contractor Confined Space Assessor ventilation plan.
- Appropriate respiratory, breathing apparatus and proper PPE shall be provided to protect the entrants from inhaling contaminants in the confined space
- A retrieval system consisting of a retrieval line, body harness and a lifting device, or other suitable means shall be used by entrants who are authorized to enter into a confined space and tended at all times by the attendant.
- Illumination of not less than 50 lux shall be provided for access and passage into the confined space.
- All portable hand-held lightings provided in confined space shall be operated at an AC voltage not exceeding 55 volts between the conductor and earth or DC voltage not exceeding 1 10 volts
- Warning signs shall be displayed at or near every access point to warn persons of the existence of a confined space.
- A confined space entrant shall always wear a safety harness with a retractable lifeline, abrasion resistant gloves, protective non-slip footwear and safety helmets.
- A tripod or crane should be used to lower workers where possible.
- Breathable air cylinders to be used shall be properly certified and tested before each use
- If Air compressor will be used to supply breathable air, the compressor shall be for that purpose only and it should be provided with CO, moisture, temperature and oil in line monitor and deficiency alarms.

6.50. Excavation

Contractor shall authorize all excavation work by means of an excavation permit; it includes on-shore pile driving and soil testing. Proper checks, e.g. by hand excavated test holes, shell be made for the presence of underground cables or services before machine excavation work is authorized. Drawing checks are insufficient. On project locations within or adjacent to operating plants , all machine excavation shall be done with a dedicated and properly trained banksmen observing the actual soil cutting and removal. The following conditions shall be in place for excavation works:

- Excavations shall be barricaded with signs and shall have warning lights at night

Page 790 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Excavations with a depth of more than 1.5 meters must be shored, sheet piled or sloped. Excavation more than 1.5 meters depth must have a barrier constructed from the edge of the excavation
- Materials shall be placed more than 1.5 meters away to prevent collapse. Vehicles shall not be parked near excavation areas • Exposed cables or services shall be supported
- Exits points shall be provided
- Excavations shall be inspected by the supervisor daily before work start. Any shoring for excavation depth exceeding 4 metres shall be designed by a professional engineer
- Excavations and trenches more than 1.2 meters depth shall be considered as a confined space and subject to work permit control, both on existing operating and green field project locations
- A designated person who has completed adequate training in safety and health shall supervise the excavation works. He shall also carry out daily inspection of the excavated area before commencement of work, and after every rainstorm or other hazard occurrence
- Access ladders must be provided for excavation depth exceeding 1.2 meters and at least every 25 meters around the perimeter of all excavations
- Ground water must be pumped and kept out from the bottom of all excavations
- Gas cylinders must not permitted in any excavation
- Edge line of excavation, ropes, chains and other tripping hazards must be marked in order to be clearly visible during day or night
- Starter bars or other protruding objects must be covered or removed
- Personnel removing shoring after completion of work must not be at the bottom of the excavation
- Only a trained and competent excavator operator is allowed to operate the excavator. The excavator operator shall have completed a training course on the operation of excavators
- Excavation machinery must be positioned and operated in a manner that will not endanger any person involved in the excavation works
- No person shall be permitted to work or to be at vicinity where he may be struck or endangered by excavation machinery or by material dislodged by it or falling from it. A safe distance must be maintained between the excavator machine and any person(s) working near to that machine. Person(s) must be prevented from entering the safe operational envelope of the machine; if no-one is there than no-one can get injured.
- visible barrier shall be erected around the excavator to prevent person(s) from walking close to its operating envelope
- Excavations must be gas checked before any personnel enter if evidence of gaseous elements is suspected
- Excavators shall not be used for lifting purposes at any time
- Excavation machinery shall be subjected to daily inspection and regular maintenance

6.51. Security

Contractor shall include the provision of full-time security personnel to manage Security measures at the Location. These personnel form part of the Emergency Response Team (ERT) and assist in emergency evacuation of personnel. The security department shall take the following measures daily.

- Attendance record for all Location personnel including sub-contractors and visitors
- Issuing of visitor pass as per location procedure
- Vehicle movement record for all vehicles entering and leaving the Location
- Records for all incoming and outgoing machineries such as cranes, excavators, piling rigs, etc,
- Stop and conduct checks on all persons, their identities, and any items in their possessions, custody or control
- Declaration form by persons carrying personal phones, pagers, walkie-talkies
- Control and management of unauthorized parking at Location premises

Page 791 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Location patrol
- Support the Contractor Drug & Alcohol Monitoring and testing Procedure
- Support Contractor Management in handling cases of workers involved in misconduct /violations at the project location.

6.52. Location traffic & Transport of Material

Contractors shall ensure the following conditions are in place for transportation of materials:

- All vehicles must be roadworthy and conform to local legal requirements.
- Inspection and maintenance of all vehicles and construction equipment before mobilization on Location. Periodic maintenance to be conducted after mobilization on-Location. All vehicles must be wellmaintained, and exhaust emissions must be clean, with no visible black smoke. All safety features/devices shall be fully operative at all times.
- Risk assessment on the 'transport of materials to include as a minimum: loading, securing, unloading of materials, escorting heavy loads, escorting loads in complicated/congested routes, use of banksmen and spotters as needed, peak hour mobilizations, pre-checks of heavy loads routes and areas impacted by inclement weather.
- Training and authorization of drivers of all classes of vehicles and construction equipment. Contractors must ensure that only licensed and authorised personnel are allowed to drive
- Designating Location personnel to act as traffic controllers. Traffic controllers to be briefed on roles and responsibilities.
- Demarcation of areas on-Location where traffic is allowed to be made known to all Location personnel and visitors. Contractors must erect barricades and install signs to separate pedestrians from vehicles. Particular attention must be paid at entrances to the Location.
- Reverse sensors to be fitted on all vehicles where practicable. In the event where fitting of the sensors are impractical, traffic controllers should be deployed.
- Seat belts are compulsory for the drivers and passengers of all classes of vehicles.
- Vehicles must be parked at a designated car park and shall not block access or emergency points
- Traffic management will be coordinated through the BPCL project manager.
- Only authorised routes must be used to and from the Location- Mobilization route drawings must be communicated and update accordingly.

6.53. Piling

Contractor shall carry out Piling operations shall be carried out, as a minimum, in accordance with the following requirements:

- Method statements risk assessments and emergency procedure for piling works
- Structure adequately supported by sheet piling or other means of shoring in accordance with the design of a professional engineer (PE)
- Contractors shall assign an area for pile preparation at a safe distance away from the piling zone
- To determine the piling machine's safe working area/access on Location during operation/movement based on type of machine operated and the ground load bearing capacity e Provision of suitable PPE to protect rig operators and workers from falling objects, noise, etc, Inspection of the piling machine daily prior to start work. Ensure all safety mechanism/devices are well known by involved personnel and are in good working condition
- Submit the Work Permit for piling prior to work commencement and proceed work subject to approval from the Project Manager
- Suitable footing such as steel plate and hard core to be provided if piling rig is to be driven on soft ground
- Only trained and competent persons to operate piling machines With valid LM certificates
- Bored holes to be properly barricaded and/or effectively covered.

Page 792 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- The piling machine shall be subjected to regular inspection and maintenance regime programme. It shall have updated and valid certification.

6.54. Demolition

Contractor shall perform demolition work in accordance with the following requirements:

- Method statements and risk assessments for demolition work shall include exposure to hazardous chemicals such as dust and toxic chemicals
- De-energize all electrical supply prior to commencement of demolition works
- Protection of adjacent structures against premature collapse
- Disposal of all types of waste in accordance to local authority requirements
- Demarcation for no-entry zones to prevent unauthorized entry into the structure being demolished.
- Appropriate PPE requirements such as safety harnesses, anchoring points, respirators, etc.

6.55. Commissioning

It is vital to mobilize commissioning managers and other key persons early, and to maintain continuity of people, planning and work processes from construction through cold commissioning to hot commissioning to start-up. Cold commissioning involves cleaning and functional testing of utility and process systems without the introduction of nitrogen and hydrocarbons. Hot commissioning involves introduction of hydrocarbons or other process materials for testing purposes and the functional testing of all remaining utility and process systems. During commissioning, BPCL work permit system will be used.

6.56. Environmental Management

BPCL Project team should audit the implementation of adequate environmental protection plan, procedures, protocols and actions.

Environmental management shall include the following.

- Waste management
- Chemicals management
    - Fugitive dust controls
- Noise and vibration controls
- Traffic management ensuring "clean wheel policy"
- Reinstatement of land after temporary works
- Vector controls (e.g. by dewatering, water treatment, use of water-based spraying of mosquitoes instead of thermal fogging, others)
- Rodent and pest controls
  Hygiene controls of office f and warehouse facilities and canteens
- Waste and spoil management to include hazardous waste (e.g. keeping a list of hazardous substances used and SDS, keeping a list and utilizing approved waste collectors, implementing programs to minimize waste by programme for recycling, reusing and recovering, others)Reporting of environmental incidents
- Training on environmental principles end procedures
- Effluent discharge controls
- Pollution prevention training
- Complying with all Pollution Control Board requirements
- Taking timely and adequate actions to resolve any potential audit observation

6.57. Waste Management

Page 793 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

All Contractors shall take provision for proper disposal of general and industrial waste at the Location. Collection of garbage and industrial waste should be conducted on a regular basis. Waste should be segregated based on the different types such as metal, wood, food, hazardous and general waste. General guidelines on disposal of waste should include the following.

Hazardous waste to be disposed in separate containers and clearly labelled. Contractors should engage a licensed industrial waste collector to dispose all hazardous waste. Hazardous waste includes waste generated from clinics such as

- Signs are to be placed at designated areas for the storage of waste bins or containers
- Batteries should be segregated and subsequently disposed in a safe and controlled manner
- Only approved contractors should be engaged for the recycling of scrap metal.
- Chemical containers and drums should be reused if still in good condition
- Disposal of garbage shall meet local legislative requirements and public health standards. Solid waste management shall be managed by the collection of refuse by licensed general waste collectors
- There shall not be any overloading or spillage of construction wastes from skips
- Refuse bins shall be properly covered
- Organic food wastes and construction wastes must not be stored together and shall be removed daily
- Waste/used oil shall be properly collected and sent to a pollution control board licensed collector/agency.
- dressings, swabs, used syringes, needles, cartridges, medicines, tablet and other chemical waste used in OHS centre.

6.58. Air Pollution Control by Contractors

- Lorries and vehicles carrying construction materials must be properly and adequately covered
- There shall not be any emission of dark smoke from construction equipment and machinery
- Open burning of construction waste is strictly prohibited.
- Dust preventive measures such as water sprinklers/spray, shielding, netting, covers/hoarding for aggregate/sand stores shall be provided and maintained.

6.59. Noise Pollution Control by Contractors

- DG sets at Location shall be with acoustic enclosure.
- Regular maintenance shall be carried out for all equipment and machinery to prevent excessive noise emission
- Noise monitoring activities may be needed/required on particular cases.

6.60. Toilet & Washing facilities by Contractors

Sufficient toilet and washing facilities at the Location office shall include the following facilities:

- Wash basins and showers shall be provided with hot and cold water, with soap and paper towels, continuous roller type towels or hand dryers
- Continuous supply of water should be provided at all times
- Toilet and washing facilities shall be kept clean and in working order
- Floors, walls, ceilings and fittings in the facilities should be of a finish that can be cleaned easily
- Waste water should be connected to a disposal drain and discharged to a drain

6.61. Canteen& Food Hygiene

Contractors shall maintain a high level of food hygiene at the Location. The necessary steps are to be taken to prevent food contamination that may lead to case(s) of food poisoning:

Page 794 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Provision of a designated area for consumption of food away from the Location.
- All Location personnel are to be briefed on good hygiene habits prior to consumption of food.
- Consumption of food at any other area other than the designated area should be strictly prohibited.
- Only food catering operators that are licensed are allowed to deliver food to the Location.
- Food handlers shall wear gloves or use tongs or other suitable implements when handling ready-to-eat or cooked food

6.62. Drinking Water

Contractors shall ensure the availability of sufficient potable drinking water for all personnel at the Location. Drinking water standards should meet WHO quality standards. Provision of potable drinking water and water stations shall also meet the following requirements:

- The stations for the drinking water and potable water tanks are to be labeled "Drinking Water" to differentiate from water used for industrial purposes
- Drinking water stations are to be indicated on the general Location layout plan to inform all personnel.

6.63. Lighting

Contractors shall provide sufficient and suitable lighting at every part of the Location as well as in the office. The requirements shall conform to the requirements stated in National building Code/OISD codes.

- General lighting requirements shall be as follows:
- Minimum 50 lux — for passageways, corridors and stairways
- Minimum 100 lux — for store rooms, toilets and wash rooms
- Minimum 200 lux -- moderate discrimination of detail required (eg. rough bench and machine work)
- Minimum 300 lux - close discrimination of detail required (eg. medium bench and machine work)
- Emergency lighting shall also be provided in the event of a power failure affecting the general lighting.

6.64. Health Monitoring

Health surveillance will be provided for staff where there is a legislative requirement or for staff who have been identified as having exposure to hazardous substances and the exposure to the hazardous substance is such that it is likely that an adverse effect on the staff's health may occur under the particular conditions of the work.

6.65. Procedures, Records Storage

BPCL HSSE procedures will be used as reference for Contractors compliance during the Construction Stage. Stringent of the two shall be complied with. Contractors Procedures will be aligned with BPCL Procedures. BPCL HSSE procedures will be fully in use during the commissioning stage,

Contractors shall ensure that the following records are obtained and kept on file:

- Insurance details for each contractor including Workers Compensation and Public Liability;
- Licenses and Permits
- Drivers license (motor vehicle and plant);
- Electrical contractors license;
- Crane drivers, signalmen, riggers, etc;

Contractors shall ensure that as a minimum the following documentation is maintained on the project:

- Details of HSSE training (external & In-house) and induction records, attendance records;
- Hot Work Permits and Confined Space permits; •Records of all accidents and near misses;

Page 795 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Details of all inspections, hazard/risk assessments;
- Copies of all Health & Safety reports

6.66. Emergency Response Plan (ERP)

Location shall develop and implement a comprehensive Emergency Response Plan to be used during the construction and commissioning phase. Communication with external authorities and Emergency Response Organizations shall be clearly defined.

A copy of the up-to-date Emergency Preparedness and Response Plan for each Area shall be made available as guide of the Emergency Response Team (ERT).

Specific high risk activities that require potentially complex rescues e.g. Confined Space within confined space or confined space requiring ventilation entry into a vessel loaded with trays or activities conduct from particularly high structures, such as flares, will be requires to have "Stand By" rescue personnel.

Locations shall ensure that contractors properly communicate the Emergency Respond Plan to their all personnel. Contractors will be responsible to ensure safety of all their supplier and short term service personnel and escort them at all time on Location.

All visitors and personnel entering the work Location shall be provided with instructions in what action to take in the event of a potential emergency situation. Key subject areas will be.

- Locations of medical facilities
- Overview of emergency plan and procedures
- Potential emergency threats on project
- Action to take in the event of an emergency
- Emergency notification alarms and their location
- Location of " Assembly Area"
- Action to be taken at a " Assembly Area"
- Medical Emergency response requirements
- First aid requirements
- Emergency Telephone numbers

6.67. Emergency Alarm System

Locations shall evaluate the need to install alarm systems. This could consist of the following.

- Gas Detection Alarm Systems
- Office Building Alarm System

6.68. Medical Facilities

Location shall maintain an OHS centre, equipped ambulance and first aid boxes at project Location as per the Building and Construction Workers Rules as applicable . Any project location more than 500 workers shall have one fully equipped ambulance van.

6.69. Incidents and Near Misses Reporting and Investigation

All accidents and dangerous occurrences shall be reported/ recorded as per BPCL IRIS system, regardless of whether or not personnel injury occurs.

- Fatal accident
- Lost Time Injury accident
- Dangerous occurrence
- Any incident involving a member of the public
- Near Misses

Page 796 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

BPCL shall conduct in-depth investigations into all fatal accidents, Lost Time injury, accidents, incidents involving a member of the public, dangerous occurrences. Copies of these investigations shall be forwarded to the contractor Representative.

6.70. Dangerous occurrence Reporting

- Bursting of a revolving vessel, wheel, and grindstone or grinding wheel moved by mechanical power.
- Collapse or failure of a crane, derrick, winch or other appliance used in raising or lowering persons or goods or any part thereof (except the breakage of chain or rope slings), or the overturning of the crane;
- Explosion or fire causing damage to the structure of any room or place in which persons are employed, or to any machine or plant, resulting in the complete suspension of ordinary work.
- Electrical short circuit or failure of electrical machinery, plant or apparatus, attended by explosion or fire, causing structural damage involving its stoppage or disuse.
- Explosion of a receiver or container used for the storage at a pressure greater than atmospheric pressure of any gas or gases (including air) or any liquid or solid resulting from the compression of gas.
- Collapse in whole or part from any cause whatsoever of any roof, wall, floor, structure or foundation forming part of the construction Location in which persons are employed.
- Total or partial collapse of any overburden, face tip or embankment on the construction Location.
- The overturning of, or collision with any object by any bulldozer, dumper, excavator, grader, lorry or shovel loader, or any mobile machine used for the handling of any substance on the construction Location.

6.71. Reporting of Fires to BPCL

The contractor shall report to the BPCL Representative all fires which occur on Location including any fires that have been extinguished by the contractor, and the Employers Representative may send staff to investigate such fires. The following information shall be provided:

- Time of fire;
- Location of fire;
- Means of extinguishing fire;
- Injury to any person / damage to any property; and
- The probable cause of fire.

6.72. Monthly Safety Submittal to the BPCL

The contractor shall submit following monthly reports to BPCL (but not limited to)

- Monthly report of total number of workmen.
- Total Man hours worked
- Number of LTI incidents
- Minutes of Location safety committee Meeting.
- Safety Inspection report
- Electrical Inspection Report
- Scaffold Inspection Report
- Crane Inspection Report
- Any potential concern

6.73. Safety Record to be maintained by contractor

The contractor shall submit following monthly reports to BPCL (but not limited to)

- Accident / Incident / Dangerous Occurrence report form.

Page 797 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Accident Statistic – Monthly report form.
- Contractors Monthly Safety report.
- Work permit records
- Risk Assessment worksheet.
- Safety Training Attendance record.
- Weekly Fire Fighting Equipment checklist.
- Electrical Inspection Report
- Scaffold Inspection Report
- Crane Inspection Report

6.74. Safety Inspections

Contractor shall establish following schedule of inspections as a minimum at each project Location and submit inspection checklist

Inspection Category	Inspection Type	Periodicity
Planned General Inspection	Contractor and subcontractor Location safety committee	Monthly
	Daily safety inspection by contractor Location safety Team	Daily
Routine Inspection	Inspection of equipment	Daily
Special inspection	As per equipment manufacturer's manual (scaffold, crane, HEMM, Electrical etc.)	----

6.75. Safety Recognition

Locations shall develop and implement recognition scheme to recognize outstanding safety performance of workers, supervisors and subcontractors. This recognition shall l be given out on a monthly basis.

BU/ Locations may award contractors who have performed well in best safety practices and achieved "Zero harm to People and Assets Incident" target.

7.0 Review

Corporate HSSE shall review this technical standard once in 2 years and need based in consultation with BU HSSE Role Holders.

Page 798 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

8.0 Definitions

Project	A project, by definition, is a temporary activity with a starting date, scope, specific goals and conditions, defined responsibilities, a budget, a planning, fixed end date, parties involved. It means here a EPC project related to construction and commissioning of a new installation at a new Location or expansion / modernization of existing installation at the existing Location. The project work activities may include but not limited to activities related to Construction, Erection, Modifications, Expansions, Maintenance, Demolishing, etc.
Project Safety Management Plan	A comprehensive document defining entire safety management system for the proposed activities. This shall be submitted by contractors in BU prescribed template and shall be approved by project owner/his representative prior to start of the work.
Project Locations	It includes A. New projects such as greenfield Locations as well as B. Projects within or adjacent to existing installation/plant (but separated by a fence with an independent access control. In case of project work , within or adjacent to existing installation/plan , prior work permit shall be required.

Appendix 1 : Project Personnel Responsibilities

BPCL Project Leader : Specific Responsibilities may include:

- Ensure Project Safety Management Plan is developed and implemented for the project and actively promote safety via personal example and supervision.
- Ensure the allocation of adequate resources for implementation of the Project Safety Management Plan
- Promote the reporting of all incidents (including non-injury) by all employees
- Ensure an audit plan is in place to monitor the compliance and effectiveness of the Project Safety Management Plan
- Endorsement of the BPCL HSSE Policy

BPCL Project Engineers

Specific Responsibilities may include.

- Ensure the effective communication of the Project Safety Management Plan to all employees, Contractors and its subcontractors
- Ensure the Project Safety Management plan as documented is implemented and to actively promote via personal example and supervision
- Familiarization and compliance of legislation as applied to the project
- To ensure safety training and induction programme are formulated and exercised to all employees, Contractors and its subcontractors
- Promote a recognition Scheme for personnel and Contractors with outstanding safety performance
- Promote a safety accountability scheme to deal with personnel with under expectation safety performance
- Promote the reporting of all incidents (including non-injury) by all employees.
- Ensure that the Contractors and their subcontractors have undertaken their Health and Safety obligations
- Undergo necessary safety training and induction of each construction Location

BPCL Project HSSE Role Holders

- Daily job planning with contractors job representatives
- Audit / inspection the implementation of the BPCL Location Project Safety Management Plan as defined herein.
- Liaison with Contractors' safety personnel and line managers.
- Audit Contractor Line Management implementation of the Project Safety Management Plan
- Participate inspections of the work areas with Contractors Management
- Advise supervisory staff and employees in the implementation of strategies to identify and control potential hazards.
- Liaise with Contractor's Safety Role Holders to request to the Contractors action plans for safety performance improvement as needed
- Audit Contractors equipment and machinery inspection process
- Audit Contractors' Hazardous Materials storage and controls
- Conduct internal safety training

Page 801 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

- Participate in safety meetings, including the Project Safety Committee Meetings
- Incident recordings and investigations
- Safety discipline

Appendix 3: Contractors Roles & Responsibilities

Contractor's Project Manager

The contractor's Manager has overall responsibility for the development and implementation of appropriate Location Managing and Health and Safety Standards of BPCL. He shall also keep all team members of their responsibilities, current, new and amended statutory requirements.

The contractor's representative shall inform the name of Location Manager to BPCL at least 3 weeks prior to commencement of work. He shall work closely with BPCL Project manager and BPCL Location Safety officer.

Contractor's Managers/ Supervisors

All managers / supervisors employed by the contractor shall conform to the following requirements:

i. The understanding and acceptance of their responsibilities under the BPCL health and Safety Policies and current Indian Health and Safety Legislation.

ii. Make themselves fully conversant with the contents of this document copy and operate within all legal and BPCL requirements applicable to the project location. This requires the continual and regular checking of these requirements in actual practice and taking any necessary corrective action.

iii. Ensuring that all newly engaged or transferred personnel under their control are made fully aware of any known hazards or processes within the project location and the preventative measures to be taken or provided to reduce the risk to personnel.

iv. Ensuring that all employees, including Supervisors, are properly trained for the specific tasks allotted to them. That all newly engaged and transferred employees receive the Health and Safety induction training prior to commencing work at the project location, and that they receive on the job training in health and Safety matters.

v. Ensuring that all personnel under their control are made fully aware of the emergency and evacuation procedures and that the locations of firefighting equipment, alarms, emergency doors and exit routes and assembly areas are pointed out to them.

vi. Making sure that all plant, tools and equipment at the location are maintained in a condition that is safe to use, that all the necessary Safety equipment is readily available, issued, used and maintained and that there is a safe means of access and egress to and from the work location at all times.

vii. Ensuring that the entire relevant safe operating procedures and systems of work instructions are generated, made known to all respective personnel and strictly adhered to. This includes the continual review of these procedures and instructions in practice and discussions with the employees concerned to ensure that they are workable and understood.

viii. Ensuring that all personnel under their control are adequately trained and capable of carrying out their duties correctly and safely, and that no newly engaged or transferred employees are required to undertake any task without the appropriate training, instruction and supervision.

ix. Knowing and thoroughly implementing the accident and incident reporting investigation procedure and taking prompt remedial action to prevent recurrences.

x. Assisting BPCL on investigations, complying with instructions given by him, and co-operating on areas recommended for improvement.

Page 807 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

xi. Demonstrating a personal interest in the health, Safety and welfare of personnel, applying a good standard of housekeeping within the work location and encouraging a positive response from other personnel by showing a high standard of self-discipline in respect of health and Safety.

xii. Maintaining a high standard of health and Safety at project location by the day to day Safety training, no matter how small the requirement, by individual instructions, as necessary.

xiii. Assisting the BPCL Representative on work location inspections and taking action any recommendations made, provided they are able to do so. Ensuring that in the event that any matter raised be unresolved, even with the facilities available to them, they refer the issue to the location Incharge/ Head.

xiv. Where new plant, equipment, process or changes are to be implemented within the work area, they are to make BPCL Representative(s) aware of the details and the potential effect such plant / equipment / practices are likely to have on the health and Safety of personnel in the work area.

xv. Seek the advice of the Location Incharge on matters of health and Safety, protective equipment, clothing, systems of work and procedures wherever any doubt exists.

xvi. Determine the requirements for protective equipment or clothing for operations and processes and requisition the same from stores and issue same to those requiring use of such equipment.

xvii. Notify their immediate superior of any defective, damaged or missing guards on machinery or plant and request that the matter be dealt with immediately prior to permitting the use of any such plant or machinery, etc.

xviii. Notifying the Location Incharge of all personnel whom they intend to employ on operations involving contact with hazardous process.

xix. The contractor's managers/ supervisors have an overall responsibility to ensure that all machinery, plant and equipment under their direct control are safe and without risk to employees.

xx. In the event of the contractor's managers/ supervisors not being able to resolve a health and Safety problem, especially ones reported to him by employees, he shall refer the matter to the BPCL project manager.

xxi. The contractor shall maintain Portable First Aid Boxes in fully equipped state at various places. The contractor shall ensure that at least one employee on every working shift, is a trained First Aider, capable of administering First Aid competently until the arrival of professional help, in an accident situation.

Contractor's Safety Officer

The contractor's Safety officer is primarily responsible for writing and the upkeep of his Safety Plan, and any other identified required procedures as the project progresses. Other responsibilities include, but are not limited to, advising the SM and any members of the project team on Safety matters, assuring compliance with BPCL Safety Manual and any other relevant Safety related documents, ensuring audits and inspections are conducted on a regular basis as required, ensure that personnel, at all levels within their scope receive appropriate Safety training through organized induction and refresher courses and activity toolbox talks , provide assistance to assure they fully comply with their responsibilities for Safety, chairing Safety committee meetings and constant liaison with the BPCL Safety Engineer. PSE shall be appointed and notified to the Employer in due course.

Page 808 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Appendix 4 : Facilities /Equipment for the Contractor's Safety Function

The following minimum facilities shall be provided:

S.No	Safety monitoring and Audio-Visual equipment details	Quantity
1	Portable hand held Digital Sound Level Meter (SLM)	
2	Portable hand held Digital Lux Meter	
3	Laptop computer with standard configuration including multimedia facilities.	
4	Colour Printer	
5	Computer Projector with Screen	
6	Overhead Projector	
7	35mm Camera	
8	Digital Camera with flash (4 Mega pixel minimum) with video facility	
9	Digital still Camera with flash (4 Mega pixel minimum)	
10	Portable loud speaker (for tool box talk and emergency purpose)	
11	Communication facilities like mobile phones and Walky talky	
12	Accident Investigation kit	

Page 809 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Appendix 5: Indicative Contractor Toolbox Meeting Structure

TOOLBOX MEETING STRUCTURE	
Coordinator	Contractor Supervisor
Attendees	Entire Work Crew for the workplace / work activity (Assemble workforce in groups of manageable size so the talk is effective)
Agenda	Supervisors shall consider the following when formulating the daily agenda: Work Permit Conditions PPE Requirements Area and Task risk analysis Emergency protocol, numbers and Assembly Areas Emergency Exit Routes (for new personnel) Equipment Condition and inspection Emergency Exit Routes (for new personnel) Dissemination of Safety Bulletins Significant Incidents / Near Misses / Preventive actions / Incident reports, safety trends & findings of incident investigations
Frequency	Daily/Weekly
Minutes	Toolbox meetings shall be considered a formal communication process and the recording of minutes with the standard Project Toolbox meeting record form shall be used

Page 810 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Page 811 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Appendix 6: Indicative Project Safety Statistics

Name of Project :

A : General

Indicator	Total
Man-hours Current Reporting Period	
Accumulated Man-hours (Since start of project)	
Days without any Lost Time Injury	

B. Lead Safety Indicators

	Target	Actual
Total Number of hazards/ unsafe conditions/ unsafe act Reported	Numbers	
Near misses and findings closed on time	100 %	
Safety audit and inspection findings closed on time	100 %	
Number of Monthly Safety Walks (against plan)	Numbers	
Number of Monthly Safety Committee Meetings	Numbers	
Number of Monthly Mass Communication Meetings	Numbers	

C. Lag Safety Indicators

	Target	Actual
Fatality	Zero	
Lost Time Injury	Zero	
First Aid Case	Zero	
Dangerous Occurrences/ Near Misses	Zero	
Spills	Zero	
Fires	Zero	
Asset damage Incident	Zero	
Traffic Incidents	Zero	
Security Incident	Zero	
Penalty Notices / Discipline Action Taken	Zero	

Page 812 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Total Lost Time Incident Rate (per 1,000,000 man-hours worked)	Zero	
Total Compensation Paid	Zero

Appendix 7 : Project Safety Basic Safety Rules

1. Contractor shall appoint adequate number of qualified and experienced safety staff at the BPCL Project Location.
2. All equipment, tools, crane, vehicle etc. brought by the contractor shall be inspected to ensure compliance with the applicable Safety requirements. Only those equipment, tools, crane, vehicle etc that meets the requirements and are approved by the BPCL shall be permitted for use.
3. Such inspections shall be carried out independently as well as jointly by contractor and BPCL HSSE staff. Inspections checklists shall be used for these inspections.
4. Contractor employees shall comply with the BPCL HSSE procedures & policies as applicable at the concerned project location.
5. Contractor shall follow project safety management plan duly reviewed and approved by BPCL.
6. Contractor employees shall follow Safety precautions and procedures concerning specific operations and jobs. Work or task shall be performed according to established procedures and with the designated tools & equipment.
7. Contractor employees shall not start work until authorized by the area owner or work supervisor from BPCL or his authorized agency.
8. Contractor employees shall only carryout the assigned task under a work permit issued by the BPCL or his authorized agency.
9. Contractor employees shall not bring Radios, Mobile phones, lighters, matches, or any other form of ignition sources within project locations.
10. Firearms, ammunitions, knifes etc. shall be strictly prohibited at project locations and workers camps within Industrial Sector.
11. Contractor employees shall not carryout photography or use video camera within the project locations without written approval of BPCL concerned department.
12. No Smoking Policy shall be strictly followed for all projects.
13. All temporary buildings of contractors within project locations shall be located in an area approved by the BPCL area owner and HSSE Department.
14. All temporary offices, office wiring including accessories installed therein shall be subjected to inspection & approval of BPCL. Any changes to approved wiring or installation of new electrical accessories shall be submitted to BPCL for review and approval prior to implementation.
15. Contractor shall ensure that construction areas, fabrication shop, corridors, offices material storage area, workshops etc. have adequate natural or artificial lighting.
16. Contractor shall furnish adequate clean supply of potable water, containers disposable cups to their employees for drinking water.
17. Contractor shall furnish adequate portable toilet facilities for his employees. All portable toilets shall be kept clean and located in an easily accessible area. If they are to be used at night, the area shall have adequate illumination.
18. Contractor shall properly secure, transport, and use compressed gas cylinders. Cylinders not in use shall be capped and marked.
19. BPCL fire and emergency response equipment and systems shall not be used without authorization and/or for any non-emergency activity. Such equipment shall not be impaired (restricted access) by contractor work activity.
20. Contractor shall comply with applicable rules and regulations for disposal of debris, waste material including hazardous, toxic chemicals.
21. Contractor shall provide required safety signs, posters, warning lights, night lights, barricades and other devices/equipment necessary for all situations or for temporary hazards created by the contractors work activity.
22. All excavations made by the contractor shall be adequately protected to prevent sloughing of earth, by shoring or sloping and shall be protected against personnel slipping or falling into the excavation.
23. Contractor shall guard or place appropriate barricades around temporary openings in floor, temporary impairments to handrails, stairways, or walkways. Existing machinery or equipment guards shall not be modified or altered.
24. Work on live electrical systems shall be conducted in accordance with tag-out, lockout, and permit procedures.

Page 814 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

25. Contractor shall follow State Pollution Control Board regulations for safe handling, storage & disposal of materials from the work .
26. When it is necessary for a contractor to operate cranes or lifting operations within 4 meters of the vicinity of energized electrical lines, the contractor shall review the hazards and precautions with the Tenant concerned area supervisor / end user to determine whether the lines can be de-energized. If the lines are to remain energized, the contractor is responsible to install suitable guards to prevent an electrical arc or accidental circuit condition. For such situations contractor shall submit a method statement along with a checklist for verifying all requirements.
27. Contractor shall ensure identification of underground services /pipelines etc in consultation with end user / facility owner prior to execution of job.
28. Contractor shall ensure compliance to compatibility requirements for hazardous material and cylinders storage.
29. Contractor supervisory personnel shall develop method/system and implement it to ensure that all safety procedures are understood and followed. Contractor supervisory personnel shall, at all times, set a good safety example.
30. Contractors shall be accountable for their employees' compliance with the Tenant safety rules.
31. Where it is apparent that contractor employees are not following prescribed Tenant safety regulations, policies, or procedures, the person observing such situations should notify the Tenant Supervising Department, who will take the necessary action to ensure that safe work conditions are maintained.
32. Horseplay, fighting, gambling, possessions of firearms or explosives, use of regulated drugs or alcohol, being under the influence of drugs or alcohol, theft, vandalism, sabotage, and distribution of unauthorized literature shall not be permitted. Those involved in such activities shall be removed from the project location and shall be liable for punishment by applicable law.
33. **For Project Locations, within existing installations/plants,** Contractor shall not perform any of the following jobs without the specific permission of the area supervisor / end user:

    a. Make repairs or changes to existing equipment
    b. Operate any valve, switch, or instrument control device.
    c. Operate any utility services such as electricity, water, air, nitrogen, etc.
    d. Connect into existing pipelines
    e. Connect into existing sewers
    f. Connect into existing electrical system or electrically operated equipment
    g. Operate electrical equipment or electrical switches
    h. Enter any closed vessel, tank, container, pit, excavations, or other confined space
    i. Perform work involving radiography (X-ray etc.)
    j. Use entity's pipelines, electrical conduits, handrails, or structures as supports for loads, ladders, or scaffolds
    k. Use entity's structure, pipe or other equipment for attaching blocks, lines, or other services which apply loads on the equipment
    l. Install guy lines across electrical lines
    m. Operate cranes or derricks near electrical lines
    n. Work on any machinery while it is in operation
    o. Dispose any material in unauthorized areas
    p. Make excavations without adequate protection to prevent sloughing and without fencing to prevent personnel from failing into them
    q. Operate electrical equipment without grounding or ground fault circuit interruption (GFCI) protection
    r. Move suspended loads without securing load to prevent swinging
    s. Operate any metal-wheeled equipment without adequate protection for the street paving.

Preamble

Indian petroleum industry is the energy lifeline of the nation and its continuous performance is essential for sovereignty and prosperity of the country. As the industry essentially deals with inherently inflammable substances throughout its value chain – upstream, midstream and downstream – Safety is of paramount importance to this industry as only safe performance at all times can ensure optimum ROI of these national assets and resources including sustainability.

While statutory organizations were in place all along to oversee safety aspects of Indian petroleum industry, Oil Industry Safety Directorate (OISD) was set up in 1986 Ministry of Petroleum and Natural Gas, Government of India as a knowledge centre for formulation of constantly updated world-scale standards for design, layout and operation of various equipment, facility and activities involved in this industry. Moreover, OISD was also given responsibility of monitoring implementation status of these standards through safety audits.

In more than 25 years of its existence, OISD has developed a rigorous, multi-layer, iterative and participative process of development of standards – starting with research by in-house experts and iterating through seeking & validating inputs from all stake-holders – operators, designers, national level knowledge authorities and public at large – with a feedback loop of constant updation based on ground level experience obtained through audits, incident analysis and environment scanning.

The participative process followed in standard formulation has resulted in excellent level of compliance by the industry culminating in a safer environment in the industry. OISD – except in the Upstream Petroleum Sector – is still a regulatory (and not a statutory) body but that has not affected implementation of the OISD standards. It also goes to prove the old adage that self-regulation is the best regulation. The quality and relevance of OISD standards had been further endorsed by their adoption in various statutory rules of the land.

Petroleum industry in India is significantly globalized at present in terms of technology content requiring its operation to keep pace with the relevant world scale standards & practices. This matches the OISD philosophy of continuous improvement keeping pace with the global developments in its target environment. To this end, OISD keeps track of changes through participation as member in large number of International and national level Knowledge Organizations – both in the field of standard development and implementation & monitoring in addition to updation of internal knowledge base through continuous research and application surveillance, thereby ensuring that this OISD Standard, along with all other extant ones, remains relevant, updated and effective on a real time basis in the applicable areas.

Together we strive to achieve NIL incidents in the entire Hydrocarbon Value Chain. This, besides other issues, calls for total engagement from all levels of the stake holder organizations, which we, at OISD, fervently look forward to.

Jai Hind!!!

Executive Director
Oil Industry Safety Directorate

Engineers India Ltd.

FOREWORD

At the time of development of this document, 113 OISD standards, recommended practices and guidelines are applicable to the Oil and Gas installations of Public sector Oil Companies in India. 11 of these standards have been adopted by Petroleum and Explosives Safety Organisation (PESO) in various rules administered by them and thus the provisions of these standards are mandatory for entire Oil & Gas sector to that extent.

A few serious accidents have occurred in the recent past in India and abroad including vapour cloud explosion and fire at Oil terminal near Jaipur emphasised the need for the industry to review the existing provisions of various guidelines and statutory requirements.

With the above in view the Government of India directed the Oil Industry Safety directorate to develop a comprehensive document covering all the facets of Safety in Design, Operation and Maintenance, of depots and terminals being run by marketing divisions of Oil companies with an objective to strengthen the existing system.

The present guideline on "Safety Practices During Construction" has been prepared by the functional committee based on, existing standards, guidelines & recommended practices of OISD, the recommendations arising out of recent major accidents and their analysis, the accumulated knowledge and experience of industry members in India and updation of National and International codes and practices.

The provisions of this document, if implemented objectively, may go a long way in enhancing overall safety standard and reduce accidents in Oil Installations.

Users are cautioned that no standard can be substitute to the "judgment and experience of Engineers"

This document will be reviewed periodically for improvements based on the new experiences and better understanding. Suggestions are also invited from the users after it is put into practice to improve the document further. Suggestions may be addressed to:

The Co-ordinator
Committee on "Safety Practices during Construction"

Oil Industry Safety Directorate

Government of India
Ministry of Petroleum & Natural Gas
8th Floor, OIDB Bhavan, Plot No. 2, Sector – 73, Noida – 201301 (U.P.)

Website: www.oisd.gov.in

Tele: 0120-2593800, Fax: 0120-2593802

This document in no way supersedes the statutory regulations of Chief Controller of Explosives (CCE), Factory Inspectorate or any other statutory body, which must be followed as applicable.

Engineers India Ltd

NOTE

Oil Industry Safety Directorate (OISD) publications are prepared for use in the Oil and Gas Industry under Ministry of Petroleum & natural Gas. These are the property of Ministry of Petroleum & Natural Gas and shall not be reproduced or copied and loaned or exhibited to others without written consent from OISD.

Though every effort has been made to assure the accuracy and reliability of the data contained in these documents, OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from their use.

These documents are intended to supplement rather than replace the prevailing statutory requirements.

SAFETY PRACTICES DURING CONSTRUCTION

1.0 INTRODUCTION

Safety in Construction Management deserves utmost attention especially in the hydrocarbon industry, such as Exploration, Refineries, Pipelines and Marketing installations, Gas Processing units etc. Construction is widely recognised as one of the accident prone activities. Most of the accidents are caused by inadequate planning, failure during the construction process and/or because of design deficiencies. Besides property loss, accidents also result in injuries and fatalities to the personnel, damage to environment which needs to be prevented.

The reasons for accidents during construction activities are related to unique nature of the industry, human behaviour, difficult work-site conditions, extended odd duty hours, lack of training & awareness and inadequate safety management. Unsafe working methods, lack of proper JSA (Job Safety Analysis) and use of improper / inadequate PPEs, equipment failure and improper housekeeping also tend to increase the accident rate in construction.

Ensuring good quality of materials, equipment and competent supervision along with compliance of standard engineering practices shall go a long way to in built safety into the system.

The objective of this document is to provide practical guidance on technical and educational framework for health, safety and environment in construction with a view to:

(a) prevent accidents and harmful effects on the health of workers arising from employment in construction;
(b) ensure appropriate safety during implementation of construction;
(c) provide safety practice guidelines for appropriate measures of planning, control and enforcement.
(d) protect environment.

2.0 SCOPE

This document specifies broad guidelines on HEALTH, SAFETY AND ENVIRONMENT practices to be adhered to during construction activities including green field projects in oil industry. However, before commencing any job, specific hazards and its effects should be assessed and necessary corrective/preventive actions should be taken by all concerned. The document is intended only to supplement and not to replace or supersede the prevailing statutory requirements, which shall also be followed as applicable. For Personal Protective Equipment, OISD-STD-155 (Part I&II) shall be referred to. The scope of this document does not include the design aspects and quality checks during construction.

3.0 DEFINITIONS

Definitions of various terminology are given below:

- **Adequate, appropriate or suitable** are used to describe qualitatively or quantitatively the means or method used to protect the men, machinery, material, property and enviroment.

- **By hand:** The work is done without the help of a mechanised tool.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

- **Competent Authority:** A stautory agency having the power to issue regulations, orders or other instructions having the force of law.

- **Competent person:** A person possessing adequate qualifications, such as suitable training and sufficient knowledge, experience and skill for the safe performance of the specific work. The competent authorities may define appropriate criteria for the designation of such persons and may determine the duties to be assigned to them.

- **Construction site:**

  A worksite involving new construction, modification or maintenance of existing facility, shutdown related activity, demolition, housekeeping etc.

- **Environment:**

  Environment includes water, air and land and the interrelationship which exists among and between water, air and land and human beings, other living creatures, plants, microorganisms and property.

- **Execution agency:**

  Any entity / person, having contractual obligation with the owner and who employs one or more workers on a construction site.

- **Hazard:** A condition or a set of conditions which has potential of causing injury to person, damage to property or environment.
- **Health:** Soundness of body covering Physical, Emotional, Psychological and Intellectual conditions of a worker which assists the attainment of the objectives.
- **Means of access or egress:** Passageways, corridors, stairs, platforms, ladders and any other means for entering or leaving the workplace or for escaping in case of danger.

- **Owner:** Any entity **/** person for whom construction job is carried out.

  It shall also include owner's designated representative/ consultant/ nominee/ agent, authorised from time to time to act for and on its behalf for supervising/ coordinating the activities of the execution agency.

- **Scaffold:** Any fixed, suspended or mobile temporary structure supporting workers and material or to gain access to any such structure and which is not a lifting appliance.
- **Safety :** Prevention & protection from exposure to Hazard.

- **Worker:** Any person engaged in construction activity.

- **Workplace:** Owner's designated premises where workers need to be present by virtue of their involvement in the construction activity**.**

4.0 GENERAL DUTIES

4.1 GENERAL DUTIES OF EXECUTION AGENCIES

4.1.1 Execution agency should:

i) provide means and organisation to comply with the Health, safety and environment protection measures required at the workplace.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

ii) provide and maintain workplaces, plant, equipment, tools and machinery and organise construction work so that, there is no risk of accident or injury to health of workers. In particular, construction work should be planned, prepared and undertaken so that:

(a) dangers liable to arise at the workplace, are prevented;
(b) excessively or unnecessarily strenuous work positions and movements are avoided;

- organisation of work takes into account the safety and health of workers and also environment protection;
- materials and products used are suitable from Health safety and environment protection point of view;

(c) working methods are adopted to safeguard workers against the harmful effects of chemical, physical and biological agents.

iii) establish committees with representatives of workers and management or make other arrangement for the participation of workers in ensuring safe working conditions.

iv) arrange for periodic safety inspections by competent persons of all buildings, plant, equipment, tools, machinery, workplaces and review of systems of work, regulations, standards or codes of practice. The competent person should examine and ascertain the safety of construction machinery and equipment.

v) provide such supervision to ensure that workers perform their work with due regard to safety and health of theirs as well as that of others.

vi) employ only those workers who are qualified, trained and suited by their age, physique, state of health and skill.

vii) satisfy themselves that all workers are informed and instructed in the hazards connected with their work and environment and trained in the precautions necessary to avoid accidents and injury to health.

viii) ensure that buildings, plant, equipment, tools, machinery or workplaces in which a dangerous defect has been found should not be used until the defect has been rectified.

ix) organise for and remain always prepared to take immediate steps to stop the operation and evacuate workers as appropriate, where there is an imminent danger to the safety of workers.

x) establish a checking system by which it can be ascertained that all the members of a shift, including operators of mobile equipment, have returned to the camp or base at the close of work on dispersed sites and where small groups of workers operate in isolation.

- provide appropriate first aid, training and welfare facilities to workers as per various statutes like the Factories Act 1948, Building & Construction Workers Regulation (BOCWR), etc. and, whenever collective measures are not feasible or are insufficient, provide and maintain personal protective equipment and clothing in line with the requirement as per OISD-STD-155 (Part I & II) on Personnel Protective

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

Equipment. They should also provide access to workers to occupational health services.

- educate workers about their right and the duty at any workplace to participate in ensuring safe working conditions to the extent of their control over the equipment and methods of work and to express views on working procedures adopted as may affect health, safety and environment.

xi) ensure that except in an emergency, workers unless duly authorised, should not interfere with, remove, alter or displace any safety device or other appliance furnished for their protection or the protection of others, or interfere with any method or process adopted with a view to avoiding accidents and injury to health.

xii) ensure that workers do not operate or interfere with plant and equipment that they have not been duly authorised to operate, maintain or use.

xiii) ensure that workers do not sleep, rest or cook etc in dangerous places such as scaffolds, railway tracks, garages, confined spaces or in the vicinity of fires, dangerous or toxic substances, machines or vehicles and heavy equipment etc.

xiv) obtain the necessary clearance/permits as required and specified by owner.

Arrangement for drinking water, toilet facilities, a creche and transport arrangement etc. to be provided as per statutory requirement.

xv) deploy a safety officer at site as per the requirement of Factory Act 1948/ Building & Construction Workers Regulation (BOCWR)/ Criticality of the job.

xvi) ensure that all employees/workmen undergo medical examination as required under the law or under the contract provision and keep a record of the same.

xvii) obtain the police verification of the workers/ supervisors arranged by him and the same is to be submitted to the owner.

xviii) not permit any employee/workmen/visitor to enter the work area under the influence of alcohol or any drugs.

4.2 GENERAL DUTIES OF OWNERS

4.2.1 Owners should:

i) co-ordinate or nominate a competent person to co-ordinate all activities relating to HEALTH, SAFETY AND ENVIRONMENT on their construction projects;

ii) inform all contractors on the work site / project of special risks to HEALTH, SAFETY AND ENVIRONMENT;

iii) ensure that executing agency is aware of the owner's requirements and the executing agency's responsibilities with respect to HEALTH, SAFETY AND ENVIRONMENT practices before starting the job.

5.0 SAFETY PRACTICES AT WORK PLACES

5.1. GENERAL PROVISIONS

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

Page 829 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

5.1.1 All openings and other areas likely to pose danger to workers should be clearly indicated and accident prevention measures taken as required. The working area should be clearly de-marketed to keep the workers in that area only.

5.1.2 Workers & Supervisors should use the safety helmet and other requisite Personal Protective Equipment according to job & site requirement as per OISD-STD-155 (Part I & II). They should be trained to use personal protective equipment including their limitations.

5.1.3 Never use solvents, alkalis and other oils to clean the skin.

5.1.4 Lift the load with back straight and knees bent. The contractor shall ensure at his construction site, no worker lifts by hand or carries overhead or over his back or shoulders any material, article, tool or pipelines exceeding in weight as per The Factory Act 1948 / Rule 38 of Building & Construction Workers Regulation (BOCWR), unless aided by another worker or device.

5.1.5 Ensure the usage of correct and tested tools and tackles. Don't allow the make shift tools and tackles. Also the tools should be suitable for a particular job and rated accordingly.

5.1.6 No loose clothing should be allowed while at construction site.

5.1.7 Start work only after proper authorization viz Work permit etc.

5.1.8 Job safety analysis to be done for all critical works.

5.1.9 Hydra should not be used for transportation of hook loaded materials.

5.1.10 Rope ladders should not be used at construction sites.

5.2 MEANS OF ACCESS AND EGRESS

Adequate and safe means of access (atleast two, differently located) to and egress from all workplaces should be provided. Same should be displayed and maintained. Escape routes should be marked prominently in workers friendly language. The escape routes should not be blocked at any point of time and same to be made understand to the workers.

5.3 HOUSEKEEPING

5.3.1 General Housekeeping shall be carried out by the contractor and he will ensure;

i) proper storage of materials and equipment;

ii) removal of scrap, inflammable material, waste and debris at appropriate intervals including slippery materials. (construction sand on road, oil/ lubricants, resins, etc.).

iii) to provide containers for segregation of disposal of debris at required places and regular cleaning of the same.

5.3.2 Removal of loose materials, which are not required for use, to be ensured. Accumulation of these at the site can obstruct means of access to and egress from workplaces and passageways.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

5.3.3 Workplaces and passageways, that are slippery owing to oil, grease or other causes, should be cleaned up or strewn with sand, sawdust, ash etc.

5.3.4 All surplus earth and debris are removed/disposed off from the working areas to officially designated dumpsites. The debris like plastics, packing material, rubber items should not be allowed to burn. Trucks carrying sand, earth and any pulverized materials etc. in order to avoid dust or odour impact, shall be covered while moving.

5.4 PRECAUTIONS AGAINST THE FALL OF MATERIALS & PERSONS AND COLLAPSE OF STRUCTURES

5.4.1 Precautions should be taken such as the provision of fencing, look-out men or barriers to protect any person against injury by the fall of materials, or tools or equipment being raised or lowered.

5.4.2 Where necessary to prevent danger, guys, stays or supports should be used or other effective precautions should be taken to prevent the collapse of structures or parts of structures that are being erected, maintained, repaired, dismantled or demolished.

5.4.3 All openings through which workers are liable to fall should be kept effectively covered or fenced and displayed prominently.

5.4.4 SOP of crane operation should be adhered to. The crane jacks/legs should be parked on compacted surface to avoid tilting.

5.5 PREVENTION OF UNAUTHORISED ENTRY

5.5.1 Construction sites located in built-up areas and alongside vehicular and pedestrian traffic routes should be fenced to prevent the entry of unauthorised persons.

5.5.2 Visitors should not be allowed access to site(s) unless accompanied by or authorised by a competent person. All authorized visitors should report at the site office. Contractor shall provide visitor's helmet (helmet with visitor sticker) and other PPEs like Safety Shoe, reflective jacket, respiratory protection etc. as per requirement of the site. All the workers to have photo IDs including the staff of vehicles used in the job.

5.6 FIRE PREVENTION AND FIRE FIGHTING

5.6.1 All necessary measures should be taken by the executing agency and owner to:

i) avoid the risk of fire;
ii) control quickly and efficiently any outbreak of fire;
iii) bring out a quick and safe evacuation of persons.
iv) Inform unit/fire station control room, where construction work is carried out within existing operating area.
v) DMP should be in place for the same.

5.6.2 Combustible materials such as packing materials, sawdust, greasy/oily waste and scrap wood or plastics should not be allowed to accumulate in workplaces but should be kept in closed metal containers in a safe place. To be disposed periodically away from site at designated place and assigned manner.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

5.6.3 Places where workers are employed on works prone to danger of fire should be provided with:

i) suitable and sufficient fire-extinguishing equipment, which should be easily visible and accessible;
ii) an adequate water supply at sufficient pressure meeting the requirements of various OISD standards.
iii) required PPEs.

5.6.4 To guard against danger at places having combustible material, workers should be trained in the action to be taken in the event of fire, including the use of means of escape.

5.6.5 At sites having combustible material, suitable visual sign boards should be provided to indicate clearly the direction of escape in case of fire.

5.6.6 Means of escape should be kept clear at all times. Escape routes should be frequently inspected and if possible marked in fluorescent colours particularly in high structures and where access is restricted.

5.7 LIGHTING

5.7.1 Where natural lighting is not adequate, working light fittings or portable hand-lamps should be provided at workplace on the construction site where a worker will do a job.

5.7.2 Emergency lighting should be provided for personnel safety during night time to facilitate standby lighting source, if normal system fails.

5.7.2 Artificial lighting should not produce glare or disturbing shadows.

5.7.3 Lamps should be protected by guards against accidental breakage.

5.7.4 The cables of portable electrical lighting equipment should be of adequate size & characteristics for the power requirements and of adequate mechanical strength to withstand severe conditions in construction operations.

5.7.5 For temporary lighting connection, mostly neutral and phases are connected and insulation tapes are provided. It is better to stagger the neutral and phase connection so that even if the tape gets removed from the joints, there will be no short circuit/ spark between neutral and phase due to staggering of neutral and phase.

5.7.6 All the temporary lighting/ machine connections are to be provided from a three core cable for better safety.

5.8 PLANT, MACHINERY, EQUIPMENT AND HAND TOOLS

5.8.1 General Provisions

i) Plant, machinery and equipment including hand tools, both manual and power driven, should:
   a) be of proper design and construction, taking into account health, Safety and ergonomic principles.
   b) be maintained in good working order;
   c) be used only for work for which they have been designed.
   d) be operated only by workers who have been authorised and given appropriate training.

Engineers India Ltd.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

e) be provided with protective guards, shields or other devices as required.

ii) Adequate instructions for safe use should be provided.

iii) Standard operating procedures should be established and used for all plant, machinery and equipment.

iv) Operators of plant, machinery and equipment should not be distracted while work is in progress.

v) Plant, machinery and equipment should be switched off when not in use and isolated before any adjustment, clearing or maintenance is done.

vi) Where trailing cables or hose pipes are used they should be kept as short as practicable and not allowed to create a hazard.

vii) All moving parts of machinery and equipment should be enclosed or adequately guarded.

viii) Every power-driven machine and equipment should be provided with adequate means, immediately accessible and readily identifiable to the operator, of stopping it quickly and preventing it from being started again inadvertently.

ix) Operators of plant, machinery, equipment and tools should be provided with PPEs, including where necessary, suitable ear protection.

5.8.2 Hand tools

i) Hand tools should be repaired by competent persons.

ii) Heads of hammers and other shock tools should be dressed or ground to a suitable radius on the edge as soon as they begin to mushroom or crack.

iii) When not in use and while being carried or transported, sharp tools should be kept in sheaths, shields, chests or other suitable containers.

iv) Only insulated or non-conducting tools should be used on or near live electrical installations.

v) Only non-sparking tools should be used near or in the presence of flammable or explosive dusts or vapours.

5.8.3 Pneumatic Tools

i) Operating triggers on portable pneumatic tools should be:
   a) so placed as to minimise the risk of accidental starting of the machine.
   b) so arranged as to close the air inlet valve automatically when the pressure of the operator's hand is removed.

ii) Hose and hose connections for compressed air supply to portable pneumatic tools should be:

Engineers India Ltd.

a) designed and tested for the pressure and service for which they are intended;
b) fastened securely on the pipe outlet and equipped with the safety chain, as appropriate.

iii) Pneumatic shock tools should be equipped with safety clips or retainers to prevent dies and tools from being accidentally expelled from the barrel.

iv) Pneumatic tools should be disconnected from power and the pressure in hose lines released before any adjustment or repair is made.

5.8.4 Electrical Tools

i) Low voltage portable electrical tools should generally be used.

ii) All electrical tools should be earthed, unless they are "all insulated" or "double insulated" tools which do not require earthing.

iii) All electrical tools should get inspected and maintained on a regular basis by a competent electrician and complete records kept.

iv) No temporary connected appliance shoud be left connected in the socket. Its plug should be immediately removed after use.

5.8.5 Engines

i) Engines should:

a) be installed so that they can be started safely and the maximum safe speed cannot be exceeded.
b) have controls for limiting speed.
c) have devices to stop them from a safe place in an emergency.
d) have their batteries top covered with insulating material.
e) have radiator fan covers in place.

ii) IC engines should not be run in confined spaces unless adequate exhaust ventilation is provided or the exhaust should be installed outside the confined place at suitable height.

iii) When IC engines are being fuelled:

a) the engine should be shut off.
b) care should be taken to avoid spilling fuel.
c) no person should smoke or have an naked light in the vicinity.
d) a fire extinguisher should be kept readily available.

iv) Secondary fuel reservoir should be placed outside the engine room.

6.0 CONSTRUCTION ACTIVITIES

The various common activities in construction are as under:

- Excavation
- Scaffolding, Platforms & Ladders
- Structural Work, Laying of Reinforcement & Concreting
- Road Work (Laying of roads)
- Cutting /Welding
- Working in Confined Space

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

- Proof/Pressure Testing
- Working at Heights
- Handling & Lifting Equipment
- Vehicle Movement
- Electrical
- Offshore
- Demolition
- Radiography
- Shot blasting/ spray painting
- Work above water

Work permit system as per requirement of OISD-STD-105 shall be followed for various construction activities. As regards the activities at work places including grass root project sites if not covered under OISD-STD-105, owner shall develop a suitable methodology for execution of various construction activities under work permit system for safe execution of the works.

The safe practices to be followed during the implementation of above construction activities are given below:

6.1 EXCAVATION

6.1.1 All excavation work should be planned and the method of excavation and the type of support work required should be decided considering the following:

i) the stability of the ground including the chances of seepage of water;
ii) the excavation will not affect adjoining buildings, structures or roadways;
iii) to prevent hazard, the Hydrocarbon lines, water, electrical and other above ground & underground public utilities should be shut off, re-routed or disconnected, if necessary; If such a presence is envisaged, clearance to be taken from respective competent authority/ person.
iv) the position of culvert/bridges, temporary roads and spoil heaps should be determined;
v) a signed rough sketch of the excavation site to be prepared and made the workers understand

6.1.2 Before digging begins on site, all excavation work should be planned and the method of excavation and the type of support work required should be decided based on good engineering practices and recorded.

6.1.3 All excavation work should be supervised by a competent person.

6.1.4 Sites of excavations should be thoroughly inspected:

i) daily, prior to each shift and after interruption in work of more than one day;
ii) after every blasting operation;
iii) after an unexpected fall of ground;
iv) after substantial damage to supports;
v) after a heavy rain, frost or snow;
vi) when boulder formations are encountered.
vii) for cracks in the nearby buildings or area as the excavation progresses and the same to be reviewed.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

6.1.5 Safe angle of repose while excavating trenches exceeding 1.5m depth upto 3.0m should be maintained. Based on site conditions, provide proper slope, usually 45^0,and suitable bench of 0.5m width at every 1.5m depth of excavation in all soils except hard rock or provide proper shoring and strutting to prevent cave-in or slides.

6.1.6 As far as possible, excavated earth should not be placed within one meter of the edge of the trench or depth of trench whichever is greater.

6.1.7 Don't allow vehicles to operate too close to excavated area. Maintain atleast 2m distance from edge of excavation or depth of trench whichever is greater. No load, plant or equipment should be placed or moved near the edge of any excavation where it is likely to cause its collapse and thereby endanger any person unless precautions such as the provision of shoring or piling are taken to prevent the sides from collapsing.

6.1.8 Adequately anchored stop blocks and barriers should be provided to prevent vehicles being driven into the excavation. Heavy vehicles should not be allowed near the excavation unless the support work has been specially designed to permit it.

6.1.9 If an excavation is likely to affect the stability of a structure on which persons are working, precautions should be taken to protect the structure from collapse.

6.1.10 Barricade at 1m height (with red & white band/self glowing caution board) should be provided for excavations beyond 1.0 m depth. Provide two entries/exits for such excavation through proper means. Lighting arrangements to be made to avoid any accidental fall in the excavated portion even when work is not in progress.

6.1.11 Necessary precautions should be taken for underground utility lines like cables, sewers etc. and necessary approvals/clearances from the concerned authorities shall be obtained before commencement of the excavation job.

6.1.12 Water shall be pumped/ bailed out, if any accumulates in the trench. Necessary precautions should be taken to prevent entry of surface water in trenches.

6.1.13 During / after rains, the soil becomes loose. Take additional precaution against collapse of side wall. During rains excavation should be avoided.

6.1.14 In hazardous areas, air should be tested to ascertain its quality. No one should be allowed entry till it is suitable for breathing.

6.1.15 In case of mechanised excavation, precaution shall be taken to not to allow anybody to come within one meter of extreme reach of the mechanical shovel. This area of reach of mechanical shovel should be marked / barricaded suitably. The mechanised excavator shall be operated by a well-trained experienced operator. When not in operation, the machine shall be kept on firm leveled ground with mechanical shovel resting on ground. Wheel or belt shall be suitably jammed to prevent any accidental movement of the machine. Suitable precautions as per manufacturer guidelines should be taken for dozers, graders and other heavy machines.

6.1.16 In case of blasting, follow strictly IS:4081-1986 & Indian Explosive Act and rules for storage, handling and carrying of explosive materials and execution of blasting operation.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

6.2 SCAFFOLDING, PLATFORMS & LADDERS

System of tagging shall be followed to indicate status of `Fit-for-Purpose' certification by a competent person for the scaffoldings. Green Tag shall indicate `Fit-for-Purpose' whereas Red Tag shall indicate `Unfit-for-purpose'. Accordingly only Red Tag shall be displayed during Erection & Dismantling.

All personnel engaged in erecting, using, dismantling scaffolds shall use full body safety harness with double lanyard with shock absorber connected with personal fall arrestor which should be secured to a properly designed anchor.

6.2.1 Scaffold related guidelines

General Requirements

Categories and Classification

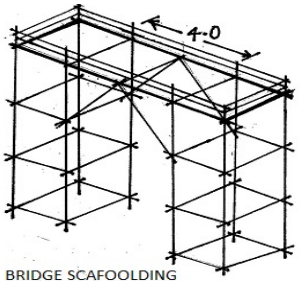
Most scaffolds fall into one of the four primary categories:

- Tube and coupler scaffold
- System scaffolds e.g. Cup lock, Ring lock, H frame scaffold
- Suspension(or Suspended) scaffold
- Mobile scaffold
- Special scaffold

Scaffolds are classified according to their intended use as:

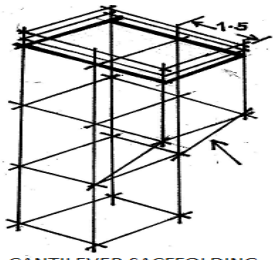
- Light duty
- Medium duty (General Purpose)
- Heavy duty

Type of Scaffolding	Load duty	Light		Medium	Heavy/Special		
	Maximum Safe load in Kg/m^2	75	150	225	300	450	600
Tubular with clamps	Max. bay length (distance between two verticals) in Meter	2.7	2.2	1.8	1.4	1.0	0.8
Cup / Ring lock		2.5	2.0	1.5	1.25	1.0	NA



Conditions where special scaffolding procedure is required:

1. Height of the scaffolding is more than 30 meters.



2. Scaffolding is special in nature/ type: cantilever more than 1 .5 meters, bridge more than 4 meters, scaffolding for machine/ equipment maintenance requiring frequent modifications, offshore scaffold, hanging scaffold; wooden scaffold (for specific use e.g. cooling tower), etc.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

BRIDGE SCAFOOLDING

CANTILEVER SACFFOLDING

For all such cases, but not limited to, in addition to checklist, a plant specific procedure cum checklist based on additional risk is to be prepared & validated by a competent person (example: procedure for erection/ dismantling shall be prepared and followed. If need felt, help from Engineering Cell/Third Party may be taken for checking proposed scaffold in respect of design and load carrying capacity etc.).

Specifications of Scaffolds

Applicable to all Scaffolds

1. All elevated structures/ working platform areas should be guarded on all sides.

2. Railings and toe boards should be provided on the platform.

3. Scaffolds shall be designed to support at least 4 times the anticipated weight of Men, material and wind force.

4. Make certain that all scaffolds are in plumb and level at all times.

5. Scaffolds shall be secured from tipping when the scaffold height exceeds four times its minimum base dimension.

6. Scaffolds must be constructed at least **3** planks wide unless location makes this physically impossible.

7. Landing platform should be provided at every 9 meter of height or less.

8. The members of scaffolds should extend at least 6" on either ends but not more than 12". They should be fastened on both ends and laid tight by clamps.

9. All scaffoldings having height to base ratio more than 4 shall be secured firmly with permanent structure in X and Y direction at least every 6 meters.

10. Scaffold which spread to 20 meter or more should have two accesses preferably opposite side.

Engineers India Ltd.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

11. Plastic Checklist holder with red marked to be used as a “Not Fit-for-Purpose” warning signboard and Green colour combined checklist to be used as “Fit-for-Purpose” signboard.

12. Keep distance of at least 150mm between high temp Pipelines or equipment and scaffolding.

13. Safe distance from overhead electrical lines to be maintained as per Site electrical safety procedures.

Applicable to Tube-and-coupler scaffold

1. Tube and coupler scaffolds over 30 meter in height must be Designed by a competent professional engineer (who by extensive knowledge, training, and experience have successfully demonstrated his ability to carry out scaffold design and load calculations).
2. Maximum height of first horizontal member (Ledger) of scaffolds from the Ground shall be 2.2 meters. Lower lift can be considered for heavy loads depending upon the scaffold design. When scaffold is more than 6 meter height for carrying heavy load, kicker lift should be provided at a height of 150mm from ground.

3. The top rail shall be at height of 900-1200 mm and Mid rails must be installed approximately halfway between the top rail and the platform surface. Toe boards (150mm) should be securely attached to the working platform. Toe boards are generally applicable to working platform and not for landing platforms.

4. The bay length & width depends on the height and the load to be carried by the scaffold.

5. Bracings shall be fitted up to full height of scaffold.

6. Standards should be joined having overlap of min 600 mm using three equally spaced swivel clamps or end to end using sleeve/pin type coupler.

7. Ledgers should be joined having overlap of min 600 mm using three equally spaced swivel clamps or end to end using sleeve coupler.

8. Base plate 150 x 150 x 6mm shall be used to support all vertical pipes of Scaffolds.

9. Sole plate shall be used at all unpaved area to support base late.

10. Scaffolding platform Grating shall be tied with clamp at both ends, and scaffolding platform Grating shall not overhang more than 150 mm and shall be at least 150 mm away from hot surface.

11. Every scaffold shall be provided with certified ladder and extending its free end shall be above platform by 1000 mm/ four rungs.

Engineers India Ltd

“OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines.”

Applicable to Mobile scaffolds

1. Attach castors with plain stems to the panel or adjustment screw by pins or other suitable means.
2. Apply castor brakes/lock at all times when scaffolding is not being moved.
3. Do not ride rolling scaffoldings.
4. Remove all material and equipment from platform before moving scaffolding.
5. Do not try to move rolling scaffolding without sufficient help. Watch out for holes protrusions in the floor and for overhead obstructions.
6. Do not use brackets on rolling scaffoldings without first considering the overturning effect.

Design Criteria

- All types of scaffolds shall be strong enough of carrying and transmitting all types of loads to the ground. All scaffolds shall be adequately secured, stiffened, both longitudinally and transversely.
- Scaffolding determines as per the requirement and use of scaffold such as:
    - Purpose of scaffolding
    - Loading on scaffold platform
    - Required height
    - Sufficient work place
    - Surrounding environment

Storage and inspection of materials

- All scaffolding material shall be stored at designated location to protect them from adverse environment conditions such as corrosion, weather.
- Storage racks/ Locations/ areas shall be clearly identified.
- Storage facility of scaffold material shall be properly constructed for its stability and load bearing capability.
- Steel pipes and scaffolding platform Grating shall be stacked horizontally according to length. Fittings, Couplers shall be stored in separate bins.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

- Defective material shall be removed from site.
- Scaffolding material such as tubular, planks, clamps etc. shall be inspected annually for contractor owned material by contractor. The visual inspection shall cover 100% scaffold materials.

Transportation and handling of scaffolding material

- Make sure that scaffold pipe shifting done in vehicle of appropriate length.
- Special safety care to be taken while shifting or lifting pipes manually.
- Rope and pulley should be used to lift pipe from height.

Safety requirements

A risk assessment to access scaffold hazards through inspection and work method statement for relevant work activities shall be made before erecting, dismantling, moving, or modifying scaffold. Examples of hazards to be considered include the following:

- Working at/from heights.
- The presence of nearby electrical lines or process equipment (e.g. hot line, vents, drains, etc.). Necessary safety distances shall be maintained as specified in site level electrical safety procedure.
- Possible emergency scenario, escape routes and responses.
- The condition and loading of working surfaces /platform /scaffold pipes and other components or loose material such as clamps/ bolts on the working platforms.
- The presence and activity of other people and equipment in the vicinity of the work.
- The weather (Heavy rain, high wind velocity-more than 20 knots, etc).
- Erection during dark hours.
- Scaffold collapse.
- Manual task (Manual Material Handling).
- Access and egress during normal and emergency condition.
- The effect of heavy equipment movement in close vicinity such as within 4 meters to be considered for direct hit and sagging of land in case of unpaved area.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

This assessment is a part of the work permit process but should also be extended to the specific job planning of the crew performing the work. Appropriate actions shall be taken to mitigate the hazards identified during the assessment.

Fall protection when erecting, dismantling, and modifying scaffolds shall be under the direction of a competent person (Scaffold Supervisor). Scaffold erectors (Scaffolder) shall use personal fall-protection systems that provide continuous fall protection while erecting, dismantling or modifying scaffolds unless the determination is made by a competent person that fall protection is not feasible or it creates a greater hazard. Fall protection can be accomplished through the use of adequate anchorages that are independent of the scaffold or by using scaffold systems and components that are approved by the manufacturer as adequate anchorages. Employees/workmen shall use appropriate fall-arrest equipment.

The footing for supported scaffolds shall be sound, rigid, and capable of supporting the maximum intended load, including the weight of the scaffold.

Scaffold platform grating shall be fastened on both ends and laid tight by scaffold clamps/couplers.

Manufacturer's guidelines for proprietary scaffolds (e.g. Cup lock, ring lock, H frame, Insulating modular scaffolds) shall be followed unless a competent person approves the variance and provided the variance complies with applicable regulations and generally accepted scaffold engineering practices.

Proprietary/special scaffold manufacturer's guidelines for erection and inspection should be available with users, and with plant maintenance engineer for reference.

The following safe practices with respect to scaffolds shall be followed:

- There shall be firm foundation for all scaffoldings. All scaffolding shall be made of sound material. Scaffolding material shall be inspected and used, only if found in good condition. Avoid using equipment whose strength is not known.

- Provide adequate Base for scaffolding posts. Metal base plate is used under all upright or standard scaffoldings. Correct type of couplers shall be used for all connections. Use right angle couplers for joining vertical to horizontal members and swivel type couplers for joining bracing with ledgers. For joining vertical load bearing members (standards), "joint pin" type couplers can also be used. The couplers shall be of a structural metal, such as drop-forged steel, malleable iron, or structural grade aluminum (use of gray cast iron is prohibited).

- Plumb and level scaffoldings as erection proceeds, so that braces will fit without forcing. Fasten all braces securely.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

- Where scaffoldings are erected above walkways or work areas, the space between toe board and railing should be screened (e.g. Safety net, Metal sheets).

- Whenever work is being done over men who are working on scaffolding, overhead protection should be provided on the scaffolding.

- Restrain free-standing scaffolding towers from tipping by guying or other means.

- A safe and convenient means of access shall be provided to the platform level. Means of access may be a portable ladder, fixed ladder, ramp or runway or stairway. The ladder shall be so installed that there supporting member (pipe) is just below ladder rung. This is to avoid tripping hazard, especially while using the ladder.

- During erection, the ladder shall be installed as early as practicable, but not later than first two horizontal members (Ledgers). This is to facilitate Scaffolder while erecting the scaffold.

- During erection/ dismantling, scaffolder shall use 'T' steps to minimize risk of accidental fall/ slip.

- Ladder should be provided with tie rods/studs at top and bottom rungs and secured to scaffolding with ladder clamps, at least 2 locations for a ladder of length up to 4 m & at 3 locations for more than 4 m long ladder.

- The horizontal member/ ledger on which ladder is to be fixed, must be clamped to two subsequent standard using fixed clamps.

- Do not cantilever or extend putlogs / trusses as side brackets, without thoroughly considering the loads to be applied.

- Do not climb scaffold using cross braces.

- Do not use ladders or makeshift devices on top of scaffoldings to increase the height.

- Have at least 12" overlap and 6" extension beyond centerline of support or cleat at both ends to prevent sliding.

- Do not allow unsupported ends of planking to extend an unsafe distance beyond supports.

- Planks shall be non-greasy and free from defects.

- Access to working platform shall be suitably protected against inadvertent fall by providing swing members/ swing gate or chains.

- When scaffolding is no longer required, request for dismantling of scaffold shall be sent to scaffolding supervisor through work permit.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

- Scaffold shall be removed from top bracings. Ties, rackers etc. should not be removed from section lower than the one which is being dismantled.
- Do not throw or allow falling to ground any scaffold member, board or fittings.
- Dismantled scaffold material shall be neatly stacked, away from the site until whole of scaffold has been dismantled.

6.2.2 Metal as material of construction

i) A scaffold should be provided and maintained or other equally safe and suitable provision should be made where work cannot safely be done on or from the ground or from part of a building or other permanent structure.

ii) Scaffolds should be provided with safe means of access, such as stairs, ladders or ramps. Ladders should be secured against inadvertent movement.

iii) Every scaffold should be constructed, erected, properly secured/ tied and maintained so as to prevent collapse or accidental displacement during erection, while in use, in idle state or dismantling.

iv) Every scaffold and part thereof should be constructed :

(a) in such a way so as not to cause hazards for workers during erection and dismantling;
(b) in such a way so as guard rails and other protective devices, platforms, ladders, stairs or ramps can be easily put together;
(c) with sound material and of requisite size and strength for the purpose for which it is to be used and maintained in a proper condition.

v) Boards and planks used for scaffolds should be protected against splitting.

vi) Materials used in the construction of scaffolds should be stored under good conditions and apart from any material unsuitable for scaffolds.

vii) Couplers should not cause deformation in tubes. Couplers should be made of drop forged steel or equivalent material.

viii) Tubes should be free from cracks, splits and excessive corrosion and be straight to the eye, and tube ends cut cleanly square with the tube axis.

ix) Scaffolds should be designed for their maximum load as per relevant codes.

x) Scaffolds should be adequately braced.

xi) Scaffolds which are not designed to be independent should be rigidly connected to the building at designated vertical and horizontal places.

xii) A scaffold should never extend above the highest anchorage to an extent which might endanger its stability and strength.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xiii) Loose bricks, drainpipes, chimney-pots or other unsuitable material should not be used for the construction or support of any part of a scaffold.

xiv) Scaffolds should be inspected and certified:

(a) before being taken into use;
(b) at periodic intervals thereafter as prescribed for different types of scaffolds;
(c) after any alteration, interruption in use, exposure to weather or seismic conditions or any other occurrence likely to have affected their strength or stability.

xv) Inspection should more particularly ascertain that:

(a) the scaffold is of suitable type and adequate for the job;
(b) materials used in its construction are sound and of sufficient strength;
(c) it is of sound construction and stable;
(d) that the required safeguards are in position.

xvi) A scaffold should not be erected, substantially altered or dismantled except by or under the supervision.

xvii) If out-rigger scaffolding is to be used, it should be specifically designed and inspected before putting in use.

6.2.3 Lifting appliances on scaffolds (CHAIN PULLEY BLOCKS, PULLERS)

i) When a lifting appliance is to be used on a scaffold:

(a) the parts of the scaffold should be carefully inspected to determine the additional strengthening and other safety measures required;
(b) any movement of the scaffold members should be prevented;
(c) if practicable, the uprights should be rigidly connected to a solid part of the building at the place where the lifting appliance is erected.

6.2.4 Prefabricated scaffolds

i) In the case of prefabricated scaffold systems, the instructions provided by the manufacturers or suppliers should be strictly adhered to. Prefabricated scaffolds should have adequate arrangements for fixing bracing.

ii) Frames of different types should not be intermingled in a single scaffold.

iii) Scaffolding shall be erected on firm and level ground. In case of loose or uneven terrain, care should be taken to see that the scaffolding is on firm footing by leveling / compacting or other means.

iv) All members of metal scaffolding shall be checked periodically to screen out defective / rusted members. All joints should be properly lubricated for easy tightening.

v) Entry to scaffolding should be restricted.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

vi) Erection, alteration and removal shall be done under supervision of experienced personnel.

vii) Use of barrels, boxes, loose bricks etc., for supporting scaffolds shall not be permitted.

viii) Each supporting member of platform shall be securely fastened and braced.

ix) Where planks are butt-joined, two parallel putlogs shall be used, not more than 100mm apart, to give support to each plank.

x) Platform plank shall not project beyond its end support to a distance exceeding 4 times the thickness of plank, unless it is effectively secured to prevent tipping. Cantilever planks should be avoided. If it is unavoidable overhang should be effectively secured to prevent tipping.

xi) The platform edges shall be provided with 150mm high toe board to eliminate hazards of tools or other objects falling from platform.

xii) Erect ladders in the “four up-one out position”

xiii) Ladder shall be properly secured with the structure.

xiv) Use non-slip devices, such as, rubber shoes or pointed steel ferules at the ladder foot, rubber wheels at ladder top, fixing wooden battens, cleats etc.

xv) When ladder is used for climbing over a platform, the ladder must be of sufficient length, to extend at least one meter above the platform, when erected against the platform in “four up-one out position.”

xvi) Portable ladders shall be used for heights not more than 4mt. Above 4mt flights, fixed ladders shall be provided with at least 600 mm landings at every 6mt or less.

xvii) The width of ladder shall not be less than 300mm and rungs shall be spaced not more than 300mm.

xviii) Every platform and means of access shall be kept free from obstruction.

xix) If grease, mud, gravel, mortar etc., fall on platform or scaffolds, these shall be removed immediately to avoid slippage.

xx) Workers shall not be allowed to work on scaffolds during storms or high wind. After heavy rain or storms, scaffolds shall be inspected before reuse.

xxi) Don't overload the scaffolding. Remove excess material and scrap immediately.

xxii) Dismantling of scaffolds shall be done in a pre-planned sequential manner.

6.2.5 Suspended scaffolds/ boatwain's chair

In addition to the requirements for scaffolds in general as regards soundness, stability and protection against the risk of falls, suspended scaffolds should meet the following specific requirements.

“OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines.”

Engineers India Ltd

(a) platforms should be designed and built with dimensions that are compatible with the stability of the structure as a whole, especially the length;
(b) the number or anchorage should be compatible with the dimensions of the platform;
(c) the safety of workers should be safeguarded by an extra rope having a point of attachment independent of the anchorage arrangements of the scaffold;
(d) the anchorage and other elements of support of the scaffold should be designed and built in such a way as to ensure sufficient strength;
(e) the ropes, winches, pulleys or pulley blocks should be designed, assembled, used and maintained according to the requirements established for lifting gear adapted to the lifting of persons according to national laws and regulations;
(f) before use, the whole structure should be checked by a competent person.

6.2.6 Bamboo Scaffolding

i) It should not be used in oil & gas installations and in the areas where hot work is to be done.

ii) For construction and maintenance of low rise residential and office buildings, situated outside explosive licensed area, bamboo scaffold, if unavoidable, should conform to provisions given in IS-3696 (Part 1)-1987.

6.3 STRUCTURAL WORK, LAYING OF REINFORCEMENT & CONCRETING

6.3.1 General provisions

i) The erection or dismantling of buildings, structures, civil engineering works, formwork, falsework and shoring should be carried out by trained workers only under the supervision of a competent person.

ii) Precautions should be taken to guard against danger to workers arising from any temporary state of weakness or instability of a structure.

iii) Formwork, falsework and shoring should be so designed, constructed and maintained that it will safely support all loads that may be imposed on it. Conformity with design during job execution shall be certified by the competent person and the relevant records shall be maintained.

iv) Formwork should be so designed and erected that working platforms, means of access, bracing and means of handling and stabilising are easily fixed to the formwork structure.

v) Proper methodology based on the design of the building / structure to be developed and approved by competent person before resorting to dismantling / modifications.

vi) All works / facilities should be certified for structural stabilities by a competent person and on statutory requirement completed before putting to use.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

6.3.2 Erection and dismantling of steel and prefabricated structures

i) The safety of workers employed on the erection and dismantling of steel and prefabricated structures should be ensured by appropriate means, such as provision and use of:

(a) ladders, gangways or fixed platforms;
(b) platforms, buckets, boatswain's chairs or other appropriate means suspended from lifting appliances;
(c) safety harnesses and lifelines supported on properly designed anchor, catch nets or catch platforms;
(d) Mechanical / Power-operated mobile working platforms;
(e) Proper Personal Protective Equipment.

ii) Steel and prefabricated structures should be so designed and made that they can be safely transported and erected. Route survey to be carried out from works to construction site route considering the load bearing capacity of the bridges, height of the bridges en-route and maximum width and length permissible without causing any hazard to public, the route and the equipment.

iii) In addition to the need for the stability of the part when erected, the design should explicitly take following into account:

(a) the conditions and methods of attachment in the operations of transport, storing and temporary support during erection or dismantling as applicable;
(b) Methods for the provision of safeguards such as railings and working platforms, and, when necessary, for mounting them easily on the structural steel or prefabricated parts.

iv) The hooks and other devices built in or provided on the structural steel or prefabricated parts that are required for lifting and transporting them should be so shaped, dimensioned and positioned as:

(a) to withstand with a sufficient margin the stresses to which they are subjected;
(b) Not to set up stresses in the part that could cause failures, or stresses in the structure itself not provided for in the plans, and be designed to permit easy release from the lifting appli-ance. Lifting points for floor and staircase units should be located (recessed if necessary) so that they do not protrude above the surface;
(c) To avoid imbalance or distortion of the lifted load.

v) Storeplaces should be so constructed that:

(a) there is no risk of structural steel or prefabricated parts falling or overturning;
(b) storage conditions generally ensure stability and avoid damage having regard to the method of storage and atmo-spheric conditions;
(c) racks are designed and secured on firm ground so that units cannot move accidentally.

vi) While they are being stored, transported, raised or set down, structural steel or prefabricated parts should not be subjected to stresses prejudicial to their stability.

vii) Every lifting appliance should:

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

(a) be suitable for the operations and not be capable of accidental disconnection;
(b) be approved or tested as per statutory requirement.

viii) Lifting hooks should have safety latch (self closing type).

ix) Lifting hooks, Tongs, clamps and other appliances for lifting structural steel and prefabricated parts should:

(a) be of such shape and dimensions as to ensure a secure grip without damaging the part;
(b) be marked with the maximum permissible load in the most unfavourable lifting conditions.
(c) be periodically inspected and certified to ensure further usage as per requirement of factory act / Building & Construction Workers Regulation (BOCWR).

x) Structural steel or prefabricated parts should be lifted only after rigging plan approved by competent person to prevent them from spinning, slipping or dropping accidentally.

xi) When necessary to prevent danger, before they are raised from the ground, structural steel or prefabricated parts should be provided with safety devices such as railings and working platforms to prevent falls of persons.

xii) While structural steel or prefabricated parts are being erected, the workers should be provided with appliances such as guiding ropes for guiding them as they are being lifted and set down, so as to avoid crushing of hands and to facilitate the operations. Use of such appliances should be ensured.

xiii) A raised structural steel or prefabricated part should be so secured and wall units so propped that their stability cannot be affected, even by external factors such as wind and passing loads before its release from the lifting appliance.

xiv) At work places, instruction should be given to the workers on the methods, arrangements and means required for the storage, transport, lifting and erection of structural steel or prefabricated parts, and, before erection starts, a meeting of all those responsible should be held to discuss and confirm the requirements for safe erection.

xv) During transportation within the construction area, attachments such as slings and straps mounted on structural steel or prefabricated parts should be securely fastened to the parts. Vehicle loading should be such that the vehicle and the load remain stable at all positions during transportation and unloading.

xvi) Structural steel or prefabricated parts should be so transported that the conditions do not affect the stability of the parts or the means of transport result in jolting, vibration or stresses due to blows, or loads of material or persons.

xvii) When the method of erection does not permit the provision of other means of protection against fall of persons, the workplaces should be protected by guardrails, and if appropriate by toe-boards.

xviii) When adverse weather conditions such as snow, hailstorm, rain and wind or reduced visibility, etc. entail risks of accidents, the rigging work should be interrupted after taking necessary safety precautions.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

xix) If necessary, to prevent danger, structural steel parts should be equipped with attachments for suspended scaffolds, lifelines or safety harnesses and other means of protection.

xx) The risks of falling, to which workers moving on high or sloping girders are exposed, should be limited by all means of adequate collective protection or, where this is impossible, by the use of a safety harness that is well secured to a properly designed support.

xxi) Structural steel parts that are to be erected at a height should as far as practicable be assembled on the ground.

xxii) When structural steel or prefabricated parts are being erected, a sufficiently extended area underneath the workplace should be barricaded or guarded

xxiii) Steel trusses that are being erected should be adequately shored, braced or guyed until they are permanently secured in position.

xxiv) Load-bearing structural member should not be dangerously weakened by cutting, holing or other means.

xxv) Structural members should not be forced into place by the hoisting machine while any worker is in such a position that he could be injured by the operation.

xxvi) Open-web steel joists that are hoisted singly should be directly placed in position and secured against dislodgment.

xxvii) All structures should be designed for either permanent anchors or provision for erection of anchors as and when required to support life line during any Maintenance work etc. during life of the structure. The point of provision of anchor should be indicated through suitable signage for ease of use as and when required.

6.3.3 Reinforcement

i) Ensure that workers use Personnel Protective equipment like safety helmet with chin straps, safety shoes, gloves, full body safety harness, safety goggles, etc.

ii) Don't place the hand below the rods for checking clear distance. Use measuring devices.

iii) Don't wear loose clothes while checking the rods.

iv) Don't stand unnecessarily on cantilever rods.

v) To carry out welding/cutting of rods, safety procedures/precautions as mentioned in Item No. 6.5 to be followed.

vi) For supplying of rods at heights, proper staging and/or bundling to be provided.

vii) Ensure barricading and staging for supplying and fixing of rods at height.

viii) For short distance carrying of materials on shoulders, suitable pads to be provided.

ix) While transporting material by trucks/trailers, the rods shall not protrude in front of or by the sides of driver's cabin. In case such protrusion cannot be avoided behind the deck, then it should not

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

extend 1/3rd of deck length or 1.5 Meters whichever is less and tied with red flags/lights.

x) Reinforcement rods, cut pieces etc. should be properly stored at identified locations and the scrap should be disposed off promptly on regular basis.

6.3.4 Concreting

i) Ensure stability of shuttering work before allowing concreting.

ii) Barricade the concreting area while pouring at height/depths.

iii) Keep vibrator hoses, pumping concrete accessories in healthy conditions and mechanically locked.

iv) Pipelines in concrete pumping system shall not be attached to temporary structures such as scaffolds and formwork support as the forces and movements may affect their integrity.

v) Check safety cages & guards around moving motors/parts etc. provided in concreting mixers.

vi) Use Personal Protective Equipment like gloves, safety shoes, full body safety harness, safety goggles, etc. while dealing with concrete and wear respirators for dealing with cement.

vii) Earthing of electrical mixers, vibrators, etc. should be done and verified.

viii) Cleaning of rotating drums of concrete mixers shall be done from outside. Lockout devices shall be provided where workers need to enter the drum for cleaning / inspection.

ix) Where concrete mixers are driven by internal combustion engine, exhaust points shall be located away from the worker's workstation so as to eliminate their exposure to obnoxious fumes.

x) Don't allow unauthorised person to stand under the concreting area.

xi) Ensure adequate lighting arrangements for carrying out concrete work during night.

xii) Don't allow the same workers to pour concrete round the clock. Insist on shift pattern.

xiii) During pouring, shuttering and its supports should be continuously watched for defects.

xiv) Never look into the drum mounted on truck (such as in case of Ready Mix Concrete).

6.4 ROAD WORK

6.4.1 Site shall be barricaded and provided with warning signs, including night warning lamps at appropriate locations for traffic diversion. This should be done sufficiently advance as a warning to the approaching drivers for the impending dander ahead.

6.4.2 Filled and empty bitumen drums shall be stacked separately at designated places.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

Page 851 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

6.4.3 Mixing aggregate with bitumen shall preferably be done with the help of bitumen batch mixing plant, unless operationally non-feasible.

6.4.4 Road rollers, Bitumen sprayers, Pavement finishers shall be driven by experienced drivers with valid driving license.

6.4.5 Workers handling hot bitumen sprayers or spreading bitumen aggregate mix or mixing bitumen with aggregate shall be provided with PVC hand gloves and rubber shoes with legging up to knee joints.

6.4.6 At the end of day's work, surplus hot bitumen in tar boiler shall be properly covered by a metal sheet, to prevent anything falling in it,

6.4.7 If bitumen accidentally falls on ground, it shall be immediately covered by sprinkling sand, to prevent anybody stepping on it. Then it shall be removed with the help of spade.

6.4.8 For cement concrete roads, besides site barricading and installation of warning signs for traffic diversion, safe practices mentioned in the chapter on "Concreting", shall also be applicable.

6.4.9 Any excavation for road work should be done only after surveying underground utilities and after taking suitable precautions. The underground utilities to be rerouted as required after approval of competent person / authority.

6.4.10 All the raw material for road construction/ maintenance to be stored on designated place which should be away from the running road. The running road should not be used for storing the sand, hot bitumen, etc..

6.4.11 Precaution should be taken that no construction material/ slab/ pre-fabricated object can come on the running road accidently or due to slipping. In such case, an erection plan should be designed and got approved from the competent authority.

6.5 CUTTING / WELDING

6.5.1 Common hazards involved in welding/cutting are sparks, molten metal, flying particles, harmful light rays, electric shocks , depletion in O_2 concentration due to generation of toxic gases, etc. Following precautions should be taken: -

i) A dry chemical powder (DCP) type fire extinguisher shall be made available in the work area.

ii) Adequate ventilation shall be ensured by opening manholes and fixing a shield or forced circulation of air etc, while doing a job in confined space.

iii) Ensure that only approved and well-maintained apparatus, such as torches, manifolds, regulators or pressure reducing valves, and acetylene generators, be used. Also their regular calibration where ever necessary.

iv) All panels and covers shall be kept in place, when operating an electric Arc welding machine. 30mA rating ELCB shall be ensured in the power receptacle of the welding machine.

v) The work piece should be connected directly to Power supply, and not indirectly through pipelines/ structures/ equipment etc.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

vi) The welding receptacles shall be rated for 63 A suitable for 415V, 3-Phase system with a scraping earth. Receptacles shall have necessary mechanical interlocks and earthing facilities.

vii) All cables, including welding and ground cables shall be checked for any worn out or cracked insulation before starting the job and such cables shall not be used. Ground cable should be separate without any loose joints.

viii) Cable coiling shall be maintained at minimum level, if not avoidable. Criss-crossing of welding/electrical power supply cables & gas cutting hoses shall be avoided. Care to be taken against damage of gas cutting hoses.

ix) An energised electrode shall not be left unattended.

x) The power source shall be turned off at the end of job.

xi) All gas cylinders shall be properly secured in upright position.

xii) Acetylene cylinder shall be turned and kept in such a way that the valve outlet points away from oxygen cylinder.

xiii) Acetylene cylinder key for opening valve shall be kept on valve stem, while cylinder is in use, so that the acetylene cylinder could be quickly turned off in case of emergency. Use flash back arrestors to prevent back-fire in acetylene/oxygen cylinder.

xiv) When not in use, valves of all cylinders shall be kept closed.

xv) All types of cylinders, whether full or empty, shall be stored at cool, dry place under shed.

xvi) Forced opening of any cylinder valve should not be attempted.

xvii) Lighted gas torch shall never be left unattended.

xviii) Store acetylene and oxygen cylinders separately.

xix) Store full and empty cylinders separately.

xx) Avoid cylinders coming into contact with heat.

xxi) Cylinders that are heavy or difficult to carry by hand may be rolled on their bottom edge but never dragged.

xxii) If cylinders have to be moved, be sure that the cylinder valves are shut off.

xxiii) Before changing torches, shut off the gas at the pressure reducing regulators and not by crimping the hose.

xxiv) Do not use matches to light torches, use a friction lighter. Gas torch should be ignited with the lighter only. It should not be ignited by touching other hot surfaces.

xxv) Move out any leaking cylinder immediately and cap it. No hot work should be permitted in the vicinity of such leaked cylinders.

xxvi) Use trolleys for oxygen & acetylene cylinder and chain them.

xxvii) Always use Red hose for acetylene and other fuel gases and Black for oxygen, and ensure that both are in equal length.

xxviii) Ensure that hoses are free from burns, cuts and cracks and properly clamped.

xxix) Avoid dragging hoses over sharp edges and objects

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

xxx) Do not wrap hoses around cylinders when in use or stored.

xxxi) Protect hoses from flying sparks, hot slag, and other hot objects. Protect cylinders by covering welding blanket while hot work in the vicinity.

xxxii) Lubricants shall not be used on Ox-fuel gas equipment.

xxxiii) During cutting/welding, use required PPEs like hand gloves, full body clothing of fire retardant / suitable material, safety shoes, full body safety harness, mask, goggles / face shields, welding screen of required DIN glass as per approved Weld Preparation Scheme.

xxxiv) Hot work permit to be taken if working in hazardous area.

6.6 WORKING IN CONFINED SPACES

6.6.1 Following safety practices for working in confined space like towers, columns, tanks and other vessels should be followed in addition to the safety guidelines for specific jobs like scaffolding, cutting/welding etc.

i) Shut down, positively isolate, depressurise and purge the vessel as per laid down procedures.

ii) Entry inside the vessel to carry out any job shall be done after issuance of valid permit only in line with the requirement of OISD-STD-105.

iii) Ensure proper and accessible means of exit before entry inside a confined space.

iv) The number of persons allowed inside the vessel should be limited to avoid overcrowding. Record of entering person shall be maintained with in and out time.

v) When the work is going on in the confined space, there should always be two men standby at the nearby manway / manhole equipped with communication arrangement to contact seniors and to evacuate the worker inside confined space in case of emergency.

vi) Before entering inside the vessels underground or located at lower elevation, probability of dense vapours accumulating nearby should also be considered in addition to inside the vessel and corrective action should be ensured.

vii) Ensure requisite O_2 level before entry in the confined space and monitor level periodically or other wise use required respiratory devices.

viii) Check for no Hydrocarbon or toxic substances before entry and monitor level periodically or use requisite Personal Protective Equipment.

ix) Ensure adequate ventilation or use respiratory devices.

x) Depending upon need, necessary respirator system, gas masks and suit shall be worn by everyone entering confined space. In case of sewer, OWS or in the confined area where there is a possibility of toxic or inert gas, required respiratory device, shall be used by everyone while entering.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xi) Barricade the confined spaces during hoisting, radiography, blasting, pressure testing etc.

xii) Use 24V flameproof lamp fittings only for illumination.

xiii) Use tools with air motors or electric tools with maximum voltage of 24V.

xiv) House keeping shall be well maintained.

xv) Required PPEs like Safety helmet, safety shoes and full body harness shall be worn by everyone entering the confined space.

xvi) Don't wear loose clothing while working in a confined space.

xvii) In case of the vessels which are likely to contain pyropheric substances (like Iron Sulphide), special care need to be taken before opening the vessel. Attempt should be made to remove the pyropheric substances. Otherwise, these should be always kept wet by suitable means.

xviii) The cutting torches should also be kept outside the vessel immediately after the cutting.

xix) The gas cylinders used for cutting/welding shall be kept outside. Care to be taken for the integrity of gas hoses and welding cables while work is in progress.

xx) All cables, hoses, welding equipment etc., shall be removed from confined space at end of each work day, even if the work is to be resumed in the same space the next day.

xxi) To the extent possible sludge shall be cleared and removed from outside before entering.

xxii) No naked light or flame or hot work such as welding, cutting and soldering should be permitted inside a confined space or area unless it has been made completely free of the flammable atmosphere, tested and found safe by a competent person. Only non-sparking tools and flameproof hand lamps protected with guard and safety torches should be used inside such confined space or area for initial inspection, cleaning or other work required to be done for making the area safe.

xxiii) Communication should be always maintained between the worker and the attendant.

xxiv) Inside the confined space spray painting should be avoided. If absolutely essential it should be done after ensuring adequate precautions including exhaust of paint vapours and continuous monitoring of concentration of oxygen and toxic gases.

xxv) Before issuing the vessel entry permit, it should be ensured that all the incoming and outgoing lines to and from the vessel are positively isolated. Where this is not applicable like dampers in HRSG system, Sufficient time is to be allowed to observe the leakage of hot gases from the dampers/ passing valves before taking any decision on vessel entry permit.

Engineers India Ltd.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

6.7 PROOF/PRESSURE TESTING

6.7.1 Review test procedure before allowing testing with water or air or any other fluid. Testing should be done only after proper Job Safety Analysis (JSA) and its approval.

6.7.2 Provide relief valves of adequate size while testing with air or other gases.

6.7.3 Ensure compliance of necessary precautions, step wise loading, tightening of fasteners, grouting etc. before and during testing.

6.7.4 Inform all concerned in advance of the testing.

6.7.5 Keep the vents open before opening any valve for filling/draining of liquid used for hydrotesting. The filling/draining should not exceed the designed rate for pressure testing.

6.7.6 Provide separate gauges of suitable range for pressurising pump and the equipment to be tested.

6.7.7 Provide gauges at designated locations for monitoring of pressures.

6.7.8 Check the calibration of all pressurising equipment and accessories and maintain records.

6.7.9 Take readings at pre-defined intervals.

6.7.10 Arrangement to be made to ensure that the pressurizing system i.e. motor-pump set is out of circuit so that the system under hydro testing is not re-pressurized by the contractor due to pressure drop before a pre-defined time.

6.8 WORKING AT HEIGHTS

6.8.1 General Provision

i) While working at a height of more than 2.2 meters, ISI approved full body harness shall be used.

ii) While working at a height of more than 2.2 meters, permit should be issued by competent person before commencement of the job.

iii) Worker should be well trained on usage of full body harness including its proper usage at the time of ascending/descending.

iv) All tools should be carried in tool bag/belt to avoid their falling.

v) If the job is on fragile/sloping roof, roof walk ladders shall be used.

vi) Provide lifeline properly designed, secured and anchored, wherever required. Mock Drill of use of lifeline at regular intervals to be carried out.

vii) Additional safety measures like providing Fall Arrestor type full body harness, safety net should be provided depending upon site conditions, job requirements.

viii) Keep working area neat and clean. Remove scrap material immediately.

ix) Don't throw or drop material/equipment from height.

x) Avoid jumping from one member to another. Use proper passageway.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

Page 856 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

xi) Keep both hands free while climbing. Don't try to bypass the steps of the ladder. Same to be followed while climbing down. Further on climbing down, front of the body to be towards the ladder.

xii) Try to maintain calm at height. Avoid over exertion.

xiii) Avoid movements on any structural member without fall protection.

xiv) Elevated workplaces including roofs should be provided with safe means of access and egress such as stairs, ramps or ladders.

xv) Fall protection hierarchy to be followed as below:

(a) Elimination: Explore possibility whether job can be done avoiding work at height.

(b) Prevention: Prevent fall of a worker by providing appropriate fall prevention system.

(c) Fall arrest system: Arrest the fall using suitable fall arrest system. Ensure to have a strong suitably designed anchor point.

(d) Warning Lines: Use a warning line using a rope or wire barrier around roof to warn workers that they are getting close to the roof edge.

(e) Safety Monitoring: Use a safety monitor to warn the workers.

(f) Administration: Prepare a written administrative procedure to ensure workers are doing the best that they can.

6.8.2 Roof Work

i) All roof-work operations should be pre-planned and properly supervised.

ii) Roof work should only be undertaken by workers who are physically and psychologically fit and have the necessary knowledge and experience for such work.

iii) Work on roofs shouldn't be carried on in weather conditions that threaten the safety of workers.

iv) Crawling boards, walkways and roof ladders should be securely fastened to a firm structure.

v) Roofing brackets should fit the slope of the roof and be securely supported.

vi) Where it is necessary for a person to kneel or crouch near the edge of the roof, necessary precautions should be taken.

vii) On a large roof where work have to be carried out at or near the edge, a simple barrier consisting of crossed scaffold tubes supporting a tubing guardrail may be provided.

viii) All covers for openings in roofs should be of substantial construction and be secured in position.

ix) Roofs with a pitch of more than 10 should be treated as sloping.

x) When work is being carried out on sloping roofs, sufficient and suitable crawling boards or roof ladders should be provided and firmly secured in position.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xi) During extensive work on the roof, strong barriers or guardrails and toe-boards should be provided to stop a person from falling off the roof.

xii) Where workers are required to work on or near roofs or other places covered with fragile material, through which they are liable to fall, they should be provided with suitable roof ladders or crawling boards strong enough and when spanning across the supports for the roof covering to support those workers.

xiii) A minimum of two boards should be provided so that it is not necessary for a person to stand on a fragile roof to move a board or a ladder, or for any other reason.

6.8.3 Work on tall chimneys

i) For the erection and repair of tall chimneys, scaffolding should be provided. A safety net should be maintained at a suitable distance below the scaffold.

ii) The scaffold floor should always be at least 65 cm below the top of the chimney.

iii) Under the working floor of the scaffolding the next lower floor should be left in position as a catch platform.

iv) The distance between the inside edge of the scaffold and the wall of the chimney should not exceed 20 cm at any point.

v) Catch platforms should be erected over:

(a) the entrance to the chimney;
(b) Passageways and working places where workers could be endangered by falling objects.

vi) For climbing tall chimneys, access should be provided by:

(a) stairs or ladders;
(b) a column of iron rungs securely embedded in the chimney wall;
(c) Other appropriate means.

vii) When workers use the outside rungs to climb the chimney, a securely fastened steel core rope looped at the free end and hanging down at least 3 m should be provided at the top to help the workers to climb on to the chimney.

viii) While work is being done on independent chimneys the area surrounding the chimney should be enclosed by fencing at a safe distance.

ix) Workers employed on the construction, alteration, maintenance or repair of tall chimneys should not:

a) work on the outside without a safety harness attached by a lifeline to a rung, ring or other secure anchorage;
b) put tools between the safety harness and the body or in pockets not intended for the purpose;
c) haul heavy materials or equipment up and down by hand to or from the workplace on the chimney;
d) fasten pulleys or scaffolding to reinforcing rings without first verifying their stability;
e) work alone;

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

f) climb a chimney that is not provided with securely anchored ladders or rungs;
g) Work on chimneys in use unless the necessary precautions to avoid danger from smoke and gases have been taken. Ensure that the outside surface temperature of the chimney is at
h) room temperature before taking up any job after shut down of the (system) chimney.

x) Work on independent chimneys should not be carried on in high winds, icy conditions, fog or during electrical storms.

6.9 HANDLING AND LIFTING EQUIPMENT:

6.9.1 General Provisions

Following are the general guidelines to be followed with regard to all types of handling and lifting equipment in addition to the guidelines for specific type of equipments dealt later on.

i) There should be a well-planned safety programme to ensure that all the lifting appliances and lifting gear are selected, installed, examined, tested, maintained, operated and dismantled with a view to preventing the occurrence of any accident;

ii) All lifting appliances shall be examined by competent persons at frequencies as specified in "The Factories act".

iii) Check thoroughly quality, size and condition of all lifting tools like chain pulley blocks, slings, U-clamps, D-shackles etc. before putting them in use.

iv) Safe lifting capacity of all lifting & handling equipment, tools and shackles should be got verified and certificates obtained from competent authorities before its use. The safe working load shall be marked on them.

v) Check periodically the oil, brakes, gears, horns and tyre pressure, lighting fixtures of all moving equipments like cranes, forklifts, trailers, etc. as per manufacturer's recommendations.

vi) Check the weights to be lifted and accordingly decide about the crane capacity, boom length and angle of erection.

vii) Allow lifting slings as short as possible and check packing at the friction points.

viii) While lifting/placing of the load, no unauthorised person shall remain within the radius of the boom and underneath the load.

ix) While loading, unloading and stacking of pipes, proper wedges shall be placed to prevent rolling down of the pipes.

x) Control longer jobs being lifted up from both ends.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xi) Only trained operators and riggers should carry out the job. While the crane is moving or lifting the load, the trained rigger should be there for keeping a vigil against hitting any other object.

xii) During high wind conditions and nights, lifting of heavy equipments should be avoided. If unavoidable to do erection in night, operator and rigger should be fully trained for night signaling. Also proper illumination should be there.

xiii) Allow crane to move on hard, firm and leveled ground. Ensure that all the crane pedestals/ hydraulic jacks taking weight of the crane and load are on a firm compacted surface.

xiv) When crane is in idle condition for long periods or unattended, crane boom should either be lowered or locked as per manufacturer's guidelines.

xv) Hook and load being lifted shall remain in full visibility of crane operators, while lifting, to the extent possible.

xvi) Don't allow booms or other parts of crane to come within 3 meters reach of overhead electrical cables.

xvii) No structural alterations or repairs should be made to any part of a lifting appliance, which may affect the safety of the appliance without the permission and supervision of the competent person.

6.9.2 Hoists

i) Hoist shafts should be enclosed with rigid panels or other adequate fencing at:

(a) ground level on all sides;
(b) all other levels at all points at which access is provided;
(c) all points at which persons are liable to be struck by any moving part.

ii) The enclosure of hoist shafts, except at approaches should extend where practicable at least 2 meters above the floor, platform or other place to which access is provided except where a lesser height is sufficient to prevent any person falling down the hoistway and there is no risk of any person coming into contact with any moving part of the hoist, but in no case should the enclosure be less than 1 meter in height.

iii) The guides of hoist platforms should offer sufficient resistance to bending and, in the case of jamming by a safety catch, to buckling.

iv) Where necessary to prevent danger, adequate covering should be provided above the top of hoist shafts to prevent material falling down them.

v) Outdoor hoist towers should be erected on firm foundations, and securely braced, guyed and anchored.

vi) A ladderway should extend from the bottom to the top of outdoor hoist towers, if no other ladderway exists within easy reach.

vii) Hoisting engines should be of ample capacity to control the heaviest load that they will have to move.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

viii) Hoists should be provided with devices that stop the hoisting engine as soon as the platform reaches its highest stopping place.

ix) Winches should be so constructed that the brake is applied when the control handle is not held in the operating position.

x) It should not be possible to set in motion from the platform a hoist, which is not designed for the conveyance of persons.

xi) Winches should not be fitted with pawl and ratchet gears on which the pawl must be disengaged before the platform is lowered.

xii) Hoist platforms should be capable of supporting the maximum load that they will have to carry with a safety factor.

xiii) Hoist platforms should be equipped with safety gear that will hold the platform with the maximum load if the hoisting rope breaks.

xiv) If workers have to enter the cage or go on the platform at landings there should be a locking arrangement preventing the cage or platform from moving while any worker is in or on it.

xv) On sides not used for loading and unloading, hoist platforms should be provided with toe-boards and enclosures of wire mesh or other suitable material to prevent the fall of parts of loads.

xvi) Where necessary to prevent danger from falling objects, hoist platforms should be provided with adequate covering.

xvii) Counterweights consisting of an assemblage of several parts should be made of specially constructed parts rigidly connected together.

xviii) Counterweights should run in guides.

xix) Platforms should be provided at all landings used by workers.

xx) Following notices should be posted up conspicuously and in very legible characters:

(a) on all hoists:

- on the platform: the carrying capacity in kilograms or other appropriate standard unit of weight;
- on the hoisting engine: the lifting capacity in kilograms or other appropriate standard unit of weight;

(b) on hoists authorised or certified for the conveyance of persons:

- on the platform or cage: the maximum number of persons to be carried at one time;

(c) on hoists for goods only:

- on every approach to the hoist and on the platform: prohibition of use by persons.

xxi) Hoists intended for the carriage of persons should be provided with a cage so constructed as to prevent any person from falling out or being trapped between the cage and any fixed part of the structure when the cage gate is shut, or from being struck by the counterbalance weight or by articles or materials tailing down the hoistway.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xxii) On each side in which access is provided, the cage should have a gate fitted with devices which ensure that the gate cannot be opened except when the cage is at a landing and that the gate must be closed before the cage can move away from the landing.

xxiii) Every gate in the enclosure of the hoist shaft which gives access from a landing place to the cage should be fitted with devices to ensure that the gate cannot be opened except when the cage is at that landing place, and that the cage cannot be moved away from that landing place until the gate is closed.

6.9.3 Derricks

Stiff-leg derricks

i) Derricks should be erected on a firm base capable of taking the combined weight of the crane structure and maximum rated load.

ii) Devices should be used to prevent masts from lifting out of their seating.

iii) Electrically operated derricks should be effectively earthed from the sole plate or framework.

iv) Counterweights should be so arranged that they do not subject the backstays, sleepers or pivots to excessive strain.

v) When derricks are mounted on wheels:

a) a rigid member should be used to maintain the correct distance between the wheels;
b) they should be equipped with struts to prevent them from dropping if a wheel breaks or the derrick is derailed.

vi) The length of a derrick jib should not be altered without consulting the manufacturer.

vii) The jib of a scotch derrick crane should not be erected within the backstays of the crane.

Guy derricks

i) The restraint of the guy ropes should be ensured by fitting stirrups or anchor plates in concrete foundations.

ii) The mast of guy derricks should be supported by six top guys spaced approximately equally.

iii) The spread of the guys of a guy derrick crane from the mast should not be more than 45^0 from the horizontal.

iv) Guy ropes of derricks should be equipped with a stretching screw or turnbuckle or other device to regulate the tension.

v) Gudgeon pins, sheave pins and fool bearings should be lubricated frequently.

vi) When a derrick is not in use, the boom should be anchored to prevent it from swinging.

6.9.4 Gin poles

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

i) Gin poles should:

(a) be straight;
(b) consist of steel or other suitable metal;
(c) be adequately guyed and anchored;
(d) be vertical or raked slightly towards the load;
(e) be of adequate strength for the loads that they will be required to lift/move.

ii) Gin poles should not be spliced and if a gin pole is composed of different elements, they should be assembled in conformity with their intrinsic material strength.

iii) Gin poles should be fastened at their feet to prevent displacement in operation.

iv) Gin poles, which are moved from place to place and re-erected, should not be taken into use again before the pole, lifting ropes, guys, blocks and other parts have been inspected, and the whole appliance has been tested under load.

v) When platforms or skips are hoisted by gin poles, precautions should be taken to prevent them from spinning and to provide for proper landing.

6.9.5 Tower cranes

i) Where tower cranes have cabs at high level, persons, capable and trained to work at heights, should only be employed as crane operators.

ii) The characteristics of the various machines available should be considered against the operating requirements and the surroundings in which the crane will operate before a particular type of crane is selected.

iii) Care should be taken in the assessment of wind loads both during operations and out of service. Account should also be taken of the effects of high structures on wind forces in the vicinity of the crane.

iv) The ground on which the tower crane stands should have the requisite bearing capacity. Account should be taken of seasonal variations in ground conditions.

v) Bases for tower cranes and tracks for rail-mounted tower cranes should be firm and level. Tower cranes should only operate on gradients within limits specified by the manufacturer. Tower cranes should only be erected at a safe distance from excavations and ditches.

vi) Tower cranes should be sited where there is clear space available for erection, operation and dismantling. As far as possible, cranes should be sited so that loads do not have to be handled over occupied premises, over public thoroughfares, other construction works and railways or near power cables.

vii) Where two or more tower cranes are sited in positions where their jibs could touch any part of the other crane, there should be direct means of communication between them and a distinct warning system operated from the cab so that one driver may alert the other of impending danger.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

viii) The manufacturers' instructions on the methods and sequence of erection and dismantling should be followed. The crane should be tested before being taken into use.

ix) The climbing operation of climbing tower cranes should be carried out in accordance with manufacturers' instructions. The free-standing height of the tower crane should not extend beyond what is safe and permissible in the manufacturers' instructions.

x) When the tower crane is left unattended, loads should be removed from the hook, the hook raised, the power switched off and the boom brought to the horizontal. For longer periods or at times when adverse weather conditions are expected, out of service procedures should be followed. The main jib should be slewed to the side of the tower away from the wind, put into free slew and the crane immobilised.

xi) A windspeed measuring device should be provided at an elevated position on the tower crane with the indicator fitted in the drivers' cab.

xii) Devices should be provided to prevent loads being moved to a point where the corresponding safe working load of the crane would be exceeded. Name boards or other items liable to catch the wind should not be mounted on a tower crane other than in accordance with the manufacturers' instructions.

xiii) Tower cranes should not be used for magnet, or demolition ball service, piling operations or other duties, which could impose excessive loading on the crane structure.

6.9.6 Lifting ropes

i) Only ropes with a known safe working capacity should be used as lifting ropes.

ii) Lifting ropes should be installed, maintained and inspected in accordance with manufacturers' instructions.

iii) Repaired steel ropes should not be used on hoists.

iv) Where multiple independent ropes are used, for the purpose of stability, to lift a work platform, each rope should be capable of carrying the load independently.

6.10 VEHICLE MOVEMENT

6.10.1 Park vehicles only at designated places. Don't block roads to create hindrance for other vehicles.

6.10.2 Don't overload the vehicle.

6.10.3 Obey speed limits and traffic rules.

6.10.4 Always expect the unexpected and be a defensive driver.

6.10.5 Drive carefully during adverse weather and road conditions.

6.10.6 Read the road ahead and ride to the left.

6.10.7 Be extra cautious at nights. Keep wind screens clean and lights in working condition.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

6.10.8 All vehicles used for carrying workers and construction materials must undergo predictive/preventive maintenance and daily checks

6.10.9 Driver with proper valid driving license shall only be allowed to drive the vehicle

6.10.10 Routes shall be leveled marked and planned in such a way so as to avoid potential hazards such as overhead power lines and sloping ground etc.

6.10.11 While reversing the vehicles, help of another worker should be ensured at all times

6.10.12 An unattended vehicle should have the engine switched off

6.10.13 Wherever possible one-way system shall be followed

6.10.14 Barriers/fixed stops should be provided for excavation/openings to prevent fall of vehicle

6.10.15 Load should be properly secured

6.10.16 The body of the tipper lorry should always be lowered before driving the vehicle off.

6.10.17 Signs/signals/caution boards etc. should be provided on routes.

6.10.18 All vehicles in a running process plants to use spark arrester on the exhaust.

6.10.19 No material should be protruding outside the vehicle for the safety of the public. If necessary, same to be marked as per RTO regulations.

6.10.20 Proper caution tag should be available on the vehicle for hazardous material like oil,.LPG, explosives, nuclear material, toxic fluids etc and the vehicle staff should be well informed about the potential danger of the material being transported by them.

6.10.21 An earth chain for the discharge of static electricity generated during transportation of specific material with the vehicle to be provided.

6.10.22 Drunken driving should be prohibited.

6.11 ELECTRICAL

6.11.1 General Provisions

i) Only persons having valid licenses shall be allowed to work on electrical facilities as per prevailing IE Act and rules thereunder including CEA rules/regulations.

ii) No person should be allowed to work on live circuit. The same, if unavoidable, special care and written authorisation need to be taken.

iii) Treat all circuits as "LIVE" unless ensured otherwise.

iv) Electrical " Lock Out - Tag Out (LOTO)" procedure "MUST" be followed for work on electrical system.

v) Display voltage ratings prominently with "Danger" signs in local language also.

vi) Put caution/notice signs before starting the repair works.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

vii) All electrical equipment operating above 250V shall have two separate and distinct connections to earth grid.

viii) Proper grounding to be ensured for all switch boards and equipment including Portable ones prior to taking into service.

ix) Make sure that electrical switch boards, portable tools, equipment (like grinding machine etc.) don't get wet during their usage. If it happens, stop the main supply, make the tools dry, check for specified insulation value and then only use them. Check proper earthing.

All temporary switch boards/ KIOSKS put up at work site should be suitably protected from rain and the level of same should be high enough to avoid contact with water due to water logging.

x) Don't work wet on electrical system.

xi) Don't overload the electrical system.

xii) Use only proper rated HRC fuses / ELCB / MCB.

xiii) Only ISI marked or equivalent industrial type extension boards and Plug sockets are to be used.

xiv) ELCB for all temporary connections must be provided using 3 pin plug.

xv) All power supply cables should be laid properly and neatly so that they don't cause hindrance to persons working and no physical damage also takes place to the cables during various construction activities.

xvi) All Power cables to be properly terminated using glands and lugs of proper size, type and crimped.

xvii) Use electrical fittings in Hazard zones as per area classification under OISD-STD-113.

xviii) Ensure pipe sleeve / conduit to protect underground cables at crossings.

xix) Don't lay unarmored cable directly on ground, wall, roof or trees. All temporary cables should be laid at least 750 mm below ground and cable markers should be provided. Proper sleeves should be provided at road crossings. In case temporary cables are to be laid on wooden poles/steel poles, the minimum cable heights should be 4.5 M.

xx) Maintain safe overhead distance of HT transmission lines as per latest CEA Safety Regulation.

xxi) Don't use pipelines/structures for earthing.

xxii) Don't make any unsafe temporary connections, e.g. naked joints etc.

xxiii) Ensure that temporary cables are free from cuts, damaged insulation, kinks or improper insulated joints.

xxiv) Check at periodic intervals that pins of sockets and joints are not loose.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

xxv) Protect electrical wires/equipment from water and naked flames.

xxvi) Illuminate level in all the work areas should be in line with OISD-RP-149.

xxvii) All switchboards should be of MS structure only and incoming/outgoing feeders should be marked.

xxviii) Hand lamps/ Torch should not be of more than 24V rating, and E'x' type should be in line with hazardous area classification.

xxix) Fire extinguishers (DCP/CO_2/Sand buckets) should be kept near temporary switch boards being used for construction purposes. Don't use water for fighting electrical fires.

xxx) ISI marked Insulating mats shall be provided in the front and back end of switch boards.

xxxi) All parts of electrical installations should be so constructed, installed and maintained as to prevent danger of electric shock, fire and explosion.

Periodic checking of electrical safety appliances such as gloves, insulating mats, hoods etc. to be done/witnessed in line with OISD-STD-137, and records to be maintained duly endorsed by the concerned.

xxxii) A notice displaying following, should be kept exhibited at suitable places in local language also:

a) prohibiting unauthorized persons from entering electrical equipment rooms or from handling or interfering with electrical apparatus;
b) containing directions as to procedures in case of fire, rescue of persons in contact with live conductors and the restoration of persons suffering from electric shock;
c) specifying the person to be notified in case of electrical accident or dangerous occurrence, and indicating how to communicate with him.

xxxiii) No other cables/pipes to be laid in trench used for electrical cables.

xxxiv) Utmost care should be taken while excavating Earth from cable trench to avoid damage or any accident.

xxxv) Sub-station floor cut-outs meant for switch board installations to be covered wherever installation is incomplete.

xxxvi) Flameproofness integrity of all flameproof equipment / fittings/fixtures to be ensured at all times.

NOTE: A Residual Current Operated Circuit Breaker (RCCB) or Earth Leakage Circuit Breaker (ELCB), when installed, protects a human being to the widest extent. RCCB or ELCB should be provided as per latest CEA Safety Regulation.

6.11.2 Inspection and maintenance

i) All electrical equipment should be inspected before taking into use to ensure suitability for its proposed use.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

ii) At the beginning of every shift, the person using the electrical equipment should make a careful external examination of the equipment and conductors, especially the flexible cables.

iii) Apart from some exceptional cases subject to work permits, work on or near live parts of electrical equipment should be forbidden.

Before starting any work on conductors and/or equipment, it is to be ensured that: power supply should be isolated by an authorized person following the concept of LOTO;

iv) After work has been done on conductors and/or equipment, the power supply should only be switched on again after work permit is returned back, lock/tag on isolated feeder are removed and the workplace is reported safe.

v) Electricians should be provided with approved and tested tools and personal protective equipment such as rubber gloves, arc flash suit etc.

vi) All conductors and equipment should be considered to be live unless there is a proof of the contrary.

vii) When work has to be done in dangerous proximity to live parts the power supply should be cut off. If for operational reasons this is not possible, the live parts should be fenced off or enclosed by qualified staff from the sub-station concerned.

6.11.3. Testing

i) Electrical installations should be inspected and tested as per approved plan and the results recorded.

ii) Periodic testing for proper functioning of the earth leakage protective devices should be carried out.

iii) Particular attention should be paid to the earthing of apparatus, the continuity of protective conductors, polarity and insulation resistance, protection against mechanical damage and condition of connections at points of entry.

6.12 OFFSHORE

6.12.1 General

The isolated nature of offshore installations are hazardous. They call for greater need for health safety and survival at offshore. Safety at offshore is safety of installations and safety of personnel. Safety problems and accidents at offshore have high risks due to limited space, helicopter operation, sea transport etc. Following are the general health and safety guidelines to be followed in addition to the safety guidelines stipulated for specific jobs dealt later on:

i) Workers should be well trained to do their job independently with high degree of self-control and self-discipline.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

ii) On arrival at offshore, everyone should be briefed about the safety rules to be followed at offshore, evacuation system etc. All personnel should wear overall (dangri), helmet and shoes for personnel protection.

iii) In case of emergency, workers should follow instruction of Field Production Superintendent (F.P.S.). In certain cases instructions may be given to abandon the offshore installation and evacuate the persons to safe location.

iv) To overcome above problems, offshore personnel must receive training for using life saving appliances and other personal survival techniques.

v) Any person working at offshore should have one person as standby for any eventuality.

vi) Periodical health check-up of all personal on platforms shall be ensured and remedial measures shall be taken as per statutory and other requirements.

6.12.2 Drilling Rigs

i) Location of jack up rigs should not be less than 5 Kms from shipping route. Orientation of the rig, wind direction, etc. are required for safe landing of helicopter. Information w.r.t. sea currents, wind speed, Hi- Low tide, etc. are required for mooring of supply vessels.

ii) Sea bed condition at every location should be ensured for safety of rig.

iii) Radio and other communication facilities should be such to maintain contact with base all times.

iv) During toeing of rig, the rig deck should be clear of load, toeing lines should be in good condition and tensions in various toeing lines should be constantly monitored.

v) Few steps during toeing are:

a) crane booms should be secured to their vesta,
b) all hatches and water tight doors should be closed,
c) number of personnel on board should be restricted,
d) evacuate in case of emergency and operation should be completed preferably in day light.

6.12.3 Drilling

i) In view of CO_2 and H_2S gas cut from well, effective ventilation should be provided where drilling is in progress.

ii) Safety alarm shall be checked in advance in view of failure of ventilation system.

iii) Suitable sensors for H_2S and Methane should be function tested time to time and suitable colour code should be given.

iv) Working areas of the crane should be illuminated during night to avoid accident.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

v) Clear space should be available for despatch and receipt of load and, in particular, basket transfer of passengers. Persons engaged in loading/unloading of materials should be protected from falling into the sea.

vi) Signal light should be fitted at the top of the jib.

vii) Crane hook should be fitted with safety latches.

viii) Experienced person should be engaged in operation of specific equipment like winches, cranes etc.

ix) At least three cable turns shall always be there on the winch drum.

x) Adequate communication like walkie talkie, round robin phone should be available between the crane operator, supervisor and helper.

xi) Crane operation should be completely stopped during helicopter landing/ taking off.

xii) Except for helicopter landing deck, all decks, platforms, bridges, ladders should have rigid and fixed guard rails atleast one meter high and should have one intermediate rail midway between the handrail and 100 mm toe board.

xiii) Wooden ladders shall not be used at offshore.

xiv) Flow sensor in the flow line should be ensured for safe working and to avoid blow out.

xv) Hydrogen sulphuide gas In offshore is of great risk and at 10 ppm (0.001%) concentration in air, a person should not be exposed for more than 8 hours, If concentration is more, then breathing apparatus should be used. Corrosion of equipment is also caused by H_2S.

xvi) Portable H_2S gas detector should be continously used.

6.12.4 Production Platforms

i) In case hydrocarbon Is released due to overpressure, leak, overflow, gas blow etc., shut down process to stop flow *of* hydrocarbon. Prevent ignition of released hydrocarbon and in case of fire shut in the process complex and follow emergency contigency plan.

ii) Sub surface safetv valve (SSSV)) below the well head should be actuated during uncontrolled well -flow and they should be regularly checked.

iii) Surface safety valve or SDV should be checked for no gas leakage from bleed port / flange etc., in the well head area. It should not be in "mechanical override" or bypassed from panel.

iv) High pressure gas lift lines - blowdown system should be O.K.

* Auto actuation of SDVs in the inlet of pressure vessels should be O.K. and in "normal position" from shutdown panels. A record of status of switches normal/bypassed

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

in auto-con* panels (PSH, PSL, LSL, ILSL) should be maintained.

*Shut Down Panels

v) Welders rectifier set and electrical connections to it should be checked and approved by electrical-in- charge for proper electrical safely.

vi) "SCADA" telementry system if available should be operational for remote opening and closing of wells at unmanned platforms (through RPMC).

vii) Local ESD/FSD (near the work site) should be provided for jobs of very critical nature, so that the persons working can access it immediately in emergency for safety. Safety officer should judge the requirement & inform FPS for the same.

viii) Railings and Gratings etc. in and around work area should be O.K. and inspected to avoid slippage of man into sea.

ix) Emergency Shut Down (ESD) system is initiated when an abnormal condition is detected. ESD should be checked once in six months.

x) Platform should be manned round the clock.

xi) Welding and cutting work should be regulated by hot work permit.

xii) All detectors should be calibrated as per recommendation of the manufacturer.

xiii) No system should be by-passed which affects the system of platform.

xiv) In H_2S field platforms, due care shall be taken as per recommendations.

xv) Follow the instructions of F.P.S. during stay at platform

6.12.5 Fire Prevention And Control

i) Provision be made for safe handling and storage of dirty rags, trash, and waste oil. Flammable liquids and chemicals applied on platform should be immediately cleaned.

ii) Paint containers and hydrocarbon samples, gas cylinders for welding and cutting should be stored properly. Cylinders should be transported in hand-cart.

iii) Smoking should be restricted and no smoking area should be identified.

iv) Special attention should be given to crude oil pump seals; diesel and gas engines which are potential source of ignition in the event of failure.

v) Fire and smoke detectors i.e. ultraviolet heat, thermal and smoke detector should be function tested once in three months.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

vi) Fire is controlled in offshore by water spraying, Halon, CO_2 flooding, DCP and sprinkler system.

vii) Foaming agent is applied for controlling fire in liquid hydrocarbon. The system is not effective in gas fire.

viii) Light weight breathing system should be used.

ix) The fire control plan at offshore should reveal control station, fire alarms and fire detectors, deluge valves and sprinkler, fire extinguishing appliances, fireman outfit and ventilation system.

x) Fire fighting equipment should be maintained in ready to use condition.

6.12.6 Life Saving Appliances

i) Life boats with a speed of 6 knots and carrying capacity upto 50 persons are used in offshore.

ii) No. of life boats on one installation should have a capacity to accommodate twice the number of persons onboard installation.

iii) Launching appliances and life boat equipment should be checked every week.

iv) Boat landing areas should be adequately illuminated.

v) Life raft has no power and they rely on drift.

vi) Life jacket lifts the wearer after entering water.

vii) Life buoys are used to rescue persons if any person accidentally falls in the sea.

viii) All life saving appliances should be inspected by the MMD surveyor /sr. officials once a year.

ix) Every life boat shall be inspected once a week.

x) Every life boat and life raft should be serviced once a year by a competent authority.

6.12.7 Safety Precautions during Helicopter Transportation

i) Passenger briefing regarding safety rules while travelling in helicopter should be carried out before boarding the helicopter.

ii) Emergency procedure should be briefed to all the passengers in case helicopter is to ditch into the sea.

iii) Heli-pad should have a non-skid surface. Nylon rope net should be stretched on the deck.

iv) Proper drainage should be available on helideck.

v) There should be no obstruction on the helideck itself and within 3 meters of its perimeter. Closest super structure above the helideck should have red obstruction light.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

vi) While landing on helicopter, fire crew of two persons should be standby adjacent to helideck.

vii) Heli-deck should be properly illuminated for night landing.

viii) During switching off helicopter, persons should not be allowed to go out/ towards helicopter

6.13 DEMOLITION

6.13.1. General provisions

i) When the demolition of any building or structure might present danger to workers or to the public:

(a) necessary precautions, methods and procedures should be adopted, including those for the disposal of waste or residues;
(b) the work should be planned and undertaken only under the supervision of a competent person.

ii) Before demolition operations begin:

(a) structural details and builders' drawings should be obtained wherever possible;
(b) details of the previous use should be obtained to identify any possible contamination and hazards from chemicals, flammables, etc.;
(c) an initial survey should be carried out to identify any structural problems and risks associated with flammable substances and substances hazardous to health. The survey should note the type of ground on which the structure is erected, the condition of the roof trusses, the type of framing used in framed structures and the load-bearing walls;
(d) a method of demolition should be formulated after the survey and recorded in a method statement having taken all the various considerations into account and identifying the problems and their solutions;

iii) All electric, gas, water and steam service lines should be shut off and, as necessary, capped or otherwise controlled at or outside the construction site before work commences.

iv) If it is necessary to maintain any electric power, water or other services during demolition operations, they should be adequately protected against damage.

v) As far as practicable, the danger zone round the building should be adequately fenced off and sign posted. To protect the public a fence 2m high should be erected enclosing the demolition operations and the access gates should be secured outside working hours.

vi) The fabric of buildings contaminated with substances hazardous to health should be decontaminated. Protective clothing and respiratory devices should be provided and worn.

vii) Where plant has contained flammable materials, special precautions should be taken to avoid fire and explosion.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

viii) The plant to be demolished should be isolated from all other plant that may contain flammable materials. Any residual flammable material in the plant should be rendered safe by cleaning, purging or the application of an inert atmosphere as appropriate.

ix) Care should be taken not to demolish any parts, which would destroy the stability of other parts.

x) Demolition activities should not be continued under adverse climatic conditions such as high winds, which could cause the collapse of already weakened structures.

xi) To prevent hazards parts of structures should be adequately shored, braced or otherwise supported.

xii) Structures should not be left in a condition in which they could be brought down by wind pressure or vibration.

xiii) Where a deliberate controlled collapse technique is to be used, expert engineering advice should be obtained, and:

(a) it should only be used where the whole structure is to come down because it relies on the removal of key structural members to effect a total collapse;
(b) it should only be used on sites that are fairly level and where there is enough surrounding space for all operatives and equipment to be withdrawn to a safe distance.

xiv) When equipment such as power shovels and bulldozers are used for demolition, due consideration should be given to the nature of the building or structure, its dimensions, as well as to the power of the equipment being used.

xv) If a swinging weight is used for demolition, a safety zone having a width of at least one-and-a-half times the height of the building or structure should be maintained around the points of impact.

6.13.2. Demolition of structural steelwork

i) All precautions should be taken to prevent danger from any sudden twist, spring or collapse of steelwork, ironwork or reinforced concrete when it is cut or released.

ii) Steel construction should be demolished tier by tier.

iii) Structural steel parts should be lowered and not dropped from a height.

6.14 RADIOGRAPHY

6.14.1 All radiography jobs shall be carried out as per BARC Safety Regulations

6.14.2 During field radiography, nearby area around the radiation source should be cordoned off.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

6.14.3 If the field radiography is to be done at the same location repeatedly, it is advisable to provide either a wire fencing around or a temporary brick enclosure.

6.14.4 Special permission/permit should be taken for radiography from area-in-charge.

6.14.5 As far as possible, field radiography should be done only during night time when there is little or no occupancy there.

6.14.6 Radiation warning signals should be pasted all along the cordoned off area.

6.14.7 Entry into the restricted area by unauthorised persons should be strictly prohibited during exposure.

6.14.8 The radiation level alongwith the cordon should be monitored by a suitable and well-calibrated radiation survey meter.

6.14.9 All personnel working with radiography sources should wear appropriate protective equipment and film badges issued by BARC.

6.14.10 Protection facilities such as manipulator rod, remote handling tongs, lead pots, radiation hazard placards and means of cordon off shall be available at each site.

6.14.11 The radiography source shall never be touched or handled directly with hands.

6.14.12 The package containing radiography cameras and sources should never be carried by public transport like bus, train etc.

6.14.13 Radiography sources and cameras, when not in use, should be stored inside a source pit with lock and key arrangement as approved by BARC. The storage room should preferably be located in an isolated area of minimum occupancy and radiation level outside the storage room should not exceed 0.25 mR/hr as per BARC Regulations.

6.14.14 In case of an accident (due to loss or of damage to radiography source), action should be taken in line with BARC Safety Rules/Guidelines.

6.14.15 Technologically advance methods should be preferred for reduced radiation effect wherever safety so warrants.

6.15 GRIT SHOT/ SLAG BLASTING/ SPRAY PAINTING

6.15.1 Blasting for surface preparation should be used only after approval from competent person.

6.15.2 Air Compressor used for grit/shot/slag blasting/painting should have guard and positioned away from the work place.

6.15.3 Exhaust of the prime mover, if IC engine is used, should be fitted with PESO approved spark arrester (in case of work in hazardous area) and directed away from the work place.

6.15.4 In case of motor driven compressor, the body of the motor as well as the compressor to be properly earthed.

6.15.5 The hoses used for compressed air should be of proper quality, and health of the same to be ensured through regular check/ test.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

6.15.6 The operator of grit/shot/slag blasting/painting should wear suitable PPE's including mask and the area should be cordoned off.

6.15.7 Adequate measures to be taken to suppress dust/spray particle.

6.15.8 When these activities are done in confined places, adequate measure to be taken including monitoring Oxygen level and ensuring proper ventilation.

6.15.9 Proper fire fighting arrangements are to be made where spray painting is in progress.

6.15.10 Some paints and their supplements are toxic also and emit offensive smell. PPE to workers should be suitable to address this issue.

6.15.11 "No Smoking Zone" boards should be displayed prominantly in paints shop/ spray paint area.

6.16 WORK ABOVE WATER

6.16.1 General Provisions

i) Where work is done over or in close proximity to water & where possibility of drowning exists, provision should be made for:
   a) preventing workers from falling into water;
   b) the rescue of workers in danger of drowning;
   c) safe and sufficient transport.
   d) deputation of lifeguards/divers.
   e) preventing of persons suffering from hydrophobia on deputation to work above water.

ii) Provisions for the safe performance of work over or in close proximity to water should include, where appropriate, the provision and use of suitable and adequate:
   a) fencing, safety nets and safety harnesses;
   b) lifebuoys, life jackets and manned boats;
   c) protection against such hazards as reptiles bushes/ polluted water and other animals.
   d) deputation of lifeguards/divers.

iii) Gangways, pontoons, bridges, footbridges and other walkways or work places over water should:
   a) possess adequate strength and stability;
   b) be sufficiently wide to allow safe movement of workers;
   c) have level surfaces free from tripping hazards;
   d) be adequately lit when natural light is insufficient;
   e) where practicable and necessary, to prevent danger, be provided with toe-boards, guard rails, hand ropes etc.
   f) be secured to prevent dislodgment by rising water or high winds;
   g) if necessary, be equipped with ladders which should be sound, of sufficient strength and length and be securely lashed to prevent slipping.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

iv) All deck openings including those for buckets should be fenced.

v) All the employees (owner, contractor and contractor workers) working above and under the water should comply with the requirements of Standards of Training, Certification and Watchkeeping 95 (STCW 95).

6.16.2 Rescue & Emergency procedures

i) Persons who work over water should be provided with some form of buoyancy aid. Life jackets should be provided for sufficient freedom of movement, have sufficient buoyancy to bring persons to the surface and keep them afloat face upwards, be easily secured to the body, be readily visible by way of self luminous paint/strip.

ii) Nobody should work alone on or above water.

iii) Each worker should be trained in the procedure to be followed in the event of an emergency.

iv) Necessary rescue arrangements like divers, rescue boats etc to be in place.

v) Persons to be trained for CPR/ Artificial resuscitation as an first aid to the rescued person.

vi) Also for off shore operations. Speed of water current and water temperature to be considered.

7.0 ADDITIONAL SAFETY PRECAUTION FOR UNITS WITH HYDROCARBONS

In addition to general safety precautions as outlined above for the activities in Clause 6.0, following additional safety precautions need to be taken for the sites within the operating area or nearby, where presence of Hydrocarbons cannot be ruled out.

i) No job shall be carried out without a valid permit. Permit should be in line with OISD-STD-105 "Work Permit System".

ii) Smoking should be prohibited in all places containing readily combustible or flammable materials and "No Smoking" notices be prominently displayed.

iii) In confined spaces and other places where flammable gases, vapours or dusts can cause danger, following measures should be taken:

(a) only approved type electrical installations and equipment, including portable lamps, should be used;
(b) there should be no naked flames or source of ignition;
(c) oily rags, waste and clothes or other substances liable to spontaneous ignition should be removed without delay to a safe place;
(d) Air operated ventilation system should be provided.

iv) Regular inspections should be made of places where there are fire risks. These include the vicinity of heating appliances, electrical installations and conductors, stores of flammable and combustible materials, welding and cutting operations.

v) Welding, flame/gas cutting and other hot work should only be done after issuance of work permit in line with the requirement of OISD-STD-105

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

after appropriate precautions, as required, are taken to reduce the risk of fire. For carrying out other jobs also, OISD-STD-105 should be followed strictly.

vi) Fire-extinguishing equipment should be well maintained and inspected at suitable intervals by a competent person. Access to fire-extinguishing equipment such as hydrants, portable extinguishers and connections for hoses should be kept clear at all times.

vii) All supervisors and workers should be trained in the use of fire-extinguishing equipment, so that adequate trained personnel are readily available during all working periods.

viii) Audio means to give warning in case of fire should be provided where this is necessary to prevent danger. Such warning should be clearly audible in all parts of the site where persons are liable to work. There should be an effective evacuation plan so that all persons are evacuated.

ix) Notices should be posted at conspicuous places indicating:

(a) the nearest fire alarm;
(b) the telephone number and address of the nearest emergency services.

x) The work site shall be cleared of all combustible materials, as Sparks and molten metal coming from the welding job can easily ignite combustible materials near or below the welding site. If the combustible materials cannot be removed from the area, the same shall be properly shielded.

xi) A dry chemical type fire extinguisher (DCP) shall be made available in the work area. Also fire protection facilities like running hoses etc. as per permit should be complied with.

xii) Wherever required, welding screens shall be put up to protect other equipment in adjoining areas against flying sparks. Material used should be metal/ fire proof blanket/water curtain.

xiii) Welding or cutting of vessels/ equipments used in Hydrocarbon/ hazardous flammable chemicals shall be done after ensuring hydrocarbon free area and verifying the same with the suitable hydrocarbon detector.

xiv) The confined space/equipment shall be made gas free (hydrocarbon and toxic) and cleaned and shall be ensured, with the help of suitable gas detectors.

xv) Used and hot electrode stubs shall be discarded in a metal bucket.

xvi) Use PESO approved and certified spark arrestors for vehicles, wherever applicable.

xvii) Relevant work permit (hot work, cold work, vessel entry etc. as the case maybe) to be obtained, if construction work is carried out within existing operating area.

xviii) Precaution against pyrophoric material shall be ensured.

8.0 Environment Protection

8.1 Waste

The contractor is required to develop, institute and maintain a Waste Management Programme (WMP) during the construction of the project for his works and obtain approval of the owner. WMP may include: -

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

i) Identification of disposal sites.
ii) Identification of waste/surplus quantities to be disposed off.
iii) Identification of amounts intended to be stored temporarily on site location of such storage.
iv) Use of proper PPEs.
v) Identification of intended transport means and route.
vi) Obtaining permission, where required, for disposal.

Such a mechanism is intended to ensure that the designation of areas for the segregation and temporary storage of reusable and recyclable materials are incorporate into the WMP. The WMP should be prepared and submitted to the Engineer for approval.

The Contractor shall handle waste in a manner that ensures they are held securely without loss or leakage thus minimizing potential for pollution and fire. The Contractor shall maintain and clean waste storage areas regularly.

The Contractor shall make arrangement to stack the metal scrap at designated location and maintain the site free from obstruction. The scrap to be disposed as per owner instruction at regular interval.

8.2 Hazardous Waste Management

If encountered or generated as a result of Contractor's activity, then waste classified as hazardous under the "Hazardous Wastes (Management & Handling) Rules, 1989, and amendments thereunder time to time" shall be disposed off in a manner in compliance with the procedure given in the rules under the aforesaid act.

Chemicals classified as hazardous chemicals under "Manufacture, Storage and Import of Hazardous Chemical Rules, 1989 of Environment (Protection) Act, 1986 (latest) shall be disposed off in a manner in compliance with the procedure given in the rules under the aforesaid act.

8.3 Air Quality

The Contractor shall take all necessary precautions to minimise fugitive dust emissions from operations involving excavation, grading, and clearing of land and disposal of waste. He shall not allow emissions of fugitive dust from any transport, handling, construction or storage activity to remain visible in atmosphere beyond the property line of emission source for any prolonged period of time without notification to the Employer.

The Contractor shall use construction equipment designed and equipped to minimise or control air pollution. He shall maintain evidence of such design and equipment and make these available for inspection by Employer.

If after commencement of construction activity, Employer believes that the contractor's equipment or methods of working are causing unacceptable air pollution impacts then these shall be inspected and remedial proposals shall be drawn up by the Contractor, submitted for review to the Employer and implemented.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

The Contractor shall maintain the MSDS of the chemicals used / stacked at site and same shall be handled as per the standard prescribed procedure. The quantity shall be stored strictly as per the norms and emergency handling procedure shall be known and displayed prominently.

8.4 Noise

The Contractor shall consider noise as an environmental constraint in his design, planning and execution of the Works and provide demonstrable evidence of the same. The Contractor shall, take all appropriate measures to ensure that work carried out by the Contractor, whether on or off the Site, will not cause any unnecessary or excessive noise.

8.5 Occupational Noise

i) Protection against the effects of occupational noise exposure should be provided when the sound levels exceed the threshold values as prescribed.
ii) When employees are subjected to expose the sound levels beyond the prescribed limit, feasible administrative or engineering controls should be ensured.
iii) If such controls fail to reduce sound levels within the levels, personal protective equipment shall be provided and used to reduce sound levels within the prescribed limit.

9.0 OCCUPATIONAL HEALTH

9.1 Medical Examination

The contractor shall arrange a medical examination of all his employees before employing, after illness or injury, if it appears that the illness or injury might have affected his fitness and, thereafter, at periodicity stipulated under Factories Act / Building & Construction Workers Regulation (BOCWR).

The Contractor shall maintain the confidential records of medical examination by the physician authorized by the Employer.

9.2 Occupational Health Centre

The contractor shall ensure at a construction site an occupational health centre, mobile or static is provided and maintained in good order. Services and facilities as per the scale lay down under Factories Act / Building & Construction Workers Regulation (BOCWR). A construction medical officer appointed in an occupational health centre possess the qualification as laid down under Factories Act / Building & Construction Workers Regulation (BOCWR).

9.3 First Aid

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd.

Page 880 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

First aid facilities should be provided in line with various statutory regulations like The Factory Act etc. However following care should be taken:

i) First aid, including the provision of trained personnel should be ensured at work sites. Arrangement should be made for ensuring the medical attention of the injured workers.

ii) Suitable rescue equipment, like stretchers should be kept readily available at the construction site.

iii) First-aid kits or boxes, as appropriate and as per statutory requirements, should be provided at workplaces and be protected against contamination by dust, moisture etc.

iv) First-aid kit or boxes should not contain anything besides material for first aid in emergencies.

v) First-aid kits and boxes should contain simple and clear instructions to be followed, be kept under the charge of a responsible person qualified to render the first aid and be regularly inspected and replenished.

vi) Where the work involves risk of drowning, asphyxiation or electric shock, first-aid personnel should be proficient in the use of resuscitation and other life saving techniques as specified in rescue procedures.

vii) Emergency telephone numbers of nearby Hospitals, Police, Fire Station and Administration should be prominently displayed.

10.0 DOCUMENTATION

The intention of keeping documentation of all types of accident(s) is to prevent recurrence of similar accident(s). All accidents should be reported as per OISD Guidelines and The Factories Act, 1948/ BOCWR.

All accidents (major, minor or near miss) should be investigated, analysed and recommendations should be documented along with implementation status.

All related data should be well-documented and further analysis highlighting the major cause(s) of accidents be done. This will help in identifying thrust areas and training needs for prevention of accidents.

11.0 SAFETY AWARENESS & TRAINING

Safety awareness to all section of personnel ranging from site-in-charge to workmen helps not only preventing the risk but also build up the confidence. Time and expenditures also get saved as a result.

Safety awareness basically seeks to persuade/inform people on safety besides supplementing skill also. Awareness programme may include followings:

i) **Poster:** Posters with safety slogan in humorous, gruesome demonstrating manner may be used to discourage bad habits attributable to accidents by appealing to the workers' pride, self-love, affection curiosity or human aspects. These should be displayed in prominent location(s).

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

ii) **Safety Sign Boards**: Different type of message of cautioning, attention, notice etc. should be displayed at the appropriate places for learning/ awareness of the workmen while working at site.

iii) **Films & Slides:** Film(s) narrating the accident case study including the causes and possible remedial ways of preventing the recurrence of a similar accident should be displayed at regular intervals. Slides consisting main points of the film show may also be shown to workers.

iv) **Talks, lectures & conferences:** The success of these events would depend much on audience's understandings of the speaker (s). The speakers are to be knowledgeable and good presenter. Speakers should know to hold the attention and to influence the audiences.

v) **Competitions:** Organise competition(s) between the different deptts/categories of workers. The sense of reward/recognition also will improve safety awareness and result in enhancing safety levels.

vi) **Exhibitions:** Exhibitions also make the workers acquainted with hazards and means of preventive measures.

vii) **Safety Publication:** Safety publications including pocket books dealing with ways of investigation and prevention in the field of safety and so on, may be distributed to workers to promote the safety awareness.

viii) **Safety Drives:** From time to time, an intensive safety drive by organising a safety day or a safety week etc. should be launched.

ix) **Training:** Training for covering the hazards for different trade should be imparted. Training should also include the specific hazards related to a job in addition to the general safety training as has been dealt in various chapters and should include all workers. Reference may be drawn from OISD-STD-154.

12.0 REFERRENCES

i) *Factory Act, 1948*

ii) *Indian Electricity Rules*

iii) *Safety & Health in Construction by ILO*

iv) *The Building & Other Construction Workers (Regulation, Employment and Conditions of Service) Act 1996 and Central Rules 1998*

v) CSB guidelines

vi) *IS 1161: 2006 or latest edition - Steel tubes for structural purposes — specification*

vii) *IS 2750: 1964 or latest edition - Specification for steel scaffolding.*

viii) *IS : 3696 (Part 1) – 1987 (Scaffolds) Safety code of scaffolds and ladders*

ix) *IS : 3696 (Part 2) – 1987 (Ladders)Safety code of scaffolds and ladders*

x) *IS 4014 Part I: 2006 or latest edition - Code of practice for steel tubular scaffolding - definitions and materials.*

xi) *IS 4014 Part II: 2005 or latest edition - Code of practice for Steel tubular scaffolding - Safety regulations for scaffolding.*

xii) *Building & Other Construction Workers(Regulation on employment &conditions of service) central rules, 1998 (Provision related to Scaffold).*

xiii) *OHSA Standard on Scaffold (CFR 1926.452)*

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

ANNEXURE I

LIST OF SAFETY CODES FOR CIVIL WORKS PUBLISHED BY BUREAU OF INDIAN STANDARDS

Sr.no	Code No.	Title
01.	IS : 818	Code of Practice for Safety and Health Requirements in Electric and Gas Welding and Cutting Operations – First Revision.
02.	IS : 875	Code of practice for Structural safety of buildings: Masonry walls
03.	IS : 933	Specification for Portable Chemical Fire Extinguisher, Foam Type – Second Revision.
04.	IS : 1179	Specification for Equipment for Eye and Face Protection during Welding – First Revision.
05.	IS : 1904	Code of practice for Structural safety of buildings: Shallow foundations
06.	IS : 1905	Code of practice for Structural safety of buildings: Masonry walls
07.	IS : 2171	Specification for Portable Fire Extinguishers, Dry Powder Type – Second Revision.
08.	IS : 2361	Specification for Building Grips – First Revision.
09.	IS : 2750	Specification for Steel Scaffoldings.
10.	IS : 2925	Specification for Industrial Safety Helmets – First Revision.
11.	IS : 3016	Code of Practice for Fires Precautions in Welding and Cutting Operations – First Revision.
12.	IS : 3521	Industrial safety belts and harnesses
13.	IS : 3696 – Part I	Safety Code for Scaffolds and Ladders : Part I – Scaffolds.
14.	IS : 3696 – Part II	Safety Code for Scaffolds and Ladders : Part II – Ladders.
15.	IS : 3764	Safety Code for Excavation Work.
16.	IS : 4014 -Part I & II	Code of practice for Steel tubular scaffolding
17.	IS : 4081	Safety Code for Blasting and Related Drilling Operations.
18.	IS : 4082	Recommendations on staking and storage of construction materials at site
19.	IS : 4130	Safety Code for Demolition of Buildings – First Revision.
20.	IS : 4138	Safety Code Working in Compressed Air-First Revision
21.	IS : 4756	Safety code for Tunneling works
22.	IS : 4912	Safety requirements for Floor and Wall Openings, Railings and toe Boards –First Revision.
23.	IS : 5121	Safety Code for Piling and other Deep Foundations.
24.	IS : 5916	Safety Code for Construction involving use of Hot Bituminous Materials.
25.	IS : 5983	Specification for Eye Protectors – First Revision.
26.	IS : 6922	Structures subject to underground blasts, criteria for safety and design of
27.	IS : 7155	Code of recommended practices for conveyor safety
28.	IS : 7205	Safety Code for Erection on Structural Steel Works.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

Sr.no	Code No.	Title
29.	IS : 7069	Safety Code for Handling and Storage of Building Materials.
30.	IS : 7293	Safety Code for Working with Construction Machinery.
31.	IS : 7323	Guidelines for operation of Reservoirs
32.	IS : 7969	Safety code for handling and storage of building material
33.	IS : 8758	Recommendation for Fire Precautionary Measures in construction of Temporary Structures and Pandals.
34.	IS : 8989	Safety Code for Erection of Concrete Framed Structures.

Preamble

Indian petroleum industry is the energy lifeline of the nation and its continuous performance is essential for sovereignty and prosperity of the country. As the industry essentially deals with inherently inflammable substances throughout its value chain – upstream, midstream and downstream – Safety is of paramount importance to this industry as only safe performance at all times can ensure optimum ROI of these national assets and resources including sustainability.

While statutory organizations were in place all along to oversee safety aspects of Indian petroleum industry, Oil Industry Safety Directorate (OISD) was set up in 1986 Ministry of Petroleum and Natural Gas, Government of India as a knowledge centre for formulation of constantly updated world-scale standards for design, layout and operation of various equipment, facility and activities involved in this industry. Moreover, OISD was also given responsibility of monitoring implementation status of these standards through safety audits.

In more than 25 years of its existence, OISD has developed a rigorous, multi-layer, iterative and participative process of development of standards – starting with research by in-house experts and iterating through seeking & validating inputs from all stake-holders – operators, designers, national level knowledge authorities and public at large – with a feedback loop of constant updation based on ground level experience obtained through audits, incident analysis and environment scanning.

The participative process followed in standard formulation has resulted in excellent level of compliance by the industry culminating in a safer environment in the industry. OISD – except in the Upstream Petroleum Sector – is still a regulatory (and not a statutory) body but that has not affected implementation of the OISD standards. It also goes to prove the old adage that self-regulation is the best regulation. The quality and relevance of OISD standards had been further endorsed by their adoption in various statutory rules of the land.

Petroleum industry in India is significantly globalized at present in terms of technology content requiring its operation to keep pace with the relevant world scale standards & practices. This matches the OISD philosophy of continuous improvement keeping pace with the global developments in its target environment. To this end, OISD keeps track of changes through participation as member in large number of International and national level Knowledge Organizations – both in the field of standard development and implementation & monitoring in addition to updation of internal knowledge base through continuous research and application surveillance, thereby ensuring that this OISD Standard, along with all other extant ones, remains relevant, updated and effective on a real time basis in the applicable areas.

Together we strive to achieve NIL incidents in the entire Hydrocarbon Value Chain. This, besides other issues, calls for total engagement from all levels of the stake holder organizations, which we, at OISD, fervently look forward to.

Jai Hind!!!

Executive Director
Oil Industry Safety Directorate

Engineers India Ltd

FOREWORD

At the time of development of this document, 113 OISD standards, recommended practices and guidelines are applicable to the Oil and Gas installations of Public sector Oil Companies in India. 11 of these standards have been adopted by Petroleum and Explosives Safety Organisation (PESO) in various rules administered by them and thus the provisions of these standards are mandatory for entire Oil & Gas sector to that extent.

A few serious accidents have occurred in the recent past in India and abroad including vapour cloud explosion and fire at Oil terminal near Jaipur emphasised the need for the industry to review the existing provisions of various guidelines and statutory requirements.

With the above in view the Government of India directed the Oil Industry Safety directorate to develop a comprehensive document covering all the facets of Safety in Design, Operation and Maintenance, of depots and terminals being run by marketing divisions of Oil companies with an objective to strengthen the existing system.

The present guideline on "Contractor Safety" has been prepared by the functional committee based on, existing standards, guidelines & recommended practices of OISD, the recommendations arising out of recent major accidents and their analysis, the accumulated knowledge and experience of industry members in India and updation of National and International codes and practices.

The provisions of this document, if implemented objectively, may go a long way in enhancing overall safety standard and reduce accidents in Oil Installations.

Users are cautioned that no standard can be substitute to the "judgement and experience of Engineers"

This document will be reviewed periodically for improvements based on the new experiences and better understanding. Suggestions are also invited from the users after it is put into practice to improve the document further. Suggestions may be addressed to:

The Coordinator
Committee on "Contractor Safety"
Oil Industry Safety Directorate
8th Floor, OIDB Bhavan, Plot No. 2, Sector – 73, Noida – 201301 (U.P.)

Website: www.oisd.gov.in

Tele: 0120-2593800, Fax: 0120-2593802

This guideline in no way supercedes the statutory regulations of Chief Controller of Explosives (CCE), Factory Inspectorate or any other statutory body, which shall be followed as applicable.

Engineers India Ltd.

NOTE

OISD (Oil Industry Safety Directorate) publications are prepared for use in the Oil and Gas Industry under Ministry of Petroleum & Natural Gas. These are the property of Ministry of Petroleum & Natural Gas and shall not be reproduced or copied and loaned or exhibited to others without written consent from OISD.

Though every effort has been made to assure the accuracy and reliability of the data contained in these documents, OISD hereby expressedly disclaims any liability or responsibility for loss or damage resulting from their use.

These documents are intended to supplement rather than replace the prevailing statutory requirements.

CONTRACTOR SAFETY

1.0 INTRODUCTION

Oil and Gas operations like Drilling, Production, Refining, Storage**,** Transportation and Distribution, etc. are inherently hazardous. A large number of contractor workforce is deployed to carry out construction, maintenance and other jobs. The analysis of the incidents in the Petroleum Sector indicates that a large number of incidents involved contractor workforce and have resulted in either casualty or injury besides leading to property damage and operational interruptions and environmental degradation.

In order to improve the safety levels of hydrocarbon installations, the contractor safety is of utmost importance and there is a need to institute a good contractor safety system.

2.0 SCOPE

This document covers broadly the guidelines on the HSE management system for enhancing the safety levels of the contractor workforce deployed in construction, maintenance and operation activities in the hydrocarbon industry.

The safety precautions to be taken while carrying out different activities during construction / maintenance have separately been covered in OISD-GDN-192 on "Safety Practices during Construction".

3.0 DEFINITIONS

Work station / Work site

A place / unit where the job is carried out by contractor/executing agency in specified manner with safety, during construction phase or in operation phase.

Owner
Any physical or legal person/entity for whom prescribed job is carried out.

It shall also include owner's designated representative / consultant /nominee / agent, authorised from time to time to act for and on its behalf, for supervising / co-ordinating the activities of the contractor/execution agency.

Contractor / Executing Agency

A physical or legal person/entity having contractual obligation with the owner, and who deploys one or more worker on the site.

Contractor Worker

It covers all workmen who are either self-employed or employed through contractor, the casual workers and includes contractor's supervisor, working at a location / site employed directly by Owner or through their contractor.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

Incident

An incident is an unplanned, uncontrolled, unintended or unforeseen event, caused by unsafe acts and / or unsafe conditions, resulting in or having the potential to result in personal injury and/or property damage.

Consultant

Consultant is a physical or legal person/entity engaged by owner to provide the consultancy services to owner for management of the contract on their behalf or as specified.

Designer

Designer is a physical or legal person / entity engaged by owner to provide design services of a work site.

Owner's Representative / Engineer In Charge

The Owner's representative/Engineer-in-charge is the one, who has been designated by the owner to manage the contract.

Owner's Safety Officer

A properly trained person designated by owner who ensures safety at work site.

4.0 DUTIES/ RESPONSIBILITIES

4.1 OWNER

4.1.1 Owner's Management

The commitment to safety has to be emphasized by the owner by practice by its own management and employees at all levels. The duties and responsibilities of owner should include:

i) To institute a mechanism for identification and compliance of all applicable statutory rules & regulations (Refer Annexure I for a list of few important Bureau of Indian Standards & statutory regulations).

ii) To provide specific information to contractors and make workers aware on the hazards associated with job assigned.

iii) To provide information about Risk Mitigation measures available at the place of work.

iv) To provide the contractor with information on Owners Safety Plan & Regulations, Emergency Management Plan, lockout / tag out procedure, confined space entry, work permit system, excavation / trench permit system etc.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

v) To specify rules (e.g. for security including access arrangements) and safety rules such as fire protection, first aid arrangements, Work Permit systems etc.

vi) To provide comprehensive list of statutory regulations / standards and specification, to be complied with during execution of contract, in the tender document itself.

vii) To ensure training of the contractor workforce, medical examination, and proper usage of safety equipment.

viii) To specify the requirements of Health, Safety and Environment (HSE) (commensurate with the nature of job) in Pre- Qualification criteria.

ix) To designate Engineer-in-charge and safety officer.

x) To arrange for a multi-disciplinary safety audit team to conduct surprise / regular safety audits and monitor the implementation of the recommendations.

xi) To introduce suitable schemes for motivation of the contractor worker to adhere to safety guidelines.

xii) To review safety practices & their implementation through periodic surprise visit of the work sites and monthly review meeting.

xiii) To develop the HSE plans and incorporate the same in the tender document.

xiv) To liaise with external agencies like press, public etc and with law enforcement, regulatory, statutory agencies etc.

xv) To report to statutory agencies on safety compliance and accidents, if any.

4.1.2 Owner's Representative/Engineer-in-charge

The duties & responsibilities of engineer-in-charge should include:

i) To ensure that all Contract requirements including Health, Safety, Environment & Security are complied with.

ii) To ensure that contractor workforce deployed is adequately qualified, trained and in state of health to commensurate with the requirements of the job.

iii) To ensure that the Tools / Tackles and Machinery being used are properly tested and are in sound working conditions and necessary resources proposed for providing safe place of work and necessary PPE are being used.

iv) To take the required necessary corrective action immediately upon noticing or receipt of a report on noncompliance or any such condition which poses a threat to health, safety or environment. If during the course of execution of the contract, any situation of non-compliance with the contractor's safety and health plan are noticed / reported, the same will be taken up with the contractor for correction. In the event of repeated non compliance, suitable action to be initiated as per the contract.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

v) To ensure that the incidents are reported to all concerned within stipulated time frame.

vi) To ensure submission of a plan for safe working (Method Statement) from contractor and approval of the same by competent person / department.

vii) To ensure that Work Permit System in line with OISD-STD-105 is adhered to.

viii) To ensure availability of all the documentation needed for the execution of contract.

ix) To ensure that the quality controls have been maintained during fabrication/erection and all jobs required for safe commissioning have been carried out.

x) To ensure safe dismantling of all temporary facilities/connections put up by the contractor, after completion of work.

xi) To compile a report on the safety performance (at the conclusion of each contract or periodically such as annually for renewable and long-term contracts), which is to be considered in future when selecting contractors.

xii) To ensure that the Consultant, contractor and sub-contractor employ / designate qualified & trained Safety Engineer / Officer commensurate with requirement of the job.

xiii) To comply with all applicable safety and health standards, rules, regulations and orders issued by competent authority pertaining to the assigned activities.

4.1.3 Owner's Safety Officer

The duties & responsibilities of the Owner's Safety Officer should include:

i) To assess the hazards associated with jobs in consultation with all concerned and establish safe working procedure including identification of the escape routes.

ii) To establish a written record of factors which can cause injuries and illnesses and maintain statistical information for use in analysing all types of incidents and events involving contract personnel.

iii) To undertake routine/surprise inspections of all work sites and identify unsafe conditions & practices, if any. Check for compliance of the safety practices being followed with approved HSE Plan.

iv) To investigate promptly the incidents (including near-miss) in order to advise corrective and/or preventive action and assist management for its compliance.

v) To ensure periodic internal audits, review meetings, monitor and analyse HSE performance, nonconformities and suggest its corrective & preventive action.

vi) To encourage contractor and contract workers for reporting requirements ~~for~~ of occupational injuries and illnesses.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

vii) To advise whether the proposed working arrangements are safe and satisfactory, particularly at the interface between the contractor's planned work and owner's existing facilities.

viii) To communicate to the Contractor the imposed restrictions which may affect the work/personnel such as the temporary closure of a corridor or electrical isolation of equipment.

ix) To review and monitor the contractor's adherence to approved HSE plan and compliance thereof.

x) To design and conduct either independently or in collaboration with the training department, suitable HSE training programme for the prevention of personal injuries to Consultant, Contractor's Managers, Supervisors and workmen at all levels

xi) To identify areas of operations where specialized training is required to deal with potential dangers.

xii) To document and to bring to the attention of the Owner's Supervisor and Contractor any non-compliance/violation of the safety norms against approved safety and health plan or safety and health requirements and also raise these issues in the Safety Committee Meetings.

xiii) To take part in Tool Box Meetings at random and to ensure maintenance of records.

I. Establish, implement, maintain and review HSE objectives and programs including responsibility, authority, means & time frame at all relevant functions and levels.
II. Apprise the management about HSE status & help formulate appropriate policies for continual improvement.
III. Standardize PPE & Safety Devices, identify and develop approved vendors wherever required.

To organise campaigns, competitions, contests and other activities in association with the concerned departments, which will develop and maintain the interest of the contractor and contractor workers in establishing and maintaining safe conditions of work and procedures;

4.2 CONTRACTOR

4.2.1 Contractor's Management

Duties & responsibilities of the contractor should include the following:

i) To implement safe methods and practices, deploy appropriate machinery, tools & tackles, experienced supervisory personnel and skilled work force etc. required for execution.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

ii) To prepare a comprehensive and documented plan for implementation, monitoring and reporting of Health, Safety and Environment (HSE) and implement the same after its approval.

iii) To nominate qualified & trained Safety Engineers / Officers reporting to the Site in charge, for supervision, co-ordination and, liaison for the implementation of the safety plan.

Similar HSE Plan should be implemented at the sub- contractor's or supplier's site /office. However the compliance with the HSE Plan is to be the sole responsibility of the Contractor.

iv) To arrange facilities at suitable location in liaison with the owner for drinking water, toilets, lighting, canteen, lunch shelter, crèche etc. as applicable as per Laws/ Legislation at site and also arrange for workmen compensation insurance, third party liability insurance, registration under ESI / PF act etc as applicable.

v) To arrange for fire protection equipment as per the advice of owner.

vi) To ensure that its employees have completed appropriate health and safety training as required by the statute / regulation and also as per requirements of the Owner / Consultant. The documentation of such training imparted to all its employees should be maintained and produced for verification as required.

vii) To comply with all the security arrangements of owner.

viii) To ensure that the plant and equipment used on-site by contractor / employees is correctly registered, controlled and maintained in sound working condition.

ix) To ensure availability of First Aid boxes and First Aid trained attendant and other facilities as per requirement of factory Act / Building & Construction Workers Regulation (BOCWR).

x) To ensure that all incidents including near misses are reported immediately. Investigated with corrective and preventive action and learning are shared with all workers and all concerned at the earliest.

xi) To have HSE policy

xii) Maintain HSE performance data on yearly basis and submit to owner for evaluation

In construction projects where sub-contractors are engaged, the contractor should set out the responsibilities, duties and safety measures that are expected of the sub-contractor's workforce. These measures should include the provision and use of specific safety equipment, methods of carrying out specific tasks on safety and the inspection and appropriate use of tools.

The responsibilities indicated separately under contractor's Supervisor, Safety Officer and contract worker are contractually that of the Contractor and legally binding on the

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Contractor only. However the specific detailing as above has been given separately for guidance and operational convenience.

The selection of sub contractors, if employed, should be approved by the owner. Sub-contractor should comply fully with all safety rules and conditions applicable to the main contractor.

4.2.2 Contractor's Supervisor / Safety Officer

Duties & responsibilities of the Contractor's supervisor/Safety Officer should include the following:

i) To ensure strict compliance with work permit system by carrying out work only with appropriate work permits and after ensuring that all safety precautions / conditions in the permit are complied with and closing the same after job completion.

ii) To ensure that required guards and standard personal protective equipment are provided, used, and properly maintained including contingency requirement.

iii) To ensure inspection, tested, certification and maintenance of all tools and ensure removal of defective tools.

iv) To plan the workload and assign workers to jobs in commensuration with their qualification, experience and state of health.

v) To ensure that all the preventive measures for identified hazards (e.g. Job Safety Analysis, Job Hazard Analysis, HIRA, etc.) are in place and communicated to workers

vi) To take immediate corrective action against the violation of safety rules observed or reported.

vii) To ensure that the workers likely to be exposed to hazardous chemicals/materials have access to appropriate Material Safety Data Sheets (MSDS), and provide necessary mitigation measures.

viii) To ensure that appropriate warning signboards or tags are displayed.

ix) To ensure that all workers have proper training for their job assignments, including use of appropriate PPE, first aid and fire fighting equipment.

x) To ensure that only medically fit person shall be engaged in work and also ensure that sick / or injured workers during course of work should receive timely and appropriate first aid and/or medical attention.

xiii) To report each incident and/or injury in accordance with established procedures and assist in investigation.

I. Maintain Daily HSE observation log book at site
II. Conduct Tool Box talks along with Site Engineers/ supervisors.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

Maintain the published HSE literature, HSE regulations, codes and other communications. Advise management of compliance and conditions requiring attention.

A fulltime / dedicated Safety Officer should be assigned, where more than 100 workers are employed at site. For smaller jobs, the supervisor should assume the role of the safety officer also.

4.2.3 Contract workers

The duties & responsibilities of the contractor worker should include the following:

i) To perform work safely as per the job requirement and instructions.

ii) To inform all concerned regarding unsafe conditions / and unsafe acts.

iii) To wear PPE as stipulated and necessary for the job.

iv) To inform promptly to their supervisor regarding all work related incidents resulting in personal injury, illness and/or property damage.

v) To take all necessary and appropriate safety precautions to protect themselves, other personnel and the environment.

4.3 CONSULTANT

The activities and responsibilities covered under the scope of the Owner may be delegated to the consultant in those cases as applicable, based on the respective contract conditions. The primary responsibility of Consultant is to ensure compliance with agreed HSE plan for the contract by the Contractor. However those responsibilities conferred on Owner as Principal employer cannot be delegated to consultant.

Where the consultant's scope involves Engineering and Design, those factors under Designer (Para 4.4) should also be applicable.

In all cases, the Consultant's scope should include submission of latest HSE plans for work under his and Contractor's purview and implementing the same till job completion. It should conform to owner's overall HSE plan. This should include Guidelines and Implementation and Reporting Methodology to be followed with required report formats.

Adequate number of Safety Officers shall be provided by the Consultant with necessary skills required for the work to be performed.

The Consultant shall review the documents submitted by the contractor and advise owner on acceptance as well as advise suitability and number of Contractor's safety officers / supervisors.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

4.4 DESIGNER

The Process Designer should identify all hazards and risks likely to be encountered during fabrication, erection including dismantling, Pre-commissioning, commissioning and Performance run to meet the Guarantees and advise the risk mitigation measures.

All the hazards and safety measures to be adopted while handling Dangerous chemicals and Catalysts should be detailed by the Process Licensor and the same should be again included in the scope of the suppliers. Specific write ups/MSDS should be obtained from Patented single source suppliers also.

Designs should recognize, include and apply safe practice during preparation, construction and subsequent operational use and maintenance after completion of the Project.

All documents including drawings and calculations are to be originated, checked and approved in accordance with latest international codes, standards, specifications and design basis philosophy.

Use of low risk materials, non hazardous substances, use of low noise and dust-suppressed equipment etc. should be encouraged.

5.0 SAFETY MANAGEMENT

5.1 JOB SAFETY ANALYSIS (JSA)

Job safety analysis (JSA) provides a mechanism by which the contractor / owner, safety officer(s) and job supervisor(s) take a detailed look at how an individual task is performed , and its inherent hazards and preventive measures. This procedure helps in integrating accepted safety and health principles and practices into a particular operation. In a JSA, each step of the job is examined to identify potential hazards and to determine the safest way to do the job.

A job safety analysis includes five steps as below:

- Select a job
- Break the job down into a sequence of steps
- Identify the hazards against each of these steps (based on knowledge of accident, causes of injuries and personal experience) and determine the preventive measures to overcome these hazards
- Apply the controls to the hazards
- Evaluate the controls measures and revisit JSA if necessary

5.2 CRITERIA OF SELECTION OF A CONTRACTOR & SAFETY PERFORMANCE REVIEW

“Contractor Safety” can be ensured to a large extent if competent agency for execution of assignment or job, based on HSE system agreed upon by owner, is selected. It is necessary to assess his capabilities and competencies to perform work safely.

“OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines.”

Engineers India Ltd

A databank should be developed for all the contractors for their past performance on HSE aspects. An attempt should also be made to get similar data from other similar industries.

The data required will depend upon complexity involved in the job and type / size of resources required. Format needs to be suitably developed depending upon size, nature of the job & hazard associated therein. The format designed should also take care of the skill required to carry out the job.

Performance review is essential for all type of contractors. It helps in recording actual performance/experience with contractors while the contract is in progress. It is essential that resources agreed as per the contract are reviewed at mobilization stage for ensuring compliance from the day one and thorough effective supervision / monitoring system are at place.

This activity also helps in taking timely action in case of unsatisfactory performance to correct the situation and ensure safe work during execution period and deciding about suitability of the contractor for future jobs.

The periodicity of such performance review will depend upon size/type/complexity of contract. However, the performance should be reviewed periodically from mobilisation stage till the demobilization stage. Appropriate corrective action should be ensured.

5.3 SITE PLANNING AND LAYOUT

Before starting the construction/maintenance job at existing workplace in operation or green field locations, following should be ensured: -

i) Details regarding location of workshop/ fabrication yard, site office, stores, laboratory, electrical installations, placement of construction machinery, medical and welfare facilities, lighting underground and above ground piping route, cable route etc. should be decided prior to commencement of the work in consultation with owner / Consultants and implementation should be ensured. Layout should be displayed at strategic locations.

ii) The resources required to meet any emergency situations like fire fighting, first aid etc. should be planned and mobilized as per the job requirement.

iii) The sequence or order in which work to be done and any hazardous operations or processes should be identified.

iv) Free access to site shall be provided with clear roads, passage, gangways, staircases etc. Access to construction site should be leveled, open and free from any obstructions like construction material or scrap/waste, exposure to hazards such as falling materials, material handling equipment and vehicles. Any pit or ditch shall be covered or barricaded.

v) Arrangements should be made to maintain good housekeeping at site. Scrap and debris generated out of construction work should be removed/disposed off at a regular interval as directed. Emergency exit should be provided in case of blockade of primary exit.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

vi) Suitable warning notices and also the routes to and from welfare facilities should be displayed prominently.

vii) Pedestrian pathways and routes for vehicular traffic (light/heavy vehicles including material handling equipment) should be earmarked.

viii) Artificial lighting to be provided at places where work continues or workers pass by after sunset or in case natural light is insufficient like confined spaces.

ix) Keep all equipment /machines under cover to prevent them from dust, rain/flood water, heat etc. and follow storage instructions as applicable for each of them.

5.4 GATE ENTRY PROCEDURE

Gate entry at any site / workplace / unit is to be restricted to ensure entry of only authorised persons / vehicles.

5.4.1 Entry procedure for all contractor workers should be as follows:

A. Issuance of Pass

i) The passes are to be issued after the owner's representative/engineer-in-charge forwards the application of the contractor providing complete details of the workers being engaged. The contractor should be asked to submit Character & Antecedents (C&A) verification of individual worker from concerned authorities.

ii) The actual deployment of the workers at the construction site should be done after imparting the necessary safety induction training.

iii) With regard to issuance of passes for all vehicles including material handling equipment, owner's representative / engineer-in-charge should forward the application only after ensuring that all documents pertaining to the fitness of the vehicle/equipment and valid driving license of the driver**,** PUC of the vehicle, insurance of vehicle, etc. are available.

iv) The passes should be serially numbered with address, contractor name, identification mark, signature of the worker etc.

v) Special colour code for passes should be used for persons entering different areas like Administrative Block, Unit area, Project Area (wherever applicable).

vi) Contractor workers engaged on routine basis for long periods should be provided with monthly photo pass.

vii) Special permit is required separately for working beyond normal working hours and holidays.

B. Gate Entry

i) Entry of the contractor's employees should be permitted with valid gate passes only.

Engineers India Ltd.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

ii) Entry of contractor's workers should be allowed in presence of authorized representative of contractor.

iii) Records of persons at the time of entry/exit should be maintained.

iv) At the entry gate of the location, a physical checking for non-carrying of lighter, matchboxes, explosives etc. should be carried out.

v) Gate passes/Identity Cards should be displayed on persons at all the times.

vi) For Mega-projects at existing / operating installations, it is preferable to have a separate gate for entry of contractor workers and also the project areas should be segregated fencing from operational area by fencing / other physical means.

vii) No vehicle should be allowed to enter in an operational area without proper flame arrestor.

viii) Awareness on Safety through training / posters etc. highlighting Do's and Don'ts should be spread within entire contractor workforce. Video/Audio tapes on Safety Topics should be played preferably.

ix) For occasionally engaged workers such as for material handling etc., spot photograph should preferably take with two copies (one for preparing the pass and other for attachment with gate register). Specific advice and recommendation of User Department should be given due cognizance. Relevant details are to be written. The pass should be collected back at the gate after day's work.

5.4.2 Tank Truck Loading (TTL) Operation :

At the loading / unloading location, a large no. of Tank Trucks of petroleum products enter the installation. Crew members are generally not regular entrants. The procedure should be as follows:

i) The gate pass should be issued to the individual crew members on written request of the transporter mentioning TT registration nos., License and certificate of training as per MV rule 9.

ii) Character & Antecedent (C & A) verification of the TTL crew through local police is to be done preferably and record maintained.

iii) For loading/unloading purpose, register entry at security gate is made before allowing entry into the premises with recording of names of crew members, time of entry, pass Sr. No., TT no. etc.

iv) For loading/unloading, crew is allowed entry alongwith TT only, after checking of TT from explosive/security point of view.

v) Out time, invoice no., Destination etc., are recorded while TTs go out of the security gate.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

5.5 TRAINING

Training is to educate contractor workforce on various hazards associated with the job/workplace and on the respective preventive / mitigation measures to avoid untoward incidents.

i) Workers should be adequately and suitably:

(a) informed of potential safety and health hazards to which they may be exposed to at their workplace;

(b) instructed and trained in the measures available for the prevention, control and protection against those hazards.

ii) No person should be employed in any work at a workplace unless that person has received the necessary information, instruction and training so as to be able to do the work competently and safely. The competent authority should, in collaboration with employers, promote training programs to enable all the workers to read and understand the information / instructions related to safety and health matters.

iii) The information, instruction and training should be given in a language understood by the worker and written, Oral, visual and participative approaches should be used to ensure that the worker has assimilated the information.

iv) Every worker should receive instruction and training regarding the general safety and health measures common to the workplace. This should include:

(a) general rights and duties of workers at the workplace;

(b) means of access and egress both during normal working and in an emergency;

(c) measures for good housekeeping;

(d) location and proper use of welfare amenities and first aid facilities provided;

(e) proper use and care of the items of personnel protective equipment and protective clothing provided to the worker;

(f) general measures for personal hygiene and health protection;

(g) fire precautions to be taken;

(h) action to be taken in case of an emergency;

(i) requirements of relevant safety and health rules and regulations.

(j) training on hazards and mitigation measures for specific area where worker is assigned to work shall be given as part of entry procedure

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

(k) Job specific training / refresher course shall also be given at regular intervals.

(l) It is also expected that behaviour based safety culture shall be encouraged and all the workers will be involved.

Copies of the relevant safety and health rules, regulations and procedures should be available to workers upon the commencement of and upon any change of employment.

5.5.1 Training Techniques

a) Lectures

This technique should be applied when it is required to transfer information in local language to a large contractor workforce with controlled content and time.

b) Case Study

This is an effective technique based on the presentation of case of real events by Trainer to highlight probable causes like Human Error, ignorance about the job etc.

c) Videos

Videos, an effective technique of communication, should be used to display the right techniques of performing a task in a safe manner and hazards associated with a job.

d) Demonstration at site

Right way to do a job should invariably be demonstrated to workers at the site itself. The right way is also a safe way. Hazards due to wrong procedures, short cuts and their adverse effects etc. should also be highlighted.

5.5.2 Training/Awareness Module and Frequency

A. General Safety Training to all categories of contractor employees should be imparted before induction and annually thereafter. No person should be allowed to enter the installation without undergoing this training. This training program should cover:

i) Mandatory uses of PPE like Cotton clothes, Helmet, Safety Shoes, Full Body Safety harness, dust masks, safety goggles, etc.

ii) Probable Hazards related to industry

iii) Job specific hazards

iv) Important Telephone No / Escape route

v) First Aid

vi) Use of Fire extinguisher

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

vii) Location of assembly points

viii) Procedure of calling fire crew in case of any emergency

ix) Wind direction

The contractor workers, if engaged in operation of the plants/facilities, should be trained in line with Clause No. 4.6 of OISD-GDN-206 on "Safety Management System". For other categories of contractor workers, training modules for different category employees are as follows:

B. Contractor Supervisor

Contractor Supervisor should be trained in accordance with the provision of clause no. 5.1.1.2, 5.2.7, 5.3.10, 5.6.12 and 5.7.8 of OISD-STD-154 on 'Safety Aspects in Functional Training'

C. Contractor Worker

Yearly training programme should be carried out for contractor worker and the records should be maintained. The training programme should cover at least the following:

i) Worker responsibility for safety of himself and work area.

ii) Associated hazards with the job and job area including electrical shock hazards.

iii) Importance of First Aid fire fighting equipment, their use & operations

iv) Communication system at the installation

v) Fire / Accident Reporting procedure

vi) General Safety rules

vii) Safety Measures during execution of job such as:

- Welding / Cutting / Grinding
- Working at height
- Confined space entry
- X ray / radiation
- Erection / Dismantling of scaffolding
- Tank construction and repairs
- Handling of chemicals etc.
- Hydrojetting
- Leak testing of pipelines and equipment (hydro and pneumatic testing)
- Grit / other methods of blasting for surface preparation blasting etc.
- Chemical cleaning & pickling
- Catalyst loading & storage
- ELCB

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

viii) Importance & use of PPE

ix) Emergency Routes

x) Assembly Points

xi) Job Specific Training

D. Consultant / Contractor

Awareness program should be carried out for demarketed Consultant / Contractor at the time of induction. This program should cover at least the following:

i) Responsibility of contractor for safety of their personnel and work area

ii) Hazardous property of Petroleum products and chemical used

iii) Communication system

iv) Fire / Accident Reporting procedure

v) Medical facility available

vi) Statutory requirements

vii) Importance of First Aid equipment and required at the site

viii) Work Permit system

ix) Direct/ Indirect losses due to accident

x) Safety Measures while executing the jobs such as:

- Welding / Cutting / Grinding
- Working at height
- Confined space entry
- X ray / radiation
- Erection / Dismantling of scaffolding
- Tank construction and repairs
- Handling of chemicals etc.
- electrical jobs
- Hydrojetting
- Leak testing of pipelines and equipment (hydro and pneumatic testing)
- Grit / other methods of blasting for surface preparation blasting etc.
- Chemical cleaning & pickling
- Catalyst loading & storage
- ELCB

xi) Safety training needs of their supervisors and workers

xii) Importance & Use of PPE at the site

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

xiii) General Safety rules at the installation –

General points:

Workers should not be allowed to take meals or take rest inside the construction / plant area.

E Security Personnel

Training program should be carried out for Security personnel at the time of induction and annually thereafter and the records should be maintained. The training program should cover at least the following:

i) Layout of Plant and Facilities
ii) Vulnerable locations
iii) Safety regulations (Statutory and in company)
iv) Fire Protection Facilities and Locations
v) Role in case of Fire / Disaster
vi) Emergency Procedure and Drills
vii) Industrial First Aid
viii) Use of Personnel Protective Equipment
ix) Disaster Management Plan

5.6 INSPECTION / AUDIT

Inspection / Audit is a tool to evaluate compliance of all safety requirements. Most of the information could be gathered through site inspection using ready-made check lists to ensure that contractors / agencies abide by the safety rules and norms while working at operating / construction sites.

A checklist, while carrying out different type of jobs, should be developed based on hazards associated with the job being performed and requirements as per OISD-GDN-192 on "Safety Practices during Construction". Typical format is enclosed at Annexure II, which should be modified to suit the requirement of the site / job to be done.

Before starting the work and at regular intervals thereafter, Contractor's Supervisor/safety Officer and Owner's representative / Engineer-in charge/safety Officer should inspect as per the checklist so prepared to ensure that contractor has prepared to start the work with all safety precaution required for safe execution of job.

5.7 FINANCIAL DETERRENTS FOR NON-COMPLIANCE OF SAFETY RULES/ PROCEDURES

Financial or other type of penalties like seizure of gate passes, stoppage of work for a limited period etc. should be levied on the contractors or their workers for non-compliance of safety rules. A provision of suitable accident severity based penalty clause for contractor should be incorporated to ensure adherence of systems and procedures.

The financial deterrent clauses shall be included in the general terms and conditions of the contract. The violators of the clauses shall be suitably punished. Following list shall be taken as a guide while preparing the financial deterrent clauses but need not be limited to these conditions only.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

A few of the usual non-compliance are as follows:

I. Working without valid work permit/ Violation of any of the conditions specified in the permit.

II. Throwing up/down any material from height or not making proper provision to bring down material safely from height

III. Non standard/unsafe platform/ladder, Non standard/unsafe Scaffolding

IV. Non-usage of PPEs like Safety helmet / Safety shoes / Safety goggles / Welding Shield / Respiratory protection etc. by the contractor personnel

V. Non use of ELCB , using poor joints of cable, using naked wire without top plug into the socket, laying wire/cables on the roads without sleeve.

VI. Carrying out electrical jobs by un-authorised person

VII. Non deployment of the licensed electricians for electrical job.

VIII. Unsatisfactory fencing / barricading of excavated areas, Not providing proper shoring /strutting /proper slope and Not keeping the excavated earth at least one meter away from excavated area

IX. Over speeding of vehicles, rash driving, wrong side parking & parking in front of any fire-fighting equipment.

X. Riding on material handling vehicles or trolleys or hydra.

XI. Non-deployment of safety supervisor / supervisor responsible for safety at work site

XII. Failure to maintain safety register and record by Contractor Safety Supervisor or Supervisor responsible for safety.

XIII. Acting in contravention to any of the provision mentioned in Factories Act 1948 and/or the rules framed there under including all amendments thereto.

XIV. Failure to furnish a first information report (FIR) as per prescribed Pro-Forma within 4 hours of the incident.

XV. Keep and maintain proper records of all incidents occurred at work site.

XVI. Working beyond statutory limits by contractor's workers.

XVII. Deployment of child or adolescent labour.

XVIII. Use of untested and uncertified pressure vessel. Use of untested and uncertified lifting tools/tackle.

XIX. Unsafe handling of compressed gas cylinders No trolley or jubilee clips or double gauge regulator or flash back arrestor on both gas lines & both ends or improper storage / handling or cylinders without caps when not in

Engineers India Ltd

use/damaged hoses). Keeping compressed gas cylinders in horizontal position.

XX. Transporting metallic items below overhead lines, without isolation.

XXI. Damage to fire equipment like hydrant & monitors, fire extinguishers including non return of fire equipment

XXII. Horseplay at work site.

XXIII. Non-provision of basic safety requirement such as 24 V lamp for working in confined space, uncertified / non standard lifting tools, earth leakage protection & earthing connections for electrical appliances as per Indian Electricity Rules, emergency isolation switches etc.

XXIV. Keeping gas cylinders inside the confined spaces.

XXV. Non-usage of the full body safety harness and fall back arrester with life line properly anchored by the workers while working at height

XXVI. Violation of Safety Permit conditions like Firefighting equipment.

XXVII. Non-barricading of area while rigging, digging etc.

XXVIII. Working without valid work permit.

XXIX. Un-authorised road closure/blockage.

XXX. Not clearing the work site on regular basis.

XXXI. Leaving contractor owned leftover material at site at the time of demobilization.

5.7.1 REWARDS AND RECOGNITIONS

The contract employees should be suitably rewarded as per a scheme, with monetary benefits/ prizes for timely reporting of the Near miss incidents/ Unsafe conditions/ Unsafe Acts based on the accident potential if it could have occurred.

The compliance to safety procedures by the contractors shall be evaluated annually as per the scheme based on different leading and lagging indicators and shall be awarded during the safety week celebrations.

The best safety conscious worker as recommended by the safety officers of different contractors during short term jobs such as the turnaround maintenance activities shall be suitably rewarded for motivating the workers to comply with safety requirements.

The best safety officer/supervisors of the contractor shall be recognized and shall be suitably rewarded during the safety week celebrations.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

5.8 INCIDENT REPORTING AND INVESTIGATION SYSTEM

All the incidents including near-miss should be reported immediately by contractor's Supervisor to Contractor and owner's Supervisor / Engineer-in-charge, who should inform to Owner's Safety Officer and owner's Management. Owner's Safety Department will be required for onward reporting as per OISD, Statutory requirements.

All accidents regardless of the extent of injury or damage should be investigated in order to find probable causes, lessons learnt thereof and remedial measures required to prevent its recurrence.

The incident investigation should be done as per provision of clause no. 4.12 of OISD-GDN-206 on 'Safety Management System'.

All the recommendations of investigation / Enquiry Report need to be monitored closely for its implementation. A proper record should be maintained to ensure implementation of all the recommendations and same should be reviewed from time to time.

5.9 SAFETY COMMITTEE MEETINGS

Following three type of safety committee meetings should be held aiming at raising the level of safety consciousness at the site:

5.9.1 Toolbox meeting

To maintain awareness, update training and convey important safety and health information, contractor supervisors should conduct tool box meetings at least weekly and also prior to start of any work. All the contractor workers should attend this meeting. The owner's supervisor/Engineer-in-charge and safety officers should also attend these meetings on random basis. Tool box meeting should be conducted more frequently depending upon circumstances. Record of the same can be maintained in the following typical format.

TOOL BOX MEETING FORM

A Toolbox Talk is a safety meeting allowing open environment for discussion with the work force. It focuses on safety topics related to the specific job, such as workplace hazards and safe work practices. It is aimed to refresh workers' knowledge, cover last minute safety checks, to raise workers' awareness of specific problems on site. Toolbox Talks are also intended to facilitate health and safety discussions on the job site and promote safety culture. It also helps to remind workers that health and safety are an important part of the working day.

Toolbox talk should be short in duration and conducted at the job site prior to the commencement of a new job or work shift. Toolbox Talks can be used for post-accident communications / accident case study, re-enforcement of safe work practice and pre-task planning etc.

Contractor supervisors should conduct tool box meetings at least weekly and also prior to start of any work. All the contractor workers should attend this meeting. The owner's supervisor/Engineer-in-charge and safety officers should also attend these meetings on

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

random basis. Tool box meeting should be conducted more frequently depending upon circumstances.

A toolbox talk should cover following topics;

- Review of the hazards related to job being done. What safety equipment and PPEs should be used? What procedures should be followed?
- Review and analyse recent safety violations— What was the violation? What hazard did it create? What injury could have occurred?
- Review and analyse recent injuries— What happened? Why did it happen? What should have been done?
- Ergonomics and behaviour related tips.
- Importance of PPEs and proper tool for specific jobs.
- Housekeeping

Records of such talks should be maintained. Following information should be included when completing a Toolbox Talk Form:

- Names and signatures of all persons present,
- Topics discussed,

Any job specific training or instructions that have been given in the meeting and who raised the issue or added to the discussion, to show that there has been active consultation with all persons attending the meeting and that all parties have had a chance to raise issues.

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

5.9.2 Site Safety Committee Meeting

Primary purpose of this safety committee is to enable owner, contractor and workers to work together to monitor the site safety and health plan so as to prevent accidents and improve working condition on site. Its size and membership will depend on the size and nature of job.

The safety committee should include representatives of owner, consultant, contractor identified as safety officer / supervisor. It should be headed by Engineer-in-charge.

The safety committee should have regular and frequent meetings, atleast fortnightly, to discuss the safety and health program on site and to make suggestions for improvement. The meetings should be documented with a time bound action plan. The functions carried out by safety committee should include:

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

i) Review compliance of pending items of last Safety meetings. All critical items should be identified and their compliance ensured.

ii) Consideration of the reports of safety personnel.

iii) Discussion of accident/near-miss and illness reports in order to make appropriate recommendation for prevention.

iv) Examination/evaluation of suggestions made by workers.

v) Dissemination of acquired knowledge through training programs and information sharing sessions.

vi) Discussion & review of Fire Prevention & Disaster Management Plan.

vii) To send recommendation to Apex Body for consideration / approvals.

5.9.3 Safety Review Meeting by Location Head

This meeting should be headed by the Location head and attended by Owner's Supervisor / Engineer-in-charge, owner's safety Officer and all concerned department heads. Prime purpose of this review is to ensure that all the recommendations of various committees are being complied with and to take decisions on critical points raised. This meeting should take place at least once in every quarter. All the investigation reports / audit findings with status of implementation of recommendations should be discussed.

5.10 SAFETY EQUIPMENT / PERSONNEL PROTECTIVE EQUIPMENT

The type of safety equipment to be used is decided based on the job requirement. Selection should be made based on OISD-GDN-192, OISD-STD-155 (Part I & II) and the job requirement. Safety equipment / Personnel Protective Equipment (PPE) shall be of approved make. Contractor shall provide necessary training to each employee regarding proper usage and upkeep of PPE including its limitation.

A register showing stock and issue of PPE should be maintained by the contractor at site and must be available for inspection. 10 to 20 % of PPE in excess of actual requirement to meet contingency requirement should be maintained at site.

ANNEXURE I

LIST OF SAFETY CODES FOR CIVIL WORKS PUBLISHED BY BUREAU OF INDIAN STANDARDS

Sl.no.	Code No.	Title
1	IS: 818	Code of Practice for Safety and Health Requirements in Electric and Gas Welding and Cutting Operations – First Revision.
2	IS: 875	Code of practice for Structural safety of buildings: Masonry walls
3	IS: 933	Specification for Portable Chemical Fire Extinguisher, Foam Type – Second Revision.
4	IS: 1179	Specification for Equipment for Eye and Face Protection during Welding – First Revision
5	IS: 1904	Code of practice for Structural safety of buildings: Shallow foundations
6	IS: 1905	Code of practice for Structural safety of buildings: Masonry walls
7	IS: 1989 – Part II	Leather Safety Boots and shoes for heavy metal industry
8	IS: 2171	Specification for Portable Fire Extinguishers, Dry Powder Type – Second Revision
9	IS: 2361	Specification of Building Grips – First Revision
10	IS: 2750	Specification for Steel Scaffoldings
11	IS: 2925	Specification for Industrial Safety Helmets – First Revision
12	IS: 3016	Code of Practice for Fires Precautions in Welding and Cutting Operations – First Revision
13	IS: 3521	Industrial Safety Belts and harnesses
14	IS: 3696 – Part I	Safety Code for Scaffolds and Ladders: Part I – Scaffolds
15	IS: 3696 – Part II	Safety Code for Scaffolds and Ladders: Part II – Ladders
16	IS: 3764	Safety Code for Excavation Work
17	IS: 4014 – Part I & II	Code of Practice for Steel Tubular Scaffolding
18	IS: 4081	Safety Code for Blasting and Related Drilling Operations
19	IS: 4082	Recommendations on stacking and storage of construction materials at site

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

42	IS: 10291	Safety Code for dress divers in civil engineering works
43	IS: 10386 – Part I	Safety Code for Construction, Operation and Maintenance for River Valley Projects
44	IS: 10386 – Part II	Safety Code for Construction, Operation and Maintenance for River Valley Projects
45	IS: 11057	Code of Practice for Industrial Safety Nets
46	IS: 13415	Code of Practice on safety for Protective barriers in and around building
47	IS: 13416	Recommendations for preventive measures against hazards at working places

Statutory Regulations

Latest Statutory Acts and Rules, as given below, should be referred:-

1. The Petroleum Acts 1934 and Petroleum Rules 2002
2. The Factory Act, 1948 (As amended by Factory Amendment Act 1987) and concerned Factory Rules
3. The Water (Prevention and Control of Pollution) Act 1974 & Rules 1975
4. The Environment (Protection) Act 1986 and rules thereunder
5. The Manufacturing, Storage and Import of Hazardous Rules 1989
6. The Hazardous Wastes Management (Management & Handling) Rules 1989
7. The Indian Electricity Act 1901 and Rules 1956
8. The Indian Explosive Acts, 1884 & The Indian Explosive Rules 1983
9. The Gas Cylinder Rules 1981and the static & Mobile Pressure Vessels (Unfired) Rules 1981
10. The Indian Boiler Act 1923 and Regulations 1950
11. The Public Liability Act 1991 as amended in 1992
12. The Motor Vehicle act 1988 and Central Motor Vehicle rules 1989
13. Building & Other Construction workers (Regulation of Employment & Condition of Service) Act 1996

In addition to above, various other statutory acts like EPF, ESIS, Minimum wage act and other local statutory requirements shall also be complied with.

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

Engineers India Ltd

ANNEXURE II

CHECK LIST FOR SAFETY INSPECTION / AUDIT

Job _____ Location _____ Date of Audit_____Frequency _____

Inspected by _____ Contractor (s) _____

Sl.no.	ITEM	YES	NO	NA	REMARKS / ACTION
1.0	**PERSONNEL PROTECTIVE EQUIPMENT (PPE):** Are following PPEs being used as per the job requirements?				
A.	**Minimum mandatory PPEs**				
A1	Safety Helmets (with chin strap)				
A2	Safety Shoes				
A3	Safety Goggles				
A4	Safety hand gloves				
B.	**Job specific PPEs**				
	Whether need of specialised safety PPE identified and documented?				
B1	Full body safety harness with double lanyard				
B2	Fall arrester				
B3	Ear Plug / Ear Muff				
B4	Gum Boots				
B5	Face shield				
B6	Shot/Grit/Slag blasting hood				
B7	Breathing Apparatus				
B8	Gas Filter Mask / Dust Mask				
B9	Hand Gloves (Chemical/ Welding/ Electrical/ anti-vibration/ High temperature/ cold burn etc.)				
B10	Boiler Suit / Fire-retardant suit / Electrical flash fire retardant suit /High pressure water cleaning (Hydrojetting-Turtle) suit /				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	Chemical suit / Low temperature suit etc.				
B11	Others				
C.	Whether workers are trained / briefed to use the PPEs?				
D.	Whether system of checking the quality / quantity of PPEs provided by contractor exists and in practice?				
E.	Whether as per contract the contractor is obliged to arrange the required PPEs to its workmen and the same is being complied with ?				
2.0	**HOUSE KEEPING**				
2.1	Whether Standards of housekeeping are defined in contract and housekeeping is being maintained accordingly?				
2.2	Whether areas are identified and marked for stacking of material like scrap, pipes, plates, cement, sand, loose excavated material etc.?				
2.3	Whether surplus excavated material, debris and scrap material is being removed and disposed on regular basis as per contract?				
2.4	Whether path ways, roads, stairs etc. in the vicinity of work place are maintained free from obstructions?				
2.5	Whether appropriate actions are taken to avoid the slippery area due to water logging / oil spillage?				
2.6	Whether system for collecting and disposal of small size scraps like welding buds, small size metal pieces, insulation material in place.				
2.7	Whether area is maintained free from vegetation, garbage etc. and the work place is kept clean and free of any hazard?				
2.8	Others				
3.0	**EXCAVATION**				
3.1	Whether detailed plan of excavation including soil stability is made and approved by competent authority?				
3.2	Whether excavation hot work permit is taken?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

3.3	Whether the workplace is thoroughly inspected before issuance of work permit, as stipulated in OISD-STD-105?				
3.4	Whether special conditions mentioned in the permit are clearly explained to the supervisor and in turn to the contractor workers and documented?				
3.5	Whether proper shoring for the excavation is provided to prevent cave-in for side of slope more than the safe angle of repose (generally around 45 degrees) of the soil being excavated?				
3.6	Whether proper precautions have been taken if the excavation is adjoining to heavy structure like building, street and roadways?				
3.7	While excavating whether proper slope usually 45^0 & suitable benches of 0.5 m width at each 1.5 m depth are provided?				
3.8	Whether barricading of 1m height with glowing caution board is provided for excavation beyond 1.5m depth?				
3.9	Whether excavating earth is placed beyond 1m or depth of the excavation whichever is more, from the edge of the trench?				
3.10	Whether heavy vehicle movement is restricted to come too close (minimum 2 M from the edge of excavation) to the excavating area?				
3.11	Whether adequately anchored stop blocks and barriers are provided to prevent vehicles being driven into the excavation? Heavy vehicles should not be allowed near the excavation unless the support work has been specially designed to permit it.				
3.12	Whether necessary precaution is taken for underground pipes, sewers, cables by contractors?				
3.13	Whether extra precaution is taken for bailing out water properly while excavating?				
3.14	During rains whether the excavation is				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	done with extra precaution to prevent caving in?				
3.15	Whether two separate entry/ exit points with necessary ladders / steps, as per requirement, have been provided?				
3.16	Whether required no. of persons are available (as per OISD-STD-105) at all the time to communicate any hazards noticed with workers working in deep trenches or excavation?				
3.17	Whether necessary precautions like regular gas testing are being taken in areas having hydrocarbons and toxic gases so that no gas accumulation takes place in the trenches.				
3.18	Whether IS: 4081-1986 & Indian Explosive act & rules for storage, handling & carrying of explosive material and execution of blasting operation is followed?				
3.19	Whether in case of mechanised excavation, caution board is provided for do's and don'ts like 'Nobody to enter' within one meter of the extreme reach?				
3.20	Whether the following observations are being documented during excavation work and corrective actions taken :- a) Boulder formation encountered b) Collapsing / development of cracks of sides c) Marked damage to support d) Unexpected fall of ground e) Inspection of site after each blast. f) Water logging g) Unexpected utility/cabling				
3.21	Others				
4.0	**PERMITS**				
4.1	Whether valid work permit is issued in compliance to OISD-STD-105 to start any work?				
4.2	Whether before issuing the permit, JSA carried out and mitigation measures made				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	part of work permit?				
4.3	Whether personnel working at site were given tool box talk about the hazards and emergency procedure with important do's and don'ts and record maintained?				
4.4	Whether all conditions of the permit are fulfilled before starting the job?				
4.5	As noted in the permit, whether compliance of all the recommendations are ensured during entire duration of the job?				
4.6	Whether permits are available at work site all the times?				
4.7	Whether hot work permit registered in fire station / designated safety officer?				
4.8	Whether permits are being closed after the completion of job?				
4.9	Others				
5.0	**SAFETY IN CUTTING / WELDING/GRINDING**				
5.1	Whether LPG / Oxygen / Acetylene/ Gas cylinders are kept outside only while working in confined space?				
5.2	Are Acetylene/ O_2 / LPG cylinders kept in upright position with required valve cap and secured at designated places under shed – wet fire retardant clothes ~~gunny bags~~ wrapped around it if the same is under sun at designated place?				
5.3	Check cylinder and cylinder valves for approved quality & any kind of damage?				
5.4	Whether protective valve ~~s~~ caps are kept on cylinders while not in use?				
5.5	Whether proper means and method for transportation of cylinders to avoid dropping and rolling are being adopted / followed?				
5.6	Whether gas cylinders, regulators are				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	kept away from combustible materials and ~~/~~free from oil and grease?				
5.7	Whether all hoses are of approved quality and found to be free of any damage or crack?				
5.8	Whether oxygen and acetylene cylinders are stored separately at a distance of at least 5 feet from each other and kept under shade as per Gas Cylinder rules 2002?				
5.9	Whether gas cylinders are kept at safe location particularly in case job is being done at different elevations while in use?				
5.10	Whether color coding is being used for easy identification of different type of cylinders and hoses?				
5.11	Whether cylinder keys are available near the cylinder?				
5.12	Whether gas torches with flash back arrestors of approved make are only being used?				
5.13	Whether pressure gauges are in working condition and checked from time to time?				
5.14	Whether welding shields are used while welding?				
5.15	Whether proper earthing for welding machines are provided?				
5.16	Whether power is taken from approved sources (welding receptacles)?				
5.17	Whether welding receptacles are properly grounded?				
5.18	Whether welding cables are maintained in good condition and without any joints/ cuts?				
5.19	Whether to avoid short circuit, welding machines are protected against rain?				
5.20	Whether earth connectors are securely connected to the job and not to the				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	adjoining pipeline or structure?				
5.21	Whether flame arrestor of DG set is of approved make and quality?				
5.22	Whether 30mA rating ELCB is provided on power supply.				
5.23	Whether separate power supply arrangement is provided for portable oven?				
5.24	Others				
6.0	**ABRASIVE (SHOT/GRIT/SLAG) BLASTING**				
6.1	Whether abrasive blasting is used only after getting approval from competent authority / work permit?				
6.2	Whether air compressor used for abrasive blasting are positioned away from work place?				
6.3	Whether exhaust of the prime mover is directed away from the work place?				
6.4	Whether in case of motor driven compressor, the body of the motor as well as the compressor is properly earthed?				
6.5	Whether line operator of abrasive blasting wear suitable PPEs including mask?				
6.6	Whether adequate measures are adopted to confine dust / flying particles?				
6.7	Whether adequate measures are taken for proper ventilation while the work is done in confined space?				
6.8	Whether the Air receiver vessel of the compressor is pressure tested.				
6.9	Others				
7.0	**SAFETY WHILE WORKING AT HEIGHTS / SCAFFOLDING / LADDERS**				
7.1	Whether work permit is obtained to take up work at height above 2.2 meters?				
7.2	Whether steel pipes scaffoldings are used in unit/off site areas?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

7.3	Whether provision for suitable platform with all scaffoldings are made? Whether its construction is as per specification with toe board and railing?				
7.4	Whether the area below working at height is cordoned?				
7.5	Whether ISI approved quality and good condition full body safety harness with shock absorber are used while working at heights?				
7.6	Whether life line of full body safety harness with shock absorber is anchored to an independent secured support capable of withstanding load of a falling person?				
7.7	Whether the area around the scaffold is cordoned off to prohibit the entry of unauthorized person?				
7.8	Whether lifeline ropes used are of good condition and adequate strength free of defects?				
7.9	Whether ladder is placed at secured and leveled surface?				
7.10	Whether it is extended 1.0 Meters above the landing point?				
7.11	Whether ladder used are of adequate length and tying short ladder is avoided?				
7.12	Whether metallic ladders are placed away from electrical system?				
7.13	Whether tools or materials are removed after completion of the day's job at heights?				
7.14	Whether a valid permit is obtained before taking up work on asbestos or fragile roof?				
7.15	Whether sufficient precaution like roof ladders, nets, lifeline, full body harness, etc. is taken while working on fragile roof?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

7.16	Whether provision is made to arrange duck ladder, crawling board for working at fragile roof?				
7.17	Whether scaffolding has been erected on rigid / firm / leveled surfaces only?				
7.18	Whether scaffold has been inspected by competent person & tagged accordingly prior to being put in use?				
7.19	Whether the scaffolding has been designed for the load to be borne?				
7.20	Whether the erection and dismantling of the scaffolding is being done only by trained persons and under competent supervision?				
7.21	Whether safety net with proper working arrangement and life line has been provided?				
7.22	Others				
8.0	**SAFETY IN CONFINED SPACE**				
8.1	Whether positive isolation is done as per approved blind list and crossed checked by competent person?				
8.2	Whether a permit is obtained to enter a confined space?				
8.3	Whether gas test for hydrocarbon, toxic gas, oxygen level is checked for acceptable limits before entering any confined space and recorded? If levels are beyond permissible limit, whether required PPE like BA, Gas Mask are used.				
8.4	Whether adequate oxygen level is ensured in confined space before entering? If not, whether all precaution like using of Breathing Apparatus set is ensured?				
8.5	In case of chance of ingress of hydrocarbon gases / toxic gases, whether Personnel Monitoring System (PMS) is used ?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

8.6	Whether only in presence of a supervisor, worker enters in confined space?				
8.7	Whether provision of sufficient means of entry and exit is available?				
8.8	Whether provision of ventilation to remove welding fumes, dust, exhaust gases are made?				
8.9	Whether provision of 24V (Hand lamps with cage as per OISD-STD-155) light for working inside space is made?				
8.10	Is it strictly ensured that stand-by trained persons (2 nos.) are standing outside before a person enters a confined space and communication is being maintained all the time with workers working inside?				
8.11	Whether life belt with one end under control of stand-by person outside is kept while working in confined space?				
8.12	Whether Personnel protective Equipment as specified in the permit are in good condition?				
8.13	Whether boxing up is done only as per the approved procedures and under the supervision of competent persons?				
8.14	Whether all the safety precautions listed in OISD-GDN-192 are taken while working in sewers, OWS etc.?				
8.15	Whether proper house keeping is being maintained inside the confined space?				
8.16	Whether training has been provided to workers working in the confined space and the workers only of sound health are being asked to work in the confined space?				
8.17	Others				
9.0	**SAFETY IN MATERIAL HANDLING**				
9.1	Whether all lifting tools, tackles, machines, chains, ropes etc. are of sound construction, made of sound material and				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	maintained in good condition?				
9.2	Whether lifting tools & tackles are tested as per norms and safe working load, date of testing visibly marked/painted on the equipment?				
9.3	Whether lifting tools, tackles are of adequate strength for the load to be handled?				
9.4	Whether all parts including the working gears fixed or movable of every lifting machine, chain, rope, tackles specify the following condition: a) Thoroughly examined by competent person at least once a year or such interval as required by statutory authority. b) Document of such examination are maintained and produced to owner supervisor before use of particular equipment?				
9.5	Whether chain blocks and cables are inspected before each use to assure their sound condition?				
9.6	Whether hoist and lift, if used are: a) Properly maintained and thoroughly examined by competent authority at least once in every year. b) A register to be maintained to record particulars of such examination in prescribed forms and shall be produced to the owner supervisor before use.				
9.7	Whether area below the movement of boom of crane is cleared to avoid injury from falling objects?				
9.8	In crane handling area whether it is ensured that crew of truck, leave the truck before starting loading / unloading?				
9.9	Whether transporting material from one place to another is done by suitable				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	means?				
9.10	Whether carrier with sufficient capacity without projecting parts is used for transporting materials?				
9.11	Whether riggers engaged are well trained and conversant with signaling procedures including night signaling if required?				
9.12	Whether permission of authorized person is obtained before working on or near an overhead crane?				
9.13	Whether trained riggers are available all the time along with crane?				
9.14	Whether barricading has been done to ensure no unauthorised person enters in the working area of the crane?				
9.15	Whether lifting (rigging) plan has been prepared and approved before start of the work?				
9.16	Whether route of crane movement has been planned before the crane moves out of the garage?				
9.17	Whether it has been ensured that no electrical cable comes within 3 meters or safe distance from the boom of the crane?				
9.18	Whether boom is being kept in the horizontal position or locked while idling?				
9.19	Whether material is being stacked / destacked in trucks with the help of wedges to ensure no slippage while loading / unloading takes place?				
9.20	Whether the forklift / crane is being operated only by trained / authorized person?				
9.21	Others				
10.0	**ELECTRICAL SAFETY**				
10.1	Has the Electrical Line Clearance				

Engineers India Ltd

	procedure been followed involving electrical and other concerned Dept. and filling of formats?				
	Whether the "LOTO" system is defined properly and all personnel are aware with the procedure?				
	Whether "LOTO" system is being used in all electrical isolation jobs, by all departments?				
10.2	Have Danger Signs with Voltage rating/ Men at work signboards been displayed at both Sub Station as well as the work site?				
10.3	Has the contractor worker understood the electrical circuit on which he is going to work with probable electrical hazards and mitigation measures to be adopted?				
10.4	Whether contractor has engaged electrician (s) having valid electrical license in line with provisions in Indian Electricity Rules?				
10.5	Have all checks prior to switching operation been carried out and authorisation of owner/ user section obtained subsequently?				
10.6	Have all earthing links on electrical conductors removed before charging the line/ apparatus?				
10.7	Are PPE as prescribed under Indian Electricity Rules available, kept healthy and being used?				
10.8	Are earthing and bonding arrangement of non-current carrying metallic parts in line with provisions of Indian Electricity Rules – 1956 amended time to time as IS: 3043?				
10.9	Have electrical part of OISD-GDN-192 and Clause No. 9.0 for Temporary installations in OISD-STD-173 been understood and followed wherever applicable?				
10.10	Are flexible wires having voltage of 240 volts above earth potential taken through				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	PVC conduits?				
10.11	Whether portable hand lamps with a voltage rating of not more than 24 volts used with flameproof enclosures in confined spaces within columns, vessels etc?				
10.12	Have the Switches, MCBs, fuses etc. been inspected for proper ratings?				
10.13	Has Earth Leakage Circuit Breaker (ELCB) been used on the incoming side to protect against leakage of current? Is the device tested every time the work is started?				
10.14	Whether all portable appliances are provided with insulated Three pin plugs and socket arrangement?				
10.15	Whether industrial type extension boards and plug sockets are used?				
10.16	Has the electrical equipment brought to site by contractor been inspected by owner's supervisor/ safety officer for damage/cuts/abrasion etc? Is record of Insulation Resistance, wherever required being kept?				
10.17	Have standard practices for termination of conductors/ cables been followed (e.g. use of proper lugs, crimping tool, cable glands etc)? Is cable armour in continuity from feeding point to load?				
10.18	Are the Contractor supervisor and workmen well acquainted with first aid for electrical shock?				
10.19	Are the wires/ cables identifiable along their route towards the load by using colour coding and/or markers?				
10.20	Others				
11.0	**ROAD WORK**				
11.1	Whether site is barricaded and provided with warning signs including night warning lamps/ self glowing markers at appropriate location for diversion of traffic?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

11.2	Whether mixing aggregates with bitumen is done with the help of batch mixing plants? If no, whether adequate precautions have been taken?				
11.3	Whether road rollers, bitumen sprayers, pavement finishers are driven by experienced drivers with valid driving licenses?				
11.4	Whether the worker handling hot bitumen sprayers or spreading bitumen aggregate mix or mixing bitumen with aggregate are provided with PVC hood, hand gloves rubber shoes (gum boot) with pegging upto knee joints?				
11.5	Others				
12.0	**FORM WORK, REINFORCEMENT**				
12.1	Whether form work, shuttering, shoring etc. are adequately designed and provided to erect the structure and to support the expected load?				
12.2	Whether staging (support) for shuttering is designed for loads like worker movement, impact load and other incidental loads during construction?				
12.3	Whether workers use PPEs at work site like safety shoes, gloves, helmet with chin strap, goggles and dust masks etc.?				
12.4	Whether all safety procedures are adopted while cutting rod?				
12.5	Whether proper staging and bundling is provided for supplying rods at height?				
12.6	Whether sufficient cross bracings are provided for high staging works as per design requirement?				
12.7	Others				
13.0	**CONCRETING**				
13.1	Whether the concreting area is barricaded?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

13.2	Whether vibrator hoses, pumping concrete accessories are in healthy condition and mechanically strong?				
13.3	Whether it is ensured that no pipe line in concrete pumping system is attached to any temporary strut such as scaffolds etc.?				
13.4	Whether it is checked that safety guards around moving parts are provided in concrete mixer/ machines?				
13.5	Whether earthing of electrical mixers, vibrator etc. are provided?				
13.6	Whether entry of unauthorised person in the concreting area is restricted?				
13.7	Whether adequate lighting arrangement is made in the concreting area if working during night?				
13.8	Whether PPEs like gum boots, gloves, helmet with chin strap, goggles and dust masks etc. are being used?				
13.9	For overhead or underground work, whether form work and shuttering have been checked with respect to design?				
13.10	Whether boom placers are properly secured?				
13.11	Others				
14.0	**DEMOLISHING (DEMOLISHING BY BLAST NOT CONSIDERED)**				
14.1	Whether an initial survey carried out to identify any structural problems and risks associated with flammable substances and substances hazardous to health?				
14.2	Whether sequence of demolition is formulated and approved by competent person after the survey and recorded in a method statement having taken all the various considerations into account and identifying the problems and their solutions?				
14.3	Are non-sparking tools being used, if required?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

14.4	Is intermittent clearing operation being done to keep the area reasonably tidy and clean?				
14.5	Whether effective barricading has been provided?				
14.6	Whether Electrical and other facilities like water, oil, gas pipelines, etc. have been isolated / protected?				
14.7	Whether required PPEs like helmet with chin strap, goggles, ear plug/muff, hand gloves, safety shoes, dust mask, etc. used?				
14.8	Others				
15.0	**RADIOGRAPHY**				
15.1	Are safety precautions for handling of source as per guidelines of BARC being followed?				
15.2	Is the potency of the source being used within acceptable limits as per the BARC regulations?				
15.3	Is the area being cordoned with proper signs during radiography as per guidelines of BARC?				
15.4	Does proper place exist as per BARC regulations for storage of source / Personnel safety equipment?				
15.5	Does the radiographer have valid certificate of radiography from competent authority (BARC)?				
15.6	Is radiographer using Exposure Meter / Dosi Meter?				
15.7	Whether minimum occupancy of the premises / workplace is being ensured while radiography is in progress?				
15.8	Is permit system being followed?				
15.9	Whether Radiation Safety Officer is				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	available at site?				
15.10	Others				
16.0	**ADDITIONAL SAFETY PRECAUTION FOR UNITS WITH HYDROCARBONS**				
16.1	Are jobs being carried out with a valid work permit only as per OISD-STD-105 "Work Permit System".				
16.2	Is smoking prohibited in all places containing combustible or flammable materials and "No Smoking" notices prominently displayed?				
16.3	Are only approved type electrical installations and equipment, including portable lamps, being used?				
16.4	Are oily rags, waste, wooden materials and clothes or other substances liable to spontaneous ignition being removed?				
16.5	Are the combustible materials properly shielded in case same cannot be removed from the area?				
16.6	Has welding screens (like metal/ fire retardant cloth/ water curtain) been put up to protect other equipment / facilities/ OWS cement ceiling/ drains in adjoining areas against flying sparks, as may be required?				
16.7	Is Gas-testing being done with the means of a calibrated Gas detection Meter prior to start of Hot work and being done subsequently at regular intervals as per the requirement and recorded?				
16.8	Are regular inspections being done of places where there are fire risks like in the vicinity of heating appliances, electrical installations and conductors, stores of flammable and combustible materials, welding and cutting operations?				
16.9	Are fire-extinguishing equipment being placed at strategic locations and are kept well maintained and inspected at suitable intervals by a competent person?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

16.10	Are accesses to fire - extinguishing equipment such as hydrants, portable extinguishers and connections for hoses kept clear at all times?				
16.11	Are all supervisors and a sufficient number of workers trained in the use of fire-extinguishing equipment?				
16.12	Are audio means, to give warning in case of fire provided, audible in all parts of the site where persons are liable to work?				
16.13	Is there an effective evacuation plan in place so that all persons are evacuated speedily without panic?				
16.14	Others				
17.0	**EMERGENCY PROCEDURES**				
17.1	Is signaling / siren system effective?				
17.2	Is arrangement for rescuing affected person adequate?				
17.3	Are signs showing emergency exit route installed?				
17.4	Is emergency exit route clear of obstacles?				
17.5	Is communication system adequate?				
17.6	Whether emergency vehicle with driver has been provided to meet any emergency situation?				
17.7	Does any tie-up with hospitals or local doctors exist?				
17.8	Has the assembly point for workers in case of emergency been identified and earmarked?				
17.9	Has training been provided to a few workers for First Aid?				
17.10	Emergency procedure and telephone numbers are known to all and same are prominently displayed at site? (Sample				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

	compliance check)				
17.11	Whether emergency mock drills are being regularly done?				
17.12	Others				
18.0	**WELFARE FACILITIES**				
18.1	Are hygienic conditions prevailing at labour camps?				
18.2	Are First Aid facilities available?				
18.3	Does proper sanitation exist at site office and labour camps?				
18.4	Does any arrangement of medical facilities like tie ups with nearby hospital exist?				
18.5	Is proper drinking water facility available for workmen & staff?				
18.6	Are crèches provided for children (if applicable)?				
18.7	Is any proper place/canteen/restroom provided for eating food and taking rest?				
18.8	Is any place earmarked for storing / keeping clothing?				
18.9	Is adequate washing facility available?				
18.10	Does proper ventilation at working place exist?				
18.11	Others				
19.0	**GENERAL**				
19.1	Are illumination levels at workplace and passages adequate?				
19.2	Is communication system adequate?				
19.3	Are display and caution boards provided at strategic locations?				
19.4	Are road barriers being used for blocking any roads/passage?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

19.5	Has the structure been adequately secured against storm/high winds during construction/ erection?				
19.6	Are the equipment properly earthed?				
19.7	Are vehicles being checked like brakes, oil, lights etc. on regular basis?				
19.8	Is compressed air being used only for its intended purpose and not for any other purpose?				
19.9	Are only proper clothes and not loose clothes being used while working around machinery?				
19.10	Are nails or other sharp objects being removed or bent?				
19.11	Are machine guards over moving parts of machinery such as coupling, pulley, wheel etc. installed?				
19.12	Whether after maintenance of machinery the guards are securely fitted before putting into operation?				
19.13	Are working platforms / gangways provided with hand rails & toe guards?				
19.14	Are swing platforms provided with chains & secured adequately when not in use?				
19.15	Are the approaches to work sites being maintained & kept clear of obstacles?				
19.16	Whether engines of equipment entering into the operating area have exhaust and muffler system with approved spark arrestor?				
19.17	Whether vehicles/engine driven equipment, electrical equipment and tools used are certified?				
19.18	Whether contractors inform his workers about hazards and safe procedures?				

Engineers India Ltd

"OISD hereby expressly disclaims any liability or responsibility for loss or damage resulting from the use of OISD Standards/Guidelines."

19.19	Whether sufficient care is taken so that spark do not go outside working enclosure & falls below?				
19.20	Whether contractor's qualified / trained supervisor is present?				
19.21	Whether all exhausts of engines are provided with approved type of flame arrestors and exhaust is not facing toward the place where the workers are working?				
19.22	Others				

Signature of the Auditor

Annexure-XVI to SCC
Eligibility Criteria for Bank for PBG/ABG

Bank Guarantee Clause

As per BPCL Standard policy on acceptance of Bank Guarantee (BG) , BG's as per following criteria will be accepted:

Criteria for Acceptance of BG

BG Value	Stipulation
Upto INR 1 Crores	Bank Guarantees from any Scheduled bank (including nationalised banks, other scheduled commercial banks, scheduled cooperative banks and scheduled regional rural banks) as appearing in the second schedule to the RBI Act 193 Shall be acceptable.
Greater than INR 1 Crores	Bank Guarantee which are issued by banks having long term issuer rating of "A2" from Moody's or equivalent from Fitch and S&P in case of the foreign bank and long-term issuer rating of at least "AA" from CRISIL or equivalent from CARE, ICRA and Indian rating in case on Indian Bank, shall be acceptable. In case rating for a bank is available from more than one rating agency, the lowest such rating shall be considered. Illustrative list of banks meeting the stipulated criteria as on 02.06.2025 are attached as annexure 1.

Annexure I

List of banks meeting the stipulated criteria as on 02.06.2025

Sr No.	Name of Bank	Category of Banks
1	AU Small Finance Bank Ltd	Indian Bank
2	Axis Bank Ltd	Indian Bank
3	Bank of Baroda	Indian Bank
4	Bank of India	Indian Bank
5	Bank of Maharashtra	Indian Bank
6	Canara Bank	Indian Bank
7	Federal Bank Ltd	Indian Bank
8	HDFC Bank Ltd	Indian Bank

2. In case of any discrepancy/subsequent upgrade in credit rating, user department can contact Treasury for clarification.

ANNEXURE-XVII TO SPECIAL CONDITIONS OF CONTRACT

ENERGY POLICY

Energy Policy

We at Bharat Petroleum Corporation Limited, Bina Refinery (BPCL-BR) are committed to continual improvement in Energy performance and Energy Management System, which shall be demonstrated by:

- **Proactively** anticipate & assess risks and opportunities, address them through short and long-term objectives and implement mitigation plans.
- **Ensuring** effective Management of Energy, Information and Resources to achieve Objectives & Targets and Complying with all applicable legislation and other requirements.
- **Strengthening** purchase of energy efficient products & services by utilizing latest technology to improve our energy performance.
- **Monitoring** & Controlling energy consumption through well-structured reviews.
- **Attaining** participative culture of energy conservation by creating awareness through training.

Date : 1st July 2023

Place : Bina

ANNEXURE-XVIII TO SPECIAL CONDITIONS OF CONTRACT

DISCONTINUATION OF HYDRA CRANES WITHIN BINA REFINERY

Annexure XVIII

DISCONTINUATION OF HYDRA CRANES WITHIN BINA REFINERY PREMISES

The present Hydra Cranes can be substituted with suitable/equivalent hydraulically operated cranes that are equipped with rear mounted boom and out rigger supports. Some of the models having these features are mentioned below for your easy reference:

Sr. no.	Manufacturer	Models
1	Escort Construction Eqp. Ltd(ECEL)	TRX Series :K10,F15,TRX 1651,TRX 2319, MAC 1214
2	Action Construction Eqp. Ltd. (ACE)	FX 120,FX 150, 15XWE ,15 XWF, Rhino 110 FC

All the contractors are requested to take cognizance of the above, and arrange for alternate equipment, to carry out various jobs inside Bina Refinery.

Please ensure strict compliance failing which suitable action shall be taken as deemed fit.

ANNEXURE – XIX
TO
SPECIAL CONDITIONS OF CONTRACT

[LABOUR COMPLIANCE & SPECIFICATIONS/GUIDELINES FOR LABOUR WELFARE FACILITIES AT CAMP AND AT PROJECT SITE]

LABOUR COMPLIANCE

1. On the award of a contract, the contractor shall contact BPCL HR department to understand the requirements for onward process/ procedure for BPCL HR related activities and submit details/ contact number(s)/ email id(s) of their point of contact and authorization letter (for signing any BPCL HR related compliance document) of the person named so.

2. The scope of obligations of the contractors underlined also includes those of its subcontractor(s) and the contractor shall have the sole ownership and accountability for the same.

3. **Adherence to Statutes, Regulations, Schemes, Rules, BPCL's rules and procedures**: The contractor shall undertake to ensure due and complete compliance with respect to all Statutes, Regulations, Schemes, Rules, BPCL's rules and procedures etc. (which may be amended from time to time) whether of Central Govt. or State Govt. or any other competent authority applicable to the contractor and or employees employed or whose services are otherwise availed of by contractor or sub-contractor appointed by such contractor. Such laws shall also include Minimum Wages Act, 1948, Contract Labour (Regulation and Abolition) Act,1970, Employees State Insurance Act, 1948. Employees' Compensation Act, 1923, Payment of Gratuity Act, 1972, Provident Fund & Miscellaneous Provisions Act, 1952, Payment of Bonus Act, 1965, Apprentices Act,1961 and all other applicable Act, laws, rules, regulations and orders as may be in force from time to time. The Contractor must ensure strict compliance with respect to all applicable Acts.

4. The Gate Passes for contractors' employees are processed through Contract Man Management System (CMMS) online portal. The contractor shall fill in details pertinent to the LOI/ LOA/ PO, Labour license (if applicable), accidental insurance (Employees State Insurance Act, 1948/ Employees Compensation Act, 1923 policy details) and personal details of contractors' employees in CMMS through its login credential. The contractor shall contact BPCL HR department to understand the requirements and process.

5. Documents related to the contractor's employees to be submitted to BPCL and or uploaded in CMMS:
   5.1. Character certificate (Police verification)
   5.2. Medical fitness certificate
   5.3. Insurance policy (Pehchan Card under ESIC/EC policy/Group Personal Accident (GPA) as applicable)
   5.4. Photo Id (preferably Aadhar)
   5.5. Education/ Experience certificate (as required)
   5.6. Bank account, mobile number and UAN details; if not available, after the first month of the running of the contract
   5.7. Any additional requirement will be communicated and shall be required to be complied

6. For Bina location, medical examination of the employees is to be done mandatorily at BPCL (VK BR) hospital, located in BPCL Township, Bina as per the applicable charges. The gate pass is issued only those who are declared medically fit. Medical fitness of employees

involved in the high-risk jobs like confined space entry, inert space entry, work at height etc. is reassessed for specific requirements (on form-32) at Occupational Health Centre.

7. BPCL has the sole proprietorship of the Gate Passes issued to the contractors' employees and the contractor is obligated to return all the gate passes issued to the contractor. In case of non-submission of the Gate passes / lost Gate passes / damaged Gate passes suitable amount per gate pass will be deducted by BPCL. Also, the case of non-submission of the Gate passes / lost Gate passes shall require the contractor to lodge complaint at the local Police Thana and submit a copy of the same to BPCL Security.

8. **Confirmation to BPCL HR department of Compliance under various Act applicable:** It shall be the responsibility of the Contractor to confirm to BPCL HR of conformance to statutory compliances under various Acts applicable and submit the required documents to BPCL HR in CMMS through its log in credentials, on monthly basis. The contractor is required to contact BPCL HR department to understand the requirements and process.

   8.1. Contractor shall ensure timely payment to employees, remittance of PF & Pension & ESIC contributions and maintain statutory documents & registers under various applicable Acts.
   8.2. The checklist of the documents and formats etc. to be maintained and submitted to BPCL can be obtained from the BPCL HR department after the award of contract.
   8.3. On submission of the aforementioned documents, BPCL HR will inspect and issue 'HR Clearance Certificate'. Clearance of invoices shall be subject to completion of all labour compliances and getting HR Clearance Certificate from BPCL HR.

9. **Inspections/ Audits:** The contractor shall maintain and keep a copy of statutory documents at site and shall present itself at the designated time and venue with the required documents as when demanded by the BPCL and or any statutory authorities.

Specifications for Labour Camp

1 Purpose

To establish a minimum standard for the provision and maintenance of living conditions for the wellbeing and welfare of the workforce in construction projects of BPREP. The document aim to cover the norms apart from the existing provisions incorporated in relevant tenders.

2 Scope

This standard covers minimum basic requirements of design, construction, installation, and maintenance of temporary workers' housing quarters (Labor Camp) on construction site.

The contractor shall provide, free of cost temporary accommodation as the regulatory requirement to all workers engaged in the Project.

This document aims to provide the Project Teams and Contractors with guidance on the planning, design, construction, operation and decommissioning of Construction Camps in a sustainable way:

- Create adequate, respectable living conditions for the Project construction workforce.
- Maximize value over the entire lifecycle of the construction camp (maintenance, cleaning, waste management, energy and water usage management) and minimize footprint.
- Consider ethnic, religious and cultural differences and managing those.
- Create a secure, safe, and hygienic environment, including the logistics.
- Minimize impact on the local communities.
- Lower disease incidence and/or food poisoning outbreaks.
- Promote Health & Wellness and create a facility and community that exudes care for people.
- Maximize opportunities for beneficial use of the site, infrastructure, or parts thereof after project execution.
- It is assumed in this document that the facilities will be intended for single or bachelor status occupancy only unless specified differently.

This document does not cover permanent residential areas, neither temporary nor permanent office units nor buildings located inside project area.

3 Responsibilities

Following are the responsibilities of contractor:

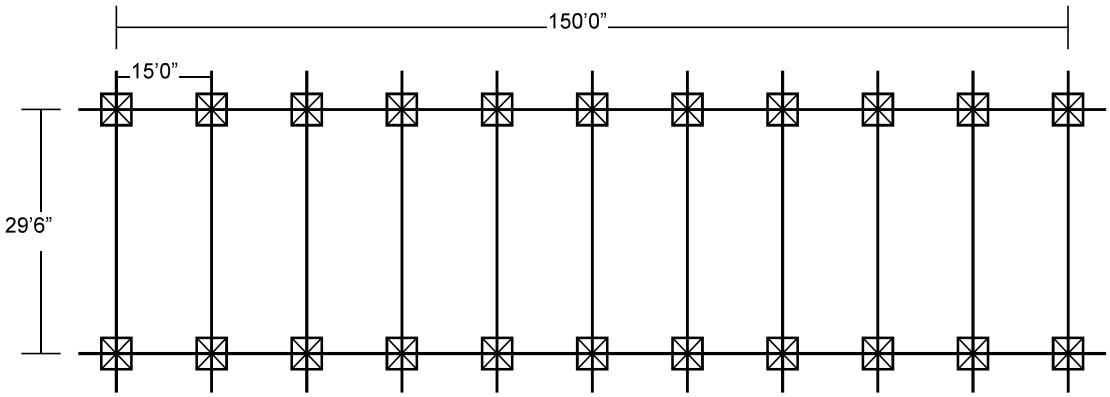
- Providing Labour camp as per the norms listed in the tender document.
- Deploying manpower/ stewards/ managers and training workers as per contract norms for inspection & ensuring compliance

Maintaining records of labor complaints and submitting owner for record of compliance.

4 General guidelines for location of labor camp:

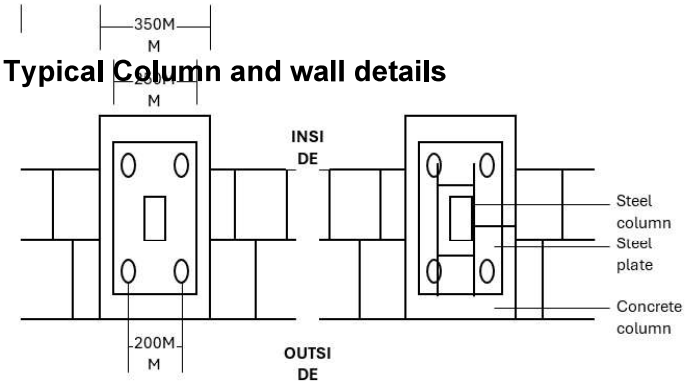
(To be read in Conjunction with labor camp layout, Appendix I)

- CONTRACTOR shall arrange land for construction of labour camp outside the Refinery. CONTRACTOR shall ensure that all workers stay in the labour camp. The workers having permanent address within 10 kms radius of the refinery location can be exempted from camp accommodation. For subject exemption, CONTRACTOR shall maintain record of all the workers with their name, age, local address, and permanent address along with copy of Aadhar card.
- CONTRACTOR shall develop and maintain all necessary facilities in labour camp like power, water, hutments, sanitation facilities, medical facilities, drainage, transportation facilities, etc. as per the norms mentioned in the tender document.
- Land for labour camp will be arranged by contractor following all local authorities rules and regulations. Camp must be located on elevated ground which is less prone to floods.
- Ensure that the land is not marshy in nature. Locality of the camp should be so selected that that there is no rift between the habitats of the camp and nearby community. Land under dispute shall not be selected for labor camp. If possible, commuting for shopping or to work shall be minimized.
- If there is danger of intrusion of snakes, carbolic acid must be spread around the labor camp and an area up to five meters from the buildings shall be cleared of any kind of shrubs, holes etc. that can house snakes and insects and it shall be maintained by periodic removal of vegetation.
- Availability of underground public utility services like electricity cables, water pipelines, gas pipelines and telephone / other lines shall be assessed and proper approval shall be taken from the authorities before excavating the land.
- If passing of overhead high-tension electric line over the labor camp cannot be avoided then a safe distance (minimum 3-5 meters) from the wires shall be ensured.
- Structures in the labor camp should be designed, constructed accordingly and their structural stability certificate shall be obtained.
- Water shall not be allowed to stagnate, and water generated shall be collected, treated and recycled.
- A small grocery shop shall be developed inside the labor camp.



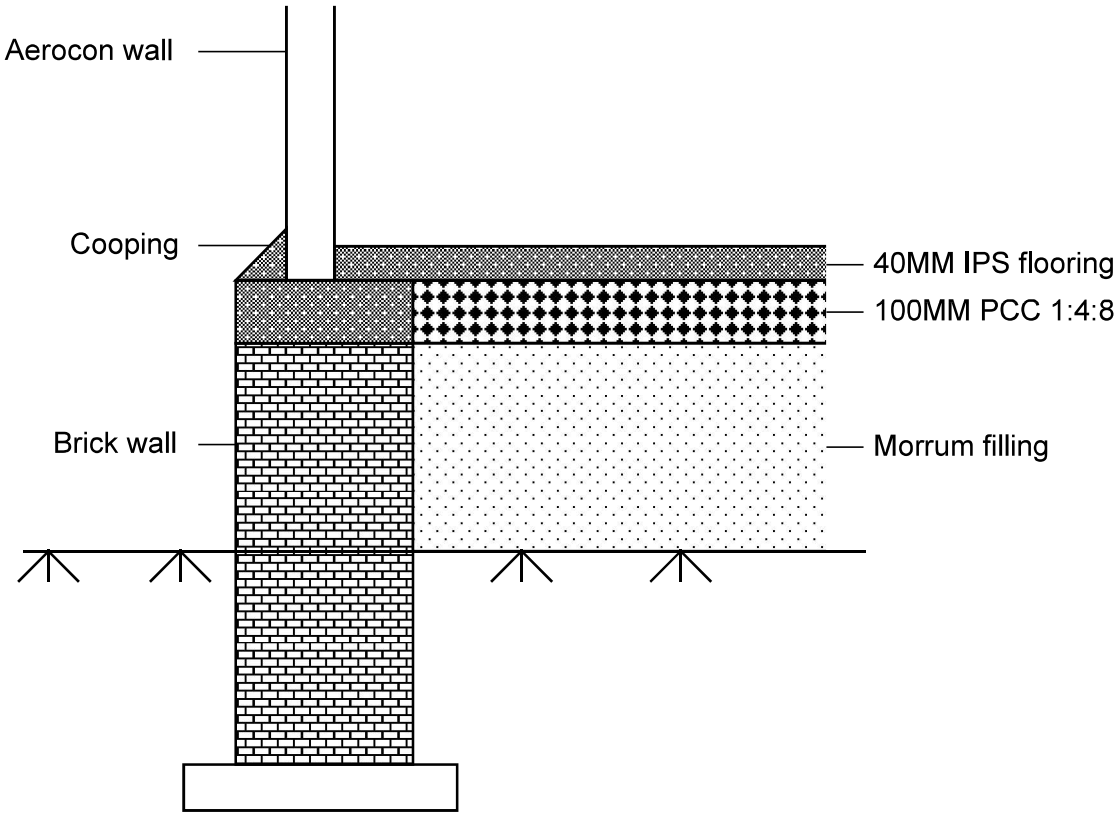
5 Norms for labor camp

5.1 Housing and Accommodation



- The housing shall be in the form of weather protected, prefabricated houses or constructed with hollow blocks. Row type sheds constructed with Structural Steel structure and Prefabricated Aerocon Panels & GI sheet roofing with columns, trusses and purlins and thermocol false ceiling.

- The contractor shall be responsible for demolishing the camp, clear the area and hand over the land to the landowner post project completion.
- Contractor shall allocate everyone a minimum of 25 square feet of accommodation space.
- Accommodations should be structured to house four persons per unit, utilizing bunk beds to maximize the use of vertical space.
- Each room with bunk bed setup should be equipped with a fan and a window to ensure proper ventilation, and lockers should be provided for personal storage. There shall be provision of a meshed window, 3 feet x 2 feet in size, located 6-9" below the ceiling on the common wall for ventilation.
- The height of ceiling shall be a minimum of 10 feet. If bunker beds are provided, the ceiling shall be a minimum of 4 feet above the top bunker bed. In case of bunker beds, no ceiling fans are allowed, only wall mounted fans shall be permitted.
- Provision of hooks in rooms @ 5ft height from the floor for tying the mosquito nets shall be ensured.
- Additionally, each bed should be furnished with a suitable mattress to ensure comfort and support for the occupants.
- Contractor shall provide for family rooms of approximately 12*10 square feet area in the ratio of 20:80 bachelor accommodation. The family accommodation shall be provided in the same camp area, separated by a barricading.
- Maximum 3-4 camps with 5000-8000 workers per camp may be considered for better management of facilities.
- Proper signages shall be installed at all turns and junctures to facilitate easy movement of habitants.
- Safe electric fitting with sufficient switches and plugs shall be provided. Every room shall have one tube light or LED, one fan and minimum 3 plug points. If bunker beds are used, number of light, fan and charging points shall be increased accordingly. ELCB of proper rating shall be provided for Electrical safety.
- The rooms and ceiling should be painted in light (preferably white) color for better illumination.
- The flooring should be made of Plain Cement Concrete.
- Every room shall have a window with grill and door with lock and key.
- Accommodation for bachelors and families shall be separate.
- Plinth of the rooms shall be approximately 300mm above the ground surface.



Labor quarters footing drawing

Typical Column and wall details

Typical Flooring details

Note: Details provided are typical in nature and for depiction only. Contractor shall design the structures as per standards and stability certification shall be provided.

5.2 Hygiene and Sanitation

Washrooms:

- Contractor shall ensure segregated water closets for men and women, adhering to below ratio: .
    - 1 for up to 20 persons
    - 2 for 21 to 45 persons
    - 3 for 46 to 70 persons
    - 4 for 71 to 100 persons
    - From 101 to 200 persons, add at the rate of 3 %. For over 200 persons, add at the rate of 2.5 %.
- Additionally, urinals shall also be installed following a ratio of 1:40.
- Washrooms with brick wall, tile flooring and standard sanitary fittings shall be provided for labour camps.
- Toilets are to be located within 100m of home location at camp
- Essential to maintaining cleanliness and hygiene, disposable bags and adequately covered dustbins must be provided in all toilet facilities.
- Furthermore, ensuring that every washroom is stocked with handwash, and soap will promote hygiene and prevent the spread of disease. These improvements are essential for providing a safe and dignified environment for all workers at the site.
- To further enhance the sanitation management, the installation of small-scale Sewage Treatment Plants (STPs) in all camps is required. There should not be any untreated discharge to the storm water.
- Proper levelling/ pavement of roads is to be ensured to avoid water logging.

Washing/Bathing Area:

- Contractor shall ensure segregated bathrooms/ washrooms for men and women, adhering to below ratio:
    - 1 for up to 20 persons
    - 2 for 21 to 45 persons
    - 3 for 46 to 70 persons
    - 4 for 71 to 100 persons
    - From 101 to 200 persons, add at the rate of 3 %. For over 200 persons, add at the rate of 2.5 %.
- The bathing area shall be constructed on P.C.C floor of area 24 feet x 24 feet with 5-bathroom block on each side and 2 feet gap on each side.
- The water shall be pumped to the portable tank lying on the structurally stable structure above the ground.
- The capacity of tank shall be suitable for 50 liters/person/day.
- The bathroom shall be completely covered with brick wall on 3 faces and gate on the 4th face.
- Size of each bathroom shall be 4ft x 4ft x 8 ft (height) fixed with a door.

- Labors shall be educated not to throw the shampoo pouches/soap cover in the bathrooms & proper screen shall be fixed to prevent all these solid wastes going into grey water treatment plant.

5.3 Water Supply

- To address drinking water issues, it is imperative to ensure a supply of 20-30 liters of water per person per day, specifically allocated for drinking and cooking purposes.
- Contractor shall ensure a daily water provision of 8-10 liters per person through water stations.
- Additionally, water coolers fitted with Reverse Osmosis (RO) systems shall be installed at all water stations to provide clean, safe drinking water at camp and site. The water used for cooking and drinking purpose shall be tested and potable as per IS 10500. Water tapes shall be push button type (as used in railways) in the drinking water area
- Recommended water supply for purposes other than drinking and cooking to be provided to ensure a minimum of 100 liters per person per day and a wastewater treatment plant of suitable capacity and design shall be established at each camp.

5.4 Grey Water and Sewage Treatment Plant

- Bathing and washing wastewater is termed as grey water and it is encouraged to treat the same in the grey water treatment plant, the treated water shall be reused for bathing and washing (by maintaining pH value), dust suppression/ green belt watering at the site.
- Grey water shall be treated in Grey water treatmentunit and sewage shall be treated in sewage treatment plant before any discharge. Grey water and sewage treatment plant shall be provided by contractor for his labor camps. Both the units shall be designed and implemented as per labor camp capacity following all environmental and statutory guidelines after taking necessary approval from BPCL/ EIL.

5.5 Fresh Water Tank

Sintex (3 layered) water tanks of required capacity shall be provided to store the fresh water, considering 2 days' storage. They should be located close to the main gate. An electric pump and necessary plumbing to pump the water to other areas shall be provided.

- A designated common kitchen shall be provided in every camp, ensuring that food preparation facilities are accessible to all residents. Cooking area with a minimum area of 600 sqft shall be setup and be separated from other facilities
- Openings for exhaust and cross ventilation shall be provided.
- The food preparation area shall be equipped with fire extinguisher for safety.
- Adequate storage with lock and key shall be provided to all the gangs for storage of grocery and vegetable.
- Pest control with anti-rodent arrangements shall be conducted regularly in the cooking area.

- If LPG is used as fuel, periodic checking of supply pipe/ regulator shall be done for leakage detection
- Fuel storage: The fuel storage area shall be close to the cooking area which should be equipped with fire extinguishers and necessary safety arrangements. People shall be trained to use fire-extinguishers. Minimum area of fuel storage shall be 100 sqft.
- No kitchen shall be allowed at Project site, food packets to be delivered to the workers by respective contractors. The food distribution by respective contractors needs to be pre-planned for additional delivery during early start and late finish months.
- Provision shall be made inside camps for workers to cook food as per choice. Cooking inside the accommodation rooms shall be strictly banned.
- Kitchen shall be provided in family rooms by using space of verandah.
- Dining area shall be near to the cooking area and shall be minimum 20X40 feet for 100 workers. Dining area capacity shall be 25% of the total wokers deployed by contractor.
- The dining area
- Fixed tables and sitting arrangements should be made preferably made of kadappa stone tables and benches.
- The area shall be sufficient for 80 to 100 labors at a time.
- Hand-wash area with drainage shall be provided.

  Covered Food-waste bins shall be kept near the dining area & waste shall be disposed on daily basis to avoid breeding of flies/mosquitoes.

5.6 Utensil Washing Area

- Utensil washing area shall be near to the cooking area and shall be minimum 20X20 feet.
- Utensil washing area shall be provided with 10 taps to wash the utensils.
- The wastewater stream from utensil washing area shall flow to gray water treatment plant after screening solids from the kitchen water.
- The screened solids shall be diverted to the waste disposal area, where food waste is disposed. Contractor should make proper arrangement for disposal of food waste/ other solid waste meeting all statutory and environmental compliance.

5.7 Weather conditions at camps

- Fans and proper ventilation shall be ensured in all camp accommodation by the respective contractors.
- Uninterrupted supply of cold water by sufficient industrial water coolers (stations) shall be ensured during the peak summer months.
- Provision of heaters/ blowers needs to be ensured at camp to cater to extreme cold.

5.8 Worker Transportation

- Comfortable seats in good condition shall be always maintained in the buses.
- Regular audits may be carried out by designated representative to ensure no overcrowding of buses.

- Site management shall ensure that parking at site is planned sufficiently to ensure no traffic because of buses at any time.
- Workflow shall be set-up by the respective contractors to ensure proper queuing of workers for getting in and getting out of the buses.

- **Provision of Transportation Services**

  The Contractor shall provide adequate transport facilities for all workmen employed at the construction site. Contractor shall provide proper mode of transport in form of passenger Bus service for transporting workmen from Labour camp to entry gate and from entry gate to worksite. The facilities shall ensure timely onboarding, transportation to the site, and return to the designated pick-up points within the stipulated timeframes. This is to ensure the timely, efficient, and safe transportation of workmen to and from the work site, thereby minimizing downtime, improving productivity, and maintaining steady job progress.

- **Capacity and Frequency of Transport**

  a. The transportation facilities shall be organized to ensure that each bus caters to minimum 50 workers per trip.
  b. The number of buses and trips required shall be determined by the total number of workmen and their work schedules to avoid overcrowding or delays.

- **Prohibition of Overcrowding**

  The Contractor shall ensure that all transport vehicles comply with applicable safety regulations and are not overcrowded. Adequate seating and standing arrangements shall be made, ensuring the comfort and safety of the workmen.

- **Compliance with Time Management**

  a. The transport schedule shall align with the work site's operational hours to guarantee that all workmen reach the site punctually.
  b. The downtime due to transportation delays shall be minimized, and any repeated failure to meet this standard may result in penalties or deductions, as specified in the contract.

- **Monitoring and Reporting**

  The Contractor shall maintain a log of transport schedules, vehicle capacity, and the number of workers transported. This record shall be subject to periodic inspection by the Owner or their representative.

- **Health and Safety Standards**

The Contractor shall ensure all transport vehicles are in good working condition and comply with health and safety regulations. Drivers shall be licensed and trained to handle workmen transportation professionally.

- **Non-Compliance:**
  Improper mode of transport (deploying small vehicles , pick up vans , construction material carrier etc) will be considered as unsafe act and suitable penalty for unsafe act will be imposed.

5.9 Cultural Amalgamation and Recreation

- Absence of recreational facilities on site can affect the morale and overall well-being of workers. Site management shall incorporate an open space measuring 100 X 150 meters in each camp specifically designated for sports and recreational activities.
- The decision regarding the specific facilities to be included in this space should be made by the contractor, based on the preferences and interests of the workforce.
- A recreation room of minimum 20*20 ft shall be provided for entertainment of labors
- The contractor needs to organize theme-based skits with professional agencies related to safety, unity, rights and duties, de-addiction, etc. once every two months.
- It shall be ensured that all the festivals are organized at camp and site to encourage bonding between workers.
- Training and awareness through slogans in different languages shall be ensured throughout the camp and site area.
- The camp management team shall comprise of representatives from different regions to ensure open communication with workers from different areas of the country.
- A TV (minimum 40 inch) with data cable connection shall be provided & be used for entertainment and showing informative videos on HSE/ general topics.
- Camp Head shall take care of the discipline in TV room and food, bidi, gutka shall not be allowed inside the TV room, also labors shall not be allowed to sleep inside the TV room
- Appropriate no of big floor mats of minimum 10ft*10ft shall be provided for watching the TV.

5.10 Medical Facilities

- Medical check-up report needs to be mandatorily submitted by the contractor for all the workers before issuance of ID card.
- Site management shall ensure primary medical facilities to all workers through OHCU.
- An ambulance through tie up with nearby hospitals should be available on site at a ratio of one per 2000 workers. If the workers are less than 2000, minimum one ambulance to be maintained. A first aid center with adequate paramedics should be present next to the camp administrator's office and the area of this room shall be minimum 100 sqft. In case of female workers, female first aiders shall be made available.

- Contractors shall equip each dining area (within HSSE hub) with a first aid box, maintaining a ratio of one box per 150 workers, to ensure first aid supplies in case of emergencies.
- Furthermore, organizing medical camps every two months and conducting an annual health check-up for all workers will help in early detection and management of potential health issues.
- Mandatory Emergency First Response training shall be imparted to supervisors once every year.
- De-addiction drives shall be organized every two months to provide education, support, and resources to help workers overcome their addictions.

5.11 Safety and security

- Security measures must include installation of a minimum of six closed-circuit television cameras in each camp, with capabilities to record continuously for 30 days to enhance safety and monitoring.
- Every labor camp shall have security cabin at the main gate to guard and to ensure safe passage of people, goods and belongings. The security cabin should typically be 6 feet x 6 feet.
- A security guard shall be deployed (24x7) at the main gate.

5.12 Waste Disposal Area

- The waste disposal area shall be cleaned daily, and authorized vendor shall be engaged to dispose the collected waste.
- Bio-gas plant and food-waste composting shall be encouraged for energy conservation and for food waste management in large labor camps (more than 1500 labors). For specific details on size please touch base with Corporate HSE department.

5.13 Emergency Assembly Area

- Emergency assembly area shall be clearly marked and should be easily accessible to everyone in the labor colony.
- Area: should be able to accommodate the full occupant load of the premises / area (as a thumb rule, not less than 2.25 square feet per person @ 1.5x1.5 feet)
- A notice board displaying the emergency contact numbers shall be provided in this area.
- Each occupant shall be briefed on the location of Emergency Assembly Area, first-aid room and their actions in case of an emergency

5.14 Grocery Shop

- Provision for a grocery shop of 10*10 Sq ft shall be made inside the labor camp, the shopkeeper must keep daily use items for labors like soap, washing powder, toothpaste,

Hair Oil, comb, shampoo etc. Kitchen items like cooking oil, rice, dal, wheat flour, spices etc shall be available with the shop.

- Shopkeeper may keep a provision for preparation of tea and ready to eat snacks, biscuits etc based on the requirement, but cooking shall not be permitted inside the grocery shop.

5.15 Creche

- In case of 50 or more female workers, a creche facility of minimum 20*10 Sqft shall be provided inside the labor camp.
- Children below 6 years shall be accommodated in creche and a trained caretaker shall be appointed to take care of children. Proper nutrition, healthcare, hygiene and primary education shall be ensured for the children by the caretaker.

5.16 Electric Room

- Preferably, labor camp electrification shall have solar energy as the source of electric energy and a small DG set as back-up for emergencies.
- Electric room shall preferably be of adequate size to accommodate the DG and panels etc. In general, it may be of 200 sqft size with brick work, concrete flooring and plaster. Earthing pits shall be a part of it. If required, cable trays shall be provided to align the cables.
- The roof, floor and walls shall be leak-proof to avoid any leakage / dampness.
- It shall be equipped with firefighting equipment and with lock & key.
- Earth resistance shall be checked on weekly basis and no. of earth pit shall be done
- In case of solar powered labor camp, room to store batteries of energy bank shall be provided.

5.17 Camp Head Room

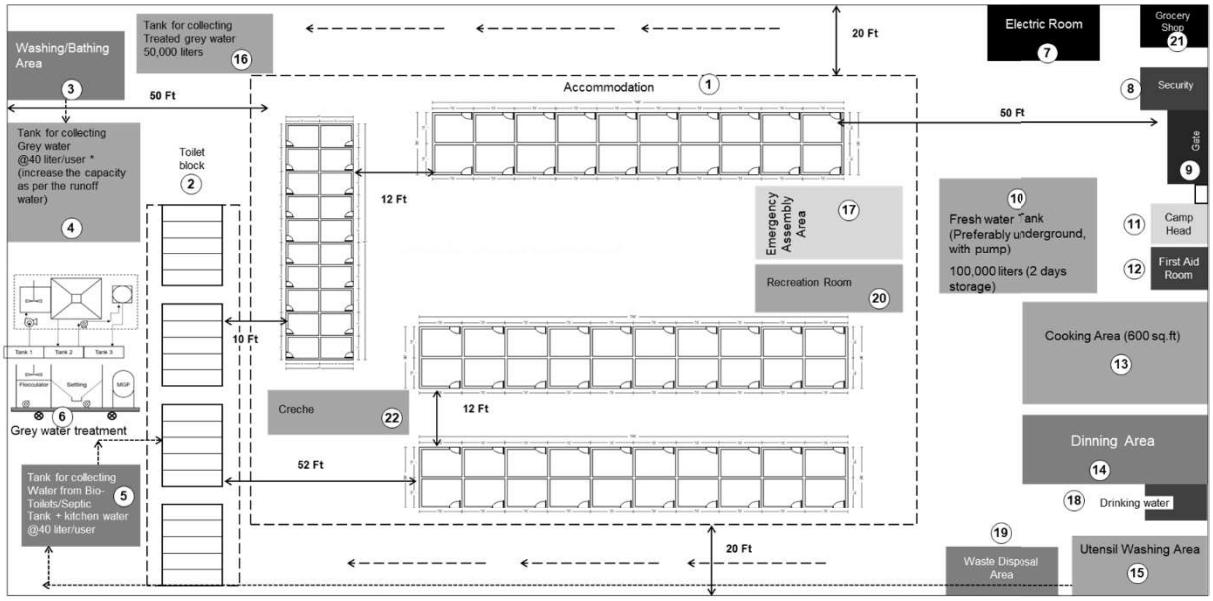
- An office room for the camp administrator shall be provided near the entrance gate.
- This office room shall be minimum 100 sqft.
- Provision of electrical fittings & fixtures (lights & fan) as well as a table, 4 chairs and cupboard shall be provided.
- A notice board in lock & key shall be provided outside the camp boss room but displaying notices, information etc.

6 Guidelines on compliance of norms

6.1.1 Audit

- **Inspection Protocol:** A third-party audit appointed by EIL/BPCL will be conducted monthly. Any deficiencies identified must be corrected and reassessed as per Attached annexure-I for penalty matrix

- **Audits and Feedback:** Surprise visits will be conducted by the owner's human resources, legal, IR, or safety teams, or by the PMC, to gather feedback on labor accommodation.



6.1.2 Reporting

- **Complaint Mechanism:** Each contractor's office must have a provision for laborers to submit complaints. The contractor is responsible for maintaining records of these complaints and resolving complaints in a timely manner.
- **Incident Reporting:** The PMC is tasked with verifying documents and informing the owner of any incidents. Human resources from the owner will report these incidents to the factory inspector, DISH, and PESO.

6.1.3 Pain - Gain

- **Non-Compliance Penalties:** The concerned authority from the owner/ PMC will impose penalties for each non-compliance issue, as per attached Annexure-I.
- **Appreciation and Rewards:** Appreciation letters will be awarded to the best contractor.
- **Recognitions** such as Safety/Quality person of the month, quarter, and year would be awarded to the contractors based on their performance in these domains.
- **Exclusive high tea sessions** with the leadership may be organized to motivate the manpower
- **Wall of fame** for outstanding laborers will be maintained and the names chosen by the auditing team.

Welfare facilities for Labour at Site

1. Toilet/ Urinal:

- Contractor shall ensure segregated water closets for men and women, adhering to a ratio of 1:20. Additionally, urinals shall also be installed following a ratio of 1:40.
- Washrooms with brick wall, tile flooring and standard sanitary fittings shall be provided in Process units (in ECU, PP/BU, etc. areas for longevity) , whereas portable washrooms may be provided in other areas at site (as mentioned in the plot plan shared in tender)
- Toilets are to be located within 200m of work zone at site (<5 mins walk).
- Essential to maintaining cleanliness and hygiene, disposable bags and adequately covered dustbins must be provided in all toilet facilities.
- Furthermore, ensuring that every washroom is stocked with handwash, and soap will promote hygiene and prevent the spread of disease. These improvements are essential for providing a safe and dignified environment for all workers at the site.
- To further enhance the sanitation management, the installation of small-scale Sewage Treatment Plants (STPs) in all camps or, alternatively, the use of septic tanks is recommended. There should not be any untreated discharge to the storm water.
- Proper levelling/ pavement of roads is to be ensured to avoid water logging.

2. Drinking Water:

- Contractor shall ensure a daily water provision of 8-10 liters per person through water stations.
- Additionally, water coolers fitted with Reverse Osmosis (RO) systems shall be installed at all water stations to provide clean, safe drinking water at camp and site. The water used for drinking purpose shall be tested and potable as per IS 10500. Water tapes shall be push button type (as used in railways) in the drinking water area

3. Food Shelters:

- Contractor shall establish dining halls (multiple small dining halls if needed) with capacity to accommodate 25% of total workforce at that hall.
- Everyone shall be allotted a space of 20 square feet to ensure comfort while dining.
- Additionally, the area shall be equipped with coolers and fans to maintain pleasant temperature, as well as fly killers to enhance sanitary conditions, ensure dignified and hygienic environment.
- The area including the dining hall may be designated as HSSE hub and shall include drinking water, hand wash facility, rest area, toilets and first aid facility.

- Covered Food-waste bins shall be kept near the dining area & waste shall be disposed on daily basis (at designated locations) to avoid breeding of flies/mosquitoes. Food waste shall be utilized for bio-gas generation and manure production

4. Weather conditions

- Adjustment of work schedule to include a 3–4-hour lunch break during the peak summer months, with an option for adjusting the same through an extended early start or finish, will help minimize exposure to peak temperature hours.
- It is recommended to provide a minimum of 20 square feet of shaded space per person, ideally located adjacent to the dining area. This can be achieved through the installation of tents made of fire retardant materials, which offer effective protection against the sun.
- Additionally, equipping these areas with fans that utilize atomized water or mist sprays will further help in reducing the temperature and providing comfort to the workers.
- Site management shall ensure properly laid out drawing in the tender documents, clearly showing the locations of shaded areas, water coolers, and washrooms.
- Provision of hydration supplements (ORS, Glucose) to mitigate dehydration during hot weather shall be ensured.
- Uninterrupted supply of cold water by sufficient industrial water coolers (stations) shall be ensured during the peak summer months.
- Towels need to be provided to workers on site to protect from harsh sun during summers.
- Provision of heaters/ blowers needs to be ensured at site to cater to extreme cold. Bonfires in site area shall be strictly prohibited to ensure safety and prevent hazard.

Note: Please refer Annexure-I for non-compliance Penalty

TERMS AND CONDITIONS FOR ACCEPTABLE USE OF SOCIAL MEDIA BY BUSINESS PARTNERS

1. OBJECTIVE

Social media has become part of everyday life and a means of communication and sharing information with others. Every organization recognises the benefits that social media tools can provide, and also reckons the challenges it brings.

These terms and conditions ("**Social Media T&Cs**") seek to provide clear guidance on acceptable standards of conduct and practices to be followed by the Business Partners (*as defined below*) of Bharat Petroleum Corporation Limited ("**Corporation**"), in the usage of social media tools during and post their association with the Corporation. These terms and conditions are intended to protect and safeguard *inter alia* the interests and reputation of the Corporation, in the access, use of or participation on Social Media (*as defined below*) platforms by such constituents.

It is important to maintain the highest degree of professional standard that is associated with the Corporation's name, brand and reputation. Constituents must constantly be aware of the risk of damaging the Corporation's name or reputation in public forums. These terms and conditions should be adhered to by each constituent at all times and should be read harmoniously and in conjunction with the terms of their engagement with the Corporation, as well as other applicable policies and directions issued by Corporation, from time to time, including the Relevant Documents (*as defined below*).

1.1. Social Media

Social Media includes any web or mobile based platform that enables an individual or agency to communicate interactively and enables exchange of user generated content. The term "**Social Media**" describes internet-based technologies and practices that people use to share opinions, insights, experiences and perspectives. It may be internal (housed within the Constituent's technology infrastructure and open for use only by the Constituents) or public (widely available to the population of internet users).

These terms and conditions are applicable equally to a wide range of websites and mobile phone / tablet applications, including the following:

(a) Social Networking sites, for example - Facebook, Twitter, and LinkedIn.
(b) Media Sharing sites, for example - Instagram, Snapchat, YouTube
(c) Discussion forums, for example - Reddit, Quora, Digg, Glassdoor
(d) Content Curation network, for example - Pinterest, Flipboard

Page 972 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

(e) Blogging and Publishing sites, for example - WordPress, Tumblr, Medium including blogs
(f) Interest-based network, for example - Goodreads, Houzz
(g) Information sharing sites, such as Wikipedia
(h) Opinion sites (e.g. Yahoo! Answers)
(i) Any other social media platform/s

1.2. Scope and Applicability

These Social Media T&Cs are applicable to all Business Partners (*as defined below*), including any prospective partners of the Corporation (the "**Constituents**").

The Social Media T&Cs provides a framework for the usage of Social Media by the Constituents and non-conformance with these Social Media T&Cs or any other applicable policy or directions issued by the Corporation as may be relevant to the Constituents, may result in penalties ranging from financial to legal liabilities, as set out under the respective contractual understanding between each Business Partner and the Corporation.

1.3. Relevant Documents

These Social Media T&Cs have been formulated in line with the Framework & Guidelines for Use of Social Media for Government Organizations, issued by the Department of Electronics and Information Technology, Ministry of Communications & Information Technology, Government of India.

In addition, these Social Media T&Cs must be read in conjunction with the underlying contract documents including the following documents (collectively, the "**Relevant Documents**"), as may be applicable to each Constituent:

(a) General Conditions of Contract for vendors (relevant clauses are placed at Annexure I);

(b) Transportation Contract Agreement Bulk LPG Transportation Contract By Road (relevant clauses are placed at Annexure II);

(c) PCVO, Retail and Lubes Transport guidelines.

2. CONTENT GUIDELINES

This section seeks to set out the guidelines for content management as well as administration rights of all official Business Partner Social Media accounts and ensure accountability of the authorised representatives of such Business Partner.

The following guidelines on content sharing ("**Content Guidelines**") must be followed, in relation to all content created, posted or shared on Social Media:

Page 973 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

(a) All post and other content shared via Social Media shall abide by applicable laws, including the Information Technology Act, 2000 and rules made thereunder, as amended.

(b) The content posted or shared though official Social Media accounts, shall be relevant, engaging and in line with the Corporation's brand and communication strategy, whether in the form of text, images, gifs, videos, etc.

(c) The Constituents shall be mindful of content and the tone associated with it. A negative tonality, sarcasm, dry humour, pun, memes, etc. should be avoided to steer clear from any controversy.

(d) The Constituents shall be careful and ensure that any content posted or shared through the official Social Media accounts does not bring disrepute to the Corporation. Opinion or comments on political observations, religious beliefs, gender biases, etc. must be avoided while operating official Social Media accounts. In the use of official Social Media accounts, the Constituents shall refrain from forwarding or sharing any videos or images or messages, which are considered inappropriate or any content that is considered offensive, obscene or derogatory in nature.

(e) The Constituents shall be cognizant of concerns regarding confidentiality and disclosure requirements, and must at all times, adhere to the Relevant Documents as well as these terms and conditions, to understand what shall be disclosed on a public platform. For instance any communication marked as "privileged" or "restricted" or "confidential" or "not for circulation" should not be shared on Social Media. The Constituents are absolutely prohibited from disclosing commercially sensitive, anticompetitive, private or confidential information. If unsure whether the information that is proposed to be shared falls within one of these categories, authorised representatives of the Constituent may discuss with the concerned official as designated by the Corporation.

(f) The Constituents shall ensure that any references to the Corporation or its employees, or other customers, partners and vendors do not contravene any non-disclosure agreements. The Constituents shall avoid disclosure of any information pertaining to any employee / vendor / customer or individual associated with the Corporation, without their prior consent.

(g) The Constituents shall be vigilant about tagging, mentions and conversations around the Corporation. If it notices any customer complaint, dealer/ distributor/ vendor grievances, media story etc., the same may be flagged to the official channels of the Corporation and will be responded to by authorized personnel within the Corporation.

(h) In the operation of official Social Media accounts, the Constituents shall be cognizant of maintaining professional etiquette for all interactions and shall not initiate or engage in discussions which may be characterised as showcasing a personal opinion such as political or religious beliefs. In

Page 974 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

addition, official Social Media accounts should not share any content or comment that may be viewed as colouring the relations between the Corporation and the Government of India or any Ministry / Department of the Central or State Governments.

(i) The Constituents, particularly in the use of official Social Media accounts, shall only post original content, which is free of any copyright infringement or plagiarism. To ensure the reputation and principles of the Corporation are safeguarded, all Constituents must avoid posting content that violates the law, infringes the intellectual property rights of the Corporation and its group companies or of any individual or organization. Any inadvertent posts, which violates these principles, must be removed / deleted immediately upon becoming aware of the implications as set out in these guidelines.

As responsible business partners of the Corporation, the following points must be strictly observed and followed by the Constituents:

(i) Text, photos, images, musical work in any form, video clips, movie clips, or any other content for which the Constituent does not own copyright, must not be used in any form, and in particular for official purposes to promote any activities related to the Corporation, without obtaining consent from the copyright owner. If the copyright owner for such work cannot be identified or if the consent for use of such work is not provided by the copyright owner, the work must not be used by the Constituent.

(ii) Capturing photographs and/or videos of the Corporation's offices, facilities, and other establishments (within or outside) or customer sites is strictly prohibited. Any such illegal images and/or videos of the Corporation's establishments, offices, facilities and factories or other sites and whether directly emailing or otherwise circulating such content via Social Media posts on the Internet, shall attract legal consequences. Official visual materials may be availed from the Corporation and can be requested through email, to the relevant State / Territory team.

(iii) Creation, sharing and/or distribution of videos which make use of unlicensed music is strictly prohibited.

(iv) Unauthorized videos of any events hosted by the Corporation, whether within or outside the Corporation's premises that may be captured by Constituents shall not be shared/distributed on Social Media.

(v) All Constituents must take due care to protect the Corporation's copyright and intellectual property within and outside the organization.

Page 975 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

(j) The authorised personnel operating official Social Media accounts of respective Business Partner shall not post unverified news, or news from dubious 'sources', that may project the Corporation in a negative light.

(k) The admins operating official Social Media accounts shall clearly state the source and give due disclaimers while quoting any third-party content through such Social Media accounts.

(l) Additionally, content on official Business Partner Social Media Accounts shall be limited to the coverage of activities related to the business only. However, these accounts can re-share / retweet the posts of Corporation's official Social Media accounts, subject to the veracity of such accounts.

3. ACCEPTABLE USAGE OF SOCIAL MEDIA BY BUSINESS PARTNERS

The following guidelines are applicable to vendors, suppliers and other contractors of the Corporation ("**Business Partners**"), and these are intended to supplement, and do not to replace the terms and conditions or any other agreement or guidelines (including the applicable provisions set out under Annexure I or II of these Social Media T&Cs), which are currently in place to regulate the conduct of such Business Partners:

(a) Business Partners have the discretion to decide whether their Social Media accounts will be used for personal or professional purposes. However, in any event, whether such Social Media accounts are used for official purposes or personal purposes, to the extent that they declare their affiliation with the Corporation in any way, it is deemed that they will abide by these terms and conditions read with the applicable contractual provisions and the Framework & Guidelines for Use of Social Media for Government Organizations, issued by the Department of Electronics and Information Technology, Ministry of Communications & Information Technology, Government of India.

(b) Only official Business Partners accounts are eligible to declare their association with the Corporation or using any content owned by or belonging to the Corporation, including logo, product specifications, product pictures, product catalogues, etc. Such accounts may only post content that are official in nature and reasonably expected to promote the activities specific to its business. Such official Business Partner Social Media account shall be akin to a professional page to promote business interactions and shall not post any content which may showcase the account as expressing opinion on ancillary matters which are not in furtherance of the objective set out under the Relevant Documents, such as posts related to entertainment industry, or political views etc. However, such affiliation or use of Corporation's content, such as logo, product pictures etc. is only limited to use by official Social Media accounts of such Business Partner, and will not, at any time, be used by any authorised or other personnel of such Business Partner, in the operation of a personal Social Media account.

Page 976 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

(c) Every Business Partner's official or personal (individual) Social Media account is prohibited from posting / circulating any official communication / document or disclosing any business-related or other confidential information, pertaining to the Corporation, in accordance with the Relevant Documents.

(d) Each Business Partner Social Media account, particularly those accounts which have been permitted to acknowledge their association with the Corporation, has an obligation to exercise caution in the posting or sharing of content on Social Media, and shall undertake adequate diligence prior to posting any content. In particular, such accounts shall be fully cognizant of posting or providing traction to any 'fake news' and shall refrain from posting or sharing unlawful, controversial or unverified news, or news from dubious 'sources', particularly in relation to the Corporation and the Central / State Governments.

(e) The Business Partner Social Media account which are maintained for official purposes, shall refrain from engaging in unlawful or inappropriate posts or sharing any content that may be defamatory or may have the effect of downplaying the Corporation's business or competitors. In addition, such account should also not post or share content using derogatory language or is likely to demean sentiments of anyone with whom they engage in any public communication using Social Media.

(f) Business Partners using Social Media for official purposes and especially those accounts that have been approved by the Corporation, shall maintain professional and proper etiquette in online interaction via Social Media and shall not engage in inappropriate behaviour. Such inappropriate behaviour includes but may not be limited to posting, sharing or endorsing in any form, any content which may be considered as:

(i) Divisive, unethical or unlawful at the workplace;

(ii) False, or derogatory, or amounting to bullying, trolling, intimidating, or harassing including using offensive, defamatory, threatening, discriminating, obscene or insulting language;

(iii) A misrepresentation of the Corporation, such as creating any unofficial groups or networks (whether intentional or unintentional) using the Corporation's name, logo, or email address;

(iv) Compromising the confidentiality (of the Constituents and/or the Corporation's information), or creating a conflict of interest;

(v) Disclosing commercially sensitive, anticompetitive, or information which is marked as restricted for internal circulation within the Corporation;

(vi) Misleading and misrepresentative, such as creating or endorsing any video channel / account representing the Corporation or any specific Business Unit, or otherwise posting or sharing any content owned by the

Page 977 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

Corporation, unless such content has been posted on verifiable official Social Media accounts of the Corporation;

(vii) Amounting to pornographic material (that is, writing, pictures, films and video clips of a sexually explicit nature) or content that could be considered as offensive, obscene or criminal; or

(viii) Creating or likely to create any liability (whether criminal or civil, for the Corporation).

Where evidence of misuse or inappropriate behaviour is brought to the notice of the Corporation, the Corporation may undertake a more detailed investigation in accordance with its procedures, which may involve the examination and disclosure of records by those nominated to undertake the investigation and any witnesses involved in the investigation. If necessary, action may be taken against such Business Partner under the respective contractual agreement and in case required, such information may be handed to authorities in connection with the investigation.

(g) Any violation of these Social Media T&Cs shall be treated as violation of General Conditions of Contract of the Corporation and may invite action by the Corporation as deemed fit, based on the sole discretion of the Corporation.

(h) The Corporation has a zero-tolerance policy for any complaints that may be brought to its notice via Business Partner Social Media accounts. In the event the Business Partner or its associates *etc.* are dissatisfied with the Corporation, or have any unresolved query or grievance against the Corporation or any individual who is in the employment or association of the Corporation, the Business Partner or such person associated with it must reach out to the designated official and follow the hierarchy established within the Corporation. All such communication must follow the formal processes that are available as per contractual agreement with the Corporation. In the event the Business Partner, whether by itself or its employee or associate publishes any such information on Social Media or discloses details of any complaint or dispute with the Corporation on a public forum through Social Media, it will be in breach of the terms of these T&Cs and its agreement with the Corporation, and the Corporation will have the right to pursue such legal remedies as may be appropriate and available under law.

(i) Upon termination or expiry of the Relevant Document / underlying contractual agreement between the Corporation and the Business Partner, the Business Partner shall ensure that all references and posts which disclose any affiliation with the Corporation has been scrubbed from the Business Partner's Social Media account and a formal written declaration to this effect must be provided to the Corporation, within 7 days of such termination or expiry.

Page 978 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

4. ENFORCEABILITY AND COMPLIANCE

4.1. These Social Media T&Cs are construed to be a part of the Relevant Documents and form an integral part of the contractual understanding between the Corporation and the Business Partner.

4.2. Any violation of the Social Media T&Cs shall be treated as violation of respective contractual understanding between the Corporation and the Business Partner, and may invite appropriate action by the Corporation as deemed fit.

4.3. The Business Partner agrees and understands that all activities of the Business Partner's official Social Media Account is subject to monitoring and periodic audits by the Corporation, if required.

4.4. The Business Partner will provide its written acknowledgement to these Social Media T&Cs, in the form set out in Annexure III, failing which the Corporation may take such action as may be necessary to ensure compliance with these terms and conditions.

4.5. The concerned official of the Corporation shall be responsible for reviewing the compliance of these Social Media T&Cs as may be required to ensure that it meets legal requirements and reflects best practice.

Page 979 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

ANNEXURE I

GENERAL CONDITIONS OF CONTRACT FOR VENDORS

Clause 34: Contractor's Subordinate Staff and Their Conducts:

34.2 If and whenever any of the Contractor's or sub-contractor's agents, sub-agents, assistants supervisor or other employees shall in the opinion of Engineer-in-Charge be guilty of any misconduct or be incompetent or insufficiently qualified or negligent in the performance of their duties or that in the opinion of the owner or Engineer-in-Charge, it is undesirable for administrative or any other reason for such person or persons to be employed in the works, the contractor, if so directed by the Engineer-in- Charge, shall at once remove such person or persons from employment thereon. Any person or persons so removed from the works shall not again be employed in connection with the works without the written permission of the Engineer-in-Charge. Any person so removed from the works shall be immediately replaced at the expense of the contractor by a qualified and competent substitute. Should the contractor be requested to repatriate any person removed from the works he shall do so and shall bear all costs in connection herewith.

34.3 The contractor shall be responsible for the proper behaviour of all the staff, supervisor, workmen and others and shall exercise a proper degree of control over them and in particular, and without prejudice to the said generality, the contractor shall be bound to prohibit and prevent any employees from trespassing or acting in any way detrimental or prejudicial to the interest of the community or of the properties or occupiers of land and properties in the neighbourhood and in the event of such employee so trespassing, the contractor shall be responsible therefore and relieve the Owner of all consequent claims or actions for damages or injury or any other grounds whatsoever. The decision of the Engineer-in-Charge upon any matter arising under this clause shall be final. Contractor shall ensure that none of their employees are ever engaged in any anti-national activities.

Clause 44: Liens

44.2 Contractor will not disclose details of the work to any person or persons except those engaged in its performance, and only to the extent required for the particular portion of the work being done. Contractor will not give any items concerning details of the work to the press or a news disseminating agency without prior written approval from Engineer-in-Charge. Contractor shall not take any pictures on site without written approval of Engineer-in-Charge.

Page 980 of 5448 : B957-TENDER DOC-B957-999-69-41-PK-T-9501 : Rev. A

ANNEXURE II

TRANSPORTATION CONTRACT AGREEMENT FOR BULK LPG TRANSPORTATION CONTRACT BY ROAD

Clause 28:

(a) The Transporter shall remain at all times liable to the Corporation for any loss or damage caused to any building, plant machinery or the property of the Corporation due to careless, negligent, inexperienced act or default of the Transporter, their agents, representative or employees. The Corporation shall be entitled to deduct from the amounts payable to the Transporter under this Agreement or otherwise the loss or damages so suffered.

(b) The Transporter will be liable for any loss and/or injury to Corporation's employee due to careless, negligent, wrongful act or default of the Transporter, his/their representatives or employees in carrying out the job under this contract.

Clause 38:

All terms & conditions stipulated in the Guidelines for Bidders, Tender Terms & Conditions, Declarations, Agreement, Industry Bulk LPG Transport Discipline Guidelines and other documents furnished with the Tender and related correspondence shall form part of the contract. The Corporations are entitled to frame and implement the Policy(ies) applicable to Transporters, and to modify and amend the same from time to time, and that the Policy(ies) as framed, amended and modified would be binding on the Transporters, immediately upon being communicated to them.

Clauses from Transportation Agreement of Retail and MAK Lubricants

Advisory on Environmental Criteria

[ANNEXURE - XXI TO SPECIAL CONDITIONS OF CONTRACT]

BPCL Supplier / Vendor Advisory on Environmental Criteria

Dear Suppliers / Vendors,
As you aware that environment is one of the most precious gifts given to us by Mother Nature. We must be conscious of our actions and act responsibly to preserve and conserve the environment. BPCL has always endeavoured to be a responsible & conscious corporate citizen. We would also want to engage you - our suppliers - in the efforts to reduce our impact on the environment.

Below are the advisory guidelines on environmental criteria, which we want our suppliers to follow:

1. **Emission / Pollution Control (Air, Water, Soil, Noise etc.)**
a. The organization and its all operations should follow all laws related to emission / pollution norms.
b. The organization should get all necessary approvals & certifications for emission / pollution control from relevant authorities for plants, equipment, vehicles etc.
c. Monitoring mechanism should be put in place for all emissions / pollution emitted from organization owned assets e.g. Equipment, vehicles etc.
d. Organization should conduct training and awareness programs for the staff on emission / pollution impacts & prevention.

2. **Energy**
a. Monitoring energy consumption by the organization from all sources should be done.
b. Organization should strive to reduce energy consumption by employing energy efficiency & conservation measures.
c. Use of alternate fuel sources & renewable energy should be promoted by the organization.

3. **Water**
a. Water consumption from all the sources should be monitored by the organization.
b. Reduction in water consumption should be aimed by treating waste water & alternative use of waste water.
c. Waste water should be treated to remove harmful elements before releasing it to the eco-system.

4. **Reducing Resource Intensity**
a. Optimization / re-use / recycle techniques should be used to reduce the use of resources.
b. Minimizing use of resources having major environmental impact should be done and substitutes should be found.
c. Proper handling should be done for hazardous resources (chemicals etc.) having impact on humans & eco system.

5. **Waste Management**
a. Waste segregation based on type of waste (solid, liquid, hazardous, etc.) generated by the organization should be done.
b. Opportunities for recycling & re-use of waste should be identified & promoted by the organization.
c. Hazardous waste should be handled by trained personnel & disposed to authorized agencies only.

6. **Risk Mitigation**
a. Environmental Risk Assessment should be carried out for all the organization's operations.
b. The severity / extent of damage due to the environmental risk should be estimated.
c. Staff / personnel involved in operations related to environmental risk should be trained and regular awareness programs should be conducted.

The guidelines are indicative of the direction that the suppliers should take to be more environmentally supportive. Suppliers should join hands with BPCL in making a value chain that is environmentally aware and responsible.

Procedure for Vendor Invoice Processing

[ANNEXURE - XXII TO SPECIAL CONDITIONS OF CONTRACT]

Business Process Excellence Centre

To Our Esteemed Suppliers/ Contractors,

BPCL has setup a Business Process Excellence Centre (BPEC) for Vendor Invoice processing.

BPEC will function as a payments factory to receive, digitize and process vendor invoices in a timely and accurate manner. In addition, the centre will receive and account for Bank Guarantees (BGs) & other allied activities like release of retention money/ security deposit etc.

➢ Bill Payments

Effective 1st May 2017, the following original documents will need to be sent to BPEC for release of payments:

i) Original Commercial / Tax invoice
ii) Any Supporting documents for payments e.g. Octroi certificate, freight bills, IRN, test certificate
iii) Copy of the Works Contract Tax (WCT) Exemption Certificate for lower/Nil deduction of WCT (Original must be submitted to Kochi Refinery procurement team for their records)

Please send these documents to the following address for payment processing*:

BUSINESS PROCESS EXCELLENCE CENTRE (BPEC)
4th FLOOR, BPCL OFFICE COMPLEX
PLOT NO. 6 SECTOR – 2
BEHIND CIDCO GARDEN, KHARGHAR
NAVI MUMBAI-410210

**Please note that this does not change the BPCL address that needs to be put on the invoice.*

The following documents should not be sent to BPEC:

- Excise invoice (Duplicate invoice For Transporter- DFT)
- User reference manuals
- Test booklets
- BG against Earnest Money Deposit (EMD) etc.

**These documents should be sent to the procurement location i.e Kochi Refinery*

How to Track Status of Bills sent to Business Process Excellence Centre (BPEC)?

1) For every valid bill received at BPEC, the vendor will be communicated with a unique DPID no. on their registered email ID & mobile no. as per BPCL records
2) Vendors can contact Toll Free No. 1800 224 221 during working days between 9.00 AM to 5.00 PM for any payment/ bill related queries
3) Vendors can write to z_vendorhelpdesk@bharatpetroleum.in for any queries
4) The payment status of your invoices can also be check in Vendor Portal (*https://efp.bpcl.in/*)
5) The payment status of your invoices can also be check in Mobile Application (https://ebiz.bpc.co.in/EbizPortal/)
6) For status of specific invoices, vendor can also use SMS application by sending SMS **"STAT (Space) <DPID>"** to 9223112222 from their registered mobile no.

General Guidelines for Invoices

All invoices should be legible and accompanied with supporting documents required for invoice processing as per the PO. Invoices should be compliant with government requirements on tax invoices and should have the following information:

- PO number, clearly mentioned (45XXXXXXXX)
- Vendor code (Available with your BPCL contract)
- Vendor name
- Vendor address, telephone number, email address and point of contact
- Tax registration number (VAT, Service Tax, Excise etc. as applicable)
- The invoice should be in name of Bharat Petroleum Corporation Limited (BPCL)
- Invoice number
- Invoice date
- Specification of goods and services delivered
- Total gross amount and breakup
- Taxes applicable, with individual tax rates matching with the purchase order
- BPCL Location name and address
- Kindly ensure multiple invoices are not bunched together (stapled) whilst sending the same to BPEC for processing.

**Please note that the above information should be present on the invoice, to ensure that the invoice is processed in a timely manner*.

➢ Release of Security Deposit/ Retention Money

Standard Template for Release of Retention Money & Security Deposit is duly attached herewith which should be used by all vendors/contractors while submitting their release of Retention/Security deposit requests to BPEC.

With respect to the said template vendors are required to note the following point:

1) Only single Purchase Order (45XXXXXXXX) / Contract (46XXXXXXXX) can be provided per request letter (separate requests letters for each Purchase Order/ Contract)
2) **Photo copies of old invoices/bills** to which the retention money pertains **should not be attached** with the request letter
3) Request letter must be duly signed by the vendor or their authorized representative
4) There is no requirement for BPCL officers to sign on the said request letter
5) Request letter must be sent to BPEC only after completion of job (for security deposit) or completion of defect liability period (for retention money)
6) Vendors can also send scan copy of the said letter duly signed to z_vendorhelpdesk@bharatpetroleum.in
7) Vendors will also be receiving emails for tracking of these requests on their registered email ID's

➢ Guidelines for Bank Guarantees and Performance Bank Guarantees

All PBGs and BGs should be accompanied with a cover letter stating one of the following (available with your BPCL contract)

- PO/ Contract number
- RFQ number

In addition, please clearly state the following:

- Vendor number
- Vendor Name, address, email address and phone number
- Vendor point of contact
- BPCL location and address

Further, currently on receipt of these BG's, letters are being sent to issuing Bank for BG Confirmation. On many occasions there are delays or no response from Banks with regards to confirmation of BG's which ultimately leads to delay in release of vendor payments.

Considering the above pain points, BPCL has tied up with SBI for implementation of SFMS (Structured Financial Messaging Service) Bank Guarantee Process and the salient features are as given below:

1) Vendors/ Contractors shall provide BPCL's Bank Account No. & IFSC Code (Details given below) to their existing Bank at the time of application for Bank Guarantee in favor of BPCL
2) Your Bank shall issue the Bank Guarantee & send SFMS message to BPCL Bank confirming the Bank Guarantee as genuine
3) **BPCL's Bank (SBI) shall in turn send the said SFMS message to BPCL's dedicated email ID basis which BPEC shall consider the said Bank Guarantee as verified by Bank**
4) Once the above process is completed, BPEC Team shall proceed with the release of payment to vendors which is due against the said Bank Guarantee.

Name of Bank: State Bank of India
Branch: CAG Branch, Mumbai

IFSC Code: SBIN0009995

REQUEST FOR RELEASE OF SECURITY DEPOSIT

Date: DD/MM/YYYY

To,

The Allied Process Team
BUSINESS PROCESS EXCELLENCE CENTRE
4th FLOOR, BPCL OFFICE COMPLEX
PLOT NO. 6 SECTOR – 2
BEHIND CIDCO GARDEN, KHARGHAR
NEW MUMBAI-410210

Dear Sir,

Sub: - **Request for Release of Security Deposit**

Request you to kindly release the Security Deposit money held by Bharat Petroleum Corp Ltd as per the details given below:

Purchase Order	**(45XXXXXXXX)**
Contract No (if applicable)	**(46XXXXXXXX)**
Vendor Code	
Vendor Name	
Description of Services / Job Carried	
Security Deposit Amount	

(Only one PO/Contract # per Request letter will be accepted)

Thanking you,

Yours faithfully
For M/s…….

_____

REQUEST FOR RELEASE OF RETENTION MONEY

Date: DD/MM/YYYY

To,

The Allied Process Team
BUSINESS PROCESS EXCELLENCE CENTRE
4th FLOOR, BPCL OFFICE COMPLEX
PLOT NO. 6 SECTOR – 2
BEHIND CIDCO GARDEN, KHARGHAR
NEW MUMBAI-410210

Dear Sir,

Sub: - **Request for Release of Retention Money**

Request you to kindly release the retention money held by Bharat Petroleum Corp Ltd as per details given below

The request to release is based on (Please tick whichever applicable)

- ☐ Retention money is due since defect liability period is complete
- ☐ Performance Bank Guarantee submitted against PO/Contract

Purchase Order	**(45XXXXXXXX)**
Contract No (if applicable)	**(46XXXXXXXX)**
Vendor Code	
Vendor Name	
Description of Services / Job Carried	

(Only one PO/Contract # per Request letter will be accepted)

S. No	Invoice Ref. No.	Invoice Date	Invoice Amount	Performance Bank Guarantee No. (if retention release against submission of PBG)	Retention Amount

Thanking you,

Yours faithfully
For M/s……

ANNEXURE – XXIII
TO
SPECIAL CONDITIONS OF CONTRACT
PROFORMA OF ABG

[PROFORMA OF ADVANCE BANK GUARANTEE]

PROFORMA OF BANK GUARANTEE - FOR ADVANCE
(On non-judicial paper of appropriate value)

To,

Bharat Petroleum Corporation Limited,
BPCL Office Complex
Business Process Excellence Centre (BPEC)
Plot No. – 6, Sector – 2, Behind CIDCO Garden
Kharghar, Navi Mumbai – 410 210

Dear Sir,

In consideration of the Bharat Petroleum Corporation Limited (hereinafter called 'the Company' which expression shall include its successors and assigns) having awarded to M/s. (Name)…..……. (Constitution)…….. (Address)…..……. (hereinafter referred to as "The Vendor" which expression shall wherever the subject or context so permits include its successors, administrators, representatives and assigns) the contract in terms inter alia for …….. (description of supply), on terms and conditions set out, inter alia, in the Company's Contract No…….dated……. as well as the General and Special Conditions of Contract of the Company and valued at <Currency> (in figures)…….. <Currency> (in words)…… only) and the Company having agreed to make an advance payment of ……% (….. percent) of the said value of the Contract to the Contractor against Bank Guarantee to be furnished by the Contractor in terms of clause …….. of the Contract , the said advance to be adjusted against the price of materials supplied in the manner provided for in clause ……. of the Contract .

We, (Name)…….. (Constitution) ……(hereinafter called "the Bank" which expression shall include its successors and assigns) hereby jointly and severally undertake and guarantee to pay to the Company in ……(Currency) forthwith on demand in writing and without protest or demur of any and all moneys any wise payable by the Vendor to the Company to the extent of <Currency> (in figures)…… <Currency> (in words)…….. only) till the said advance is adjusted as aforesaid at any time up to ……

The amount stated by the Company in any demand, claim or notice, as liable to be paid to the Company by the Contractor, with reference to the above mentioned advance payment under the said Contract , shall, as between the Bank and the Company, for the purpose of these presents, be conclusive of the amount payable by the Bank to the Company hereunder, notwithstanding any dispute or disputes has been raised by the Contractor and are pending before any arbitration, Tribunal or Court.

The Bank agrees that the guarantee herein contained shall continue to be enforceable till the sum due to the Company on account of the said advance is adjusted as aforesaid or till the expiry of this guarantee, whichever is earlier.

The Bank further undertakes not to revoke this guarantee during its currency without the previous consent of the Company.

The Bank also agrees that the Company shall be entitled to enforce this guarantee, notwithstanding any other security or guarantee that it may have in relation to the supplier's liability for the said advance.

Notwithstanding anything said above, our liability under this guarantee is restricted to <Currency> …..... (<Currency> …… only). Our guarantee shall remain in force until …… Unless a claim or demand in writing is made against us under this guarantee before the expiry of …… months from the aforesaid date, i.e. before _____ be relieved and discharged from all liabilities thereunder.

This Guarantee shall be treated as an unconditional guarantee and the Contractor shall have no right to object or obstruct in any way the enforcement of this Guarantee.

This guarantee shall be governed and construed in accordance with Indian laws and subject to the exclusive jurisdiction of courts in India.

Dated this …… day of ……..

Yours faithfully,

ANNEXURE – XXIV
TO
SPECIAL CONDITIONS OF CONTRACT

[SPECIAL INSTRUCTIONS TO CONTRACTORS]

SPECIAL INSTRUCTIONS TO BIDDERS/ CONTRACTORS

Apart from scope mentioned in tender, follow are additional instructions to bidder:

"The following requirements are within the Contractor's scope without any additional cost implication. No separate payment shall be made for these items, and the cost shall be considered included in the prices quoted in the Schedule of Rates (SOR) attached with the Tender."

GENERAL:

This tender i.e. composite tender no. B957-999-69-41-PK-T-**9501** shall comprise Mechanical (Piping & Equipment erection), Electrical, Instrumentation, Insulation, Painting, Fire-proofing and miscellaneous Civil/ Structural works relating to offsites and utilities area . Offsites and Utilities plot area is divided in to Part A and Part B per agreed execution philosophy with BPCL.

1. Bidders will ***visit site to assess the site conditions*** and familiarize themselves of ***site specific requirements***. During the visit bidder will also familiarize themselves of ***locally available resources*** that may be required for carrying out site works.

2. Bidder will set up ***well equipped, gated, covered and secured pre-fabrication facilities*** and site offices near the vicinity of site works. Watch and ward of these facilities will **be** bidder**'**s responsibility during the entire duration of the works under the scope of this package

3. ***Approx. 5 acres area for each package will be allocated to the*** contractor for setting up of the prefabrication yard and site office. The location of the fabrication yard is within the BPCL Refinery boundary wall . Fabrication yard will be handover to Contractor in "as it is" condition. Contractor to visit site to assess the location before submitting the bid. Further any grading and other ground preparation as well as shed erection for monsoon preparation as required per SOW to be done by Contractor." Contractor's fabrication yard shall be maintained in good condition. Materials shall be stored off ground, protected from waterlogging and environmental damage, with proper care of handed over material. The area required to be developed by the Contractor by their own and regular housekeeping to be maintained. In case contractor fails to do so the necessary housekeeping will be arranged by deploying other agencies at risk and cost of the contractor as well as vacating the area. Non-availability of space inside refinery from BPCL should not be a case for extra claim or time extension. Therefore, the CONTRACTOR shall, within the quoted price, make alternate arrangement to cope with such eventuality.

MONSOON COMBAT /EXTREME WEATHER CONDITION

4. During the Monsoon season, the bidders shall be ***responsible for making their own arrangements to combat monsoon*** to ensure uninterrupted site works. Bidder will make all necessary ***arrangements for keeping the prefabrication yard, working area free of water logging*** and make necessary approach to work site as required.

5. The execution of the work shall entail working in all seasons including extreme winter/summer and monsoon. In so far as necessary, the bidder shall maintain at job site at all times such material, labor, pumps, equipment and machinery as may be required for the performance of the work during all weather condition including monsoon or other rains and shall plan well in advance for the collection of material and equipment and the erection of such tarpaulins, sheds, wind breakers and/or other protection as shall or may be necessary for the work during all weather condition including monsoon or other rains so that the rains or monsoon ***shall not***

hamper working. Bidder shall also arrange and bring to job site such special equipment and machinery as may be necessary to enable work during the monsoon, and shall, at his own cost and initiative, arrange at all times for dewatering the job sites so as to keep the construction site and areas to be worked upon, free of water. Bidder shall ensure cool air circulation, humidity control for any work or equipment works.

6. Bidder shall familiarize itself with the weather conditions of Bina site across the year. As a precautionary, Bidder to note that ***at least 2 monsoon stretches*** of rainfall are envisaged in the construction duration allocated for the works. ***Detailed plan*** for monsoon combat for ***uninterrupted construction activities during the monsoon period is to be provided.*** Bidder shall Consider atleast 2 peak summer season- cool drinking water supply, sheds with proper ventilation, distribution of ORS for workers and overall sanitation facilities. Bidder to consider mobilization of additional resources suitably considering site weather conditions. No extra time/cost implications shall be entertained in this regard.

7. Bidders shall provide scheme for suitable ***coverage of the work area*** in addition to other covered pre-fabrication yards proposed by them for continuity of works during extreme summer, winter and monsoon and shall implement the schemes for effective mitigation of effects of monsoons including but not limited to preparation of approach roads for vehicular/crane movements, adequate dewatering systems/facilities at no extra cost to the Owner. Monsoon Mitigation Plan for Storage & Execution for insulation works (cover-shed) shall also be provided.

PRE-FABRICATION & TESTING OF MATERIALS

8. Bidder shall have to note the following information to identify the type of prefabrication, sequence of erection
   a. Site facilities viz. overhead bridges, Movement constraints and restrictions, turning radius, existing Fire water lines etc. in view of modular construction and its transportation.
   b. Approach roads/routes.
   c. Area for crane placement
   d. Space for storage and site work

9. ***Adequate covered fabrication, blasting(automatic blasting facilities), painting and storage facilities(hazardous waste disposal of painting materials)***shall be developed by the contractor in allotted fabrication yard for facilitating uninterrupted piping fabrication works. For this purpose, as a minimum, covered sheds as defined elsewhere in the bid, shall be developed by the contractor as mentioned in this document.

10. ***Testing of material (e.g. consumables)*** procured by bidder may be required in authorized laboratories(NABL accredited lab) during the course of execution of works and this will be bidder's responsibility without any time and cost implication to the owner.

11. Bidder shall ensure Comprehensive Piping Spools management for AG system / program during the entire execution of site work. Bidder shall use system/program for material and inventory management, weld mapping, revision management, activity level stage wise control with documentation at all level of fabrication and erection and related commercial billing. Advance technique like RFID for spooling & Bar code system must be used for identification of materials to ensure automation as per specification and access to the systems shall be available to BPCL / EIL on real time basis. Necessary MIS/reports related to above shall be periodically uploaded in Digital platforms of owner (DigiBPREP platform).

12. The bidder shall ensure deployment of their personnel at Spool's manufacturer(s) works as per tender's conditions to have better coordination with them to facilitate receipt of right Spools in accordance with site readiness.

STATUTORY APPROVALS

13. Bidder will ensure ***all local approvals*** for smooth and uninterrupted execution of site work. Bidder shall also ensure proper coordination, liasoning, complying and obtaining approvals as required from statutory/government bodies like GBI/IBR, factory inspector (DISH), labour law compliance authorities, CEA etc and any other required to complete works as per scope in all manner. Bidder has to work in the existing facility area. Contractor to comply with all the safety rules and regulations as per the guideline of BPCL.

SITE COORDINATION & MANAGEMENT

14. The QA plans for execution shall be developed by the Contractor and submitted for Owner/PMC's approval well before start of the work.

15. ***Multiple agencies*** are expected to work concurrently at site; bidder will ensure ***necessary coordination*** with these agencies and ensure smooth construction/ site activities. Interface management plan shall be submitted to the owner / EIL. It is the responsibility of the bidder to plan execution in coordination with the other agencies working on the plot. No time/cost implication shall be applicable in this regard.

16. ***Competent sub-agencies may be engaged by the bidder*** with prior approval of owner for carrying out site works. Augmentation of manpower as required will be bidder's responsibility.

17. Bidder to note that ***construction management*** of the Package shall be done directly by him and shall not be subcontracted to any other agency.

18. ***Skilled manpower required for carrying out site activities*** will be identified by the bidder and month-wise Resource ***deployment plan (Manpower/ Equipment/ Machineries/ Tools etc.) will be submitted*** to the owner post award. Bidder will ensure that the skilled manpower meets all qualification criteria required for performing site works. Bidders shall furnish the trade validation check lists, internal procedure & on-site trade validation plan to owner / EIL for review. All required qualifications tests etc. will be at bidders cost. Overall Execution plan, crane mobilization plan, manpower deployment plan and zonewise construction management plan shall be submitted at bidding stage and detailed plan during execution stage. Further

    a. Bidder to familiarize himself with BPCL material movement and manpower entry/exit procedures including online software platforms. Bidder is requested to consider approximate time taken to prepare gate passes for manpower is 5 days from the date of submission of all required documents. (Safety training, Medical checkup, ESIC/PF etc). Bidder to mobilize resources considering above suitably.
    b. Qualified maintenance team shall also be deployed during Pre-commissioning/Commissioning for any maintenance activity on rotating equipment, if required.
    c. Contractor shall execute mechanical works on a 24×7 basis. Resource planning and deployment shall be managed by contractor to meet this requirement.
    d. Contractor shall prepare and submit a zone-wise weekly execution schedule covering all activities for review and approval.

e. Build Clean concept to be implemented for all equipment.
f. Paramedic staff to be maintained by Contractor for welfare of manpower deployed.

19. ***Latest construction techniques*** will be ***utilized in performing site activities*** with an ***overall objective to maximize production in minimum time*** without compromising on quality. This shall be bidder's exclusive responsibility without any time and cost implication to the owner.

PROGRESS REVIEWS

20. ***Weekly / monthly review meeting*** will be held with successful bidders and in case any ***Contractor lag behind in progress of work,*** Owner reserves the right to engage other agencies to augment site manpower for ensuring smooth and uninterrupted site work at bidders risk and cost. Bidder will ***ensure strong and competent planning and scheduling personnel*** as part of his site management team. All progress review meetings shall be conducted in coordination with DigiBPREP platform. Bidder to ensure timely submission of data/inputs on the platform as per the procedure.

ERECTION OF HEAVY LIFT / TALL EQUIPMENTS/ PIPING/MISC. STRUCTURE

21. Mobilization of required capacity Crane for handling / installation of skid, Structural steel, module, etc. including supply of Operator, Rigging Gang, skilled manpower, tools and tackles and thus make the cranes ready for use is in the Bidder's scope. Erection shall be performed by the bidder in coordination with the Owner/EIL. ***Bidder to provide mast climbers & tower cranes in strategic locations & has to mark it on plot plan for owner's review & approval. All progress review meetings shall be conducted in coordination with DigiBPREP platform. Bidder to ensure timely submission of data/inputs on the platform as per the procedure.***

22. The prime responsibility with respect to erection scheme & arrangements and complete erection lies with the bidder who would have substantial presence at site and shall be in a position to manage all aspects of the erection. For critical lifts above 50 MT, contractor shall prepare lift animations with binder and provide detailed briefings to BPCL/EIL and workmen.

    All equipments (Columns/Vessels/Dryers/Reactors etc) shall be erected in fully dressed up condition to minimize/avoid working at height. Bidder to consider this time taken to dress up the equipment in their erection methodology and plan accordingly.

23. Bidder shall be responsible for preparation of Erection Scheme for modules incorporating the site, schedule and situation specific requirements & shall furnish the same to Owner/Consultant along with offer and same shall be subject to review/approval by owner/ Consultant.

24. Bidder shall be responsible for ***sequencing the erection*** activities with respect to modular structures/ skid/piping and other works, cordoning-off the areas under risk prior to erection.

25. Bidder shall also be responsible for Making the foundation/Structure for erection including chipping/ hacking concrete surfaces of foundation, arranging shims, packing plates, etc., arranging all tools & tackles for aligning the equipment including Auto levels, Theodolites, laser plumbs, hydraulic jacks, stools etc., arranging manual/ power wrenches, torque tensioners etc. as required.

26. Bidder shall be responsible for arranging and erecting scaffolding, ladders, walkways, planks/boards for working platforms, safety nets, hand railing etc. as required for ensuring smooth and safe equipment erection operation. Hanging scaffolding with A/G and U/G

segregator shall be provided at the pipe racks(Full deck) wherever work in UG/Grade are in progress and also above grade activities are in progress.A special design for scaffolding required above 9 Mtr. Jallies not permitted .Contractor to use steel boards.

Prior to commencement of work, successful bidder has to submit the proposed agencies list for owner/consultant review & approval. Approved scaffolding agency should have adequate experience and approval for the same should be by engineering –in-charge prior to engagement. Bidder to ensure availability of one scaffolding supervisor in every 3 gangs & one scaffolding inspector in every 6 gangs, scaffolding supervisors & inspectors must have certification from approved training institutes & submitted to owner/consultant for validation. Suitable Financial Penalty per day shall be imposed in case of non availability/deployment of scaffolding inspectors and use of non certified scaffoldings.

a. Bidder shall provide lifting beams, spreader beams for equipment erection within the coated rates.

b. Test loads for load testing of cranes shall be arranged by the bidder.

c. Vendor supervision if extended for the reason solely attributed to bidder then the charges towards such overstay shall be recovered from the bidder.

d. Bidder shall also be responsible for removal and reinstallation of all temporary scaffolding, ladders, walkways, planks/boards for working platforms, safety nets, hand railing, Hanging scaffolding etc. installed for facilitating any erection.

27. Bidder shall be responsible for, installing circular platforms, ladders, landing etc., installation of sliding plates/base plates etc. both in horizontal & vertical condition.

28. Bidder shall be responsible for following activities during erection:

- Providing skilled & un-skilled manpower.
- Bolting/tightening and securing the equipment / skid during and upon placement on the foundation including inserting extra shims/pack-plates/jacks etc. if required.
- Bringing the structure/Tack structure to correct alignment with respect to all three axes including blue-matching if required.
- Grouting the equipment base with foundation.
- Preparation of relevant reports and obtaining endorsements as required by Owner/Consultant.
- Bidder to note that specialized agencies with suitable PTR be deployed for bolt tensioning, rotomol cleaning, hydrijetting, chemical cleaning, alkali boil out.

29. Initial Constructability study shall be conducted by the successful bidders within 30 days of awarding the contract & should cover the following minimum mentioned topics:

- Traffic Management.
- Identification of erection holds.
- Identification of dismantling of structure for erection.
- Identification of critical lifts (equipment's, pipingand packages including tandem lifts, skidding).
- Temporary facilities plan (Lay down, office layout, ware house, labor accommodation & transportation).
- Heavy crane movement plan incl preparation of roads, approach or hardstands
- Subcontracting plan.
- Subcontracting plan.
- Construction power & construction water.

- Storage & preservation.
- Statutory approval.
- Waste management plan.
- Dress-up plans.
- Item description should cover protection of U/G facilities, making good the damages as per approved repair procedure, design calculation for stools, arrangement of adequate no. of wooden sleepers, steel mats.
- Bidder to study/assess the equipment layout and indicate resource mobilization according to the requirements to carry out work as per various elevations across the plot.

Final Constructability study shall be presented, within 3 months of award of contract.

30. Piping down comers along with support shall have to be fabricated and keep ready within prior to availability of equipments coming for this work.

31. Tray/ duct coming on already erected structure be procured immediately & made available at site within three month of award of job.

32. Bidder to note all fabrication of piping spool and support shall be done outside the premises of the plant to minimize site erections work such that the modular / bolted erections can be achieved. Except local welding where ever required. Proper traceability during Spooling and fabrication of piping to be maintained by RFID/BAR Code.

Extent of Pipe spooling shall be finalized considering following guide line

a) Rack Piping: Straight Pipe Pieces to be pre-assembled to length of about 25 M and then stringing shall be done at Site along the Rack;
b) All Expansion Loops to be Spooled, keeping in view erection feasibility of the expansion loops.
c) Pipe spooling shall be ensured to the extent of 70% (of Total Weld) in case of Piping in Restricted Place/Tech Structure.

33. Movable/Biodegraded toilets adequate number (01 number of toilet for 25 Nos. workers) shall have to be installed at site. All the toilets have to be periodically maintained and shall be mobilized on site as per man power plan.

34. Bidder has to mobilize adequate no of supervisors/Engineers. Penalty shall be imposed for non-mobilization of the supervisors/Engineer and other personnel as per document no. 7-82-0003 rev 2.

35. Bidder to provide CV of head of each function with an alternate CV.All key personnel (Construction manager, HSE Manager, Quality Manager, Project control manager, heavy lift superintendent, rotary equipment superintendent& material controller) nominees along with one alternate resume to be provided immediately on and when asked or during KOM. Owner's consultant shall interview the key personnel during & accepted personnel shall be deployed. Detailed organization chart should be submitted by the bidder in his technical bid.

36. L2 schedule shall be provided with the bid. L3 Schedule to be provided post award within a month. KoM to be conducted within two weeks of award of LOA/PO.

37. Contractor to have suitable procedure for waste insulation material disposal as per Central/State Pollution Control board Norms. Bidder to dispose of debris generated out of execution as per norms of local municipality/panchayat outside premises at his own cost.

38. Contractor to have suitable procedure for waste insulation material disposal as per Central/State Pollution Control board Norms.

39. Bidder to note that adequate covered area is to be prepared. Minimum covered area required is as follows.

- Painting covered area offsite 10 MTR x 20 MTR within a month of mobilization – 04 nos minimum.
- For piping work covered and other works of size 100 MTR X24 MTR within 3 months award of jobs- 04 nos. minimum.
- Gantry crane yard with capacity of 20 MT with a span of 15 MTR.for open yard.

40. Bidder to note that color coding & material traceability for spools to be finalized with consultation with RCM at site. Bidder to share the schema which shall be followed along with the BID

41. Bidder to note that bar and color coding for piping material to be followed.

42. Bidder to establish Warehouse in complex for storage of material after receipt from warehouse.

43. Bidder to arrange necessary arrangement for automatic blasting.

44. For sprinkler system ,caps/plugs to be supplied for testing purpose.

45. Minimum two subcontractors to be mobilized for Insulation, Painting for each to safeguard against risk of relying on just one party..

46. Bidder to note that Mechanical completion definition has been specified in the contract. Also Bidder to note that SOR items for Mechanical completion and pre commissioning/commissioning has been specified in scope of work. Separate SOR items have been identified for Pre-comm. & Commissioning activities

47. Bidder to arrange Boroscope for inspection for Stretch of inlet piping of critical equipments. Especially Exchangers, Compressor, Compressor suction piping/critical piping and other High Energy Intensive Rotating Equipment).

48. Bidder to arrange Automatic & semi automatic machines for Cutting/Beveling& welding.

49. As Mobile Phones are restricted inside the Premises Contractor to have provision for Tata Walkies or similar communication systems.

50. Bidder to arrange Double Decker Site offices(due to space constraints).

51. Bidder to arrange adequate diesel dewatering pumps for hydro-test Draining and Monsoon Mitigation.

52. Bidder to arrange Rotomole cleaning/Hydro jetting for critical pipe flushing.

53. Specialized agency for Torquing & Tensioning and Catalyst loading shall be mobilized. Formatted Record shall be generated against box-up of each Flanged Joint included in the Composite Contract

54. Bidder to arrange AUT(Automated Ultrasonic testing) for pipe welding inspection.

55. CPM / PERT – Bidder to submit a detailed schedule in network form, identifying critical path.

56. Lists of Instrumentation agencies to be submitted to EIL for approval. Agency to have Testing Facility-PSV, Control Valve etc.

57. All piping spools are to be fabricated at established mechanized shop.

    Mechanized Spooling Work up to 32"NB: Contractor shall carry out Mechanized Spooling Work for pipe size up to 32"NB at its, or its Sub-Contractor's, Workshop.

    Semi-Mechanized Spooling Work above 32"NB: Contractor shall carry out Semi-Mechanized Spooling Work for pipe size above 32"NB at its Fabrication Shop/Yard put up at Site.

    Piping spools shall be erected at Site only after all reports are reviewed and verified as mentioned in contract. All piping spools are to be erected after checking internal cleaning. Build Clean concept to be implemented for all equipment/piping/spools.

58. Pipe Spooling in Mechanized Set-Up:

    This category of Pipe Spooling shall mean manufacturing of pipe spools in controlled environment, by employing mechanized spool-fabrication assembly line(s) (automated tools & machines for forming, cutting, squaring, edge-preparing, welding, etc.) and synchronized material handling facilities, in order to deliver fabricated pipe spools with highest productivity and with least quality concerns.

59. Bidder to ensure that at any point of work execution if individual SOR quantity is exceeding ,the same is to be intimated to EIL&BPCL within 10 days of receipt of drawings and prior Approval is obtained before undertaking any such work. Moreover, excess- saving statement to be prepared every quarterly after six months of award of job. Payment will be made by the OWNER against Running Account (RA) Bills certified by the EIC/Site-in-Charge within 30 days from the date of receipt of complete and correct R.A. Bill with supporting documents from the Contractor by Engineer-in-Charge.

60. Flare header & other lines requiring pneumatic testing of size 24" NB & above, flushing shall be carried out prior to pneumatic testing and clearance shall be taken from operation group and then contractor shall proceed for pneumatic testing and box up. After pneumatic testing and box up, it shall be preserved so that no further cleaning is required at a later date.

61. Pre commissioning & commissioning activity shall be commenced even prior to the Mechanical clearance of entire unit. However the total time period for pre-commissioning and commissioning shall be maximum within 3 month from unit Mechanical completion date. All activities related to this must get completed within time period.

62. During Pre -commissioning/Commissioning number of activities like fabrication, erection, testing, tubing, loop checking, valve dismantling, re-election, structural modification, equipment dismantling/re-erection etc. which were not part of mechanical clearance and reasons are nor attributable to contractor may have to be carried out but the rates for the same is available, The same shall be utilized for carrying out the activity during Pre-commissioning/Commissioning.

63. After respective mechanical completion & Pre commissioning/commissioning contractor has to demobilize the resources, temporary structure etc.and clear the work site within 15 days. In case the same is not demobilized in specified time frame, same shall be done and shall be back charged to the contractor.

64. Bidder to provide facilities for critical valve testing. Contractor shall provide small facility for valve testing and repair.

65. Bidder to Use pre insulated tubes as mentioned in scope of work.

66. Bidder to construct sufficient no of underground pits for storing radiography source/camera systems as per guidelines issued by BARC in his allocated area.

67. **Penalty:**

The Contractor shall adhere consistently to all provisions of HSE requirements as per specification no. **6-82-0001 Rev.2**. In case of non compliances and also for repeated failure in implementation of any of the HSE provisions,
EIL/Owner may impose stoppage of work without any cost & time implication to the Owner and/or impose a suitable penalty as per above specification.

68. Contractor to identify /study the system to be cleaned for rotomol/manual cleaning or hydro jetting and advise on any extra opening or drains of appropriate size after study in consultation with EIC and their sub agencies within three month of award of job.

69. Residual Insulation, Painting, Scaffolding Removal, etc., which are usually kept/allowed in Pre-Commissioning Period, should all be completed prior to declaring Mechanical Completion.

70. Bidder shall work on priority areas identified by EIL / Owner on regular basis.

71. Facilities to be setup by Contractor
    a) Warehouse within Refinery. Bidder to establish warehouse in complex for storage of materials after receipt from EIL/BPCL warehouse.
    b) Warehouse to have physically segregated Zones corresponding to Units zones, especially for piping items
    c) Material receipt and material issue vouchers to have specific zone mentioned
    d) Contractor shall provide and operate a small mechanical workshop with minimum one lathe, one drilling machine and necessary lapping arrangement for seal faces, PSV discs and nozzles throughout contract duration.

    Prefabrication & Testing of material
    a) Piping spool management software - Contractor shall provide one license each to EIL & BPCL of the software / program.

72. Site coordination and management

    Piping - Bidder / Contractor to provide piping area wise following with schedule
    - Work quantum of piping (ID)
    - Associated NDT
    - Material requirement / availability
    - Free issue items
    - Drawing issuance plan
    - Work front release plan.

    Contractor to prepare area wise work packages including following on a daily basis (DPR):
    - Resources deployment plan – Supervisors, skilled man-power like welder, fitter, grinder, rigger etc.

- Work front availability matrix (Drawings Vis-a Vis material)
- Area wise responsible Safety supervisor / Job Safety Analysis

Contractor to provide equipment wise work load (specially welding ID, structural erection MT) and construction plan.
Contractor to provide resource deployment plan for erection and associated works after award of work..

Contractor to provide warehouse management data dumps to EIL / BPCL on receipt &utilization of materials on weekly basis, to enable control/ tracking of material post issuance to contractor up to erection/ installation.

Contractor / Bidder to provide quality assurance plan with assessed quantum.

73. All contractor supplied material shall be inspected by BPCL approved TPI.

74. No LET - OUT of cranes under the scope of a particular contract is allowed at site. However, in the interest of job, if let- out from one agency to other agency is need of the time, it shall be only after due permission from BPCL and EIL. However, commercial benefits in this regard be passed on to BPCL by contractor/ agency.

75. PPE quality should be of good quality.

76. Successful Bidder to furnish detailed manpower mobilization (direct and indirect) and detailed equipments and machinery deployment (month wise) after award of job.

77. Machinery, welding machines, Crane, EOT, etc which are required shall be fit to use and shall be assessed and verified prior to usage.

78. Contractor to setup workshop or tie up with external agency for repairs of machines, motors etc and also ensure minimum surplus (quantity to be mentioned in bid) of certain items for maintaining productivity. Contractor shall prepare daily log book for the availability of resource and back-up plan for its mitigation.

79. Soft Ware:-
    - Composite Contractor to use Software for Material Management till System handover.
    - Composite Contractor to have own;
        - Data Centre Facility
        - Server Application
        - Connectivity-Client Software to access Data Centre.
        - Own Lease Line for resource connectivity from Contractor Data Centre to client & Specific URL to be provided (Global Public URL) to provide client access as & when required.

80. Work Permit
    Issue of work permit will be as below:

    a) Within the construction area segregated from operational area where work is to be executed for project completion, contractors & Consultant shall follow approved permit system finalized & agreed with BPCL. Consultant shall directly issue the work permits to contractors.

    b) Work permit system for all hook up / tie up jobs and within operational area shall be as per enforced work permit system of BPCL Bina Refinery. Within operational area

work permits shall be issued by Bina Refinery to respective contractors which have to be signed by consultant also.

The EIL site team, in coordination with BPCL, shall prepare and finalize the modality of the Work Permit System for the non-operational area. Same to be followed by contractor during execution.

81. REQUIREMENTS TO BE ADHERED BY CONTRACTOR AT SITE FOR EXECUTION OF WORKS

1. 4 nos of 20 feet Porta Cabin with Amenities (Table/Chairs/Acs) to be provided at site for EIL/Client use (Standard layout attached for reference). Refer sketch below for porta cabin.
2. Provision and execution of temporary lifts required for mechanical works will be kept.
3. Contractor shall fabricate/procure hoses for all pre-commissioning, commissioning, and LO flushing activities as instructed by EIC.
4. Certified scaffolding inspectors(min 4 numbers) shall be deployed. Scaffolding materials shall be certified and zone-wise scaffolding teams segregated for better control.
5. For material issued to contractor: Contractor's scope shall include pickup of issued materials from BPCL/EIL stores within plant premises as instructed by EIC, without any cost or time implications.
6. DigiBPREP platform shall be mandated for all project reporting, submittals, inspections, NCRs, punch lists, progress updates and documentation as required by BPCL.
7. All contractor personnel shall possess VKBR medical certification in accordance with prevailing BPCL guidelines and maintain validity throughout execution.

SCHEDULE OF RATES

Name of Work : COMPOSITE WORKS FOR UTILITIES & OFF-SITES (PART-A & PART-B)

Bidding Document No.: JP/B957-999-PK-T-9501/1031

PREAMBLE TO SCHEDULE OF RATES

1.0 The Schedule of Rates shall be read in conjunction with all other sections of this Bidding Document.

2.0 The Contractor is deemed to have studied the drawings, specifications and details of works to be done within the Time Schedule and should have acquainted himself of the conditions prevailing at site.

3.0 The quantities shown against the various items are only approximate and may vary to any extent individually subject to conditions given in General Terms & Conditions of Contract/Special Conditions of Contract.

4.0 No claim shall be entertained during currency of this Contract towards any items due to the above including where the CONTRACTOR has quoted low/ high rates.

5.0 EIL/OWNER reserves the right to interpolate or extrapolate the rates for any new item of work not covered in Schedule of Rates from the similar items already available in schedule of rates. In case any activity though specifically not covered in schedule of rates descriptions but the same is covered under scope of work/ scope of supply/ specification/ drawings etc. no extra claim on this account shall be entertained, since Schedule of Rates is to be read in conjunction with all other documents forming part of the Contract.

6.0 All items of work mentioned in the Schedule of Rates shall be carried out as per the specifications, drawings and instructions of EIL/ OWNER and the rates are deemed to be inclusive of material, consumable, labour, supervision, tools & tackles and detailing of construction/fabrication drawings, isometric wherever required as called for in the detail specification and conditions of the Contract.

7.0 Bidder shall furnish this Form duly filled in all respects along with his price part.

8.0 The quoted prices/rates shall be deemed to be inclusive of all taxes and duties except “Goods and Services Tax” (GST) as per Provisions of taxes & duties specified in SCC.

9.0 Any errors of interpretation of applicability of taxes/duties by bidders shall be to their account.

10.0 Employer/Consultant reserves the right to cancel/ delete/ curtail any item or group of work if necessary. Such a step shall not be construed as reason for changing the rates.

11.0 Bidders shall quote their prices as percentage [increase(+) (i.e. Above) /decrease(-) (i.e. Below) /Par] variation in Price Schedule format **Form SP-0** on Total estimated value in **BoQ1** Sheet of Price Schedule respectively for **Part-A and/or Part-B**. This percentage variation as quoted by the bidder will apply uniformly to all items of SOR during execution for the respective parts.

12.0 Bidder shall indicate only the Increase (i.e. Above) /Decrease (i.e. Below)/Par **(in Col.7)** on Total estimated value in terms of percentage **(in Col.9)** upto 2 decimal places in the “SUMMARY OF PRICES [SP-0]" i.e., Sheet BoQ1. Bidder shall not change the Pre-filled rate/ amount indicated in ‘Schedule of Rates’ [Refer FORM-SP-1].

529	A	B957-999-16-43-PK-SOR-9501-A-3M	M29907000000	HOT TAPPING WORKS: The Hook Ups shall be carried out, as per the requirement of Client/Engineer in Charge with the fluid on stream inside the existing line (HOT TAPPING). All the activities described in SOR item and relevant sections of Piping Scope of work shall be in addition to this SOR item. Removal of painting with wire brush and cleaning the spot of hot tapping and offer for inspection. After inspection clearance, weld a "shop hydrotested stub" of specified dia and length as per the specification to the main line.After the clearance of hydro test, welding of RF Pad on the stub /main line and carry out leak test at a pressure of 1.25 kg/cm2. The stub has to be pre-fabricated before taking hot tapping as per specification and instruction of Engineer in charge. Installation of a valve on the stub welded on the main line. The valve is required to be hydro-tested in the shop prior to field erection. Completion of Hot-Tapping work including supply and arranging of hot Tapping machine, cutter, Split Tee (if required) and also taking out the cut piece of pipe shall be under the scope of contractor. Installation of a blind flange on the open end of valves, if required, after removal of hot tapping machine shall be by contractor. All materials (excluding split Tee) for hookup like RF pad, stub in pipe, valves, flanges, gaskets, stub, nuts, blind flanges, etc. to be supplied by the Owner. Split-Tee shall be supplied by the Contractor. Notes: 1)The rate given in the SOR for hot tapping shall be inclusive of pre-fabrication and installation of stub to the header and its hydro-test, fabrication and welding of RF Pad and its air test including supply of compressor for air test, lug grinding (if required)/supply and welding of Split-Tee and installation of valve on the welded stub, fabrication and installation of blind flange on open end of the valve after the completion of the hot tapping works and removal of hot tapping machine supplied by contractor, transportation of equipment, materials, etc. and all other items required but not limited to mentioned for completion of the work. 2) The rate is inclusive of scaffolding /barricading as required for carrying out hot tapping at all elevations. The Scaffolding has to be erected in such a way that two separate and independent access will be available for the temporary platforms at all elevations erected for Hot Tapping. The Contractor shall supply, fabricate and erect all the structural members and arrangements required for providing: a) support to the existing line/main line on to which the Hot Tapping is made b) working platform for Hot Tapping personnel c) Access to Hot Tapping platform where Hot Tapping personnel are deployed

544	A	B957-999-16-43-PK-SOR-9501-A-3M	M40000000000	PAINTING (OFFSITES) :- Supply of paints and primers, preparation of surfaces and application of primer and finish paints, identification (Line numbering), lettering, colour bands, colour coding etc. as specified including rubdown and touch up of shop primer wherever required, providing scaffolding for all heights, labour, material, tools and tackles, consumables supervision etc. to complete the work in all respects as per EIL painting spec., drawings and direction of Engineer-in-Charge for all types of uninsulated piping and insulated piping as specified including all pipes, fittings, flanges, supports, valves etc. Surface preparation by blast cleaning and application of first coat of primer (inorganic zinc silicate, F9) shall be done in fabrication yard prior to erection. For insulated piping wherever blast cleaning with no primer application is specified, in such cases finish paints shall also be applied in the fabrication yard. The identification marks of the piping and joints shall be noted before blasting and the same shall be transferred on primed surface with Polyurethane paint (F2) or as per the instructions of Engineer-in-Charge. Notes: 1. All joints (fabrication as well as erection joints) shall be left unpainted till hydrotesting. 2. No extra payment shall be made for identification (line numbering etc.) of insulated and uninsulated lines.

695	A	B957-999-16-43-PK-SOR-9501-A-3M	M5**********	********** LEGENDS / NOTES FOR INSULATION WORKS ********** ** Types of Insulation : IH = Insulation for Heat Conservation IT = Insulation for Steam Traced Lines IS = Insulation for Personal Safety IC = Cold Insulation for Anti-condensation IE = Insulation for Electrically Traced Lines IJ = Insulation for Jacketed Lines IK = Insulation for Dual Insulated Lines ** Basic Line Surface Materials : CS = Carbon Steel (Including LT Carbon Steel) AS = Alloy Steel SS = Stainless Steel ** Notes : 1. For insulation type IT,tracer size and tracer numbers shall be as per specification. 2. Insulation thickness for IC where insulation material is Poly Urethane foam (PUF) / Poly Isocyanurate (PIC) + Cellular Glass includes outer layer of 50mm of Cellular Glass and Inner layer of balance thickness of PUF/PIC 3. Insulation for IE consists of inner layer of Rockwool and outer layer of PUF / PIC. The thicknesses have been specified as THK(I) and THK(O) for inner and outer layers respectively. **********					
696	A	B957-999-16-43-PK-SOR-9501-A-3M	M60000000000	HOT INSULATION (OFFSITES): Providing thermal insulation including supply of all insulating and ancillary materials, vapour barrier, weather protective coverings, consumables and other necessary materials , testing of materials as required, including transportation of materials to work site, duly inspected by 3rd party(LIyods/BV/DNV or any other Client approved party)at manufacturer's shop & sample check/inspection at site by EIL Construction inspector, applying insulation on surfaces as specified including all preparatory work there on, binding, tying, lacing, stitching and/or otherwise securing , finishing with sheet cladding as per spec. , providing bolts, rivets, and self tapping screws wherever specified , providing inspection windows, end seals for flanges etc., colour coding and identification. Providing steel scaffolding, all tools , tackles , equipments etc. , labour, supervision and completing the work in all respect, at all heights as per drawings , specifications and instructions of Engineer-in-charge. (Refer Legend for applicable EIL specification)

PIPE SLEEVES of all diameters including providing necessary staging, cutting, straightening if required, bolting, welding as required and embedding in position on both Plain and Reinforced Cement concrete members inclusive of adjusting shuttering & reinforcement/any other fixture, welding where necessary, tying and holding to correct level, line and position, any auxiliary dummy structures to support heavy sleeves etc. all complete for all depths and heights as specified and directed.	0.5	MT		131740	65870
2438	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.18	MS Chequered Plates - Non FIM Items					
2439	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.18.1	Supplying, fabricating and erecting in position at all levels and locations bolted, screwed and/or welded M.S. CHEQUERED PLATES of any thickness in walkways, platforms, stair treads, any other place as directed etc. including cutting to required size, shape, making holes, notches, openings of required size, nosing, straightening if required, making the edges smooth, removing the burrs, fixing, welding, preparation and submission of fabrication drawings and preparing the surfaces for painting and applying shop primer as per EIL Specification No. 6-79-0020 (or Job Specification, wherever applicable) after fabrication etc. all complete as specified and directed. (SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE).	0.5	MT		141520	70760
2440	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.19	MS Grating Cat. A,B - Non FIM Items					
2441	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.19.6	Supplying, fabricating and erecting in position at all levels and locations ELECTROFORGED HOT-DIP GALVANISED GRATING (purchased from approved manufacturer by the Contractor) conforming to EIL Standard No. 7-68-0697 (in walkways, platforms, stair treads etc.) including cutting to required size, shape, making holes, notches, openings of required size, nosing, straightening if required, making the edges smooth, removing the burrs, fixing with manufacturer's supplied Hot-dip galvanised clamps, preparation and submission of fabrication drawings, all complete as specified and directed. SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE.	15	MT		138560	2078400
2442	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.19.7	Making openings in galvanized grating for pipes / ducts etc., at all levels and at at all locations by cutting the existing grating and providing 50x6 galvanised flat as toe protection for the openings by welding and application of galvanized paint as per EIL Standard No. 7-68-0697, all complete. Payment shall be made as per number of openings.	50	each		1460	73000
2443	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.22	MS Rungs - Non FIM Items					
2444	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.22.1	Supplying, fabricating, fixing and keeping in position M.S. RUNGS in R.C.C. works at all depths and heights including handling, transporting the steel to site workshop and site of work, straightening, if required, cutting, bending to shape, necessary tying and welding with reinforcement, adjustment of shuttering, cleaning, surface preparation, shop primer as per EIL Spec. 6-79-0020 (or Job Specification, wherever applicable) and two coats of anticorrosive paint of approved quality on the exposed portion of rungs etc. all complete as specified and directed (SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE).	25	kg		100	2500
2445	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.23	Hand Railing 1000mm - Non FIM Items					
2446	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.23.MD1301	Supplying, fabricating and fixing in position at all locations 1000mm high INCLINED HAND RAILING (for staircases) consisting of top rail, mid rail and vertical posts (Maximum spacing 1500mm c/c) with 32mm nominal diameter medium grade M.S. Tubes conforming to IS:1239 including straightening if required, cutting, bending, welding, bolting, grouting with ordinary grout, cleaning, surface preparation, hot-dip galvanising as per Sl. No. 4.1 of Table 4 of EIL SPEC. 6-79-0020 (or as per Job Specification, wherever applicable) , preparation and submission of fabrication drawings etc. all complete as specified, shown and directed. (SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE). (Complete handrail work shall be measured as length of top rail only and not length of each element fixed).	225	m		1940	436500
2447	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.6.23.MD1303	Supplying, fabricating and fixing in position at all locations 1000mm high HORIZONTAL HAND RAILING (for platforms, walkways, etc. or any other location as directed) consisting of top rail, mid rail and vertical posts (Maximum spacing 1500mm c/c) with 32mm nominal diameter medium grade MS Tubes conforming to IS:1239 and 100x5 MS Toe Plate confirming to IS:2062 (Grade A/B), including straightening if required, cutting, bending, welding, bolting, grouting with ordinary grout, cleaning, surface preparation, hot-dip galvanising as per Sl. No. 4.1 of Table 4 of EIL SPEC. 6-79-0020 (or as per Job Specification, wherever applicable), preparation and submission of fabrication drawings etc. all complete as specified, shown and directed. (SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE). (Complete handrail work shall be measured as length of top rail only and not length of each element fixed).	600	m		1830	1098000

2489	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.10.6.1	Dismantling bolted/rivetted/welded STRUCTURAL STEEL WORK of all descriptions (taking all necessary safety precautions), including supply of all tools and tackles, consumables, necessary scaffolding etc., providing temporary bracings as required, cutting (by flame or saw) gusset plates, bolts, nuts, weldings etc., transporting and stacking of the serviceable materials, cleaning the site of work of all unserviceable materials for disposal to spoil heaps anywhere within the plant boundary, all complete at all depths and heights, as specified and directed.	0.5	MT		12630	6315
2490	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.10.7	AC / GI Sheets - Non FIM Items					
2491	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.10.7.1	Dismantling GI/asbestos/translucent sheets, ridges, gutters etc. (taking all necessary safety precautions) in roofings and wall claddings, including supply of all tools & tackles, necessary scaffolding, consumables, cutting (by flame or saw) of fixing hooks, transporting and stacking the serviceable materials, cleaning the site and disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete for all levels, as specified and directed.	5	m²		150	750
2492	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11	MISCELLANEOUS ITEMS (REFER SPECIFICATION NO. 6-68-0013)					
2493	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.6	Sand Filling - Non FIM Items					
2494	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.6.1	Supplying and filling approved SAND of specified quality under floors, in foundations, plinths, tank foundations etc. for all depths and heights including cost of sand, royalties, transportation to site for all leads and lifts, including loading, unloading, spreading in layers of loose thickness not exceeding 150 mm, watering, ramming, compacting with mechanical compactors and/or other equipment to the specified levels to achieve 85% relative density as per IS:2720 Part XIV, including preparation of subgrade to the required slope, providing testing apparatus and testing the degree of consolidation all complete as per drawings, specifications and direction of Engineer-in-charge. The rates shall be inclusive of the cost of all labour, material, equipments etc. all complete .	10	m³		3440	34400
2495	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.8	Bitumen - Non FIM Items					
2496	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.8.1	Supplying and applying one coat of HOT BITUMEN VG10 grade conforming to IS:73 @1.5 Kg/sq.m. on Concrete/Brick work surfaces etc. all complete as specified and directed.	2	m²		100	200
2497	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.8.2	Extra over item 01CS.11.8.1 for each additional coat of HOT BITUMEN VG10 grade @ 1.2 Kg/sq.m. on Concrete/Brick work surfaces etc. complete.	2	m²		80	160
2498	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.10	BI-POLAR CONCRETE PENETRATING CORROSION INHIBITING ADMIXTURE					
2499	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.11.10.1	Supplying and mixing of approved brand of BI-POLAR CONCRETE PENETRATING CORROSION INHIBITING ADMIXTURE (confirming to EIL Specification No. 6-68-0017) in concrete as per manufacturer's specification for protection of reinforcement against corrosion. Supply of admixture in Contractor's scope.	1000	kg		220	220000
2500	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.14	BONDING FRESH CONCRETE TO OLD CONCRETE BY EPOXY RESIN BONDING SYSTEM (REFER SPECIFICATION NO. 6-68-0056)					
2501	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.14.1	Epoxy Resin - non FIM Items					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
2502	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.14.1.1	Providing and applying approved EPOXY RESIN (prepared as per manufacturer's recommendation) for bonding of fresh concrete to old concrete in all types of structure at all depths and heights including cleaning of concrete surface, removing of all loose concrete pieces, making rough by chiselling, taking off the skin of concrete, application of Epoxy Resin System by spraying, necessary working platforms, props, scaffolding and other safety measures, removal of same after completion etc. all complete as specified and directed. (Excavation, backfilling, removal of surplus earth, keeping pit dry by pumping/bailing subsoil water shall be paid separately under relevant items).	100	kg		1350	135000
2503	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17	FIREPROOFING OF STEEL STRUCTURES (REF SPEC NO 6-68-0033)					
2504	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.11	Concrete - Non FIM Items					
2505	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.11.1	Supply and laying of concrete of grade M30 as per Type-I of EIL Standard Specification 6-68-0033 as fire proofing material with 10 mm and down size graded coarse and fine aggregates including admixture around structural steel members (viz. beams, columns, bracings etc.) all complete; cleaning the steel surfaces, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, vibrating, tamping, curing or providing a layer of approved membrane of curing compound, rendering with cement sand mortar (1:3) wherever required to achieve a smooth and even surface, providing L50x50x6 at corners or as specified in the drawing, applying primer on MS nuts, angles and affected surfaces, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights upto & including 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS INCLUDING CEMENT TO BE SUPPLIED BY THE CONTRACTOR).	500	m²		3290	1645000
2506	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.12	Vermiculite Concrete for Structural Steel - Non-FIM Items					
2507	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.12.1	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-II of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness around structural steel members (viz. beams, columns, bracings etc.) for the required fire protection from reaching temperature 538 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, applying primer on MS nuts and affected surfaces, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights upto & including 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	2500	m²		4750	11875000
2508	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.12.2	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-II of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness around structural steel members (viz. beams, columns, bracings etc.) for the required fire protection from reaching temperature 538 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, applying primer on MS nuts and affected surfaces, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights more than 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	50	m²		5020	251000
2509	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.13	Vermiculite Concrete for Equipments - Non-FIM Items					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
2510	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.17.13.1	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-III of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness on equipment/ vessel skirts, saddles and supports for the required fire protection from reaching temperature 427 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062, hot dipped galvanized welded wire fabric reinforcement of 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566 and tying the reinforcement with the pre welded nuts by galvanized 16 SWG tying wire, including straightening, cutting, bending of the reinforcement, including supplying and welding of additional MS nuts if directed by the Engineer-in-charge, applying primer wherever required, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	60	m²		5710	342600
2511	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.18	Mechanical works					
2512	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.18.5	Supplying, fabricating and erecting in position MS plates as per detailed drawings, conforming to grade A of IS:2062 on top of all RCC pedestals supporting the sliding saddles of equipments, including cutting, straightening where necessary, rounding rounding unfinished edges by grinding, machining the exposed top surface, making necessary bolt holes, providing and laying ready mixed free flow non-shrink grout below the base plate at all levels & locations, machining top surfaces etc. all complete and as shown and directed.	0.5	MT		141520	70760
2513	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.18.9	Dismantling Of steel works					
2514	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.18.9.1	Dismantling structural steel already erected by others including provision of adequate temporary supports, bracings etc. wherever required, to ensure safety of the affected structure or part thereof, and replacing back all original members into their respective positions true to line and level, removing all temporary supports/bracings, welding/bolting of the end connections, splicing or strengthening the member and their joints to regain original strengths, all complete as directed by the Engineer-in-Charge. Note: The weight of dismantled and re- erected structure shall be measured only once.(SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE)	1	MT		12630	12630
2515	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.23	SAFETY (REFER EIL SPECIFICATION)					
2516	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.23.1	Safety Structures - Non FIM Items					
2517	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.23.1.1	Supplying, Transporting, Storing, Fabricating & Erecting in position and testing/ examining bolted and/ or welded Structural Steel Works at all locations and levels in HANGER SCAFFOLDING below piperack, comprising of hangar channels, fabricated pen wen ladder beams, steel planks bent to shape and size and any other sections, if required, all as per sketches/ specifications and load tested for statisfactory performance, including cutting to required size, straightening/ bending if required, edge preparation, cleaning, preheating, bolting/ welding of joints (including sealing the joints of box sections with continuous welding and plugging any open ends & holes of box sections), finishing edges by grinding, fixing in line and level with temporary staging & bracing and removal of the same after erection, including preparation and submission of detailed fabrication drawings, preparing the surface for painting as per BIS codes after fabrication etc. all complete as specified and directed. All items shall be removed & carried back by Contractor as per instructions of Engineer-in-Charge after completion of works. (Supply of All Material In Contractor's Scope).	50	m²		2430	121500
2518	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.23.1.3	Providing and fixing double scaffolding system of any height made with 40 mm dia MS tube 1.5 m centre to centre, horizontal & vertical tubes joining with MS tubes, MS tube challies, MS clamps and MS staircase system in the scaffolding for working platform/ staircase etc., and maintaining it in a serviceable condition for the required duration as approved and removing it thereafter. The scaffolding system shall be stiffened with bracings, runners, connection with the building etc., wherever required for inspection of work at required locations with essential safety features for the workmen etc., all complete as per directions and approval of Engineer-in-charge. (Height shall be measured from Floor/ platform from where scaffolding is erected) including providing Aluminium ladders for safe acess of workers.	1000	m³		110	110000
2519	A	B957-999-81-41-PK-SOR-9501-A-3M	01CS.23.1.4	Providing of steel scaffold stair tower system with minimum 800 mm wide flights, landings at every 1.5 to 2.0 m height, handrailing around flights and landings for safe access upto a height of 12.0 m, all complete including supply of all materials, tools & tackles, manpower etc., at the location directed by Engineer-in-Charge on monthly rental basis. Rental charges shall be payable after completion of erection of the system and acceptance by the Engineer-in-Charge. Rates shall also be inclusive of dismantling of the system and taking out all materials from the project permises as directed by the Engineer-in-Charge. Rate quoted shall be for Running Meter (Height) per month.	100	RM		5670	567000
2520	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC	GENERAL CIVIL					
2521	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.2	Compound wall/ Chain Link Fencing/ Barbed wire fencing works					
2522	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.2.5	Supplying, fabricating and fixing G.I. chain link fencing with 3.15mm dia. wire, 50x50mm diamond mesh chain link fence fabric conforming to IS:2721 fixed to steel/RCC posts/struts above ground level or above short height compound wall (height upto 1.5m), including supply of chain link fencing fabric in 1.9 metre wide rolls, stretcher bars, staples, etc. required for fixing the fencing, fixing of chain link fencing between straining posts, fixing of bottom of fencing to a concrete sill beams by means of hairpin staples, including supply and fixing line wires, complete as per drawings, specifications and directions of Engineer-in-Charge (All materials shall be supplied by Contractor). (The measurement of chain link fencing shall be on linear basis for 1.9 m wide fencing fabric)	500	m		1430	715000
2523	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7	CONCRETE PAVEMENTS					
2524	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.2	Providing and laying Reinforced Cement Concrete with 20mm and down size graded crushed stone aggregates in flooring, pavements etc. including leaving pockets, if necessary, making recess/drains, laying in alternate panels, etc. for all depths including shuttering, tamping, curing, etc. as specified in any shape, thickness, position and finishing the top surface smooth etc. all complete as per drawings, specifications and directions of Engineer-in-Charge.					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
2525	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.2.2	For RCC of M-30 grade concrete (all materials including cement but excluding cost of providing & fixing reinforcement and joint sealing shall be supplied by the contractor).	400	m³		9870	3948000
2526	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.6	Supplying and laying of 150 micron thick HM HDPE (Grade-I) FILM lining conforming to IS 10889 below concrete pavements, Hard stand, at any other place etc. including royalties, taxes, handling, transportation, unloading, storage, joining etc. all complete as per drawings, manufacturer's specifications and directions of Engineer-in-charge.	2500	m²		140	350000
2527	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.7	Supply of all materials and Construction of DRY LEAN CEMENT CONCRETE SUB-BASE (7 days compressive strength of 10.0 MPa) with 26.5mm and down size aggregate including cement , water, and approved additives on a prepared sub-grade, mixed in batching plant, transported to site, for all leads & lifts, laid, compacted, finished and cured etc. complete as per IRC:SP:49 (Guidelines for the use of Dry Lean Concrete as Sub-Base), drawings, standards, specifications and directions of Engineer-in-charge.	200	m³		4130	826000
2528	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.10	Providing 20mm wide Expansion Joints in pavement slabs as per standard/ drawing including cleaning the joints of all loose material, filling with 20mm thick impregnated fibre boards for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. all complete as per drawings, specifications and directions of Engineer-in-Charge.					
2529	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.10.1	For type-I pavement (Upto and inclusive of thickness of 200 mm). (Including providing and laying MS dowel bar, painting as required, GI pipe and cap and cotton waste).	100	m		1870	187000
2530	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.10.3	For type-II pavement (Upto and inclusive of thickness of 150 mm)	100	m		290	29000
2531	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.10.4	For type-III pavement (Upto and inclusive of thickness of 100 mm).	50	m		230	11500
2532	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.11	Providing joints in pavements and around foundations as per standard/ drawing including cleaning the joints of all loose materials and sealing with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge for.					
2533	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.11.1	Construction joints 20mm wide x 25mm deep.	100	m		370	37000
2534	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.11.2	Sealing joint around pedestal and column etc. 20mm wide x 200 mm deep including filling with 20mm thick impregnated fire board for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge.	350	m		580	203000
2535	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.11.3	Sealing joint around pedestal and column etc. 20mm wide x 150 mm deep including filling with 20mm thick impregnated fire board for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge.	350	m		520	182000
2536	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.7.11.4	Sealing joint around pedestal and column etc. 20mm wide x 100 mm deep including filling with 20mm thick impregnated fire board for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge for.	150	m		460	69000
2537	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.15	MISC. CIVIL AND STRUCTURAL WORKS FOR U/G PIPING AND OTHER CIVIL WORKS					
2538	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.15.1	Providing and laying brick masonry with locally available bricks of specified class (Brick of class lower than specified shall not be accepted) in cement mortar 1:4 (1 cement : 4 Coarse sand) in one or more brick thickness and in any shape in foundation and plinth for valve pits, drains, circular/square maholes, wing walls, etc. including providing recesses, openings, etc. including curing, finishing the joints flush below ground level and raking out joints in plinth with all labour and material, etc. complete as per drawings, specifications and direction of Engineer-in-Charge. For following Brick Class.					
2539	A	B957-999-81-45-PK-SOR-9501-A-0M	01GC.15.1.1	Cement supplied free of cost by the Owner and following Brick Class

2694	B	B957-999-16-43-PK-SOR-9501-B-3M	M20000000000	PIPING-OFFSITES					
2695	B	B957-999-16-43-PK-SOR-9501-B-3M	M20900000000	PIPING (ABOVE GROUND) :-Transportation of all piping items from Owners storage point to work site/work shop; fabrication including cutting, edge preparation, (inclusive of grinding the edges of pipe, pipe spools, fittings, flanges etc. to match with the mating edges of uneven/different thickness wherever required); fitup, bending, preheating wherever required, welding, threading, and laying of pipes and pipe spools (spools along with supports) of all types and thickness over sleepers, overhead on racks and at all elevations, hook-ups with existing piping, connecting with equipment nozzles, strainers, steam traps, static mixers, sight flow indicators, thermal sleeve, orifice assemblies, spray nozzles, rotameters, tappings for pressure gauges, thermowells, sample connections, sample coolers, closed sample system cabinets etc. and fixing of gaskets, bolts, nuts including application of torque wherever required and all other inline instruments and fittings, like elbows, reducers, tees, flanges, spectacle blinds and spacer and blinds, piping specials such as mitres and fabricated fittings, vents, drains (but excluding reinforcing pads), SW valves upto 1.5 NB, Steam Supply/ Condensate Recovery stations(Cast/Fabricated), Supply and welding of Strip as per EIL Std 7-51-0112 to all pipes before hydro-testing at exit points of Units for earthing purpose; alignment, cleaning and flushing by water/compressed air, hydrostatic, pneumatic, vacuum, spark testing and any other type of testing as specified draining, drying by compressed air, performing Positive Material Identification(PMI) using alloy analysers, completing all such works in all respects (including preparation of isometrics as mentioned in the Scope of Work for the job) as per the specifications, drawings and instructions of Engineer-in-Charge. PMI shall be performed by third party as defined in PMI spec.Rates for tubing (if any) shall include rates for valves, fittings, all in line instruments and testing etc. Carbon steel piping includes LTCS piping also. Erection of all inline instruments like flow instruments and specialty items like static mixers, sample coolers, thermal sleeve, air mixers, exhaust head, rupture disk, flow meters, venturi tube, flame arrestor, thermal flow switch etc. except valve shall be considered as part of piping and separate payment shall not be made on this account. Note : Contractor to refer to Instrumentation SOR for specific details and rates of Instrumentation items not covered herein.

3139	B	B957-999-16-43-PK-SOR-9501-B-3M	M29907000000	HOT TAPPING WORKS: The Hook Ups shall be carried out, as per the requirement of Client/Engineer in Charge with the fluid on stream inside the existing line (HOT TAPPING). All the activities described in SOR item and relevant sections of Piping Scope of work shall be in addition to this SOR item. Removal of painting with wire brush and cleaning the spot of hot tapping and offer for inspection. After inspection clearance, weld a "shop hydrotested stub" of specified dia and length as per the specification to the main line.After the clearance of hydro test, welding of RF Pad on the stub /main line and carry out leak test at a pressure of 1.25 kg/cm2. The stub has to be pre-fabricated before taking hot tapping as per specification and instruction of Engineer in charge. Installation of a valve on the stub welded on the main line. The valve is required to be hydro-tested in the shop prior to field erection. Completion of Hot-Tapping work including supply and arranging of hot Tapping machine, cutter, Split Tee (if required) and also taking out the cut piece of pipe shall be under the scope of contractor. Installation of a blind flange on the open end of valves, if required, after removal of hot tapping machine shall be by contractor. All materials (excluding split Tee) for hookup like RF pad, stub in pipe, valves, flanges, gaskets, stub, nuts, blind flanges, etc. to be supplied by the Owner. Split-Tee shall be supplied by the Contractor. Notes: 1)The rate given in the SOR for hot tapping shall be inclusive of pre-fabrication and installation of stub to the header and its hydro-test, fabrication and welding of RF Pad and its air test including supply of compressor for air test, lug grinding (if required)/supply and welding of Split-Tee and installation of valve on the welded stub, fabrication and installation of blind flange on open end of the valve after the completion of the hot tapping works and removal of hot tapping machine supplied by contractor, transportation of equipment, materials, etc. and all other items required but not limited to mentioned for completion of the work. 2) The rate is inclusive of scaffolding /barricading as required for carrying out hot tapping at all elevations. The Scaffolding has to be erected in such a way that two separate and independent access will be available for the temporary platforms at all elevations erected for Hot Tapping. The Contractor shall supply, fabricate and erect all the structural members and arrangements required for providing: a) support to the existing line/main line on to which the Hot Tapping is made b) working platform for Hot Tapping personnel c) Access to Hot Tapping platform where Hot Tapping personnel are deployed

3272	B	B957-999-16-43-PK-SOR-9501-B-3M	M5**********	********** LEGENDS / NOTES FOR INSULATION WORKS ********** ** Types of Insulation : IH = Insulation for Heat Conservation IT = Insulation for Steam Traced Lines IS = Insulation for Personal Safety IC = Cold Insulation for Anti-condensation IE = Insulation for Electrically Traced Lines IJ = Insulation for Jacketed Lines IK = Insulation for Dual Insulated Lines ** Basic Line Surface Materials : CS = Carbon Steel (Including LT Carbon Steel) AS = Alloy Steel SS = Stainless Steel ** Notes : 1. For insulation type IT,tracer size and tracer numbers shall be as per specification. 2. Insulation thickness for IC where insulation material is Poly Urethane foam (PUF) / Poly Isocyanurate (PIC) + Cellular Glass includes outer layer of 50mm of Cellular Glass and Inner layer of balance thickness of PUF/PIC 3. Insulation for IE consists of inner layer of Rockwool and outer layer of PUF / PIC. The thicknesses have been specified as THK(I) and THK(O) for inner and outer layers respectively. **********

4953	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.3	Chipping of RCC WORK (taking all necessary safety precautions) by CHISELLING, upto & inclusive of 25mm thickness including supply of all tools & tackles, necessary scaffolding, propping, underpinning etc., cutting, lapping/welding of reinforcement bars as per drawings, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete at all heights and depths, as specified and directed. (Excavation and backfilling shall be paid separately under relevant items).	2	m²		580	1160
4954	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.4	Chipping of RCC WORK (taking all necessary safety precautions) by CHISELLING, beyond 25mm and upto & inclusive of 50mm thickness including supply of all tools & tackles, necessary scaffolding, propping, underpinning etc., cutting, lapping/welding of reinforcement bars as per drawings, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete at all heights and depths, as specified and directed. (Excavation and backfilling shall be paid separately under relevant items).	2	m²		730	1460
4955	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.5	Chipping of RCC WORK (taking all necessary safety precautions) by CHISELLING, beyond 50mm and upto & inclusive of 100mm thickness including supply of all tools & tackles, necessary scaffolding, propping, underpinning etc., cutting, lapping/welding of reinforcement bars as per drawings, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete at all heights and depths, as specified and directed. (Excavation and backfilling shall be paid separately under relevant items).	2	m²		1130	2260
4956	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.6	Chipping of RCC WORK (taking all necessary safety precaution) by CHISELLING for thickness more than 100mm for all depths below plinth level including supply of all tools & tackles, scaffolding, propping, underpinning, etc. exposing, cutting, lapping/welding the reinforcement bars as per drawings & cleaning the same by wire brushing, washing the exposed surfaces, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete as specified and directed. (Excavation and backfilling shall be paid separately under relevant items).	2	m³		4530	9060
4957	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.7	Chipping of RCC WORK (taking all necessary safety precaution) by CHISELLING for thickness more than 100mm for all heights above plinth level including supply of all tools & tackles, scaffolding, propping, underpinning, etc. exposing, cutting, lapping/welding the reinforcement bars as per drawings & cleaning the same by wire brushing, washing the exposed surfaces, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete as specified and directed.	2	m³		4990	9980
4958	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.11	Making cut-outs in RCC slab/ wall upto a thickness of 400mm (taking all necessary safety precautions) by vibration-less spark-free mechanical means like core-cutting, wet cutting by diamond wall saw system at all depths & heights including supply of all tools & tackles, necessary scaffolding etc. cutting of reinforcement bars, disposal of unserviceable material, plastering & finishing the cut surfaces, all complete as specified and directed by the Engineer-in- Charge (Measurement on Plan/ Elevation Area basis).	2	m³		15450	30900

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
4959	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.12	Cutting/ Dismantling RCC work in pavement, slabs, beams, columns, etc upto a depth of 450 mm by using vibration-less spark-free Diamond Saw Cutter of make HILTI (or equivalent) at all depths & heights, in hazardous areas within process units & offsite which are fire prone due to presence of hydrocarbon vapours etc. taking elaborate precautions for dismantling as per fire permit, clearance etc. and work is to be done with extreme caution. The work item includes cost of all necessary accessories, tools & tackles including diamond saw cutter, disposal of RCC Debris upto lead of 100 m & for all lifts (taking all safety precautions) including cutting reinforcement bars, embedded structural steel members, with necessary scaffolding, propping and underpinning etc. for all elevations with all labour and materials, all complete as per drawings, specifications and directions of the Engineer-in-charge. Payment will be made per sq.m.of cross-sectional cut area. Contractor to submit dismantling plan prior to start of dismantling. Dismantling shall be planned in such a way that each cut piece shall weigh not less than 1.6 MT.	2	m²		10380	20760
4960	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.2.13	Cutting/ Dismantling of RCC block foundations, raft foundations, pile caps, mass concrete, equipment foundations etc. by using vibration-less spark-free Diamond Wire Saw Cutter of make HILTI (or equivalent) at all depths & heights, in hazardous areas within process units & offsite which are fire prone due to presence of hydrocarbon vapours etc. taking elaborate precautions for dismantling as per fire permit, clearance etc. and work is to be done with extreme caution. The work item includes cost of all necessary accessories, tools & tackles including diamond saw cutter , disposal of RCC Debris upto lead of 100 m & for all lifts (taking all safety precautions) including cutting reinforcement bars, embedded structural steel members, with necessary scaffolding, propping and underpinning etc. for all elevations with all labour and materials complete as per drawings, specificationsand directions of the Engineer-in-charge. Payment will be made per sq.m.of cross-sectional cut area. Contractor to submit dismantling plan prior to start of dismantling. Dismantling shall be planned in such a way that each cut piece shall weigh not less than 1.6 MT.	2	m²		11030	22060
4961	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.3	Pockets - Non FIM Items					
4962	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.3.1	Making POCKETS/HOLES of sizes upto & inclusive of 200 x200x500mm in RCC/PCC works (taking all necessary safety precautions) by chiselling/drilling, including supply of all tools & tackles, necessary scaffolding etc. cutting of reinforcement bars, cleaning the pockets of all debris, disposal of the unserviceable material to spoil heaps anywhere within the plant boundary all complete at all heights & depths as specified and directed.	5	each		530	2650
4963	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.4	PCC _ Non FIM Items					
4964	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.4.1	Demolishing PLAIN CEMENT CONCRETE work (taking all necessary safety precautions) for all depths below plinth level including supply of all tools & tackles, necessary scaffolding, propping, underpinning etc. disposal of unserviceable material to spoil heaps anywhere within the plant boundary, all complete as specified and directed. (Excavation and backfilling shall be paid separately under relevant items)	5	m³		2070	10350
4965	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.5	Stonework - Non FIM Works					
4966	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.5.1	Demolishing STONE MASONRY WORK (taking all necessary safety precautions) for all depths below plinth level including supply of all tools and tackles, necessary scaffolding, propping, underpinning, cleaning and stacking of serviceable material, disposal of unserviceable material to spoil heaps anywhere within the plant boundary, all complete as specified and directed. (Excavation & backfilling shall be paid separately under relevant items).	25	m³		2090	52250
4967	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.6	Steelwork - Non FIM Items					
4968	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.6.1	Dismantling bolted/rivetted/welded STRUCTURAL STEEL WORK of all descriptions (taking all necessary safety precautions), including supply of all tools and tackles, consumables, necessary scaffolding etc., providing temporary bracings as required, cutting (by flame or saw) gusset plates, bolts, nuts, weldings etc., transporting and stacking of the serviceable materials, cleaning the site of work of all unserviceable materials for disposal to spoil heaps anywhere within the plant boundary, all complete at all depths and heights, as specified and directed.	0.5	MT		12630	6315
4969	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.7	AC / GI Sheets - Non FIM Items					
4970	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.10.7.1	Dismantling GI/asbestos/translucent sheets, ridges, gutters etc. (taking all necessary safety precautions) in roofings and wall claddings, including supply of all tools & tackles, necessary scaffolding, consumables, cutting (by flame or saw) of fixing hooks, transporting and stacking the serviceable materials, cleaning the site and disposal of the unserviceable material to spoil heaps anywhere within the plant boundary, all complete for all levels, as specified and directed.	5	m²		150	750
4971	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11	MISCELLANEOUS ITEMS (REFER SPECIFICATION NO. 6-68-0013)					
4972	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.6	Sand Filling - Non FIM Items					
4973	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.6.1	Supplying and filling approved SAND of specified quality under floors, in foundations, plinths, tank foundations etc. for all depths and heights including cost of sand, royalties, transportation to site for all leads and lifts, including loading, unloading, spreading in layers of loose thickness not exceeding 150 mm, watering, ramming, compacting with mechanical compactors and/or other equipment to the specified levels to achieve 85% relative density as per IS:2720 Part XIV, including preparation of subgrade to the required slope, providing testing apparatus and testing the degree of consolidation all complete as per drawings, specifications and direction of Engineer-in-charge. The rates shall be inclusive of the cost of all labour, material, equipments etc. all complete .	10	m³		3440	34400
4974	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.8	Bitumen - Non FIM Items					
4975	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.8.1	Supplying and applying one coat of HOT BITUMEN VG10 grade conforming to IS:73 @1.5 Kg/sq.m. on Concrete/Brick work surfaces etc. all complete as specified and directed.	2	m²		100	200
4976	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.8.2	Extra over item 01CS.11.8.1 for each additional coat of HOT BITUMEN VG10 grade @ 1.2 Kg/sq.m. on Concrete/Brick work surfaces etc. complete.	2	m²		80	160
4977	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.10	BI-POLAR CONCRETE PENETRATING CORROSION INHIBITING ADMIXTURE					
4978	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.11.10.1	Supplying and mixing of approved brand of BI-POLAR CONCRETE PENETRATING CORROSION INHIBITING ADMIXTURE (confirming to EIL Specification No. 6-68-0017) in concrete as per manufacturer's specification for protection of reinforcement against corrosion. Supply of admixture in Contractor's scope.	1700	kg		220	374000
4979	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.14	BONDING FRESH CONCRETE TO OLD CONCRETE BY EPOXY RESIN BONDING SYSTEM (REFER SPECIFICATION NO. 6-68-0056)					
4980	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.14.1	Epoxy Resin - non FIM Items					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
4981	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.14.1.1	Providing and applying approved EPOXY RESIN (prepared as per manufacturer's recommendation) for bonding of fresh concrete to old concrete in all types of structure at all depths and heights including cleaning of concrete surface, removing of all loose concrete pieces, making rough by chiselling, taking off the skin of concrete, application of Epoxy Resin System by spraying, necessary working platforms, props, scaffolding and other safety measures, removal of same after completion etc. all complete as specified and directed. (Excavation, backfilling, removal of surplus earth, keeping pit dry by pumping/bailing subsoil water shall be paid separately under relevant items).	100	kg		1350	135000
4982	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17	FIREPROOFING OF STEEL STRUCTURES (REF SPEC NO 6-68-0033)					
4983	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.11	Concrete - Non FIM Items					
4984	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.11.1	Supply and laying of concrete of grade M30 as per Type-I of EIL Standard Specification 6-68-0033 as fire proofing material with 10 mm and down size graded coarse and fine aggregates including admixture around structural steel members (viz. beams, columns, bracings etc.) all complete; cleaning the steel surfaces, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, vibrating, tamping, curing or providing a layer of approved membrane of curing compound, rendering with cement sand mortar (1:3) wherever required to achieve a smooth and even surface, providing L50x50x6 at corners or as specified in the drawing, applying primer on MS nuts, angles and affected surfaces, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights upto & including 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS INCLUDING CEMENT TO BE SUPPLIED BY THE CONTRACTOR).	1500	m²		3290	4935000
4985	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.12	Vermiculite Concrete for Structural Steel - Non-FIM Items					
4986	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.12.1	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-II of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness around structural steel members (viz. beams, columns, bracings etc.) for the required fire protection from reaching temperature 538 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, applying primer on MS nuts and affected surfaces, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights upto & including 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	8500	m²		4750	40375000
4987	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.12.2	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-II of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness around structural steel members (viz. beams, columns, bracings etc.) for the required fire protection from reaching temperature 538 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062 and stiffeners for members exceeding 600 mm depth, supply and welding of MS nuts on angle and box sections and cover blocks for other sections, supplying, placing and fixing in position galvanized expanded metal sheet with mesh size 4.5 mm x 13.5 mm conforming to IS:412 except on angle and box sections, hot dipped galvanized welded wire fabric reinforcement 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566, and tying the reinforcement to the cover blocks with galvanized 16 SWG tying wire, including cutting, straightening, cleaning, bending, applying primer on MS nuts and affected surfaces, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions at all heights more than 10 m above pavement etc. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	50	m²		5020	251000
4988	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.13	Vermiculite Concrete for Equipments - Non-FIM Items					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
4989	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.17.13.1	Supply and laying of vermiculite based lightweight cementitious concrete coating as per Type-III of EIL Standard Specification 6-68-0033 as fire proofing material of required thickness on equipment/ vessel skirts, saddles and supports for the required fire protection from reaching temperature 427 degree C; cleaning the steel surfaces and applying primer compatible to vermiculite material if required as per manufacturer specifications, supplying, placing and fixing in position cover plates conforming to IS:2062, hot dipped galvanized welded wire fabric reinforcement of 2 mm dia 50 mm x 50 mm mesh conforming to IS:1566 and tying the reinforcement with the pre welded nuts by galvanized 16 SWG tying wire, including straightening, cutting, bending of the reinforcement, including supplying and welding of additional MS nuts if directed by the Engineer-in-charge, applying primer wherever required, curing or providing a layer of approved membrane of curing compound, patching of damaged portion wherever required to achieve a smooth and even surface, providing chamfering at corners, supplying and laying of non-bituminous polysulfide or silicon rubber mastic sealant at terminating edges/ metal joints, painting the surfaces with sealer coat of epoxy polyamide as base and finish coats of coating system No.1 of NORSOK Standard M-501, including the cost of all labour, materials, specified tests, shuttering, staging, scaffolding, working platforms, approaches, etc. for all shapes and positions. all complete as per specifications and directions of Engineer-in-Charge. (ALL MATERIALS SHALL BE SUPPLIED BY THE CONTRACTOR).	1400	m²		5710	7994000
4990	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.18	Mechanical works					
4991	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.18.5	Supplying, fabricating and erecting in position MS plates as per detailed drawings, conforming to grade A of IS:2062 on top of all RCC pedestals supporting the sliding saddles of equipments, including cutting, straightening where necessary, rounding rounding unfinished edges by grinding, machining the exposed top surface, making necessary bolt holes, providing and laying ready mixed free flow non-shrink grout below the base plate at all levels & locations, machining top surfaces etc. all complete and as shown and directed.	0.5	MT		141520	70760
4992	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.18.9	Dismantling Of steel works					
4993	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.18.9.1	Dismantling structural steel already erected by others including provision of adequate temporary supports, bracings etc. wherever required, to ensure safety of the affected structure or part thereof, and replacing back all original members into their respective positions true to line and level, removing all temporary supports/bracings, welding/bolting of the end connections, splicing or strengthening the member and their joints to regain original strengths, all complete as directed by the Engineer-in-Charge. Note: The weight of dismantled and re- erected structure shall be measured only once.(SUPPLY OF ALL MATERIALS IN CONTRACTOR'S SCOPE)	1	MT		12630	12630
4994	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.23	SAFETY (REFER EIL SPECIFICATION)					
4995	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.23.1	Safety Structures - Non FIM Items					
4996	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.23.1.1	Supplying, Transporting, Storing, Fabricating & Erecting in position and testing/ examining bolted and/ or welded Structural Steel Works at all locations and levels in HANGER SCAFFOLDING below piperack, comprising of hangar channels, fabricated pen wen ladder beams, steel planks bent to shape and size and any other sections, if required, all as per sketches/ specifications and load tested for statisfactory performance, including cutting to required size, straightening/ bending if required, edge preparation, cleaning, preheating, bolting/ welding of joints (including sealing the joints of box sections with continuous welding and plugging any open ends & holes of box sections), finishing edges by grinding, fixing in line and level with temporary staging & bracing and removal of the same after erection, including preparation and submission of detailed fabrication drawings, preparing the surface for painting as per BIS codes after fabrication etc. all complete as specified and directed. All items shall be removed & carried back by Contractor as per instructions of Engineer-in-Charge after completion of works. (Supply of All Material In Contractor's Scope).	50	m²		2430	121500
4997	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.23.1.3	Providing and fixing double scaffolding system of any height made with 40 mm dia MS tube 1.5 m centre to centre, horizontal & vertical tubes joining with MS tubes, MS tube challies, MS clamps and MS staircase system in the scaffolding for working platform/ staircase etc., and maintaining it in a serviceable condition for the required duration as approved and removing it thereafter. The scaffolding system shall be stiffened with bracings, runners, connection with the building etc., wherever required for inspection of work at required locations with essential safety features for the workmen etc., all complete as per directions and approval of Engineer-in-charge. (Height shall be measured from Floor/ platform from where scaffolding is erected) including providing Aluminium ladders for safe acess of workers.	1000	m³		110	110000
4998	B	B957-999-81-41-PK-SOR-9501-B-3M	01CS.23.1.4	Providing of steel scaffold stair tower system with minimum 800 mm wide flights, landings at every 1.5 to 2.0 m height, handrailing around flights and landings for safe access upto a height of 12.0 m, all complete including supply of all materials, tools & tackles, manpower etc., at the location directed by Engineer-in-Charge on monthly rental basis. Rental charges shall be payable after completion of erection of the system and acceptance by the Engineer-in-Charge. Rates shall also be inclusive of dismantling of the system and taking out all materials from the project permises as directed by the Engineer-in-Charge. Rate quoted shall be for Running Meter (Height) per month.	100	RM		5670	567000
4999	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC	GENERAL CIVIL					
5000	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.2	Compound wall/ Chain Link Fencing/ Barbed wire fencing works					
5001	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.2.5	Supplying, fabricating and fixing G.I. chain link fencing with 3.15mm dia. wire, 50x50mm diamond mesh chain link fence fabric conforming to IS:2721 fixed to steel/RCC posts/struts above ground level or above short height compound wall (height upto 1.5m), including supply of chain link fencing fabric in 1.9 metre wide rolls, stretcher bars, staples, etc. required for fixing the fencing, fixing of chain link fencing between straining posts, fixing of bottom of fencing to a concrete sill beams by means of hairpin staples, including supply and fixing line wires, complete as per drawings, specifications and directions of Engineer-in-Charge (All materials shall be supplied by Contractor). (The measurement of chain link fencing shall be on linear basis for 1.9 m wide fencing fabric)	500	m		1430	715000
5002	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7	CONCRETE PAVEMENTS					
5003	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.2	Providing and laying Reinforced Cement Concrete with 20mm and down size graded crushed stone aggregates in flooring, pavements etc. including leaving pockets, if necessary, making recess/drains, laying in alternate panels, etc. for all depths including shuttering, tamping, curing, etc. as specified in any shape, thickness, position and finishing the top surface smooth etc. all complete as per drawings, specifications and directions of Engineer-in-Charge.					

Sl. No.	PART NO	SOR NO	ITEM NO	DESCRIPTION	QTY	UOM	CURRENCY	RATE	AMOUNT
5004	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.2.2	For RCC of M-30 grade concrete (all materials including cement but excluding cost of providing & fixing reinforcement and joint sealing shall be supplied by the contractor).	800	m³		9870	7896000
5005	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.6	Supplying and laying of 150 micron thick HM HDPE (Grade-I) FILM lining conforming to IS 10889 below concrete pavements, Hard stand, at any other place etc. including royalties, taxes, handling, transportation, unloading, storage, joining etc. all complete as per drawings, manufacturer's specifications and directions of Engineer-in-charge.	5000	m²		140	700000
5006	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.7	Supply of all materials and Construction of DRY LEAN CEMENT CONCRETE SUB-BASE (7 days compressive strength of 10.0 MPa) with 26.5mm and down size aggregate including cement , water, and approved additives on a prepared sub-grade, mixed in batching plant, transported to site, for all leads & lifts, laid, compacted, finished and cured etc. complete as per IRC:SP:49 (Guidelines for the use of Dry Lean Concrete as Sub-Base), drawings, standards, specifications and directions of Engineer-in-charge.	500	m³		4130	2065000
5007	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.10	Providing 20mm wide Expansion Joints in pavement slabs as per standard/ drawing including cleaning the joints of all loose material, filling with 20mm thick impregnated fibre boards for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. all complete as per drawings, specifications and directions of Engineer-in-Charge.					
5008	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.10.1	For type-I pavement (Upto and inclusive of thickness of 200 mm). (Including providing and laying MS dowel bar, painting as required, GI pipe and cap and cotton waste).	200	m		1870	374000
5009	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.10.3	For type-II pavement (Upto and inclusive of thickness of 150 mm)	250	m		290	72500
5010	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.10.4	For type-III pavement (Upto and inclusive of thickness of 100 mm).	100	m		230	23000
5011	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.11	Providing joints in pavements and around foundations as per standard/ drawing including cleaning the joints of all loose materials and sealing with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge for.					
5012	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.11.1	Construction joints 20mm wide x 25mm deep.	250	m		370	92500
5013	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.11.2	Sealing joint around pedestal and column etc. 20mm wide x 200 mm deep including filling with 20mm thick impregnated fire board for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge.	550	m		580	319000
5014	B	B957-999-81-45-PK-SOR-9501-B-0M	01GC.7.11.3	Sealing joint around pedestal and column etc. 20mm wide x 150 mm deep including filling with 20mm thick impregnated fire board for the full depth of slab except for 25mm depth from top and sealing the top 25mm with Polysulphide base joint sealant of approved make conforming to BS:5212, including applying 2 coats of approved primer compatible with the brand of Polysulphide etc. complete as per drawings, specifications and directions of Engineer-in-Charge.	550	m		520	286000

1 GENERAL SCOPE OF WORK FOR TENDERS

This Scope of Work comprises Piping Works for the Composite Works Tender Document No. B957-999-16-43-SOW-9501 of offsites, (Mechanical Works, Painting, and Insulation), for the Bina Petrochemical & Refinery Expansion Project (BPREP) at Bina, Madhya Pradesh, of M/s Bharat Petroleum Corporation Limited (BPCL). The work shall be executed as per the Scope of Work, Scope of Material Supply, Schedule of Rates, Specifications, Standards, Drawings, and all other requirements included in the Tender Document, complete in all respects.

The composite works tender consists of Schedule of rates in two parts as follows but not limited to:

PART A

PART B

The scope of work of Offsite is to fabricate and erect the piping in the areas identified in the enclosed overall plot plan. This scope of piping is majorly in new area of development and partly in existing area of Offsite pipe racks connecting the new units such as Ethylene Cracker Unit (ECU), LLDPE/HDPE (SWING), PPU, BUTENE-1, New Tank farms, Gantry area, Existing tank farms and BDT area. This quantum of piping work is covered in Part-A and Part-B of Schedule of Rates (SOR).

Generally, the scope of work of contractor shall include the following in addition to the scope of work as defined in EIL standard specification for fabrication & erection of piping (doc. No. 6-44-0012)

1.1 Transportation of required piping materials (as described in CL.1.3), pipe support materials (as described in CL.1.6) and all other necessary piping materials from owner's storage point or Contractor's storage point (in case of Contractor's scope of supply) to work site/shop including raising store requisitions for issue of materials in the prescribed format & maintaining an account of the materials received from owner's stores & reconciliation of all Owner supplied free issue materials.

It may be noted that work shop / Field shop/Store for any material storage, Pre-fabrication, Surface preparation, Painting, coating, testing, NDT etc., may be located elsewhere inside Refinery premises or located elsewhere outside the Refinery due to space constraints. Contractor shall accordingly arrange for transport of material and the pre-fabricated spools to worksite for erection without any time and cost implication.

1.2 Clauses 2.6 of Standard Specification for fabrication and erection of piping: 6-44-0012 shall stand modified as below:

For all areas Piping GADs and Hook up sketches shall be provided to the contractor.

Copyright EIL – All rights reserved

Preparation of Isometrics & bill of materials for all temporary piping as per General Arrangement drawing/ Hook up sketches' requirements shall be done by the contractor. Also miscellaneous small bore lines related to instruments & pump flushing/ cooling, purging, pump vent & drain lines to CBD/OWS/SS & drain lines from LG,LT to CBD/OWS/SS, steam tracing (Non-IBR), if any, from steam supply stations up to condensate recovery station, supporting details of all Non-IBR & IBR lines up to and including 1.5" and lines specified as field routed including subsequent approval from Engineer-in-charge as and when required is in contractor's scope of work. If required, system routing & isometrics (2" & below) including branch lines 2" & below from main header at rack shall be done by the contractor. The material for all above shall be free issued.

The above lines up to and including 1.5" shall be field supported (including IBR lines- for IBR lines only the support type e.g. resting/guide/cross guide etc. shall be specified in the drawing or applicable support standards) up to the unit battery limit including approval by Engineer-in-charge, is in contractor's scope of work.

IBR Package for residual, field routed and site modified steam lines shall be prepared by the Contractor. IBR approval for the same shall be in Contractor's scope, also hook up with existing system and approval as required will be part of this scope which includes preparation of document as desired by local IBR authority

No separate payment shall be made on this account

Since the scope of the tender also involves works within, existing tank farms, existing pump houses etc., all the drawings that are issued for construction shall be verified with the site condition before start of developing the fabrication drawing. Instances where the routing indicated in the issued drawing is not feasible due to any existing facility, the same shall be brought to the notice of Engineer –in- Charge and drawings to be made to suit to site before fabrication and erection with due approval from EIL/Client without any extra cost and time.

Clause 2.7 of 6-44-0012 stands modified as under:

Contractor shall fabricate and erect the offsite piping as per GADs issued.

Contractor shall review the routing of piping thoroughly for hindrances and suggestions for avoiding the same shall be provided and approval to be taken prior to fabrication.

1.3 Piping materials, in addition to those already specified in 6-44-0012, shall also include the following but not limited to:

1.3.1 Specialty items like online filters, springs (All types), silencers, snubbers, steam and condensate manifolds, injection nozzles, MOVs, sight glass, spray nozzles, blow down valves, compact/ integrated steam traps, hoses, hose couplings, sample coolers, Expansion joint / Bellows (All types) etc.

1.3.2 Erection of Online instruments like control valve, orifice flange, rotameter, safety valves, SDVs, restriction orifice, rupture disc, de-super heaters, corrosion probes, annubar, magnetic flow meter, ultrasonic flow meter, Coriolis mass flow meters, venturi PG/PT/ Flow transmitter, ejectors, static mixers eductors, flame arrestors, thermal flow switches, fabricated hook-ups etc.

Copyright EIL – All rights reserved

1.3.3 Pipes (All sizes, types and schedules)

1.3.4 Flanges (All sizes, types and Pressure ratings)

1.3.5 Fittings (All sizes, types and schedules)

1.3.6 Valves (All sizes, types and ratings)

1.3.7 Gaskets (All sizes, types and ratings)

1.3.8 Studs, Nuts or M/c Bolts (all types)

1.3.9 Installation of silencers, traps, strainers, ejectors, eductors, flame arrester, sample coolers and online/ inline instruments.

1.3.10 All pipe support materials.

1.3.11 Prefabricated Piping Spools.

1.4 Shop & field fabrication and erection of piping in accordance with documents listed under CL. 2.0 i.e., 'BASIS OF WORK' including erection of all piping materials enumerated above.

1.5 **Erection of Clad Piping:** Pre-fabricated spools of clad piping shall be issued as free issue material by the owner. Transportation, erection, installation, beveling, cutting, field joint, welding, spool pipe supporting (fabrication including welding of pipe support pad), providing concrete pedestals, installation of Springs and special supports, NDT, hydro/Pneumatic testing, painting, insulation, etc. shall be in the scope of contractor. Any damage caused by contractor during transportation, shall be made good by the contractor without any time & cost implication.

1.6 Fabrication and erection of pipe supports in addition to those already specified in 6-44-0012, shall also include the following but not limited to: dummy pipes, stops, anchors, clips, cradles, hangers, turnbuckles, supporting fixtures, corrosion pads, clamps, special support, brackets, cantilevers, lubrite /graphite/PTFE low friction pads, roller supports, struts, tee-posts, erection and de locking of spring supports at all elevations after providing proper scaffolding arrangement if necessary, expansion bellows, sway braces , steam and condensate manifolds supports etc.

Reinforcing pads and stiffening rings, if not covered in the specifications/standards, shall be of the same material as of parent pipes.

1.7 Site Fabrication of piping items, in addition to those already specified in 6-44-0012, shall also include the following but not limited to:

a. Fabrication of piping specials like special radius bends, reducers, mitres, etc.

b. Fabrication of plain and threaded nipples from pipes as required during erection.

Copyright EIL – All rights reserved

c. Fabrication of swage nipples as and when required.

d. Fabrication of odd angle elbows like 60°, 30°, or any other angle from 90°/45° elbows as and when required.

e. Fabrication of flanges, reducing flanges, blind flanges, spectacle blinds, crosses, jump-overs etc. as and when required.

f. Fabrication of circular pipe for steam rings, fire water lines, utility lines at all levels and elevations.

g. Fabrication of branch connections with or without reinforcement.

h. Grinding of edges of pipes, fittings, flanges, etc. to match mating edges of uneven/ different thickness wherever required as per specifications including bevelling of plain end pipes. Grinding/ finishing of uneven surfaces/ joints after welding.

i. Fabrication and erection of miscellaneous items like injection nozzles, distributors etc. as per the respective sketches which shall be provided to the contractor. Contractor's scope also includes testing, commissioning of such items in all respect as directed by Engineer-In-Charge. Detailed fabrication drawings if required are to be prepared by the Contractor and submit to Owner/ EIL for Approval.

j. Design, fabrication & Installation of Sample Coolers as per EIL std drawings 7-44-0310/0311 wherever required.

k. Fabrication of chain operation arrangement of chain operated valves including chain of required length as per EIL std. 7-44-0050. All material required for this modification shall be supplied by contractor.

l. Threading (internal and external threading) of all small-bore piping as per piping material specifications.

m. Equipment nozzle reinforcement with pads, jacket & stiffeners as and when required.

n. Fabrication of injection nozzles as per details provided as and when required.

o. Tapping and drilling of holes in flanges, blind flanges, Spacer rings, piping connections for jack screw, if required.

p. Drilling on blind flange for inserting / joining small bore lines.

q. Fabrication and erection in position of funnels required for OWS/ WWS/ SS/ Condensate collection & blow down system as per direction of Engineer-in-charge.

Copyright EIL – All rights reserved

r. Fabrication and welding of reinforcement pads at branch pipe locations wherever required.

s. Extension of valve stem, locking arrangement of valves etc as and when required.

1.8 Hot tappings / Hot works / Cold tappings for hook-ups/modifications shall be provided as per Client requirement. Site preparation for hot work/cold tapping on the existing process/utility lines including flushing/ hydro testing, cleaning oily sludge, covering the storm water channel with tin sheets, providing hot work booth with suitable material, Standby DC Gen set, Standby crane or any other special arrangements, tools and tackles required for safe execution of hot or cold tappings etc, is in contractor's scope of work and supply. In case of Hot Tappings the specification 6-44-0021 is to be followed.

1.9 Hook-up points shall be very clearly identified with proper stenciling at site on the adjacent structure & on the respective lines. All hook-ups with the existing piping system shall be hydrotested upto the nearest isolation valve/ flange. In case it is not feasible to hydrotest as stated above, then philosophy of golden joints may be adopted, which will be done only at the discretion of Engineer-In-Charge with due NDT/ Radiography.

1.10 In case certain equipments are required to be included as a part of piping hydrotest / pneumatic test circuit, contractor's scope shall include making necessary arrangements thereof and equipment drying after hydrotest. Contractor shall take adequate care to ensure that no damage to equipment or its auxiliaries takes place during the execution of works. The rates of piping shall be inclusive of said equipment testing and separate payment shall not be made on this account.

1.11 Fabrication and erection of pipe supports shall include, but not be limited to, those specified in Clause 2.3 of 6-44-0012.

1.12 Site Fabrications of piping items, in addition to those already specified in 6-44-0012, shall also including following but not limited to:

1.12.1 Erection of Sample Coolers as per EIL Std. Dwg. No.7-44-0310/ 0311 wherever required.

1.13 Clause no 4.3.1 of standard specification for Fabrication and erection of piping 6-44-0012 shall stand modified as below;

Obtaining approval for the piping systems/ Hook up systems falling under the purviews of IBR from the statutory Indian Boiler Regulation (IBR) authority of the state where the plant is situated. The EIL/Owner shall provide documentation for IBR system. In case the local IBR authority insists that the documentation provided by the EIL/Owner is required to be submitted in any alternate format, then it will be contractor's responsibility to get the isometrics, IBR calculation etc. from the original package revised in the appropriate format as required by the local IBR authority at no extra cost. The revised package shall require Owner/ EIL approval. System isometrics or GAD required by the IBR authorities shall be made by contractor based on available isometrics.

Copyright EIL – All rights reserved

The contractor shall carry out the fabrications, erection and testing of this piping as per requirements of Indian Boiler Regulations and to the entire satisfaction of the Local Boiler Inspector. The Contractor shall also get the approval of IBR inspector for all fabrication and testing done by them at their own cost. All certificates of approval shall be in proper IBR forms.

1.14 IBR Package for residual, field routed and site modified steam lines shall be prepared by the Contractor. IBR approval for the same shall be in Contractor's scope. Contractor shall arrange for the inspection of the works by the statutory IBR authority and will undertake necessary coordination and liaison required and shall not be entitled to any extension of time for any delay in obtaining such approvals. Any deficiencies as pointed out by any such authority shall be rectified by the contractor within the scope of relative supply and/or work at no extra cost.

1.15 Fabrication and erection of structural arrangements like brackets, for pipe supports and valve operation / accessing some instruments etc., providing brackets from heater structure and other structures for pipe supports, modification / extension of platforms, providing additional platforms / ladders for improving / providing accessibility, including supply of necessary materials.

1.16 Providing stiffeners for all small bore (1.5" and below) branches wherever required. Material required for the same are in Contractor's scope of supply.

1.17 Modifications like providing additional cleats for extension of stem of valve, locking arrangement of valves, providing chain operation facility etc. as and when required. All materials required for these modifications shall be supplied by the contractor.

1.18 Internal grinding of welds of process lines and orifice flanges to render smooth surface.

1.19 Radiography, stress relieving, dye penetration test, magnetic particle test, wet fluorescent magnetic particle test, etc., as per specification B957-6-44-0016. In addition to this, welded reinforcing pads shall be pneumatically leak tested. Radiography requirements should include digital / conventional and Selenium based radiography methods. Digital and Selenium based radiography requirements have been provided elsewhere in this piping scope of work.

1.20 Hydraulic bolt tensioning & torquing shall be performed on flange joints as per the requirements specified in "Standard Specification for application of Torque & Hydraulic Bolt Tension for flange joints" (6-76-0002) & "addendum to the bolt tensioning and bolt tightening requirements" (B957-000-16-54-DD-1001) For determining the lines requiring torquing as per clause 5.1.2 of 6-76-0002, PMS class shall be referred. Wherever sizes / piping class are not covered in the standard specification, the applicable job specification shall be provided to successful bidder.

1.21 Wherever piping class breaks of high pressure/ low pressure are involved, the high-pressure circuit shall be tested up to piping class spec. break and the low-pressure circuit shall be done up to the nearest flange of high-pressure piping.

Copyright EIL – All rights reserved

1.22 Making material reconciliation statement and return of owner supplied left over materials to Owner's storage.

1.23 Pre-insulated tubing shall be free issued to mechanical contractor for erection & fabrication, as per specification and direction of Engineer-in-charge.

1.24 Electrical tracing shall be done where 'IE' is specified in P&IDs/ GADs. For electrical tracing refer requirements specified in Electrical Scope of Work documents elsewhere in the tender.

1.25 Pneumatic testing of Reinforcement pads shall also be done by the contactor. SOR item for reinforcement pads also includes pneumatic testing of the pads. Rates for Stress Relieving of welds for Reinforcement pads (for branches) shall be considered as 1.5 times size of branch pipe. Rates for Stress Relieving of Protection Shields and Corrosion Pads shall be paid for equivalent "D" which shall be calculated as "L=3.14 X D", where "L" is total weld length. Equivalent "D" shall be rounded off to the nearest size of pipe.

1.26 Making connections to underground piping systems erected by other agencies.

1.27 Erection of all online instruments & specialty items like rupture disk, venturi-tube, flame arrestor, thermal flow switch etc. except valve shall be considered as part of piping and separate payment shall not be made on this account

1.29 De-super heaters are not covered separately in the SOR. However, if the de-super heaters are of Control valve type, payment for installation of the same shall be same as for control valve of inlet line size. If the de-super heaters are venturi type, the same shall be treated as pipe for payment of its erection.

1.30 Erection of control valve (4" & above) shall be done after flushing/ chemical cleaning etc. of the erected line. For erection of piping, temporary spool pieces, fabricated from pipes (supplied by EIL) & plate flanges (supplied by contractor), shall be installed in place of control valve along with temporary gaskets (supplied by contractor).

1.31 Transportation of all safety valves from Owner's storage points to Owner's testing yard and testing them (set pressure test, leak test and back pressure test etc.) Calibration of PSV's/ TSV's shall be carried out before installation. Contractor's scope shall also include dropping/shifting of the PSV's/ TSV's from the installed position (if required) to workshop for calibration/re-calibration/re-checking, etc., and reinstall back to original location including parts replacement, gasket, stud/bolts etc., re-fixing of the PSV's/ TSV's including lapping if required to be done. This includes the PSV's/ TSV's which are installed by package vendors. The payment shall be same as control valve of inlet size only once. Erection & dismantling required for alignment, testing & re-erection shall be done at no extra cost.

1.32 Providing insert plates at all elevations with anchor fasteners in concrete structures / paved floors, providing openings for pipes in floor and repair of platform gratings around pipe openings and providing suitable members for

Copyright EIL – All rights reserved

support under the platform grating. Materials required for above are in Contractor's scope of supply.

1.33 Casting of concrete pedestals, fabrication and erection of small structures for pipe supports and valve operation / attending some instruments etc., providing brackets from heater structure and other structures for pipe supports, modification / extension of platforms, providing additional platforms / ladders for improving / providing accessibility, including supply of necessary materials.

1.34 Contractor shall follow the welding specification charts provided for each PMS class.

1.35 Contractor shall prepare welding specifications for all weld joints where dissimilar welding will be performed, and obtain approval from EIL.

1.36 Stiffening arrangement shall be provided for all Branches of size <= 1.5"

a) For header lines of Rating >= 600#
b) For header lines subjected to two phase flow
c) For Header lines subjected to Pulsation Flow
d) Which are PSV & TSV Inlet/Outlet purge/drain/vent connections (irrespective of line rating)
e) Which are Control Valve drains (irrespective of line rating)
f) Which are Orifice flange tapings (irrespective of line rating)
g) Which are Vents & drains
h) Which are Pressure tappings
i) Which are Temperature tapping
j) Which are Sample connections

Stiffening arrangement shall be provided with two no. of stiffeners (6MM Thk X 40 MM wide), with material equivalent to line material, at 90 deg to each other.

1.37 Contractor shall obtain all Necessary work permits from Engineer-In-Charge/ Client at site.

1.38 Contractor to ensure meeting all requirements for carrying out work in Shutdown/ Running plant.

1.39 Contactor to carry out the dismantling/modification of existing piping, if required for routing of new lines. All necessary clearances have to be taken by contractor from client.

1.40 Dismantling/ modification/ of erected piping and de-tensioning of flanges, if required for routing of lines as per revised isometrics/ GADs. All necessary clearances have to be taken by contractor from Engineer in charge. Contractor shall note that "1 Inch dia" of beveling is equal to beveling both side of the pipe components for which fit up is being made.

1.41 Inspection, Flushing and testing of all piping systems as per Standard Specification for Inspection, flushing and pressure testing of erected piping systems No. 6-44-0013. The accessories required for blinding the line like flange, blind flange, gasket (all sizes, type and rating), stud-bolts, flexible hoses

Copyright EIL – All rights reserved

etc. are to be arranged by the Contractor. During flushing the discharged water / air shall be drained / routed as directed by the Engineer – In Charge.

1.42 All piping must have high point vents and low point drains. P&ID & PMS requirements are to be followed for the size and type of vents and drains.

1.43 Removal, separation & disposal of insulation material, transportation of dismantled pipe, fittings, flanges, valves, pipe support etc. after flushing with air/water to owner's storage area and reconciliation of all dismantled material.

1.44 Positive Material identification shall be done in two stages: first stage during storage at EIL store or Contractor store, before fabrication and erection at site (6-82-0002) and the second stage after the installation and before hydro testing. The instruments required for PMI is to be arranged by the Contractor and handed over to EIL/Owner after completion of work in good condition. PMI as specified in Specification No.-6-82-0002 shall include the following but is not limited to the same:

A. PMI shall be done in two stages, first one during fit up/welding by contractor and another at the end by TPI agency.

B. PMI shall be done for balancing/bypass line in the alloy steel/ NACE/ hydrogen service/ CS/ SS/ DSS whenever required as per specification addition to the PMI of valves.

C. PMI shall be done for spring support clamp/cleat (if PMI is applicable for the line in which the spring is installed) and shall be recorded.

D. PMI shall be done for shoe support/corrosion pad (if PMI applicable for the line in which the support is provided.

E. PMI shall be done for RTJ gasket before insertion and shall be recorded.

F. Any other lines identified by the Engineer-in-Charge.

1.45 **Chemical Cleaning / Pickling**: Chemical cleaning shall be performed as per applicable specifications attached in the tender. The scope shall be considered from marked up P&IDs with related lines/ equipments highlighted. Supply of chemicals, consumable, DM water, piping components like pipes, flanges, fittings, valves, fasteners and gaskets required for providing temporary piping arrangement for chemical cleaning, equipment boilers, and the testing equipment required for chemical cleaning, pickling & of lines is also in the contractor's scope. Chemical cleaning has to be done as per the following specifications

- Pre Treatment Cum On-stream Cleaning of Recirculating Fresh Cooling Water System shall be as per Job Specification B957-000-06-42-CCS-001.

- Chemical cleaning of VHP/HP Steam piping shall be as per Job Specification B957-000-06-42-CCS-004

Copyright EIL – All rights reserved

- Chemical cleaning and passivation of compressor circuits shall be as per Job Specification B957-000-06-42-CCS-005.

- External chemical cleaning and passivation of SS welds & fittings of tanks and pipes B957-000-06-42-CCS-011.

1.46 Contractor shall supply and erect structural davits or monorails for safety valves, control valves etc., wherever required, as per operating conditions of the plant and as instructed by the Engineer-In-Charge.

1.47 For bare lines, of size two inch and above, routed on Pipe rack/ sleeper, shall have corrosion pads, the pads shall of be same metallurgy at all required locations in accordance with Job specification which shall be given to successful bidder. Welding, Stress relieving and Pneumatic testing of pads shall be provided by the contractor as required. No separate payment shall be made for the same.

1.48 Providing barricading wherever required, preventing hot gases affecting adjacent air cooler suction, work area etc., as required by EIL/BPCL.

1.49 **AS-BUILT**: Contractor shall prepare the as-built piping layout, GADs, Hook up sketches and isometrics and get it approved by Engineer In-charge. CDs/Hard Drives and hard copies of as-built drawings shall be supplied as per Special Condition of Contract. Updation of 3D model in SMART 3D version 2019 (12. 01.00.0983) as per the as-built hard copies is also in contractor scope and the same shall be approved by EIL. Software and modellers required for updation of 3D model shall be in contractor's scope. Native files of model and hardware will be provided by EIL to contractor at its office at Gurugram/ Delhi/ other EIL office. Contractor shall provide as-built GADs and isometrics extracted from the model. For the other drawings which are available/ developed in AutoCAD, as built drawing shall be updated in AutoCAD format. All the above said work are to be completed within quoted rates of piping and no separate payment shall be made on this account. Contractor shall hand over the model (native files etc.) after completion of the as-built work to EIL. The model shall not be used for any purpose other than updation as mentioned above. Contractor to ensure that the updation of all the related facilities (civil, structural, electrical, instrumentation and equipment connection) if modified, along with the updation of line routing in as built 3D modeling.

The As-Built drawing shall include the details of the other existing facilities like lines, structures, equipment etc. in the area.

1.50 For specific requirements of materials to be supplied by the contractor other than those mentioned in the technical specifications, refer general conditions of the contract, and for the Inspection and testing of contractor supplied items, refer special condition of contract.

1.51 Filling/covering of extra openings in Tech structure floors and platforms that are erected for facilitating operation of equipment and instruments.

Copyright EIL – All rights reserved

1.52 Piping items (e.g.-Pipes, fittings, flanges, valves etc.) in contractor scope of supply shall be procured from project approved vendor list. Approved vendor list for piping items (To be supplied by contractor) shall be provided to the successful bidder.

1.53 Providing Pre-Commissioning and commissioning assistance to owner by supply of skilled/semi-skilled/Un-skilled workers as per the direction of Engineer-in-charge with hand tools (But excluding consumables).

1.54 Providing low friction pads as specified in GADs/isometrics/special support sketches

1.55 Removal of temporary strainers before startup / commissioning as directed by Engineer In-charge.

1.56 Pre-commissioning and commissioning activities and any assistance required therein as listed below are in contractor's scope but not limited to are as follows:

a) Carry-out/Monitor water flushing followed by air drying of pipes

b) Air blowing / card board blasting of ducts & other piping systems.

c) Steam blowing / Nitrogen Purging

d) Dropping of control valve/ ROV/ MOV/ Check valve/ PSV/ Rupture Discs flanges at all elevation and reinstatement of same.

e) Dropping off in line piping instrument like orifice, venturi flow nozzle & other instrument on equipment as required and reinstatement of the same.

f) Final box up of equipment, pipeline fitting after pre-commissioning activities.

g) Carry-out leak test/tightness test & integrated leak test with soap solution or by other means.

h) Installation of temporary or permanent blind, spool piece or valve for carrying out any activities as mentioned above.

i) Attending leaks by tightening to the required torque/replacement of faulty gaskets where necessary.

j) Cleaning strainers/filters in the pump /piping circuits.

k) Supply of all temporary strainers/filters/screens required for pre-commissioning and commissioning activities

l) Topping up of bearing oil/lube oil in rotary equipment. Flushing, draining, cleaning and filling up of small hydraulic oil consoles, seals / tanks of rotary equipment.

Copyright EIL – All rights reserved

m) Hose connections/removal for flushing, blowing, drying, leak test or any other activities

n) Opening & box-up of piping/Vessels for demister pad cleaning & inspection.

o) Rechecking of alignments for the rotating equipment.

p) Providing skilled/semiskilled/unskilled manpower for assisting Vendor's representative for equipment preparation/minor repair/trail run and any other similar activity as per the commissioning requirement.

q) Fabrication of valve keys/blinds.

r) TPI for all bought out items

s) Removal of scrap to identified area and maintain good housekeeping in plant area to maintain safe working condition at all time.

t) Provide skilled/semiskilled/unskilled manpower for commissioning of safety systems like fire hydrants, clean agent, car sealing of safety valves, blinding/ de-blinding as required.

u) Provide manpower for checking pipe hangers/supports and setting guides for hot & cold setting.

v) To remove and reinstate inline fittings like steam traps, small in line strainers etc.

w) Make scaffolding arrangement wherever required as per safety standard and removal of the same after completion of job.

x) The flange opening & closing also include, hot loosening for easy opening and hot tightening during / after start up.

y) Cleaning of all type of steam traps for proper functioning.

z) Dropping, cleaning by means of compressed air or water jet and re-fixing the de-mister pads after inspection

aa) Cleaning and lubrication of fasteners is to be done before box-up.

bb) Brazing/replacement of wire mesh.

cc) Opening & Box up of static equipment like vessel, pipe line flanges.

dd) Isolation, removal & re fixing of Static Equipment / column/Vessel mounted instruments.

ee) Removal of insulation from piping, valves and flanges in such a way that these can be reused and fixed after completion of job.

Copyright EIL – All rights reserved

ff) Supplying and installation of brass target plates for use in steam blowing as required.

gg) Fabrication yard if available, shown in the overall plot plan shall be provided to the contractor. In case there is a requirement of more space contractor needs to arrange the same.

1.57 **TYPICAL TOOLS & TACKLES AND MACHINERY REQUIRED FOR PRE COMMISSIONING ACTIVITIES AND COMMISSIONING ASSISTANCE**:

The list is not exhaustive so some tools & tackles and machinery may be required to be included or excluded in scope of contractor on project specific basis. Following shall be supplied as minimum requirement along with manpower: -

a) Welding machine, TIG welding machine, electrodes, Gas cutters, Welding generator, filler wire, Diesel operated Welding Generator suitable for lighting and grinding jobs in remote area.

b) All rigging tools-tackles like Trailer, tractor trolley, hand trolley, chain pulley block of different capacity like 2.5 MT etc., ropes, material shifting trolley/push cart and wooden blocks for local movement of the material.

c) Necessary hand tools like all sizes of spanner, flange spreader, Impact wrench, & non sparking tools for working in explosive area/hydrogen handling unit. These tools must be supplied along with supplied manpower.

d) Different valve key for operating valve. These must be supplied along with supplied manpower.

e) Infrared temperature gun for measuring temperature.

f) Dewatering electric pump, temporary air compressor etc. with consumable.

g) Grinding machine, drilling machine with consumable.

h) Lifting tools like Hydra crane, assorted wire slings, web belts, D-Shackles, hook chuck.

i) Wire brushes, painting brushes, Measuring Taps & PP/Manila ropes. These can be cash procured or supplied along with supplied manpower.

j) Aluminum Ladders.

k) Condition monitoring tools for rotary equipment.

Copyright EIL – All rights reserved

l) Air Compressor for providing compressed air for the purpose of air blasting and flushing and any other special tools & tackles required.

1.58 TYPICAL CONSUMABLES REQUIRED FOR PRE COMMISSIONING ACTIVITIES AND COMMISSIONING ASSISTANCE

The list is not exhaustive so consumables may be required to be included or excluded in scope of contractor on project specific basis. Some of the consumables can be cash procured at site or to be supplied by contractor along with supplied manpower depending on quantum of work.

a) Required PPE for supplied manpower like cotton gloves, heat resistant gloves suitable for steam & high temperature service, gum boots, safety goggles, face shield, gas/dust mask, ear muff/ear plugs, raincoat, heat resistant aprons/jackets, safety harness, safety shoes, safety helmet and any other PPE necessary for carrying out activities safely. This is mandatory requirement and must be supplied by contractor along with supplied manpower.

b) Temporary rubber hose, fire hose etc. for flushing / pressure testing.

c) Necessary barricaders and indication tape.

d) Grease, rustoline etc.

e) Paint for temporary markup.

f) Cardboard & Temporary Gasket sheet.

g) Soap Solution & Squeeze bottles.

h) Pressure gauge for card board blasting, leak test or any other activity.

i) Emery papers, masking tape.

j) Marking Pencils

k) Electric Torch

l) Nitrogen cylinders

m) Any other consumable required, even if not mentioned etc.

1.59 **HOOK –UP OF ALL THE TIE-IN POINTS.**

Hook up works shall include the following but not be limited to:

1.59.1 The Contractor shall identify the exact location of the hook-up as per piping drawings/sketches by checking/marking exactly w.r.t site conditions and thereafter plan to execute the hook-ups. The hook up may be either, a) Branch connection on an existing line, b) Extension of tank manifold & providing a branch connection, c) Modification of an existing line & providing a branch connection, d) Extension of an existing header & providing a branch connection.

Copyright EIL – All rights reserved

In the absence of the availability of the piping details at the hook-up locations, the contractor can remove insulation of existing lines at these hook-up locations with prior approval from Owner/ Engineer-in-charge for finding out the details of existing piping, in order to ascertain material, size, rating etc. Insulation shall be put back properly by contractor after ascertaining of piping details. Insulation material, scaffolding etc. and whatever is required shall be in the scope of contractor.

1.59.2 Hooking-up with existing systems wherever required as per the directions of the engineer-in-charge. Hot tapping/hot work requirements of refinery/plant shall be followed wherever hot tapping/hot work is directed / required.

1.59.3 In cases where a new pipe is being hooked up with an existing piping system, the hydro testing of associated existing piping upto first isolation shall be required. In all hook-ups with the existing piping, the system shall be hydro tested upto the nearest isolation valve / flange. In case it is not feasible to hydro test as stated above then the philosophy of golden joints (i.e. 100% radiography) may be adopted. However, this shall be done only at the discretion of engineer in charge.

1.59.4 Shop/site fabrication, erection and welding of piping including flushing and hydrostatic testing, any other test etc. complete with all fittings, in line instruments etc.

1.59.5 Carrying out radiography, DP/MP test, hydrostatic, pneumatic, vacuum and other tests including the portions of existing piping, as per Job NDT Specification and standard specification for pressure and vacuum testing

1.59.6 Meeting all the safety requirements for carrying out the work during the Shutdown / operational/Running phase of plant. During Pre shutdown, the contractor shall do detailed planning & all back-up activities so that the shut-down activities can be minimized for reducing the shutdown duration. Prior to shutdown / taking up the hook-up activities the contractor shall ensure the following: -

(i) Contractor shall pre-fabricate to the maximum possible extent.
(ii) The field welds, adjustment welds shall be kept to a minimum.
(iii) Pre-fabricated parts along with loose piping components shall be tagged and kept properly. Based on the actual material requirements, contractor shall prepare shortage as well as surplus material list and provide the same to Owner/ EIL for necessary action.
(iv) Contractor shall make field engg. team which shall mark all the hook-up points and paint the lines / part of lines with the agreed colours that require dismantling.
(v) The drawings/sketches provided by the Owner/ EIL shall be verified by the Contractor as per actual site conditions before taking up prefabrication. Existing nozzle flange type, rating etc. shall also be checked.
(vi) Temporary supports required for the dismantling works shall be prefabricated to the maximum extent possible.

Copyright EIL – All rights reserved

(vii) Welding for prefabrication of hook-ups, Non-destructive examination, stress relieving, hardness test, insulation, painting, installation of valves for the hook-ups, pipe supporting, reinforcement pad etc. shall be treated as normal piping work and payment for these works shall be made accordingly.

1.59.7 Location of the Hook-ups shall be as per the issued hook up sketches. If - as an exception, due to the various exigencies on account of the existing functional units and tankages –, the location and arrangement of any of the hook ups are subjected to change, (with respect to the issued hook up drawing) contractor shall follow the following procedure.

At such instances Contractor shall prepare the hook up sketch as per the new location and arrangement. The same shall be submitted to the Engineer in charge for review and approval. The work on such hook ups shall be performed only after the receipt of the approval from the Engineering Division of the consultant (EIL). The preparation & submission for prior approval of the hookup sketches shall be done without any claim for extra cost & time.

1.59.8 The Contractor's scope for Hook up connections with existing lines as per process requirements/indicative sketches of hook ups/Piping GADs in the existing refinery areas shall include transportation of piping materials & all other materials from owner's storage point to worksite/shop including raising store requisitions for issue of material in the prescribed format & maintaining an account of the materials received from owner's stores & reconciliation of all Owner supplied free issue materials &consumables including support materials, fabrication of plain & threaded nipples from pipes, stub in connection with or without reinforcement, casting of concrete pedestals & fabrication & erection of small structures for pipe supports & valve operating /attending instruments etc., including supply of necessary materials, providing support for new piping, modified piping, change of existing support / additional support in existing piping as indicated in the Drawings or as required by the Engineer in charge. Statutory approval of piping wherever required, supporting, fabrication including cutting, edge preparation (inclusive of grinding the edges of pipe, fittings, flanges etc. to match the mating edges of uneven/different thickness wherever required), fit up, preheating wherever required, welding, laying, erection, cleaning & flushing by water/compressed air, non-destructive testing, positive material identification, hydrostatic test, pneumatic test or any other type of test as specified, draining, drying by compressed air, bolt torquing, flushing (including steam flushing), complete in all respects at all elevations, of all piping required for successful erection, testing & pre-commissioning, commissioning, providing all normal &special equipment & gadgets, skilled /unskilled labor, specialists, supervisory staff, operation & maintenance of plant as per the standards, specification, approved drawings, and provision of local barricading at hot work permit area at all levels and elevations as per all safety measures & instructions of Engineer-in-charge.

1.59.9 The Hook Ups shall be carried out, as per the requirement of Client/Engineer in Charge, either with the fluid on stream inside the existing line (HOT TAPPING) or after draining out of the existing line based on the availability and possibility of the obtaining a shut down for the existing line.

Copyright EIL – All rights reserved

If Hot Tapping is to be done, the Contractor shall supply and erect the Scaffolding required for the performance of Hot Tapping at all elevation. The Scaffolding has to be erected in such a way that two separate and independent access will be available for the temporary platforms at all elevations erected for Hot Tapping. A stand by DC Generator set shall also be made available at the location during the Hot Tapping operation in addition to the main DC Generator set from which power is consumed. A stand by crane shall also be arranged by the contractor in addition to the crane on to which the hot taping machine is being loaded, during the performance of the Hot Tapping operation. (wherever the hot tapping machine is loaded & operated from crane). If crane is not being deployed for mounting the hot tapping machine, the same shall be done only after the approval from Engineer -In-Charge. The Contractor shall supply, fabricate and erect all the structural members and arrangements required for providing 1) support to the existing line on to which the Hot Tapping is made, 2) working platform for Hot Tapping personnel & 3) Access to Hot Tapping platform where Hot Tapping personnel are deployed. Adequate fire fighting equipments shall be arranged by contractor at site for hot tapping.

Hot Tapping (the process, the technique, the materials, the consumables) shall comply to the Specification 6-44-0021. Clause no 4.2 of the same shall be strictly adhered to and no deviation from the same shall be permitted.

All machinery, equipment and consumables required for providing the Hook Ups (Hot Tapping or otherwise) like cutting machine, adaptor etc. should be arranged by contractor at the stipulated time. The Hot tapping machine shall be arranged by the contractor. The contractor shall be the single point interface for the Hot Tapping work. The downstream coordination with all the specialized agencies that the contractor will engage for Hot Tapping work shall be done by the contractor.

Piping Components like Pipes, fittings, flanges, gaskets, fasteners and valves required for providing the hook ups (except full encirclement branch tee used for Hot Tapping) shall be supplied by owner.

Thickness of the existing pipe will be taken by owner before carrying out hot tapping. Contractor should provide scaffolding /platforms and remove insulation for facilitating thickness measurement. Reinstallation of insulation after thickness measurement shall be done by the contractor. If thickness is found not satisfactory, the above detailed arrangements, for taking thickness measurement at other locations of the same pipe shall be done by the contractor.

The above are specific in nature with respect to hook-up related works.
Balance works, if any, necessary for the successful execution of the activities shall be completed as per references provided elsewhere and as per the detailed direction and supervision of the Site-engineer in charge.

Copyright EIL – All rights reserved

1.60 DISMANTLING WORKS:

Contractor to note that work has to be performed both in the running plant and during shutdown. The scheme of work execution shall be approved by owner / engineer in charge prior to taking up these activities in the plant. Contractor has to take utmost care & safety precautions while working in the plant. Hot Work Permits / Safety Permits for working in the plant shall have to be taken from the Owner by the Contractor. Contractor under the supervision of Owner shall carry out draining and making the lines hydrocarbon free. Contractor shall carry out work only after obtaining clearance from the Owner.

Dismantling activities are to be carried out on the basis of dismantling P&IDs & General arrangement drawings issued for dismantling, enclosed with the tender. These dismantling activities shall also be performed as per the instructions of the Owner and Engineer-in-charge.

Prior to dismantling contractor to prepare sketches / isometrics of the existing lines which are required to be dismantled and seek approval from Owner/EIL.

Contractor shall carry out dismantling/ removal works of the existing piping systems (bare/insulated/traced lines including supports) in the existing unit and retrieve/ segregate and transport the same with proper tagging (line no. & piping class etc.) to owner's storage point & stacking the materials as per requirement of Owners stores-in-charge etc. All dismantling work shall be carried out as per the drawings/ P&ID's and instructions of the Engineer-in-charge based on following guidelines:

(a) Retrieved items are the property of owner and shall be handed over to the owner after proper cleaning and tagging. No separate payment shall be made on this account.
(b) The dismantled material may be re-used as and when required and as per the instruction of Engineer-in-charge.
(c) Blinding of the retained piping shall also be carried out as per drawings and instructions of the Engineer-in-charge.
(d) While dismantling the valves (Gate, Globe, Check, PSV's, Control valves etc.) Contractor shall dismantle by cutting the matching flanges along with the valves because the same may be required for reuse along with the end flanges. While cutting with end flanges, enough care shall be taken (i.e. cutting with precision for enabling the use of end flanges after edge preparation). Valves shall be properly stacked separately at storage area.
(e) Contractor shall list out Pipe supports / structures required to be dismantled for facilitating the removal / dismantling of lines identified for dismantling.
(f) Isolation of existing line shall be done before dismantling and proper permit shall be taken for dismantling work. All safety precautions shall be taken before carrying out the job.
(g) Any damage to existing facilities like piping, painting, insulation etc. shall be rectified as per specification and no extra payment shall be made for the same.
(h) Other preparatory jobs like making the parent line Hydrogen free, blinding/ de blinding, connecting and disconnecting of hoses etc. are also the

Copyright EIL – All rights reserved

contractor's responsibility. No separate payment shall be made for these activities.

(i) In case of part dismantling, the line or piping or components left intact shall be properly supported and secured.

1.61 **Fire Fighting System (Above Ground)**

1.61.1 Firewater CS piping above ground shall be fabricated/ erected/ tested, etc. as per the issued isometrics / general arrangement drawings.

1.61.2 Refer elsewhere in the tender document i.e. Civil section/ Piping section for the following: -

- Supply & installation of firefighting equipments viz. double headed hydrants, landing valves, hose cabinets, portable fire extinguishers, first aid hose reel, spray nozzles etc. on the Fire water system.
-
- Providing tape coating, laying coated pipes U/G, testing the system and back filling with soil, commissioning the system etc.

- Procurement, supply, fabrication, erection of the above ground Galvanized Sprinkler Fire water system for the columns, Vessels, Pumps including the testing of the piping systems.

1.61.3 Providing insulation on the galvanized drinking water lines from drinking water header to Eye Wash and Safety Shower as per the Isometric/GADs Drinking Water System.

1.61.4 Refer elsewhere in the tender document i.e. Civil section/ Piping section for the details regarding the procurement / supply of G.I above ground piping, preparation of engineering details and fabrication & erection including testing and supporting of Above Ground drinking water piping and interconnection to Eye Wash and Safety Shower units including commissioning the system etc. within unit B/L.

1.62 **Scope at Battery Limit:**

Flushing and testing shall be carried out up to Contractor's limit shown in drawings/isometrics. The limit shown is applicable for all elevations along that coordinate. The accessories required for blinding the line with suitable plates are to be arranged by contractor. After testing the plate blind shall be cut and pipe ends shall be prepared as per piping specification. In case continuation piping (which is in the other contractor's scope) has already been hydro tested & ends have been prepared, the later contractor shall weld his piping at the battery limit, radiograph the joint at battery limit after performing hydro test of system of his portion of piping. For certain services the extent of testing may be outside the physical battery limit indicated in the layout drawings, to match the limits of the other contractor or to facilitate proper testing. Matching flange, gasket and fasteners shall be in ISBL contractor scope.

In case of interface of the contractor, with ISBL/Unit/Other agencies in Offsites is not through valve/ flange connection, the contractor shall weld a spool of required

Copyright EIL – All rights reserved

length (if necessary) to match with piping continued from ISBL/ Unit/ Other agency limit in Offsites–within existing Refinery, and 100 % radiograph the non-hydro tested joint with ISBL/Unit/ Other agency limit in Offsites- within existing Refinery-piping which shall be available duly beveled.

For location of the units in Bina Petchem and Refinery Expansion Project (BPREP) the overall plot plan (B957-999-81-45-00001) shall be referred.

1.63 **Digital Radiography:** The digital radiography as per requirements for the Project have been provided in the Job specification attached elsewhere in the tender). It is proposed that maximum joints shall be done by digital radiography provision. The contractor shall procure phosphorous plates and submit the radiographic files to M/s BPCL for information and retrieval. Radiography requirements(quantum) that have been provided in the piping schedule of rates includes approx. 85% Radiographic joints (40% digital radiography, 35% conventional radiography, 10% closed proximity radiography) and 15% of joints shall have provision for Ultrasonic testing techniques i.e. PAUT/TOFD - subjected to thickness requirements and approval of engineer in charge.

Digital radiographs requirements have to comply with the job specification and contractor shall submit radiographic records to Owner / EIL in digital form either in CD or Hard drive along with documentation. Broad stages of activity by vendors and contractors would be as follows:

i) Exposing Radiography image on Industrial Phosphor Plate (IPS)films
ii) Scanning IPS films & digitizing them with proper identification.
iii) Creating equipment wise/piping circuit wise Radiography soft copy files.
iv) Creating soft copy files of results interpretation by respective Inspection agency including repairs re-radiography.
v) Storing in CD or Hard drive form and submit to Owner / EIL along with final Project Documentation.

1.64 Hydro jet cleaning of mill scale, rust, foreign material, grease etc from inside of the erected piping with 20000 PSI Hydro jetting machine, power lance and other accessories as per requirement. All the works required for carrying out the hydro jetting like dropping of valves, plugging of open ends, dewatering to nearest stormwater drain etc. Making arrangement for hydro jetting at all elevation shall be in contractor's scope.

Roto-mol cleaning for critical piping shall be done by contractor to achieve the required finish. All required machineries, pumps, compressors, tools and tackles, attachments, facilities, etc shall be arranged by the contractor, as directed by Engineer-in-charge.

Cleaning shall be followed up with borescopy for checking the cleanliness inside the pipe. Contractor has to offer borescopy of the lines to Owner/EIL, ensuring satisfactory internal cleaning of lines.

All spading, de-spading, erection/dismantling of scaffolding, all tools and tackles, Farhana, Roto-mol Machine, borescopy machine, Cables from nearest 440V socket, panel and all other accessories including hose connection jobs required for successful completion of job is in the scope of contractor.

1.65 Fabrication/ erection of support structures (T-posts, U-portals, inverted U portals) for routing the lines, avoiding the interference with existing facilities like Fire water Piping, underground OWS/ CRWS/ BLOWDOWN system Piping,

Copyright EIL – All rights reserved

electrical & instrumentation cable routes. The contractor shall prepare, and submit for review and approval, the drawing of the support structures planned (if the routing as per the drawing issued to the contractor is fouling with any existing facility). The drawing, should indicate the North-South & East-West Co-ordinates of the support structure along with the support level elevation (TOS). The fabrication and installation of the support structure shall be done only after the award of acceptance from the consultant's (EIL) Engineering division.

1.66 Contractor shall install requisite nos. of necessary review software (e.g. Navisworks) for viewing 3-D models at site by his representative at site. The subject model may be arranged by contractor from site Engineer-In-Charge on a mutually agreed time frame (e.g. weekly).

1.67 Contractor shall deploy software for piping construction management & fabrication spool management. Software used for fabrication and spool management should be compatible with the S3D. It should be able to interpret IDF files created by S3D and generate piping MTO, isometrics with weld joint numbers, fabrication spool and erection drawings indicating construction work load. The software should be able to handle revision management seamlessly.

1.68 Works for Piping Erection shall involve works inside existing culverts, with in existing pipe racks (between two tires) etc., and bidder to engage agencies conversant with working in confined areas.

1.69 Bidder to note that since the works are also involved inside BPCL Refinery & within existing functional units and building areas- the working area is very congested. Erection and fabrication may be very difficult. Therefore, it is in the interest of the bidder, that site visit may be made to accesses the works.

1.70 Box up of Non Hydrotested Flange Joints are also in contractor's scope. The rates for the same shall be inclusive of the rates considered for erection and fabrication.

1.71 Fabrication, supply and erection of rain protection cover for doing welding jobs during rains. The contractor should use rain protection cover for welding during rains.

1.72 Ultra Sonic testing shall be done for welded joints if instructed by RCM /Site-In-Charge and as per specifications.

1.73 If PWHT is done for the line, hardness test shall be done for all the welds in the line, including fillet weld joints also. The rates for stress relieving shall be inclusive the rates for the stress relieving of the attachment welds and the hardness tests.

1.74 If PWHT is done for the line then hardness test shall be done for the attachment welds also including those of pipe supports like shoes, trunnions, dummy supports, pads etc.

Copyright EIL – All rights reserved

1.75 For Austenitic and duplex stainless steel ferrite number checking of weld joints shall be done using ferritoscope and shall be reported. The rates quoted for fabrication of Stainless-Steel metallurgy shall be inclusive of the same.

1.76 The rate quoted for the erection of valves shall take into account the erection of valves at higher elevations also.

1.77 No separate rate shall be claimed for Post heating and the same shall be part of the rates quoted for the items under the head Piping Above Ground.

1.78 For the items under the head MODIFICATION/ EXTRA WORKS (IF ANY) in SOR the rates quoted shall be inclusive of the rates for, Cleaning & flushing by water/compressed air, hydrostatic, pneumatic, vacuum, spark testing and any other type of testing as specified draining, drying by compressed air, performing Positive Material Identification(PMI) using alloy analysers, completing all such works in all respects (including preparation of isometrics as mentioned in the Scope of Work for the job) as per the specifications, drawings and instructions of Engineer-in-Charge. PMI after such modifications shall be done by TPI agency. The rate quoted for the modification of tubing shall include rates for valves, fittings, all in line instruments and testing etc. The rates for modification of Carbon Steel Piping includes the rates for LTCS modifications also. If beveling is to be done as part of the modifications the payments shall be made as per the number of joints and not as per the number of faces for which beveling is done.

1.79 “Warning/Danger “Tag Stenciling shall be done throughout Electrically traced lines.

1.80 Fabrication, erection, painting & insulation of piping in the packages which are to be done by Mechanical contractor. Contractor shall also facilitate the work of different other package vendors for successful mechanical completion.

1.81 Any damage to Painting and insulation on the existing equipment and piping shall be made good by the Contractor. The EIL specifications for Insulation & Painting shall be followed in such cases

1.82 Contractor shall deploy store management software.

1.83 Spool identification & Spool storage location shall be managed through RFID and barcode scanning and tracking system. Programme should facilitate fully automatic barcode printing using mobile printers. High range barcode scanner shall be integrated with the system.

1.84 Spool searching with RFID: -Searching fabricated spool in lay down area shall be achieved with the use of RFID & scanners through spool search software modules. Identification of spool shall be indicated using beep alarm audio. Proximity of the searching spool shall be indicated graphically in the scanner.

1.85 The extent and quantum of modification /dismantling & relocation of existing facilities are to be properly accessed by the bidder. Bidder’s representatives shall undertake site verification of the relevant areas in the existing Bina Refinery to quote the rates accordingly.

Copyright EIL – All rights reserved

1.86 For lines routed at grade level, (on sleeper) the road crossing and the crossing of the lines beneath existing piping and other existing facilities shall be through pipe way bridges or pipe trenches. The pipe way bridges and trenches shall be constructed by other agencies. Contractor shall liaison & coordinate with other agencies with respect to the pipe support level elevations.

Instances where there are only one or two lines to be routed across roads/ beneath existing facilities, the same may be through sleeves. The same shall be as per the issued for construction drawings. The fabrication and installation of pipe sleeve along with the guiding arrangement as per 7-44-0404 shall be done by the contractor.

The excavation & the back filling of the soil and the re-establishment of the road once the pipe crossing through sleeve is complete, shall be done by the contractor. Refer Civil part for details of the same elsewhere in the tender.

1.87 **Package units:** For the several package units (e.g. Compressed air package, Steam Generation package etc.) the scope includes handling and transportation of all piping materials (including loose-supply pipes, fittings, valves etc. and prefabricated piping spools) from the Owner's storage point to the work site; fabrication (shop and field welding), erection, and support of all lines/piping, including interconnections between skids/modules, in accordance with Isometric drawings, GADs, P&IDs, applicable standards, and specifications, including field adjustments such as cutting and welding of prefabricated spools wherever required; alignment and support of piping spools at all levels and elevations on above-ground structures, followed by welding after laying; installation of flanges, tapping for pressure and temperature gauges, and all other online instruments as required, including all line-mounted valves, fittings, and instruments; hydrotesting of the system, flushing, and drying of pipes with compressed air; painting and insulation of piping as applicable as per standards and job specifications; and completion of all works as per the instructions of the Engineer-in-Charge, including returning all unused or scrap pipes to the Owner's storage point.

Special care shall be taken for the erection and installation of interconnecting piping between equipment/skids, within the skid, and for piping to/from the battery limit for connections within the package boundary, as per the requirements of the Licensor.

Payment for Fabrication, erection, prefabricated spool erection, NDT, Valve erection, supports, Painting, Insulation, pre commissioning works etc. shall be made based on the respective item rates specified in the SOR. The basis of the work shall be as per Licensor's P&IDs, EIL P&IDs, Package layout/plot plan, Isometric/GADs, Specifications, standards etc.

In case of discrepancies found in any term, standards, specification and references, the most stringent clause shall be applicable, as per the discretion of Engineer in charge.

Copyright EIL – All rights reserved

2 BASIS FOR WORK

The basis of work shall be read in conjunction with standard specification for fabrication and erection of piping, 6-44-012. Additionally, the following documents shall be referred. The complete piping works shall be carried out in accordance with the following but not limited to the same:

2.1 'Approved for construction' drawings and sketches issued by EIL to the Contractor- Plans (General Arrangement Drawings) and/or Isometrics / system isometrics.

2.2 Drawings, sketches and documents prepared by Contractor duly approved by Engineer-in-charge. (Such as isometrics of small bore pipes in contractor's scope (refer clause 1.2) and lines required to be field routed etc.)

2.3 Specifications / Documents as below:

a) Piping and Instrumentation Diagram (P&ID).

b) Piping Material Specification (B957-6-44-0005) along with General notes & annexures.

c) Piping Support Standards and special support sketches as applicable.

d) Line schedule.

e) Job Specification of Non-Destructive Examination Requirement of Piping (B957-6-44-0016)

f) Job welding specification charts for piping (B957-999-6-41-WSC-0001).

g) Piping Standard Specification for inspection, flushing and testing piping system 6-44-0013.

h) Welding specification for fabrication of piping 6-77-0001

i) Any other EIL or other specification, including job specifications, attached with Piping Material Specification or elsewhere and special conditions of contract (such as standard for dimensional tolerances etc.).

j) Procedure for storage, preservation and positive identification of materials at Contractors works/ stores. Preservation team with one supervisor to be deployed.

k) Standard Spec for application of torque & hydraulic bolt tension for flange joints (6-76-0002). The classes/sizes not covered by this specification shall be given to successful bidder subsequently

l) Painting, color coding, surface preparation etc. shall be as per Job Specification for surface preparation & protective coating doc no. B957-000-06-42-PLS-0001.

Copyright EIL – All rights reserved

m) Standard specification for hot insulation of vessels, piping, equipments 6-79-0026

n) Specification for Digital Radiography Requirements B957-6-44-0016.

o) Job Specification for Pretreatment Cum On stream cleaning of Recirculating fresh cooling water system, B957-000-06-42-CCS-001.

p) Job Specification for chemical cleaning of VHP/HP B957-000-06-42-CCS-004.

q) Job Specification for chemical cleaning & passivation of compressor circuits B957-000-06-42-CCS-005.

r) Job Specification for external chemical cleaning and passivation of SS welds & fittings of tanks and pipes B957-000-06-42-CCS-011.

s) Marked Up P&ID for Chemical cleaning

t) Contractor shall implement software for piping construction management as per job specification, that shall be given to successful bidder.

u) P&IDs for fire water system

v) ISO-17636-1: Non destructive testing of welds / radiographic testing, X- ray & gamma ray, techniques with film.

w) ISO-17636-2: Non destructive testing of welds/radiographic testing, X – ray & gamma ray techniques with digital detectors.

x) Specification for Hot Taping 6-44-0021.

y) All documents, specifications, standards that are attached or referred elsewhere in the tender.

2.4 Following Codes, Standards and Regulations:

i.	ASME B 31.3	Process Piping
ii.	ASME Sec.VIII	Code for Unfired Pressure Vessel.
iii.	IBR	IBR Regulations
iv.	IS: 823	Code for Procedure for Manual Metal Arc Welding of Mild Steel (for structural steel).
v.	ASME Sec. V	Boiler and Pressure Vessel Code

All the codes referred above shall be of the latest edition, at the time of award of contract.

Copyright EIL – All rights reserved

3 SCOPE OF SUPPLY FOR TENDER (PIPING)

3.1 OWNER'S SCOPE OF SUPPLY

a) Pipes (All sizes, types and schedules in random lengths)

b) Flanges (All sizes, types and Pressure ratings)

c) Fittings (All sizes, types and schedules)

d) Valves (All sizes, types and ratings)

e) Gaskets (All sizes, types and ratings)

f) Studs, Nuts or M/c Bolts (all types) except structural bolting.

g) Spring, Expansion joint / Bellows (All types), struts, sway braces etc.

h) Specialty items like sample coolers, MOVs, steam supply and condensate manifold, integrated steam traps, injection nozzles, strainers, spray nozzles, air traps, hose pipes and hose couplings, CPV fittings& valves, Victaulic snap couplings, corrosion coupon/probes, silencers, snubbers, sight glass etc.

i) Online instruments like Control Valve, SDVs, Orifice flange, Annubar, Magnetic Flow meter, Restriction Orifice, Ultrasonic flow meter, Rotameter, Rupture disc, Safety Valve, De-super heater, PG/PT/Flow transmitter etc.

j) Pipes for supporting of Piping such as dummy pipe, RF pad, saddle, corrosion pad/protection shield fabricated from pipe.

However, pipes/ fittings/ flanges/ gaskets/ fasteners/ valves related to galvanized piping (for fire water & drinking water system) are not included in owner's scope of supply and the same shall be supplied by the contractor.

3.2 CONTRACTOR'S SCOPE OF SUPPLY

The procurement and supply in sequence and at appropriate time of all materials and consumables required for the completion of the works & Pre-commissioning shall be the responsibility of the contractor and prices quoted shall be deemed to be inclusive of such materials.

The supply of these materials shall include but not limited to the following:

a) Tools, tackles and machinery required for cutting, fitting, welding, brazing, cleaning, grinding, threading, bolt tensioning. All equipments (like torque wrench and hydraulic bolt tensioning equipments) required to tighten the flange joints to desired level.

Copyright EIL – All rights reserved

b) Contractor shall provide all measuring, testing and other tools required to complete mechanical jobs as directed by Engineer-In-Charge, including specialized instruments.

c) All industrial gases such as oxygen, acetylene, inert gases, all types of electrodes, filler wire, flux wire, brushes, etc.

d) Shims, wedges, and packing plates (machined wherever required).

e) All materials such as hydraulic pumps, metallic blinds, temporary gaskets etc. and arrangement required for pressure testing and pneumatic testing.

f) Arrangement for compressed air, blinds, temporary gaskets etc. and arrangement required for pneumatic pressure testing including suitable compressor. Compressor for pneumatic testing shall be suitable for testing the lines at 7 to 8 Kg/cm2g pressure

g) Certified scaffolding inspectors shall be deployed. Scaffolding materials shall be certified and Area-wise scaffolding teams to be segregated for better control.

h) Contractor shall deploy a dedicated housekeeping team, in two or three shifts (covering 24 Hours), with supervisor throughout contract execution.

i) A proper tool box with racks shall be prepared for storage and organization of special tools provided by equipment vendors.

j) All materials and arrangement required for all types of non-destructive tests such as radiography, dye-penetrant, magnetic particle and wet fluorescent test, Pneumatic Testing for reinforcement pad, PMI instruments etc.

k) Arrangement & supply of chemicals, consumables, DM Water, equipments, boilers, coupons, piping components (like pipes, flanges, fittings, valves fasteners and gaskets) required to provide temporary connections for chemical cleaning, and other testing equipments required for chemical cleaning, pickling & passivation of lines. The contractors shall submit the proposed circuits which shall be duly approved by EIL.

l) All sealing and protecting materials required for protecting materials/equipments supplied by owner/contractor.

m) Oil, grease, graphite, Teflon pads, molykote, sealing tapes, cleaning agents including acids for cleaning of internals/packing/trough/tray etc.

n) Suitable material and water hoses for fire and safety protection as required.

o) Chain pulley block, davit and all other material handling equipments as per requirements.

Copyright EIL – All rights reserved

p) All safety equipments required to conduct the job and avoid accident and keep good housekeeping and environment.

q) Supply, fabrication, welding of hot dip galvanized plates, for earth wire lug connection required for earthing of pipes.

r) All consumables and materials required for fire fighting system other than supplied by Owner as free issue.

s) Tape / Tape coating material for U/G piping as required.

t) Wherever valves require extended spindle, the valves have been generally procured with extended spindle. If anywhere if the same is not procured/available then the extended spindle shall be provided by the contractor. The arrangement for the extended spindle shall be prepared by Contractor and submitted to Engineer-in-charge for approval.

u) All grouting material required and specified as per EIL Specification, drawings and two sets of instructions of the Engineer-in-charge.

v) Equipment and instruments for hydraulic bolt tensioning (complete set) & PMI. Contractor shall hand over one complete set of hydraulic bolt tensioning equipment and Two (2) sets each (Pneumatic and Manual) of torque wrenches and socket sets covering all plant fastener sizes (in mm and inches) to Owner after commissioning of the plant. The instruments with which PMI is done shall be handed over to Owner after completion of work in good working condition.

w) All tools and tackles required for assistance in pre-commissioning/commissioning.

x) Structural steel required for modifications/ extension of platform, providing additional platforms, ladders, jumpovers etc. to improve accessibility, wherever required.

y) Paints Materials etc. which are under contractor's Scope of supply will require the approval of EIL / OWNER with necessary required tests at no extra cost.

z) All equipment/instruments required for hydro testing /pneumatic testing/ blinding / de-blinding / flushing etc.

aa) Safety net & Fall arrester.

bb) Cranes/hydra/other lifting tools required for erection

cc) MS Tube, Bolts / Anchor fasteners, nuts, washers, spring washer including hangers, U-bolts with nuts, clamps, graphite and Teflon pads, angles, beams, channels etc. for pipe supports, platforms, ladders, stairways and for all

Copyright EIL – All rights reserved

miscellaneous steel structure, supporting steel plates, wires, and strips. However, for spring hangers entire spring assembly shall be supplied by Owner.

dd) Plate flanges for fabricating temporary spool pieces for use in place of control valve (4" & above) including temporary gaskets

ee) Supply of MS flats, chequered plates, & flat bar.

ff) All material and arrangement required for stress relieving.

gg) All safety equipment required for safe conduct the job, avoid accidents and keep good housekeeping and environment

hh) Supply fabrication, etc. of hot dip galvanized plates, for earth wire lug connection required for earthling of pipes/

ii) Supply of cold galvanizing or zinc coating material with approval of Engineer In charge.

jj) Bird screens at the outlet of lines open to atmosphere.

kk) Low friction pads like Teflon/graphite pads with suitable bonding material/fastener.

ll) Supply of all material required for fabrication of funnels for OWS system, bearing cooling water and back flushing requirement as required per drawings/P&IDs as per EIL'Std and instruction of the Engineer-in-charge.

mm) Supply of all structural steel required for fabrication of pipe supports.

nn) All materials like cellular glass, PUF, PIC, Rock wool, Aerogel etc., required for Isolation of Pipe supports from Structural members, wherever specified in Isometric and as per special support sketch.

oo) Contractor shall bring in their own Lifting Tools & Tackles for equipments lifting, erection of Piping, Piping specials, Valves, Equipments, etc., The lifting tools & tackles being deployed for erection activities shall be of good quality and possess valid certification from appropriate authorities with respect to the SWL of each of them. Contractor shall take back all their lifting tools & tackles, after completion of the entire works as per the scope of contract. Supply of all items required for erection comprising of:

i. Manually operated ground winch
ii. Hoisting rope
iii. Direction pulley on ground, Guide pulleys
iv. Motor for hoisting rope, along with fixing bolts and structural support members, as required.
v. Thimble for fastening hoisting rope to lifting beam.
vi. Supports for ground winch and direction pulley with foundation bolts, as necessary.

Copyright EIL – All rights reserved

vii. Welding/fixing of bearing brackets on the platform and support arms on the stack.

viii. Structural members as necessary for supporting the guides for lifting beam during lowering/hoisting.

ix. Tip lowering/hoisting guides.

pp) All other materials though not specified above but required for completion of the work as per specification, drawings and instructions of the Engineer-in-charge.

qq) Flange spreader required for making the gap between flanges while inserting blinds or for changing gaskets shall be arranged and made available by contractor. The rates quoted for fabrication and erection of above ground piping shall be inclusive of the same.

rr) Temporary gaskets required for hydro testing of lines and equipment after blinding the equipment nozzles and flange joints are to be supplied by the contractor. The gasket shall be asbestos free. The rates quoted for fabrication and erection of above ground piping shall be inclusive of the same.

ss) Supply of Galvanized Pipes, Fittings, Flanges and associated Gaskets, bolts and nuts as per Piping Material Specification – Piping Class – J2A/J95A for firefighting systems as well as drinking water lines to eye wash and safety shower units including galvanizing of the damaged piping as per the instructions of the Engineer-in-charge.

tt) Supply of all materials for glass flake epoxy lining, painting and insulation.

uu) Contractor to note that close proximity radiography with “Radiography with Selenium-75 source using safe radiation technique” as per Exhibit-H of Job specification, B957-000-06-41-WSP-0001 is also required to be used, hence the scope includes arranging of equipment and all necessary items required for work and specifically not mentioned above but required to complete the work in all respects and as per the directions of the site engineer-in-charge.

vv) For hook ups with existing lines, which are to be executed with the fluid on the stream, in the existing line (HOT TAPPING) , the scope of supply of the full encirclement hot tapping fitting , (split tee) is with the contractor .The material of construction of the split tee shall be as per the respective hook up drawing .The isolation valve, flanges & pipe required for the fabrication of the hook up shall be provided as free issue to the contractor .The full encirclement split tee shall be of two piece construction .The two piece construction shall be either a) split in to two equal halves through the branch or b) split longitudinally through the run of the pipe perpendicular to the branch . The material of the Split tee shall be certified in Material Test Certificate (MTC) of accredited labs.

ww) The structural components required for the fabrication of the hook ups (hot tapping or otherwise) are to be supplied by the contractor.

Copyright EIL – All rights reserved

xx) All special machinery and equipments and tool and tackles required for the execution of the hot tapping hook up are to be supplied by the contractor.

yy) Refer Electrical section of the tender for the scope of supply for electrical tracing.

4.0 SCOPE OF WORK (PAINTING)

The scope of work broadly consists of painting of piping, inline items, pipe supports and structural steel work for pipe supports as detailed in schedule of rates as per drawings, specification for Standard Specification for surface preparation & protective coating, doc no. B957-000-06-42-PLS-0001 and instructions of Engineer-in-charge.

The scope of work shall consist of surface preparation as required, selection and application of required paints on surfaces of piping, inline items, pipe supports and structural steel work for pipe supports etc. including but not limited to painting of piping in packages (erection by others) shall also include in scope of work of Mechanical contractor.

The scope of work shall be as per Schedule of Rates (SOR) but not limited to:

(i) All un-insulated piping and fittings including flanges and valves (Including providing identification marks) and Instrument impulse lines.

(ii) All equipments like columns, vessels, Heat Exchangers, filters, Skid mounted equipments, pumps etc. and other miscellaneous equipments as specified.

(iii) The painting activity may include painting of prefabricated piping spools and piping other than prefabricated spools. The prefabricated piping spools shall be supplied to the contractor with pre-erection/ shop primer painted and only the post erection/ field painting shall be done by the contractor after repair of pre-erection/shop primer after erection/welding.

(iv) Coating system as per Sr. 11.1.1 of EIL specification B957-000-06-42-PLS-01 Rev. 2 shall also be applicable for design temperature range of -47 deg C.

(v) For the piping other than prefabricated spools, the contractor shall carry out the complete painting as per procedure including the surface preparation, Pre-erection/Shop Primer application and the post erection/ field painting including the repair of pre-erection/pre-fabrication or Shop Primer after erection/ welding

(vi) All structural steel work including pipe rack, trestles, compressor house, flood light masts, flare trestle structure, walkways, handrails, pipe supports, ladders, technological structures etc. as per painting specification but excluding those members which are to be fire proofed.

(vii) Painting of surfaces to be insulated as per requirement.

Copyright EIL – All rights reserved

(viii) Any other surface as directed by Engineer-in-charge including all surfaces.

(ix) Identification, color bands on all painted surface of equipments/piping. Color coding shall be carried out as per Job Specification for surface preparation & protective coating, doc no. B957-000-06-42-PLS-0001/Client's specification. In case of any doubt / ambiguity on the color codes, the owner's / EIL decision shall prevail.

(x) Identification lettering / numbering on all painted surface of equipment, piping, including color bands on all painted surface of equipment / piping. Color coding shall be carried out as per Job specification B957-000-06-42-PLS-0001/ Client's specification.

(xi) Hazardous content marking / identification signs on painted surface of equipments / piping.

(xii) Cleaning up the working areas regularly during the course of work for purpose of good housekeeping as well as cleaning up the site on completion of the work as directed by the Engineer-in-charge.

(xiii) Providing scaffolding for all heights, all other incidental / auxiliary / ancillary / accessories, labor, material, tools and tackles / consumables, supervision etc. or any enabling work not specifically mentioned in the specifications but necessary for the execution and completion of work as envisaged in the tender document.

(xiv) Fire Water CS piping above-ground shall be painted as per specification.

(xv) The quantum and scope of painting shall be assessed by the bidder themselves based on drawings and documents such as P&IDs, Line lists, typical drawings, hook-up drawings and other documents and specifications. However complete painting works are necessary shall be in the scope of the contractor.

(xvi) Repainting of the existing piping exposed/ spoiled while making hook-ups, damage of any pipe during erection, fabrication or movement of contractor's crane/ equipments etc.

(xvii) Repainting of the lines/ headers of hook-up or adjacent line affected during hook-up.

(xviii) Scaffolding for all heights, all other incidental / auxiliary / ancillary / accessory or any enabling work/materials not specifically mentioned in the specifications but necessary for the execution and completion of work as envisaged in the tender document.

(xix) If the finish paint is applied to the Piping components at the fabrication yard and in the event of damage to the same during erection and field welding the same shall be repaired and the original DFT shall be maintained

Copyright EIL – All rights reserved

(xx) The surface preparation, primer coating and finish coat of all the relocated & modified existing facilities are in the contractor's scope.

5.0 SCOPE OF SUPPLY (PAINTING)

5.1 OWNER'S SCOPE OF SUPPLY

NIL

5.2 CONTRACTOR'S SCOPE OF SUPPLY

The procurement and supply in sequence and at appropriate time of all materials and consumables required for the completion of the works shall be the responsibility of the contractor and prices quoted shall be deemed to be inclusive of such materials.

The supply of these materials shall include but not limited to the following:

- All primers and finish paints as per paining specification.
- All equipments for surface preparation & touch-up primer.
- All consumable for surface preparation & touch-up primer.
- All equipments for paint application like brushes, spray nozzles, spray Pumps/blowers etc.
- All equipments like dust collector, protection shield etc. for conducting the job.
- All consumables and equipments required for job completion at all elevation and at any location.
- Any other consumables and equipments required to complete the job as per drawings, specifications and instructions of Engineer-in-Charge, at all elevations and locations is under Contractor's scope.

6.0 SCOPE OF WORK (INSULATION – HOT AND COLD)

The scope of work shall include hot Insulation, safety insulation including metal cage, vessels, exchangers, piping, valve & flange assemblies, instrument impulse / lines etc. as detailed in schedule of rates and as per this document and as per Standard Specification no. 6-79-0026 for hot Insulation of vessels, piping & equipment. The insulated lines may undergo painting as per specification no. B957-000-06-42-PLS-0001 and for special insulations as per Job Spec: B957-999-06-43-IL02. Wherever B957-420-06-43-IL01 is mentioned, contractor to read this as B957-999-06-43-IL02

The work in brief shall include the following but not limited to the following: -

Scope of work includes supply/erection of insulation for lines and equipment in Tank farm area, Road gantry, Rail Gantry, BDT area, Mounded Bullet area etc. within offsite.

(i) Supply of all insulation and ancillary material like spacer-ring, stays, lacing and binding wires, screws, bands, felt, studs, flats, support ring clips, sealant and mastic, cement, glass cloth, aluminum sheets/ GI sheets necessary drillings and fixing of bolts/nuts, washers etc., wherever specified and required. All insulation material shall be new and of

Copyright EIL – All rights reserved

approved quality with complete test certificates and in accordance with the specifications.

(ii) Application of insulation with weather proofing on vessels, columns, Package Equipments, equipments like filters, Heat Exchangers and piping including valves, flanges etc. and instrumentation as per specifications and instructions of Engineer-in-charge.

(iii) Insulation of any other surface as per instruction of Engineer-in-charge.

(iv) Providing scaffolding for all heights, all other incidental/auxiliary /ancillary/accessories, labour, material, tools and tackles / consumables, supervision etc. or any enabling work not specifically mentioned in the specifications but necessary for the execution and completion of work as envisaged in the tender document.

(v) Providing besides all materials and consumables labour and supervision required for carrying out the insulation work, all safety devices, equipments, apparatuses, instruments etc. necessary and incidental requirements to perform the work in workmanship and efficient manner within the stipulated time period.

(vi) Color coding, identification of equipments, vessels, heat exchangers, process column, piping, instruments etc. after insulation as per painting specification and instruction of Engineer-in-charge.

(vii) Proper storage and protection of insulation material and consumables brought to site by the contractor at all stages of work.

(viii) Providing insulation plugs and windows at all locations as per drawings, specifications and instructions of Engineer-in-charge.

(ix) Keeping the working area clean and tidy during course of execution and cleaning the work site to the full satisfaction of the engineer-in-charge after completion of work.

(x) Any other incidental/intermediate/ancillary or any enabling work/materials not specifically mentioned in the specifications but necessary for the execution and completion of work as envisaged in the tender document.

(xi) Certain equipment and piping require chain guards, screens for personnel protection etc. because insulation cannot be provided directly on the equipment/ piping. Contractor shall provide the same as per approved drawings and instructions of Engineer-in-charge.

(xii) Any lines requiring dismantling of the insulation for inspection / repair / maintenance, erection of any other equipment shall be done by contractor and again secured back in place after completion of the subject activity.

(xiii) Supply of paint and Color coding identification of equipments, vessels, heat exchangers, process column, piping, instruments etc. after insulation

Copyright EIL – All rights reserved

as per relevant specification 6-82-0003/ Client's specification and instruction of Engineer-in-charge.

(xiv) Any line which Owner feels requires insulation during the process of commissioning shall also be done by contractor.

(xv) Painting of surfaces which require painting under insulation is also in contractor's scope.

(xvi) Chloride content in the insulation used for SS pipeline to be checked and low chloride insulation used for SS pipeline shall be stored separately to avoid mix up

(xvii) The actual quantum and scope of work of insulation shall be assessed by the bidder based on drawings and documents such as P&ID's, line list, GAD's, isometrics and other relevant documents and specifications. However complete insulation work necessary shall be in the scope of the Contractor

(xviii) "Warning/Danger" tag stenciling shall be done throughout electrically traced lines

(xix) Restoration of the insulation, with new insulation materials for all the locations where in the insulation over existing lines have been removed for executing hook ups

(xx) Providing insulation with new insulation material for all the locations where modification and relocation has been done in existing facilities.

7.0 SCOPE OFSUPPLY FOR INSULATION TENDER (PIPING)

7.1 OWNER'S SCOPE OF SUPPLY: NIL

7.2 CONTRACTOR'S SCOPE OF SUPPLY

The procurement and supply in sequence and at appropriate time of all materials and consumables required for the completion of Insulation and Painting (Color coding identification) works shall be the responsibility of the contractor and prices quoted shall be deemed to be inclusive of such materials. undergo painting as per specification no. B957-000-06-42-PLS-0001.

The supply of these materials shall include but not limited to the following:

a. All items required to complete Insulation (Insulation material, attachment material, fixing materials, vapor barrier material, bolting, screws, inspection window, structural attachment, material for color coding identification etc.) as per EIL standards, specifications and instructions of Engineer-in-charge.

Copyright EIL – All rights reserved

b. All consumables and equipments which is required for job completion at all elevations and any location.
c. All sealing and protecting materials required for protecting materials/equipments supplied by Owner/ Contractor.

d. Wooden Blocks, High Density PUF blocks, cellular glass for providing cold insulation and supporting of cold insulated lines.

e. Aluminum foils for cold insulated lines of Stainless Surfaces

1.0 SCOPE OF WORK

The scope of work under this contract in general shall include Construction of all relevant Composite works for Bina Petrochemical & Refinery Expansion Project (BPREP) at Bina, Madhya Pradesh of M/s Bharat Petroleum Corporation Limited (BPCL) including supply of all materials (as defined in scope of supply), tools & tackles, labour, etc., as per the Schedule of rates, Specifications, Standards, drawings and codes (latest revision), good engineering practices and directions of Engineer-in- charge etc. complete, and as per approved for construction drawings made available to the successful bidder.

The Contractor shall be responsible to complete the entire work in all respect and any other work necessary to complete the job though specifically not covered in the scope of work.

Contractor shall visit the site to ascertain actual site condition to assess the job himself before quoting the rates. No extra claim at a later date shall be entertained due to non-familiarization of site.

2.0 BROAD SCOPE OF WORK

PART-A: Composite Works U&O (West Side)

PART-B: Composite Works U&O (East Side)

The detailed scope of work shall be in general but not limited to the following:

i) Supply of all materials & construction of RCC pavements.

ii) Supply of all materials & construction of RCC drains with gratings/perforated precast covers.

iii) Supply & installation of CI Sluice Gates with frames as per IS: 13349.

iv) Supply & installation of Combined Safety Shower & Eye Wash Units.

v) Supply Fabrication & Laying / Erection of U/G & A/G GI pipes for Fire water spray lines, instrument air.

vi) Fabrication, laying and jointing of Under-Ground 3-layer Polyethylene (3LPE) coated CS piping as per PMS for Fire Water System (Pressure).

vii) Supply & installation of Fire Hydrant, Monitors, Landing Valves, Long Range Monitors, Remote Operated Long-Range Monitors, First Aid Hose Reel (Wall Mounted & Floor Mounted), Hose Box Cabinet (Type – II) & Air Release Valve etc.

viii) Supply & installation of Deluge Valve skids

ix) Supply & installation of spray nozzle, Quartzoid bulb

x) Supply & installation of Portable & Trolly mounted Fire Extinguishers.

xi) Supply of all materials and construction of Hydrant & Monitor platforms on grade.

xii) laying of Double walled corrugated (DWC) HDPE pipes as per IS 16098 Part 2 under roads/ drain crossings.

xiii) Design, engineering, procurement of all equipment for Foam storage system.

xiv) Clearing and removal of debris/ scraps.

Copyright EIL – All rights reserved

As per drawings, detailed scope of work and schedule of rates mentioned elsewhere in the bid document. All materials, equipment's, tools and tackles, consumables, manpower and supervision required for satisfactory completion of the job shall be supplied by the contractor.

3.0 DETAILED COMPOSITE WORKS ACTIVITIES

The Detailed works shall be as per the its relevant Broad scope of work descried In Clause - 2 above and shall include the following but not limited to the same.

3.1 Earthwork in excavation for all civil works such as RCC pavement, RCC drains etc. including backfilling and disposal of surplus earth as directed by Engineer in charge.

3.2 Earthwork in excavation for all U/G piping works such as Oily waste Sewer (OWS) Contaminated rain water sewer (CRWS), Storm sewer (SS), all closed blowdown services, Fire water (FW) etc. including backfilling and disposal of surplus earth as directed by Engineer in charge.

3.3 Construction of RCC Pavements including supplying & laying of DLC (Dry Lean Concrete) 150micron thick HM HDPE (GRADE-I) film conforming to IS:10889 shall be provided as separation layer between DLC and RCC.

3.4 Providing and laying of Construction joints, expansion joints, sealing joints etc. in the RCC pavements as per drawing / specifications.

3.5 RCC work for encasing of U/G pipe as per drawings/standards.

3.6 Supply & installation and fixing in position CI sluice Gates with frames as per IS:13349 and as per specifications and drawings including transportation to site of work, supplying and fixing bolts, nuts, washers, gaskets etc. complete as per drawings, specifications and directions of Engineer-in-Charge.

3.7 Supply and installation of Combined Safety Shower & Eyewash Units as per spec. no. 6-66-0038, including providing and fixing of necessary foundation bolts in foundations/ pavement.

3.8 Fabrication and laying and jointing of Under-Ground 3-layer Polyethylene (3LPE) coated piping works for underground pipes Oily Waste Sewers (OWS), Contaminated rain water sewer (CRWS), Storm Sewer (SS) systems (Gravity) and Vent Pipe for manholes as per the PMS, including installation of valves, flanges, fittings, etc., to proper grade and alignment, transporting the pipes, fittings, flanges, valves etc. from Owner's storage point to the work site, including, fixing the pipe in walls of manholes, valve pits, all complete.

3.9 Fabrication and laying and jointing of Under-Ground 3-layer Polyethylene (3LPE) as per the PMS for Fire Water System (Pressure), including installation of valves, flanges, fittings, etc., to proper grade and alignment, transporting the pipes, fittings, flanges, valves etc. from Owner's storage point to the work site, fixing the pipe in walls of manholes, valve pits, all complete.

3.10 Supply, fabrication, laying and joining of Carbon steel galvanized pipes, valves & specials for U/G Fire water spray lines (pressure pipe) as per the PMS/VMS including supply & installation of valves, flanges, fittings, etc., to proper grade and alignment, transporting the pipes, fittings, flanges, valves, pipe specials, etc. from contractor's storage point to the work site, etc. complete.

3.11 Supply and installation of Firefighting equipment such as Fire Hydrant, Monitors, Landing Valves, Long Range Monitors, Remote Operated Long-Range Monitors, First Aid Hose Reel (Wall Mounted & Floor Mounted), Hose Box Cabinet (Type – II) & Air Release Valve etc. at

Copyright EIL – All rights reserved

grade & at elevations including transportation to worksite from storage point, testing, flushing etc. all complete.

3.12 Supply and installation of Portable & Trolly mounted Firefighting equipment such as 6kg / 9kg / 50kg DCP Fire extinguishers, 4.5kg CO_2 Fire extinguishers, etc. including transportation to worksite from storage point, testing, flushing etc. all complete.

3.13 Supply and installation, erection, testing and commissioning of Deluge valve skid, with UL/FM listed/approved Deluge Valve (consisting of deluge valve, strainers, solenoid valve, air pressure regulator, limit switches, pressure gauge, pressure transmitters, inlet/ outlet valves, drain valve, priming valve, vent valve including alarm motor gong, fittings, local control panel including bypass connection to deluge valve along with strainer and ball valve etc. complete) actuated through air (pneumatic) detection system including installation/placing the skid at the designated location and fixing with anchor bolts, connecting the water inlet and system piping, connecting detection network piping, fittings etc. complete.

3.14 Supply and installation of spray nozzle in fire water spray system for columns, vessels.

3.15 Supply and installation of quartzoid bulb detectors in fire water spray system for columns, vessels, pumps.

3.16 Earthwork in excavation for civil works for construction of Hydrants & Monitor's platforms including backfilling and disposal of surplus earth as directed by Engineer in charge.

3.17 Providing and laying Brick Masonry in cement mortar 1:4 (1 cement: 4 Coarse sand) in one or more brick thickness and in any shape for Hydrant/Monitor's platforms, etc. including providing recesses, openings, etc. including curing, finishing the joints flush below ground level.

3.18 Providing 13mm thick average cement plaster in cement mortar 1:3 (1 cement : 3 sand) on brick walls for hydrant platforms.

3.19 Providing and laying 100 mm thick cement concrete lining of M-20 grade with 20mm and down size graded stone aggregates for Hydrant & Monitor.

3.20 Complete work for laying of Double walled corrugated (DWC) HDPE pipes as per IS 16098 Part 2 under roads/ drain crossings for maximum depth of 2m measured from top of DWC pipe upto road top level in all types of soil excluding soft rock and hard rock using HDD (Horizontal Directional Drilling) method using machine including supply of all materials, machinery, manpower etc.

3.21 Design, engineering, manufacture, procurement of equipment, materials and bought out components including all civil, structural, electrical, mechanical, instrumentation & piping material, assembly at shop, inspection, testing at manufacturer's works, packing, transportation, delivery including supply of all mandatory spares, commissioning spares, special tools & tackles, first fill of consumables, erection material, foam tank, supporting structure, underground tank, pump etc. complete as per drawings, specifications and directions of Engineer-in-Charge.

It shall be clearly understood that all the works mentioned above together with all the incidental works whether specifically mentioned or not shall be deemed to have been included in the scope of work.

Copyright EIL – All rights reserved

4.0 SCOPE OF SUPPLY

4.1 OWNER'S SCOPE OF SUPPLY

All CS pipes including fittings, valves etc. (Bare and 3L PE coated).

4.2 CONTRACTOR'S SCOPE OF SUPPLY

a. All materials (consumables/ non-consumables) including tools, tackles, plant machinery, workers/labors, etc. required for completion of the works as per Schedule of Rates shall be in contractor's scope of supply and shall be the responsibility of Contractor within the quoted rates.

b. All material shall be of approved brand/ make as per the list of approved brand/ vendors for Civil Structural & Piping, valves, fittings etc. items attached elsewhere in the contract. However, in case of any deviation from the list of approved brand/ vendors, prior approval from Owner/ Engineer In-charge shall be obtained prior to use of the material at site. All the material required to complete the entire work as per scope of work, schedule of rates, specifications, standards and drawings.

c. Galvanized pipe of PMS J95A & J2A including fittings and valves.

d. All firefighting equipment including Deluge Valve, Hydrant, Landing Valves, Monitor, Long Range Monitor, Remote Operated Long-Range Monitor, First Aid Hose Reel, Hose Cabinet, Air Release valve etc.

e. Portable & Trolly mounted Fire Extinguishers.

f. Safety Shower & Eye Wash Assembly.

5.0 SPECIFIC REQUIREMENTS TO BE FULFILLED BY THE CONTRACTOR

Note: In case of any contradiction between these Specific Requirements and Requirements/ Specification specified elsewhere in the tender document, the Specific Requirements given below shall have precedence.

a. Contractor shall arrange all the approvals required.
b. All works shall be done to the entire satisfaction of the Engineer-in-Charge. Any work not carried out in accordance with the instructions shall be dismantled and made good without any extra cost and time implication to the owner.

6.0 PREAMBLE TO SCHEDULE OF RATES

a. Wherever "plant boundary" or "complex limit" is mentioned in the SOR or specifications, the same shall be read as "Refinery property limit of Bina Refinery Complex & Bina Despatch Terminal".
b. Environment for selection of painting system shall be considered as Industrial.

7.0 APPROVALS

Obtaining statutory approval from local authorities such as Municipal Corporation, Development Authorities, Inspector of Factories and any other concerned authorities required for their own working before starting the works at site.

Copyright EIL – All rights reserved

8.0 LIST OF ATTACHMENTS

8.1 STANDARD SPECIFICATIONS

Sl. No.	Title of Document	Specification No.	Rev
1	Standard Specification for earthwork for U/G piping	6-65-0006	4
2	Standard specification for concrete pavement	6-65-0019	4

1.0 SCOPE OF WORK

The scope of work in general shall include Construction of all Civil-Structural Works for **Composite Works Tender for Offsites for Bina Petrochemical & Refinery Expansion Project (BPREP) at Bina, Madhya Pradesh of M/s Bharat Petroleum Corporation Limited (BPCL)** as per the Scope of Work, Scope of Material Supply, Schedule of Rates, Specifications, Standards and Drawings included in the Tender document, etc. all complete.

This Composite works tender consists of Schedule of Rates in two parts, namely

1) Part A – West side
2) Part B – East side + BDT

The contractor shall be responsible to complete the entire work in all respect, including any other work necessary to complete the job, though specifically not covered in the scope of work.

Major structures shall include following but not be limited to the same:

- Platforms, jumpovers & pipe supports in unit and offsite.
- Structural steel works for platforms on/around equipment.
- Retrofitting & modification works in existing steel structures.
- Addition/modification of structures over/on existing structures.
- Erection of already fabricated steel structures, handrail, gratings, ladders, etc.
- Brick masonry works.
- Painting of Structural steel.
- Fire proofing of steel structures & equipment.
- Dismantling of PCC, RCC, brick work, stone masonry Structural steel works, sheeting etc.
- Foundation treatment & ground improvement works below foundation.
- Electrical & Instrumentation supports envisaged on grade/rack/bridge/trestle/ existing structures.
- Any kind of structural steel works including grating, handrail, ladder, staircase etc. not covered above.
- Barricading works

Contractor shall visit the site to ascertain actual site conditions to quantify/ assess the job himself before quoting rates. No extra claim at a later date shall be entertained due to non-familiarization of site.

Major civil and structural activities involved shall include but not be limited to the following:

1. Obtaining all approvals from owner, statutory authorities such as Factory Inspector, Local Municipal or Development Authorities (including existing refinery) and other designated authorities etc. for necessary construction works.

2. Earthwork in excavation in all types of soil, soft rock (by chiseling, controlled blasting etc.), hard rock (by chiseling, controlled blasting, etc.) including dewatering by deploying

Copyright EIL – All rights reserved

adequate capacity of pumps or dewatering techniques, if required, below ground level for all types of soils, and providing shoring & strutting, wherever required, by open and/ or closed timbering method.

3. Storing/ stacking excavated earth at safe location near foundation or at designated place for reuse within the plant boundary as instructed by owner/ Engineer-in-Charge. Segregating unserviceable earth separately and disposing the same at designated place as instructed by owner/ Engineer-in-Charge.

4. Backfilling at all depths with selected and approved earth available and from borrow areas, and transportation & disposal of surplus earth (including rock material) and debris to the areas designated by Engineer-in-charge.

5. Backfilling at all depths with selected and approved crushed rock available within the plant boundary.

6. PCC works including lean concrete at all depths below foundations of all types, plinth beams, walls, non-suspended slabs, trenches, etc., and in screed at all depths below plinth level.

7. PCC Works including lean concrete in screed at all depths below plinth level & at all heights above plinth level.

8. RCC works in sub-structure for foundation of all types including open foundation etc., plinth beams, walls, basement, non-suspended floor slabs, trenches, pits etc. at all depths.

9. RCC works in super-structure for columns, beams, walls, floor & roof slabs, etc. at all heights.

10. RCC works for pre-cast elements, trenches (including covers) etc. and any other miscellaneous works required as per AFC drawings and transportation of precast elements to site for erection.

11. Supply, cutting, bending, fixing of reinforcement for RCC works in sub-structure at all depths and in super-structure at all heights.

12. Preparation of Bar Bending Schedule for concrete structures as per the ‘Approved for Construction’ (AFC) drawings.

13. Centering & Shuttering (including curved shuttering) in sub-structure at all depths and in super-structure at all heights/ elevations.

14. Concrete encasing works.

15. Providing isolation joints around column/pedestal/trenches etc.

16. Masonry works in substructure and superstructure for all depths and heights as per specifications.

Copyright EIL – All rights reserved

17. Providing & laying sand-filling at all locations; as specified or directed by Engineer-In-Charge.

18. Supplying and fixing mechanical rebar coupler.

19. Structural steel works with rolled steel, parallel flange sections, built-up sections and tubular/hollow sections, including supply, fabrication, transporting, storing, assembling & erecting in position & testing/examining bolted &/or welded Structural Steel & preparation of detailed fabrication drawings for all types of structures at all locations and heights in super-structure.

20. Barricading works.

21. Painting for Structural steel shall be as per painting Job Specification no. B957-000-06-42-PLS-01.

22. Dismantling/ Demolishing of PCC/ RCC, masonry, Structural steel works/sheeting for all depths below plinth level and all heights above plinth level including disposal of unserviceable item anywhere within the plant boundary. Stacking & depositing serviceable items in Owner's yard, location as approved by Engineer-in-Charge.

23. Dismantling, modification & re-erection of Structural steel members, electroforged galvanized gratings & handrailing for all types of Structures; at all locations & all heights.

24. Dismantling & re-erecting of Steel structures; wherever required.

25. Retrofitting/Jacketing works on existing Steel/RCC structures, as per drawings and directions of Engineer-in-charge.

26. Addition/modification of structures over/on existing structures, as per drawings and directions of Engineer-in-charge.

27. Erection of already fabricated steel structures/ members, handrails, ladders, gratings, etc. (fabricated by others) for new structures, over/on existing structures, over/on equipments, at all locations & all heights.

28. Fabrication & placing/ erection of miscellaneous steel items like Anchor Bolts, metal insert plates, Pipe sleeves, rungs, prefabricated hand railing etc. as per EIL standards/specs. as directed by Engineer-in-charge at any location wherever required.

29. Mixing of approved brand of BI-POLAR concrete penetrating corrosion inhibiting admixture in concrete as per manufacturer's specification & EIL Specifications for protection of reinforcement against corrosion.

30. Fixing of BITUMEN IMPREGNATED FIBRE BOARD conforming to IS: 1838 of approved quality in expansion joints at all locations and levels in concrete structures.

31. Sealing of EXPANSION JOINTS at all locations and levels in Concrete Structures with POLYSULPHIDE SEALING COMPOUND as per IS: 12118 including raking of joints etc.

Copyright EIL – All rights reserved

32. Providing and fixing electro-forged hot dipped galvanized MS gratings as per EIL Standards.

33. Providing fixing MS chequered plates & at all heights on structures.

34. Providing anchor fasteners to fix structures/ pipe supports etc

35. Fire proofing of equipment supports, structures etc. as per approved Engineering design basis, specifications & AFC drawings.

36. Providing one side machined sliding plates, embedded in the grout, under horizontal equipment.

37. Fixing of re-bars in already cast concrete.

38. Concrete retrofitting works using epoxy resin.

39. Providing & laying of geogrid, boulder soling and sand gravel mix as per specification/drawing.

40. Preparation of detailed fabrication drawings using TEKLA or Autodesk Advance Steel or equivalent 3D Modeling software, including submission of design calculation for connections, showing the master index of particular structures indicating nomenclature to facilitate sequence of erection activity, for all types of structures. Connections in fabrication drawing shall be prepared only after review of connection details by the owner. Final model shall be submitted for records which shall include all fabrication drawings, related files, catalogues along with all erection/ part marks and material reports.

41. Providing temporary supporting/protection arrangement to protect the existing facilities like pipes, cables, equipments and other miscellaneous structures which may be affected during the course of work at all depths & heights.

42. Isolation of existing structures (concrete/steel) if necessary by providing necessary permanent supports for existing structures during the course of work at all depth & heights.

43. Providing safety structures & safety personnel as per specification.

44. Preparation of AS-BUILT mark-up prints on AFC drawings and subsequent updation of the same in soft copy (Auto Cad) of AFC drawing and submission of hard copy (as specified elsewhere in the bid package) and soft copy to Engineer-in-charge.

45. Removal of scrap, generated during construction, includes segregation of scrap into serviceable and unserviceable material and transportation of serviceable material to Owner's storage.

46. Clearing and removal of debris includes clearing the site of all unserviceable material from the site after completion of work and disposal of the same at a designated area as directed by Engineer- in- charge.

Copyright EIL – All rights reserved

47. It shall be clearly understood that all the above works together with all incidental works to complete the work whether specifically mentioned or not shall be deemed to have been included in the scope of work.

48. This scope of work is to be read in conjunction with the other scope of works enclosed in the tender document.

Any other Civil Structural Works, not specifically mentioned herein, but required for the satisfactory and successful completion of the project as per directions of the Engineer-in-Charge shall also be in the scope of the contractor.

2.0 SCOPE OF SUPPLY OF MATERIALS

2.1. OWNER'S SCOPE

NIL

2.2. CONTRACTOR'S SCOPE

Procurement and supply of all material (consumables/ non-consumables) required for the execution of Civil Structural works under this contract shall be in the scope of the Contractor.

All material shall be of approved brand/ make as per the list of approved brand/ vendors for Civil Structural and Architectural items attached elsewhere in the contract. However, in case of any deviation from the list of approved brand/ vendors, approval from Owner/ Engineer-In-charge shall be obtained prior to use of the material at site.

3.0 SPECIFIC REQUIREMENTS TO BE FULFILLED BY THE CONTRACTOR

Note: In case of any contradiction between these Specific Requirements and Requirements/ Specification specified elsewhere in the tender document, the Specific Requirements given below shall have precedence.

3.1 Mandatory use of mechanical excavators for excavation, however manual excavation for minor foundations & new foundations to be constructed close to existing foundations & around existing Underground facilities, can be taken up after due approval of Engineer-in-Charge.

3.2 Mandatory installation of weigh batching plant of adequate capacity for concrete/ usage of ready mix concrete (RMC) along with transit mixers and concrete pumps as per the direction of Engineer-in-Charge.

3.3 Batching plant shall be located outside plant boundary. Land for same shall be arranged by contractor.

3.4 Disposal of unserviceable material etc. shall be done outside plant boundaries. Land required for the disposal shall be arranged by the Contractor. Contractor shall obtain relevant statutory approval from all statutory authorities (like municipal etc.) and including payment of charges/ royalty/ octroi for the same. Contractor shall keep

Copyright EIL – All rights reserved

the client indemnified of any liability and/ or complaint from local authorities/ municipal bodies. However, serviceable surplus earth and rock materials shall be disposed within plant boundary limit at designated location as per direction of Engineer-in-charge.

3.5 In case of borrow earth is required from outside refinery; location for the same shall be identified by the contractor. Contractor shall obtain relevant statutory approval from all statutory authorities (like municipal etc.) and including payment of charges/ royalty/ octroi for the same. Contractor shall keep client indemnified of any liability and/ or complaint from local authorities/ municipal bodies.

3.6 For cutting & bending of re bars mechanized equipment/ cutting- bending machine shall be used.

3.7 Dismantling shall be done by mechanical means; as approved by Engineer-In-Charge.

3.8 Controlled specialized demolition of part of a structure (RCC/ Structural Steel) shall be done with absolutely no disturbance of remaining part, as the same may be in operation.

3.9 Controlled specialized demolition shall be done to retain only selective part of a structure as decided by Site Engineer-In-charge, and to provide supports for existing facilities to be retained.

3.10 Structural concrete mix shall be approved Design Mix.

3.11 Generally the use of one of the following cements shall be considered,

- 43/53 Grade Ordinary Portland Cement (OPC) conforming to IS 269.
- Portland Pozzolana Cement (PPC, fly ash based) confirming to IS 1489 Part 1.
- Portland Pozzolana Cement (PPC, calcined based) confirming to IS 1489 Part 2.
- Portland Slag cement (PSC) conforming to IS 455.
- *Sulphate Resistant Portland Cement(SRC) conforming to IS 12330.

* For specific requirement as specified in respective drawings.

3.12 Reinforcing steel shall be high strength deformed steel bars of grade Fe500D(TMT) conforming to IS 1786.

3.13 All lugs shall be of high strength deformed bars of minimum grade Fe500D conforming to IS 1786

Copyright EIL – All rights reserved

3.14 Anchor bolts shall be of grade E250 quality BR/B0 confirming to IS 2062. All primer/ epoxy except finish paint shall be applied to all insert/sleeve prior to fixing in position before pouring of concrete.

3.15 Metal insert plates shall be of grade E250 quality BR/B0 confirming to IS 2062.All inserts/ sleeves shall be properly secured in position before pouring of concrete.

3.16 Supply of connection bolts is in the Contractor's scope. For all bolted connections high strength hot dip galvanized bolts of property class 8.8 as per IS 3757 & IS 4000 shall be used. Hot dip galvanized Nuts and washers shall conform to IS 6623 & IS:6649 respectively.

3.17 Before commencing the structural steel works in offsite area, contractor to ensure all the Grid dimensions, U/s base plate level, shall match with the foundation layout & TOG of the pedestal as per the actual AS-BUILT drawings/site condition.

3.18 Mandatory use of Electro-forged hot-dipped Galvanized MS grating.

3.19 Structural steel shall be of grade E350 Quality BR/B0 confirming to IS 2062. Minimum grade of steel for insert plate, grating & steel structures in platforms taken from equipment; shall be of Grade E250 Quality BR/B0 conforming to IS 2062. For Steel Structures, field welding shall be minimized by employing modular construction to the extent possible.

3.20 Fabrication of Anchor bolts to be taken on priority to ensure placement of the same at the time of concreting.

3.21 The contractor shall ensure the required founding strata confirming to soil recommendation for all foundations and bring it to the notice of Engineer-in-charge, if the founding depth encountered is different from that specified in the drawings.

3.22 Dewatering including supply of adequate no. of pumps wherever required shall be carried out by the contractor at his cost to keep the Ground water table down below the founding level.

3.23 The construction of underground piping & drainage system, if provided at a depth lower than that of the foundations, shall be taken up before construction of foundation. However in general underground piping activity shall be executed before backfilling of soil.

3.24 Fabrication of structure steel shall be done in contractor’s fabrication shop outside plant boundary; area to be arranged by contractor. All shop connections shall be welded & field/ site connections shall be bolted unless otherwise mentioned.

3.25 Contractor shall make his own arrangements for casting the precast elements, outside the plant premises. Land required for the same shall be arranged by the contractor.

Copyright EIL – All rights reserved

3.26 Contractor has to take of all safety measures as per Refinery fire and safety standard.

3.27 Contractor shall consider recycling of construction & demolition waste to the extent possible. Usage of recycled aggregate, recycled coarse aggregate, M-sand & usage of products having less embodied carbon (i.e. low carbon foot-print); shall be adopted for sustainable construction, with approval of Owner/Engineer-In-Charge.

3.28 Whenever new Construction or demolishing/ dismantling is considered close to the existing structure, manual excavation shall be carried out as per direction of Engineer-in-Charge. Trail pit, if required, shall be carried out before excavation to check the existence of underground facilities.

3.29 Proper scaffolding shall be provided around the working area for sufficient height with cladding adopted for barricading in premises to isolate construction area. The quoted rate shall be inclusive of barricading, no extra claim shall be made at later date.

3.30 During the execution of the work, the contractor, at his own cost, shall keep structures, materials and equipment adequately braced by guys, struts or otherwise approved means which shall be supplied and installed by the Contractor as required till such time the installation work is satisfactorily completed. The provided guys, shoring, bracing, strutting, planking supports etc. shall not interfere with the work of other agencies and shall not damage or cause distortion to other works executed by him or other agencies.

3.31 The contractor shall ensure proper co-ordination / co-operation with other agencies, while working in the Construction area, without affecting others work front areas.

3.32 Various tolerances required as marked on the drawings conforming to codal requirements/ specifications or as directed by the Engineer-in-Charge shall be maintained by the Contractor. Verticality shall be maintained at every stage and the same shall be verified with Theodolite/ Total Station.

3.33 During execution of work, all existing facilities (Temporary /Permanent) shall be protected from any damage. In case of any damage / dismantling (if required) is required to be carried out for carrying out contractor's work, the same shall be restored to original condition to the satisfaction of Owner/ Engineer-In-charge without additional time and cost implication.

3.34 All works shall be done to the entire satisfaction of the Engineer-in-Charge. Any work not carried out in accordance with the instructions shall be dismantled and made good without any extra cost and time implication to the owner.

5.0 ADDENDUM TO STRUCTURAL SPECIFICATIONS & SOR

Sl. No	Specification/ SOR item No.	Clause No.	MODIFICATION
1.	6-68-0003 Rev.6	2.2	Clause "*This is fissured/ disintegrated rocky strata, boulders (volume more than 0.028 m3and less than 0.400 m3) and also which cannot be quarried/ excavated by using above manual tools but can be quarried/ excavated manually by using crow bars is classified as soft rock. Soft rock shall include all kinds of stiff and stratified rock, such as shales, thinly bedded phillites, laterite hard conglomerate, lime stone, sand stone and unreinforced cement concrete below ground level. Soft rock may be quarried or split with crow bar or picks and can also be excavated by rippers, dozers and other mechanical equipment, but without the aid of blasting. If required and permitted, light blasting may be restored to, for loosening the materials, but this will not, in any way entitle the material to be classified as "Hard Rock"*." is withdrawn and shall be read as *"This is fissured/ disintegrated rocky strata, boulders (volume more than 0.028 m3and less than 0.400 m3) and also which cannot be quarried/ excavated by using above manual tools but can be quarried/ excavated manually by using crow bars is classified as soft rock. Soft rock shall include all kinds of stiff and stratified rock, such as shales, thinly bedded phillites, laterite hard conglomerate, lime stone, sand stone and unreinforced cement concrete below ground level. Soft rock may be quarried or split with crow bar or picks and can also be excavated by rippers, dozers and other mechanical equipment. If required & permitted, Control Blasting, Chiseling, Chemical Blasting may be resorted to, for loosening the materials, but this will not, in any way entitle the material to be classified as "Hard Rock"."*
2.	6-68-0002 6-68-0006 6-68-0008	All Relevant	Wherever "EIL Specification No. 6-79-020" is mentioned, the same shall be read as "Job Specification No. B957-000-06-42-PLS-01"

6.0 PREAMBLE TO SCHEDULE OF QUANTITIES

6.1 SOR indicates only estimated quantities. Unit rate quoted against each SOR item shall be applicable for any addition & deletion during execution of the project.

Copyright EIL – All rights reserved

6.2 Depth of foundation in general shall be 3.0 m below FGL. (This data is for general guidance of the Contractors; however deviation from the noted depth shall not form a basis for any extra claim).

6.3 The maximum approximate height of structures shall be 10.0 m (This data is for general guidance of the Contractors; however, deviation from the noted height shall not form a basis for any extra claim).

6.4 As per Geotechnical data, ground water table is at finished ground level. The expected water table depth may fluctuate. The quoted rate of excavation shall include requirement of dewatering etc. for completion of total works including concreting, backfilling etc. and no extra amount is payable on this account.

6.5 Item description provided in Schedule of Rates (Short Description) is in brief, while quoting and filling the rate in these Schedule of Rates (Short Description), Bidder shall take into consideration complete scope of work/item description as mentioned in Schedule of Rates (Detailed Description) for the relevant item. **The rate quoted in Schedule of Rates (Short Description) shall be deemed to include all activities of work mentioned in item description of Schedule of Rates (Detailed), scope of work, specifications, standards etc. & stringent of all shall govern.**

6.6 For protective coating/ painting system, plant location shall be considered as Inland.

6.7 Wherever “plant boundary” is mentioned in the SOR or specifications, the same shall be read as “Refinery property limit”.

6.8 All items in the Schedule of Rates shall be inclusive of all material, workmen, constructional infrastructures like scaffolding/ staging, finishing, cleaning, cutting chases/ holes etc. in brick work/AAC block work/ RCC work and making good the same and rectification of any damaged work shall be applicable for all heights and locations.

6.9 The minimum cement content and maximum water-cement ratio for RCC & PCC works shall be as below:

Exposure condition	Type of concrete	Grade of Concrete	Minimum cement content (kg/m^3)	Maximum free water-cement ratio
Moderate	Plain concrete	M20	240	0.6
	Reinforced concrete (sub-structure)	M25	330	*0.5
	Reinforced concrete (super-structure)	M25	300	*0.5
	Reinforced concrete (Liquid retaining sub-structure)	M30	350	*0.45
	Reinforced concrete (Liquid retaining	M30	350	*0.45

Copyright EIL – All rights reserved

	super-structure)			

*For self-compacting concrete, maximum free water-cement ratio shall be 0.4

7.0 Digital Reporting & Tracking for Structural Steel

1. Fabrication model shall be submitted simultaneously with fabrication drawing. Model shall be submitted through online downloadable link with minimum 6-month validity.
2. Excel sheet of status of all individual Assembly shall be E-mailed to Engineer-In-Charge on daily basis. Following two tables shall be part of the daily digital status reporting.
3. Model Identification (Sheet 1 in Excel)

Model Name	List of EIL Design Drawing	List of EIL Standards
Structure-1	Drawing-1 Drawing-2 Drawing-3 …….	Standard-1 Standard-2 …….
Structure-2	…….	…….

4. Assembly wise Status in Separate Sheet for each Model/Structure.
   a. Name of Sheet shall be same as Model Name.
   b. Plates forming integral part of the assembly need not be reported separately. Only Loose plates for field erection shall be reported in following table.
   c. For Multiple count identical assemblies, sub-mark shall be tagged in fabrication shop. Each sub-mark shall be reported in different rows.

Assembly Name / Mark	Sub Mark	Highest / Top Elevation.	Drawing Submitted Date	Fabrication Completed Date	Dispatch Date	Site Received Date	Erection Date
C-01	1	109.100					
C-02	1	121.100					
…….	….	…….					
BEAM-1	1	108.000					
BEAM-2	1	108.000					
…….	….	…….					
BRACE-1	1	107.975					
BRACE-1	2	107.975					
BRACE-2	1	120.975					
BRACE-2	2	120.975					
……..	….	…….					
and so on.

SECTION A: STATIC EQUIPMENT

Copyright EIL – All rights reserved

CONTRACTOR'S SCOPE OF WORK/SUPPLY FOR STATIC EQUIPMENTS

The Scope includes the following:

1.0 This scope of work and supply of contractor shall be read in conjunction with Schedule of rates (Doc. Nos. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B) and specifications, standards appearing in the list of applicable documents / attachments furnished below.

2.0 The scope includes the erection, supply and application of painting (touch-up), supply and application of insulation with cladding (Hot, Cold, and Safety), Inspection, Local PWHT (if required), scaffolding, barricading works for Vessels, Heat Exchangers and Iso pentane Bullet etc. as defined in the tender.

3.0 Issuance of FIM's, Transportation from Owner's storage to erection site, alignment, grouting, chemical cleaning of equipment, dressing up of equipment involves activities installation of insulation with cladding, installation of ladder/platforms, handrails, piping spools with supports, demister, internal gratings and other associated internals/accessories, complete in all respects.

4.0 Hydro testing of new exchangers shall be carried out according to Clause 4.1.14 of EIL Specification 6-76-0001. (Refer Item no. 01VV.30.3 of SOR B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B).

5.0 Cleaning of site, shifting and handing over of the removed items to owner at their designated location.

6.0 Chemical Cleaning shall be carried out as per Specifications attached in the tender document. (Refer item no. 01VV.30.14 & 01VV.30.15 of SOR B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B).

7.0 All necessary spading/ despading works, including providing necessary tools, tackles, equipment, labours required for the job, before start of any work inside the equipment and also after completion shall be in Contractor's scope. The same shall be included in the quoted price.

8.0 Provision of adequate local barricading or screening, if any as required by Engineer-in-Charge, shall be in Contractor's scope.

9.0 Provision of any scaffolding (both internal and external), as per instructions of Engineer-in-Charge shall be in Contractor's scope. The Scaffolding is to be made out of tubular structures (standard scaffolding pipes of 40mm dia.) and shall be self-locking type. Working platforms or stages shall be provided as per instructions of Engineer-in-Charge. A clear gap of 50 -70 mm should be maintained between the edge of scaffolding pipes and side wall of shell. In no case the pipe edges should touch shell surface except at bottom support points (for Internal Scaffolding only), where pipes should be supported on flat plates (flat pieces of plates to be welded at the end of the vertical scaffolding pipes) to avoid damages to shell surfaces. Wooden planks, bamboo, coir ropes, nylon ropes, cotton or any such combustible material should not be used for making scaffolding.

10.0 All tools, tackles, equipment including providing labours required for internal cleaning along with supervision shall be provided by contractor as per instruction of Engineer in charge, any residual cleaning, if required for carrying out hot jobs shall be in the scope of contractor.

Copyright EIL – All rights reserved

11.0 Preservation of static equipment using desiccants and moisture control materials shall be executed as instructed by EIC.

12.0 Static equipment flanges, fasteners and related preservation activities including greasing shall be included, dedicated preservation team with one supervisor to be deployed.

13.0 Preparation of all documents like Procedures, Documents, Detail fabrication Drawings etc., approval from Client / Consultant, as-built drawings after completion of all works shall be in scope of Contractor

14.0 **CHEMICAL CLEANING**:

Preparation of procedure and approval of same from Client / Consultant, procurement of all chemicals, blinding of nozzles, piping connections etc., temporary blinds, temporary spools / jump overs, fabrication including supply of all required materials, installation, all tools & tackles, instruments, equipment, accessories required for carrying out chemical cleaning of equipment, taking samples and noting parameters etc. including manpower, supervision etc. shall be in scope of Contractor. The Chemical Cleaning of the following equipment shall be carried out as per Specifications attached in the tender document.

Chemical Cleaning and passivation shall be performed by the mechanical contractor for the below items as per Schedule of rates B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B). For equipment's which required Chemical Cleaning and passivation, refer the scope marked P&ID of Chemical Cleaning and job specification attached elsewhere in the tender document.

15.0 **PAINTING:**

Supply and application of paint for touch up for all equipment's shall be included in contractor's scope. Painting for the equipment's to be carried-out as per the details furnished in SOR doc. no. SOR B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B).

Note for Touch Up painting works: The Surface preparation, primer application and finish paint is done by Equipment vendor. Only touch up paint wherever required (i.e.: Paint damage due to erection, transportation...etc) shall be done at site by mechanical contractor.

16.0 **INSULATION:**

Insulation for the equipment's to be carried-out as per the details furnished in SOR Doc No. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B) and Equipment details for insulation (Doc. no. B957-80-42-EI-9501A & B957-80-42-EI-9501B).

Insulation of Equipment: Contractor scope includes procurement of all insulation materials hot as well as cold (wherever applicable) insulation including all ancillary material, transportation from supplier shop to Contractor yard, storing at Contractor's yard, transportation to erection site from Contractor's yard, protective covering, all consumables and other necessary materials, testing of the material as required, applying insulation on surfaces as specified, including all preparatory works thereon, all binding, tying, lacing, stitching and/or otherwise securing, providing Vapour barrier wherever applicable, finishing with plain/corrugated sheet cladding or as specified, providing bolts, rivets, self-tapping screws wherever specified, providing inspection windows etc. arranging necessary scaffolding, all tools and tackles, equipment, apparatus etc. labour

Copyright EIL – All rights reserved

and supervision and completing the work in all respect at all heights as per drawings, specifications and instructions of Engineer-in-Charge. Contractor to strictly follow the Insulation table for type and thickness for new equipment & existing drawings for modification equipment. For insulation, Contractor to fulfill the requirements given in EIL Standard specifications no. 6-79-0026 & 6-79-0027 for hot & cold service respectively.

17.0 BURIED VESSELS:

Site work for the Buried Vessels: The nozzle sections (refer site welding marked in the MDS) including internals and stiffeners shall be made fit up and welded on the vessel at the site to the satisfaction of Engineer in-charge. After the welding, full radiography, Local PWHT, draining, cutting, flushing and finishing of box, drying put of the vessel after completion of site work etc. shall be carried out to the satisfaction of Engineer-In-Charge. All tools and tackles, consumables and others required for the site work shall be in contractor scope of supply.

Checking the alignment of equipment in underground with all aspects, touch up paint, providing all tools and tackles, machinery. Consumables, transportation/handling of equipment, erection in sump, sand filling, labor etc. to complete the work in all respects for the items specified in SOR Doc No. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B attached elsewhere in tender.

18.0 HEAT EXCHANGERS

18.1 GENERAL

1. This section covers the minimum requirement for erection of Shell & Tube Heat Exchangers at site by an Erection Contractor.

Abbreviation used

EC	Erection contractor/turnkey contractor
EIC	Engineer-in-Charge (designated by EIL)
HEI	Heat Exchanger(s)
AEI	Air Cooled Heat Exchanger(s).

2. SCOPE OF WORK OF ERECTION CONTRACTOR

The scope of work for the EC as per schedule of quantities given in the mechanical tender shall include the following as a minimum:

2.1 Transportation of heat exchanger (HEI) as stipulated in Job specifications & Schedule of Rates.

2.2 Preparation of foundation by chipping & installation of base plates for foundations.

2.3 Erection of HEI on foundations.

2.4 Leveling, aligning, grouting and completing the work in all respect as per drawings, specifications and instructions of the EIC.

2.5 Hydro-testing of HEI if the time gap between last hydro-test is more than six months or in case it is found to be necessary by EIC or for the exchangers where bundle pullout check

Copyright EIL – All rights reserved

is required at site as per procedure given in Para 18.4 & 18.5.

2.6 The EC shall take care of Torquing/Tensioning and de-tensioning/de-torquing of equipment flange joints.

Pneumatic and Electric Torquing/tensioning machine to be deployed in sufficient numbers. In case of Pneumatic machine deployed by contractor, contractor to arrange compressor for air pressure. All bolting above 200 NB nozzle shall be tightened be by Torque wrench or BTD. No manual tightening is allowed.

2.7 Drying by passing compressed air and blinding off of HEI to prevent ingress of rain, dust, extraneous matter etc. as per Para 18.6 below.

2.8 The EC shall take proper care to avoid undesirable corrosion during various stages of erection and prior to pre-commissioning activity.

In addition to the above, EC may be called upon to do other jobs like rectification of defects etc. as per instructions of EIC.

18.2 SCHEDULE OF COST:

1. EC shall include in his cost for carrying out work as per Para 18.1 (2) above for HEI as given in the Doc. Nos. B957-80-42-EE-9501.

   All equipment, consumable and other Accessories required for completion of the job shall be arranged by the EC. This would include but not limited to, cranes, tools and tackles, manpower, machinery, instruments like plumb line, theodolite etc. for checking the erection, hydrostatic testing pumps, potable water, pressure gauge, hoses blinds etc. for hydrotesting and shims and wedges & other consumable for alignment & grouting.

2. EC shall also supply the base plate to be installed on the sliding foundation. The dimensions of the base plate shall be as per the foundation drawings enclosed with tender.

18.3 ERECTION OF SHELL & TUBE HEAT EXCHANGERS

1. HEI shall be erected with proper orientation on prepared foundation.

2. EC shall install base plate over the sliding end foundation before erection of HEI. The HEI shall then be erected, properly leveled and aligned with limits as below by providing necessary shims/wedges as required under the fixed support/base plate before grouting.

3. HEI shall be leveled properly after erection on the foundation. Difference in elevation of centerline from one end to the other end shall not be more than 1mm/m, limited to + 3mm maximum. Further, elevation difference shall be such as to ensure complete draining of HEI.

4. Leveling and plumpness shall be approved by EIC and shall be checked using theodolite before grouting and final finishing of the foundations. The record of the same shall be maintained.

Copyright EIL – All rights reserved

5. Instruments, as required shall be mounted on the HEI by EC. On instructions of EIC, EC shall also remove and handover the instruments to EIC for calibrations. During this period, EC shall cover all openings to protect the equipment.

6. EC to ensure that foundation bolts at the sliding saddle end are at the center of slotted holes & nuts at sliding end are only hand tightened. Projected bolt threads shall be properly protected by application of grease etc.

18.4 HYDRO TESTING

1. HEIs shall be hydrotested using potable water. Hydrotesting of both shell and tube sides shall be carried out as per procedure given below or as per instructions of EIC. For HEI's fitted with SS bellow or SS part, use potable water with max. 25 ppm chlorides for hydrotesting.

2. Suitable pump set, piping, test pressure gauges and other instruments, water-hoses, temporary gaskets, metallic blinds, bolts, nuts, consumable and other temporary arrangements and equipment for testing shall be provided by the EC at his cost. Test pressure gauges shall be calibrated by the EC and got approved from EIC.

3. Stacked HEIs shall be hydrotested in stacked conditions.

4. Test pressure shall be as indicated in the name plates mounted on each HEI. Duration of hydrotest shall be at least one hour. Test pressures and duration of hydrotest may be reduced by EIC. Minimum test water temperature shall be 20 °C.

5. Any defects noticed during hydrotesting shall be repaired by EC as per the procedure approved by EIC. Cost for rectifying defects, not attributable to the EC shall be paid separately.

6. No HEI shall in general, form part of the piping loop during hydrotesting and shall be blinded off, except when instructed otherwise by EIC.

7. EC to take adequate care during pressurizing & depressurizing the equipment. EC shall also take care of any instruction given regarding hydrotest in the HEI equipment drawing.

18.5 HYDRO TESTING PROCEDURE

1. Shell side & tube side shall be hydrotested separately.

2. The side, shell or tube which ever to be tested at higher pressure shall be taken first.

3. During hydrotest all gasket joints should be checked for any leakage. In case of leakage from any gasket joint, bolting at that joint shall be further tightened following proper tightening sequence (bolts should not be over tightened or tightened by hammering). In case it is not possible to stop leakage by bolt tightening, drain the water in exchanger & replace gasket at that joint by new gasket (gasket will be supplied by owner). After replacing gasket, exchanger must be again hydrotested with same procedure to ensure leak tightness.

4. In case of floating head heat exchangers, if it is found during hydrotest that the pressure is dropping, while the external gasketed joints are not leaking, this could be due to floating

Copyright EIL – All rights reserved

head gasket joint leakage. This shall be further investigated, by removing shell cover & pressurizing tube side to check the floating head gasket joint leakage. In case of leakage observed at floating head flange joint, replace floating head gasket by new gasket. After replacing gasket, exchanger must be again hydrotested first on tube side & then on shell side with same procedure to ensure leak tightness of gasket joints.
In case of heat exchangers with shell side hydrotest pressure higher than tube side, it is possible that above procedure (with tube side hydrotest to detect floating head gasket leakage) may not help. Absence of leakage during this test is not conclusive in such a case, as the shell side pressure was dropping during hydrotest. In such a case, floating head gasket shall in any case be replaced and then equipment retested to ensure leak tightness.

5. When hydrotested as per above procedure after floating head gasket replacement, if it is observed that test pressure is still dropping, this could mean leakage from tube to tubesheet joint. For such cases matter shall be reported to EIC for further investigations/instructions.

18.6 DRYING

1. After hydrotesting, HEI shall be completely drained of all water. It shall then be dried by passing dry compressed air. Air shall be passed for a sufficiently long time to ensure that no moisture is left. That the equipment has been properly dried shall be approved by the EIC.

2. After drying, HEI shall be blinded off to avoid any ingress of moisture/dust or any other extraneous matter.

   EC shall ensure that no HEI is subjected to any corrosion during any stage during his period of work till handing over to EIC/Client.

SECTION B: PACKAGED EQUIPMENT

Copyright EIL – All rights reserved

1.0 GENERAL

1.1 The Contractor shall receive the equipment/packages from owner's store and shall arrange lifting and transportation to the site of installation. The Contractor shall then execute the job as per schedule to be finalized in consultation with the Engineer-in-Charge. The quantities, indicative level of installations and approximate weights are as mentioned under clause 6.0; SOQ (Schedule of Quantities).

1.2 The contractor shall take proper care to avoid damage to painting during various stages of erection and prior to pre-commissioning activity.

2.0 SCOPE OF SUPPLY AND SERVICES FOR PACKAGED EQUIPMENT ITEMS

Items listed in **cl. no. 6.1** shall be issued as **free issue materials** by the owner. The erection, installation, testing and commissioning of the above said items shall be in the scope of the contractor.

The intent of this specification is to specify detailed scope of work, scope of supply and services for installation and commissioning as specified below.

2.1 Lifting of Equipment / Skid Mounted Packages at owner's store.

2.2 Transportation of Equipment / Skid Mounted Packages from owner's store to site of installation.

2.3 Minor chipping of foundation (if required).

2.4 Placing, leveling, aligning, fixing and grouting (including supply of grouting material) of Equipment / Skids on the foundations.

2.5 For Skid mounted pumps/compressors, initial alignment & alignment with piping shall be checked by the erection contractor and corresponding modification work if any, required for completing the alignment.

2.6 Installation of interconnecting piping, hook-up/connection of the Equipment with the plant piping and control system as per vendor drawings (*drawing will be provided during erection).*

2.7 Modification of prefabricated spools as per site condition.

2.8 Field joints, if any, in the loose supplied items shall also be in erection contractor's scope including radiography and other NDT requirements.

2.9 Installation of any other loose items (Control valves, PSV, online items, etc.) supplied by package Vendor.

2.10 Repair and touch-up painting for the locally damaged areas of the equipment and field welding of piping shall be carried out by the erection contractor as per EIL/Owner painting specification attached in the tender document.

2.11 Application of insulation material (free issue material) for the field joint portion, un-insulated part of the package which has been left for erection purpose

2.12 Hydro-testing/ Pneumatic testing of the installed piping for the above said packages, if required.

2.13 Erection Equipment (like crane, etc.) required for installation and commissioning of all items and components at all elevations including arrangement and installation of temporary scaffolding.

2.14 Preservation of rotary equipment specially entry from foreign materials until handing over to Client shall be specified

Copyright EIL – All rights reserved

2.15 Final inspection and punch list liquidation of vessel/ equipment along with EIL/Client and handing over to Client in all aspect shall be included.

2.16 Assistance to Performance Guarantee test for packages by providing skilled and unskilled labour and handover to owner.

2.17 All labour, materials, facilities and supplies required during installation, testing and commissioning.

2.18 In addition to the above, contractor may be called upon by Engineer-in-Charge to do other jobs like rectification of defects etc. in the said packages.

3.0 Technical Requirement

3.1 Chain Pulley Blocks

3.1.1 Chain pulley blocks and geared trolleys suitable for hazardous area shall be supplied, installed, shop tested, commissioned in position including any modifications required in the already installed structures based on the Structural and Piping drgs. and as per the instruction of the Site –In charge.

3.1.2 Contractor shall procure the chain pulley blocks & geared trolleys from the EIL approved vendors. For vendor list contractor to refer ANNEXURE-1 of this document.

3.1.3 Mechanical erection contractor shall procure, test, paint, install the chain pulley blocks & geared trolleys in line with EIL std specification no.: 6-61-0015, attached with this tender. Chain Pulley Block shall be of detachable type suitable for mounting on geared trolley of same rating /capacities.

3.1.4 Painting (Primer +finish coats) of the chain pulley blocks & geared trolleys shall be as per manufacturer standard and shall be suitable for highly corrosive industrial environment.

3.1.5 Contractor shall ensure that the chain pulley blocks and geared trolleys are supplied with commissioning spares of adequate quantity.

3.1.6 Contractor shall ensure that chain pulley blocks and geared trolleys are supplied & installed with first fill of lubricants and grease nipple points are provided suitably.

3.1.7 Contractor shall submit the documentation as per doc no. B957-999-80-42-VDR-9501 attached elsewhere in the tender.

3.1.8 Contractor shall ensure that the chain pulley blocks & geared trolleys are supplied with statutory approvals and formats, as applicable. Each Chain Pulley Block and Trolley shall be marked with the tag no., SWL capacity & “Non-Sparking Type”.

4.0 ERECTION

4.1 Complete erection of packages / equipment & piping works etc. under supervision of respective package / equipment supplier as per EIL standard specification no.6-76-0001. The overall coordination shall be Contractor’s responsibility.

4.2 Equipment shall be erected with proper orientation on foundation.

4.3 Contractor shall install base plates, erect equipment, level and properly align with necessary shims and wedges wherever applicable.

Copyright EIL – All rights reserved

4.4 Leveling and plumbness shall be approved by EIL and shall be checked using suitable instruments as to be decided by Engineer-in-Charge before grouting / fixing. Finishing of the foundation shall be carried out, wherever applicable.

4.5 Equipment shall be firmly bolted down to foundations, wherever applicable.

5.0 EXCLUSIONS

Civil Foundation. However, minor chipping of foundation (if required) and grouting of equipment (including supply of grouting material) shall be in contractor's scope.

6.0 SCHEDULE OF QUANTITIES

The schedule of quantities is as given below. Dimensions and weights are approximate only. Final data along with equipment manufacturer's drawings will be furnished during erection of equipment to the successful contractor.

6.1 **Packages/ Equipment to be erected**

6.1.1 **Vapour Recovery System** (Refer Item no. 01QQ.3.48 of SOR Doc. no. B957-999-80-42-MR-SOR-9501-A & B957-999-80-42-MR-SOR-9501-B)

S. N.	Equipment Tag No.	Service	Approx. Erection Weight (MT)	Approx. Overall Dimension (L X W X H) (meter)	Elevation from grade (in meters)	Remarks
1.	500-LZ-00-003	Benzene	130	20 X 25 X 15	EL +0.000 (Refer equipment layout attached elsewhere)	
2.	500-LZ-00-019	Toluene	130	20 X 25 X 15		
3.	500-LZ-00-020	Xylene	130	20 X 25 X 15		
4.	500-LZ-00-021	HC Vapour	130	20 X 25 X 15		
5.	All skid interconnecting piping, fittings, structure support, insulation, control valves, all types of instruments etc.					

Note:

1. Sizes & Elevation of equipment / skids / Piping mentioned above are tentative. Actual GA drawing of individual equipment & package layout will be given to successful bidder. For the estimation purpose, bidder shall refer the equipment layout showing the location of individual equipment.
2. Actual weight of equipment shall be as per AFC drawing, which will be given to successful bidder.
3. Prefabricated piping along-with some loose free length piping and fittings shall be supplied by package vendor. Welding, some amount of cutting & re-welding may be required to adjust the lengths at site. Bidder shall erect all loose prefabricated piping / free length piping between equipment and skids. Actual isometrics and layout will be given to successful bidder.

6.1.2 **Bagging and Palletizing Package (Tag no.540-LZ-101-104/105/106/107-119/120-122/123-125)**

(Refer Sl. No. 01QQ.3.4 of SOR doc. No. B957-999-80-42-MR-SOR-9501-A)

Copyright EIL – All rights reserved

Size, Erection weight are tentative. Actual details shall be as per approved vendor drawings provided at the time of erection.

Description of the Machines-

1. 25 kgs FFS – 17 machines
2. Big Bag (1 Ton) – 4 machines
3. Bulk Loader – 4 machines

Overall estimated weight for Bagging and Palletizing Package shall be approximately 640 MT.

Major items which are a part of this package are listed below for Contractor's information.

Sl. No	Equipment Tag No.	Equipment Description	Qty. (Lot/ Nos.)	Approx. Weight (MT) / Equipment	Total Approx. Weight (Note-1) (MT)	Elevation from Grade (m)
1.	Not Applicable	Buffer Hopper	17	0.4	7	Grade
2.	Not Applicable	Automatic Film-Reel Changing System	17	0.11	2	Grade
3.	Not Applicable	Complete Bagging machine along with all accessories & supporting structure	17	8.64	147	Grade
4.	Not Applicable	Bag Carrying-off Conveyor	17	0.11	2	Grade
5.	Not Applicable	Checkweigher	17	0.029	0.5	Grade
6.	Not Applicable	Metal detector along associated conveyors/supports	17	0.4	6.5	Grade
7.	Not Applicable	Manual Palletizing System.	17	0.11	2	Grade
8.	Not Applicable	Product Recycling System for broken bags	17	0.11	2	Grade
9.	Not Applicable	Bag Forming and Pressing Unit	17	0.029	0.5	Grade
10.	Not Applicable	Empty Pallet Magazine and Dispenser	17	0.029	0.5	Grade
11.	Not Applicable	Carton / PE Sheet Dispenser	17	0.029	0.5	Grade
12.	Not Applicable	Cold Glue System	17	0.029	0.5	Grade
13.	Not Applicable	Bar Code Reader for Empty Pallets	17	0.029	0.5	Grade
14.	Not Applicable	Palletizer along with supporting structure and all related conveyors	17	12.52	213	Grade
15.	Not Applicable	Static weighing system for 50kg	17	0.058	1	Grade
16.	Not Applicable	Ink-jet printer (with 2-printing head) along associated conveyors/supports	17	0.11	2	Grade
17.	Not Applicable	Bag rejecter along associated conveyors/supports	17	0.64	11	Grade
18.	Not Applicable	Stretch Hooder machine along with all accessories & supporting structure and all related conveyors	17	5	85	Grade

Copyright EIL – All rights reserved

19.	Not Applicable	Complete Big-Bag machine along with all accessories & supporting structure and all related pallet conveyors	4	26.75	107	Grade
20.	Not Applicable	Ink-jet printer (with 1-printing head) along associated conveyors/supports	4	0.25	1	Grade
21.	Not Applicable	Bar Code Reader for Empty Pallets	4	0.125	0.5	Grade
22.	Not Applicable	Static weighing system for 1200kg	4	0.25	1	Grade
23.	Not Applicable	Loose structure and other accessories	-	-	30	Grade
24.	Not Applicable	Bulk Loader	4	4.25	17	Grade
	Total Approximate Erection Weight				**640**	

Notes:

1. Actual weight of equipment shall be as per approved drawing which will be given to successful bidder.
2. Prefabricated piping along-with some loose free length piping and fittings shall be supplied by package vendor. Welding, some amount of cutting & re-welding may be required to adjust the lengths at site. Bidder shall erect all loose prefabricated piping / free length piping between equipment and skids. For the estimation purpose, bidder shall refer building layout attached with tender (Dwg. No. B957-540-80-42-10001/10002) (These drawings are only for reference. Scope demarcation etc. is not to be considered). Actual isometrics and layout will be given to successful bidder.

6.1.3 **Road/Truck Loading arm (**Refer Sl. No. 01QQ.1.7 of SOR doc. No. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B)

S. No.	Equipment Tag No.	Qty	Fluid Handled	Type	Approx. Size (Dia.)	Approx. Erection weight (MT)	Total weight (MT)
1.	500-LZ-00-004/005/006/007 A	4	Benzene	Bottom	3”	0.6	2.4
2.	500-LZ-00-004/005/006/007 B	4	Benzene	Bottom	3”	0.6	2.4
3.	500-LZ-00-008/009/022 A	3	Toluene	Bottom	3”	0.6	1.8
4.	500-LZ-00-008/009/022 B	3	Toluene	Bottom	3”	0.6	1.8
5.	500-LZ-00-010/023 A	2	Xylene	Bottom	3”	0.6	1.2
6.	500-LZ-00-010/023 B	2	Xylene	Bottom	3”	0.6	1.2

8.	500-LZ-00-014/015 A	2	Propylene	Bottom	4”	0.6	1.2
9.	500-LZ-00-014/015 B	2	Propylene	Bottom	4”	0.6	1.2
10.	500-LZ-00-016 A	1	Butene	Bottom	4”	0.6	0.6
11.	500-LZ-00-016 B	1	Butene	Bottom	4”	0.6	0.6
Total Equipment Erection Weight (MT)							16.8

Copyright EIL – All rights reserved

Quantity & type mentioned above are estimated and may be changed during detail engineering. Payment to the contractor shall be made based on the actual quantity erected and quoted unit rate against the item.

Note:

1. Tag no. will be provided to successful contractor during detail engineering.
2. Sizes & Elevation of equipment / skids / Piping mentioned above are tentative. Actual GA drawing of individual equipment & package layout will be given to successful bidder. For the estimation purpose, bidder shall refer the equipment layout showing the location of individual equipment.
3. Actual weight of equipment shall be as per AFC drawing, which will be given to successful bidder.
4. Prefabricated piping along-with some loose free length piping and fittings shall be supplied by package vendor. Welding, some amount of cutting & re-welding may be required to adjust the lengths at site. Bidder shall erect all loose prefabricated piping / free length piping between equipment and skids. Actual isometrics and layout will be given to successful bidder.

6.2 **Equipment to be fabricated**

Nil

6.3 **Equipment to be procured and erected**

6.3.1 **Chain Pulley Block & Gear trolley (Hazardous Area):**

(Refer Sl. No. 01QQ.7.1, 01QQ.7.2, 01QQ.7.4, 01QQ.7.5, 01QQ.7.6 & 01QQ.7.7 of SOR doc. No. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B)

Following items shall be supplied and erected by the Contractor as per attached EIL Std. Specification for Chain Pulley Block (Doc. No. 6-61-0015), and Cl. No. 3.1 of this document. Chain pulley blocks supplied shall be suitable for Hazardous area application.
Chain Pulley Block (CPB), as indicated in the AFC drgs. and as per the tag no. and respective maintenance equipment shall be installed in position, as per the instruction of Site in Charge.

Sl. No	Description	Qty.	Capacity * (MT)	Remarks
a.	Chain Pulley Blocks (Trolley mounted / hook mounted)	32	1 MT to 15.0 MT	* - As per the AFC drawing of Piping & structural and vendor drawing.

Quantity mentioned above are estimated and may be changed during detail engineering. Payment to the contractor shall be made based on the actual quantity erected and quoted unit rate against the item.

6.4 **Equipment to be painted**

Repair and touch-up painting for the locally damaged areas of the free issue packages shall be carried out by the erection contractor as per EIL/Owner painting specification attached elsewhere in the tender document.

6.5 **Equipment to be Insulated**

Copyright EIL – All rights reserved

Application of insulation material (free issue material) for the field joint portion, un-insulated part of the package which has been left for erection purpose, repair and touch-up insulation for the locally damaged areas of the above packages shall be carried out by the erection contractor as per EIL/Owner instruction.

7.0 ENCLOSURES

7.1 Schedule of Rates for mechanical works, SOR (doc. No. B957-999-80-42-PK-SOR-9501-A & B957-999-80-42-PK-SOR-9501-B)

7.2 Data sheet of chain pulley block (Doc no. B957-999-80-42-DS-9501)

7.3 Vendor Data Requirement (Static & Machinery Equipment) (Doc no. B957-999-80-42-VDR-9501)

7.4 EIL Standard Specification no.6-61-0015.

SCOPE OF WORK & SUPPLY

1. SCOPE

1.1 The intent of this document is to outline the **Contractor's Scope** for all rotating equipments including all associated works as required for **REFINERY FACILITIES RELATED TO BPREP-BPCL**, comprising of following units:

- **PART-A: West side of Nallah**
- **PART-B: East side of Nallah +BDT**

1.2 Contractor shall carry out erection and commissioning of the following Rotating Equipments & Miscellaneous items of package as specified in below tables (refer Table A.1) which shall be given to the Contractor by the Purchaser as Free Issue Materials (FIM):

Table A.1

S. NO.	EQUIPMENT TAG NO.	QTY	EQPT. DESC.	EQUIPMENT TYPE	LOCATION
PART-A: West side of Nallah					
1	500-KA-RP-002 A/B	2	Propylene Unloading Compressor	Horizontal Reciprocating Gas Compressor	ECU Feed & Intermediate Tanks

2. PREPARATION FOR MECHANICAL ERECTION OF ROTATING EQUIPMENT & MISCELLANEOUS ITEMS

2.1 Vendor's representatives shall be present at site only for supervision of erection and pre-commissioning work. However, total responsibility for this shall be of Contractor. The entire material shall be issued to the Contractor by the Engineer-in-Charge. The Contractor will return all the unused material / items identified as per the packing list to Engineer-in-Charge to store at the Owner's store.

2.2 The Contractor shall carefully study the vendor drawings, manuals and other data before start of the job to ensure correct erection, alignment and commissioning.

2.3 Material opened from vendor supplied boxes after open box installation shall be stacked/stored equipment/package wise. The Contractor shall arrange for visual inspection of all vendor equipment in line with manufacturer's drawing and maintain a record.

2.4 Reconciliation of material issued and return special tools and unused material / spare items to warehouse as per the packing list.

2.5 The Contractor shall make sure from the vendor's drawing and data that whether there is any transportation dummy provided in the equipment or its auxiliaries and accessories or not. If such dummy has been provided the same shall be removed by the contractor before starting the erection activities. Preservation made by vendor shall be maintained by the Contractor.

2.6 In case the Rotating Equipment is received in knocked down condition, the various parts shall be assembled as per the instructions of the Engineer-in-Charge and as per manufacturer's instructions. On the basis of the part list and the handling procedures

Copyright EIL – All rights reserved

provided with the equipment, the Contractor shall make suitable arrangements to move the assemblies and sub-assemblies to the site. All parts of the equipment shall be thoroughly cleaned with solvents to remove protective compounds if any, before assembly. Contractor shall follow OEM recommended procedures for cleaning.

2.7 All protective and safety guards shall be installed and all foundation bolts shall be checked before starting the trial runs.

2.8 All Alignment shall be done by Laser Alignment only for all rotating equipment.

2.9 All the rotating equipment package erection shall be done by the Qualified technical personal. Contractor shall depute qualified technical personal for carry out erection, installation and commissioning of rotating equipment. The contractor shall engage qualified rotary equipment overhauling contractors for carrying out all rotary equipment jobs from grouting to commissioning. Qualified technical personal shall possess minimum 10 years of relevant experience.

2.10 Preservation of rotary equipment including barring, LO flushing/greasing, nitrogen charging (if required) and associated preservation activities shall be in contractor scope as instructed by EIC. A dedicated preservation team incl MWF with one supervisor shall be deployed.1 Team=1 Supervisor+1MWF+3 Riggers.

2.11 All type of Special consumables required by Pump/turbine/compressor/vendor specifications shall be included in contractor scope supply and shall be provided.

2.12 Contractor shall provide all measuring, testing and other tools required to complete mechanical jobs as directed by EIC, including specialized instruments.

2.13 Epoxy grouting of equipment bases, grout pads and associated surfaces shall be included in contractor's scope. During grouting of Rotary equipment, contractor to include supervision of grouting by OEM of Grouting material (GP2 and epoxy or OEM recommended grout material etc..) at site.

2.14 Correction of soft foot on Motors and rotating equipment shall be in contractor scope.

2.15 Alignment of all the rotary equipment shall be done only by Laser alignment kit at site. And Laser Kit alignment report shall be generated and submitted with Package commissioning report.

2.16 Blue matching of sole plate for all the rotary equipment is in contractor scope.

2.17 Alignment of vertical equipment shall be done through total station only.

2.18 Alignment of all Rotary equipment like pumps/compressors etc. and its auxiliary skids are in contractor's scope.

2.19 Alignment of all rotary equipment shall be carried out in all respects as per OEM recommendation.

2.20 Decoupling and recoupling with prime-movers during no-load/loads trials for multiple occasions is in Contractor's scope.

Copyright EIL – All rights reserved

2.21 Two (2) sets of laser alignment tools of size covering all equipment of plant shall be provided and handed over to BPCL upon completion of works.

3. ERECTION OF EQUIPMENTS (LISTED IN TABLE A.1 ABOVE)

3.1 The Contractor shall use the proper specified/supplied material handling equipment / lifting tools and manufacturer recommended / safe handling procedure for erection of the equipment and their driver and auxiliaries / accessories. The Contractor shall submit erection scheme along with details of proposed lifting tools.

3.2 The Contractor shall ensure that the lifting tools/ accessories are attached to the equipment at the place where is has been recommended by the manufacture. In case the manufacturer has not recommended the place of attaching the lifting tools/ accessories on the equipment, the Contractor shall decide the place in consultation with the Engineer-in-charge to ensure that no damage is occurred to the equipment or any part of that.

3.3 The alignment between driver and driven equipment of the complete train shall be rechecked and corrected as per the recommendations of the equipment manufacturer. The readings of final alignment shall be verified by the Engineer-in-charge.

4. PRECOMMISSIONING WORK (LISTED IN TABLE A.1 ABOVE)

4.1 All the piping i.e. either main or auxiliary (for utilities) shall be cleaned (steam / water flushing) and then complete connections shall be made. The manpower as required for this purpose shall be provided by the Contractor depending on the contract / P.O. All site fabricated piping shall be hydro tested.

4.2 The Contractor shall carryout initial charge (for flushing/cleaning of systems) of the lubricants. All the oil systems shall be run, flushed and the oils changed by fresh charge. Unless otherwise specified, all lubricants shall be supplied by the Contractor, including the initial charge.

4.3 Contractor shall note that lubricants, sealing fluid & other consumables etc. required for startup and commissioning of free issue Items shall be included in Contractor's scope of supply. A consolidated list for all free issue items shall be provided to Contractor indicating type of lubricant, grease, oil etc. giving specifications, quantities, brand name and their BPCL equivalent.

4.4 Cooling Water System, Lube Oil System and all other auxiliary systems shall be run / operated at rated pressures and the leaks shall be checked and corrected.

4.5 All flushing work shall be done with temporary strainers (as applicable) or with the temporary fine mesh SS sheets (exact mesh size to be confirmed by OEM/ Engineer in-charge) and after final cleanliness & clearance, permanent strainer shall be installed.

4.6 Temporary piping required for flushing, chemical cleaning, blowing shall be fabricated and erected by the Contractor. If not supplied by the vendor, temporary strainer for flushing shall be arranged by the Contractor.

4.7 In case of pump's mechanical seal leakage during pre-commissioning, the Contractor shall arrange for disassembly, transportation of pumps from site to Owner's workshop & back to site and again reassemble & align at site as per the instructions of Owner/Engineer-in-Charge *(Seal repair at workshop will be done by Owner)*.

Copyright EIL – All rights reserved

4.8 The Contractor shall carryout all other pre-commissioning activities as deemed necessary and as per the instructions of the engineer in-charge.

4.9 Requirement of mobilization of the package / equipment supplier representative for supervisory services shall be intimated to Engineer in Charge 45 days in advance by the Contractor. Specific activity list, along with requirement of labor (skilled / unskilled) and erection equipment required for carrying out specific activity shall be obtained by the Contractor from the package / equipment supplier representative, through Engineer in Charge. The Contractor shall ensure to provide the desired manpower, equipment required for erection works, as deemed necessary by the package / equipment supplier representative. The overall coordination shall be the Contractor's responsibility.

4.10 Unless indicated to the contract, all the rotating equipment will be subjected to trial runs for a continuous operation of 72 hours. In case of motor driven rotating equipments, motors shall be decoupled and turned over for testing and no load running of motors. After the no load runs of motors are satisfactorily completed, the Contractor shall recouple the motors to the rotating equipment and recheck the alignment. The trial run of the rotating equipment shall be started only after the above is completed. Contractor shall provide, as part of his work, necessary skilled personnel (excluding the operating personnel) for conducting the trial runs round the clock during the trial runs period. Final inspection of bearing etc. shall be carried out by the Contractor after the Machinery had gone through the trial run and defects if any, shall be made good for rendering the rotating equipment ready for start-up. Defects due to Contractor's fault noticed during trial runs shall be rectified by him.

8. HANDING OVER FOR COMMISSIONING

8.1 The Contractor shall arrange for removal of all scrap and debris generated during erection activities from the site before handing over the equipment for commissioning activities and transporting the same as within or outside the plant as per instruction of Engineer-in-Charge or as specified elsewhere.

8.2 After the mechanical completion while handing over to the client or to the commissioning agency, the Contractor shall provide a list of construction defects, rectified by them. The Owner or commissioning agency will check the Contractor's work before taking over.

8.3 The Contractor shall also provide a team of skilled labor to client or to the commissioning agency during their commissioning period if requisitioned by them.

8.4 If some defects are noticed during commissioning and are attributed to Contractor, the Contractor shall arrange to rectify to the satisfaction of Engineer-in-Charge.

1.0 SCOPE OF WORK / SUPPLY

Scope of work shall include supply (wherever specified), inspection, installation, testing and commissioning of electrical power distribution system comprising of various electrical equipment, lighting system, earthing and lightning protection system, cabling system and other miscellaneous works.

The tender scope broadly comprises of electrical works in the following areas but not limited to these of BPREP Project (Offsites and Utilities).

Part A: (ECU, PP, LLDPE, CT-01, CT-02, TF-20, TF-21, Flare, RWPS, RWTP+RODM+ZLD, Petchem gantry, SS-108, SS-109, SS-106, existing substation SS-16 etc.)

a. EHV (66kV) 1core, cable & associated intertrip and differential FO cable laying between new MRS (SS-100) to SS-101, SS-102, SS-103, SS-105, SS-106, SS-109, SS-110.

b. HV (6.6kV) 1core/3 core, cable & associated intertrip and differential FO cable laying between new MRS (SS-100) to SS-108.

c. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-106 to CT-01, CWPH, CWTP, TF-21, workshop extension.

d. HV (6.6 KV) 3 core / 1 core cable, MV (415 V) cable & associated control cable laying between SS-108 to Polymer warehouse, Petchem gantry.

e. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-109 to CT-02, CWPH, CWTP.

f. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-110 to RWPS, Flare, TF-20, Gate house, catalyst warehouse, ware house, chemical storage, satellite fire station etc.

g. Complete Cable tray work on main / branch pipe rack & pipe sleepers and cable trenches from above substations (SS-106, 108, 109, 110) to respective offsites loads to be fed within PART-A battery limit as defined elsewhere.

h. Electrical Works in SS-106, SS-108, SS-109, CR-04, satellite fire station, offsite pump houses with PART-A battery limit including earthing & lightning protection, lighting, cabling etc.

Part B: (MRS-100, TF-22, TF-23, TF-24, TF-26, N2 plant, STG block, SS-112, SS-107, DG, SS-05A, Petchem MCR, Lab, Site office, SS-111, CPU, Polymer Gatehouse, driver rest room)

a. HV (6.6KV) 1 core/3 core power cable & associated intertrip and differential FO cable laying between new MRS (SS-100) to SS-111, SS-112, SS-05A, SS-109.

b. HV (33 KV), Single core cable & associated intertrip and differential FO cable laying between existing SS-10A in existing Bina refinery complex to new substation SS-107 for critical/most essential power supply.

c. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-109 to TF-22, TF-23, TF-24, TF-26, Nitrogen (N2) plant, SS-107, SS-112 etc.

Copyright EIL – All rights reserved

d. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-5A to FWPH-Extn., Petchem MCR, Lab, Site office.

e. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between SS-111 to CPU, Polymer gate house, driver rest room.

f. HV (6.6 KV) 3 core / 1 core, cable & & associated intertrip and differential FO cable laying between SS-107 to MRS-100, SS-101, SS-102, SS-103, SS-105, SS-106, SS-108, SS-109, SS-110, SS-111, SS-05A, SS-112 for emergency power distribution.

g. HV (6.6 KV) 3 core / 1 core, MV (415 V) cable & associated control cable laying between BDT SS to TF-13, TF-14, pump house, Naphtha unloading, Gantry, existing control room building etc.

h. Complete Cable tray work on Main / branch pipe rack, pipe sleepers & cable trench from feeding substations above to respective loads for all facilities in PART-B battery limit + BDT area as defined elsewhere.

i. Electrical works for SS-107, DG building, SS-5A, offsite facilities, new facilities in BDT area etc. including earthing & lightning protection, lighting, cabling etc.

j. Modification/extension of switchboards in existing substation (SS-16), to accommodate new feeders, relays, metering units, communication modules, cable terminations, and associated interface work.

k. Alteration, relocation, or replacement of existing cables, trays, supports, lighting fixtures, junction boxes, earthing strips, and associated accessories.

Contractor (for Part A and Part B) shall also provide electrical services in the respective areas/ buildings/units/offsites which are specifically not mentioned above, however required for the installation/ commissioning and satisfactory operation of facilities covered under subject Project.

Contractor scope includes meeting all the requirements defined in specifications, datasheets and drawings attached with the tender and required for completion of the job including but not limited to the areas defined above. The scope shall also include handling, transportation of equipment/ material from Purchaser's stores/ warehouse to the place of installation and supply of mandatory and commissioning spares wherever required.

This document shall be read in conjunction with attached Job Specification and Schedule of Rates (SOR).

Bidder may visit Site prior to bidding to familiarize themselves with site and to ascertain the nature of work involved with prior permission of EIL/Owner.

1.1 SUPPLY, INSTALLATION, TESTING AND COMMISSIONING (EQUIPMENT/ MATERIAL SUPPLIED BY CONTRACTOR):

Contractor shall supply all items/ equipment required for completion of the work except those specifically mentioned under Cl. No. 1.4 below. The quantities as indicated in SOR document no. B957-999-16-50-PK-SOR-9501-A & B957-999-16-50-PK-SOR-9501-B are tentative and actual required quantities shall be bought as per site requirement in consultation with Engineer-

Copyright EIL – All rights reserved

in-Charge. The equipment/ material in Contractor's scope shall include but not be limited to the following:

1.1.1 Supply, filtration and filling of transformer oil for Purchaser's supplied transformers as required.

1.1.2 Supply, installation, testing and commissioning of dry type transformers.

1.1.3 Industrial, weather proof type Push Button (Break glass type) stations in transformer bay for tripping remote breaker

1.1.4 Supply of commissioning spares and special tools and tackles as required for supplied equipment.

1.1.5 Indoor draw out type 6.6kV, HV extension /modification in breaker Panel in existing substation buildings as per scope defined in tender

1.1.6 For 6.6kV Extension panel one set of "Tripping Coil (1 No.), Closing coil (1 No.), control fuse /MCB (10 nos. of each rating and type), Auxiliary relays (1 no. of each type)" for each extension breaker panel shall be considered as mandatory spares for 6.6kV Extension breaker panel. **Price of mandatory spare for 6.6kV Extension breaker panel shall be inclusive in respective SOR items (PART-A & B)**.

1.1.7 Mandatory spares for 415V vacant feeders shall be considered as per mandatory spares list attached with electrical design basis B857-999-16-50-EDB-1001 Rev-01 attached with tender. **Price of mandatory spare for vacant feeders shall be inclusive in respective SOR (PART-A & B).**

1.1.8 415V/ 415V Dry Type Lighting Transformers.

1.1.9 415V fixed type PDB.

1.1.10 415V Flameproof MOVDB.

1.1.11 415V weatherproof fixed type feeder pillar.

1.1.12 MCB box for battery rooms.

1.1.13 Electrical Heat Tracing system as per scope of work & job specification (doc. no. B957-999-16-50-SP-9503) enclosed with tender .

1.1.14 30M smart high flood light mast for safe and hazardous area.

1.1.15 Feeder in vacant compartment and /or extension of panels in existing HV (6.6kV) & MV (415) Switchboards.

1.1.16 WP/FLP local control stations suitable for safe area/ hazardous area.

1.1.17 Flameproof (IIA/IIB) and weatherproof junction boxes.

1.1.18 Flameproof (IIA/IIB) and weatherproof socket and plug.

1.1.19 **Floor mounted standalone marshaling panels** for E&I interface cables

Copyright EIL – All rights reserved

1.1.20 Canopies for equipment, as required.

1.1.21 Flameproof (IIA/IIB) and safe area lighting fixtures

1.1.22 Lighting poles for Safe Area and Hazardous Areas.

1.1.23 Lighting Panel/Power Panel, MCB Box, Fans and Exhaust Fans

1.1.24 Clamps for platform and ceiling mounted lighting fixtures

1.1.25 Heat Shrinkable type 33kV & 6.6 kV Unearthed grade HV termination kits and straight through joints.

1.1.26 415 MV power and control cables.

1.1.27 Optic Fibre cable (OFC) along with FR HDPE duct for feeder differential protection relays.

1.1.28 Earthing system including Cu bonded high tensile low carbon steel core earth electrodes in maintenance free chemical test pits, earthing grid, earth plates, earthing conductors / strips of various sizes & associated connectors and accessories etc.

1.1.29 Grounding system including GI earth electrodes in test pits, earthing pits employing deep bore well electrodes (up to 60 mtr), earthing grid, wire ropes, earth plate, earthing cables /strips of various sizes, flexible connections, lightning protection rods, associated connectors and accessories etc.

1.1.30 Supports for push button stations, etc. including painting and all materials.

1.1.31 Supply and making of MV straight through joints.

1.1.32 Supply and making of straight through joints for communication, FA and paired cables.

1.1.33 Cable trenches including excavation, backfilling, compacting, spreading of sand including all supplies and accessories.

1.1.34 Prefabricated G.I. cable trays ladder type, slotted channel type cable trays of various sizes along with horizontal & vertical bends, Tee including providing its supports and related civil works and tray fittings for GI pre-fabricated type cable trays.

1.1.35 G.I. sheet covers for cable trays.

1.1.36 Cable markers/ earth pit markers, identification tags, GI saddles, saddle bars and associated accessories inclusive of providing and fixing supports.

1.1.37 GI pipes and PVC pipes for cable protection above ground, floor sleeves and supports etc., wherever necessary.

1.1.38 Supply, fabrication and erection of MS frames, structural steel, Cable racks in trenches, cable tray supports, anchor fasteners, GI canopies, brackets for miscellaneous electrical equipment including welding, bolting etc. and necessary supplies and connected works all-inclusive of painting as specified.

Copyright EIL – All rights reserved

1.1.39 Supply, fabrication and erection of bolted and/or welded Structural Steel Works of all types using "COLD FORMED SQUARE HOLLOW SECTIONS" conforming to IS: 4923, Grade Yst-355 of approved make as defined in structural part of SOR.

1.1.40 Concealed and surface mounted GI/ black enameled steel, PVC conduits

1.1.41 Weatherproof and Flameproof Nickel-plated double compression brass cable glands, crimping type, long barrel, circular/sector shaped, type aluminium/ bimetallic/ tinned copper lugs and Nickel-plated brass blocking plugs for unused entries as required.

1.1.42 Nickel plated single compression brass cable glands, crimping type, long barrel, circular/sector shaped, type aluminium/ bimetallic/ tinned copper lugs and Nickel-plated brass blocking plugs for unused entries as required.

1.1.43 Safety equipment/ fire extinguishers, safety mat, epoxy based, insulation coating, sand bucket, First Aid Box, rubber hand gloves, gas masks, face shield, electrical protection suit, HV tester & HV tapes, Enameled caution boards, discharge rods, etc.

1.1.44 Chequered plates for covering floor cutouts, unused cable trenches etc.

1.1.45 All other hardware like nuts, bolts, washers, spring washers, grouting bolts etc. necessary for completion of job. All hardware shall be of stainless steel (SS 304).

1.1.46 Gravel as required in transformer bays etc.

1.1.47 Miscellaneous material like sand / stone dust, bricks / clay bricks, plain cement concrete etc. for civil works.

1.1.48 Cable trenches including excavation, backfilling, compacting, providing of brick protection by second class bricks/fly ash bricks including all supplies and accessories. Supply & laying of sand/fly ash in Cable trenches including providing of brick protection by second class brick/ fly ash bricks including all supplies and accessories.

1.1.49 Sealing compound

1.1.50 Safety equipment's

1.1.51 Illuminated framed Electrical Single Line Diagrams for Sub-stations

1.1.52 Epoxy based insulating paint (for Sub Station switchgear floors)

1.1.53 Fire proof sealing system

1.1.54 Trefoil clamps for single core cables.

1.1.55 Canvas Tarpaulin of 18 m x 18 m size for Monsoon and Dust protection of electrical panels is included in contactor's scope. Same shall be provided by contractor as and when required to protect the electrical equipment from rain / dust. No separate payment shall be done for the same.

1.1.56 Bracing of single core 66kV, 33kV & 6.6kV cables laid in trefoil formation shall be done by suitable clamps at intervals not exceeding 2 m along the cable routing. In addition to these clamps, single core cables shall be bound with tapes in line with IS. Price quoted against

Copyright EIL – All rights reserved

laying of cables shall include the price for supply and installation of bracing clamps and binding tapes and no separate price for bracing/ binding as specified above shall be considered for payment.

1.1.57 **Smart lighting control network**:
Design, engineering, supply, installation including laying of FO cables, testing & commissioning of smart lighting control network for all existing and new smart high mast & smart street lighting including supply of fiber optic cables & HDPE ducts of required length, LIU kits, ethernet switches, termination accessories, centralized control system comprising of HMI-PC, interface with upstream ECS system and downstream interface with smart lighting system (i.e. 30 mtr high mast, street light pole and hybrid solar street lighting poles) and all necessary hardware, software etc. as per approved drawings, specifications of this tender and directions of Engineer-in-charge.

1.1.58 Smart feeder pillar with feeder controller for controlling street light poles and hybrid solar street light poles.

1.1.59 Modification of existing conventional safe area and hazardous area high masts to convert into smart high mast.

1.1.60 AC Hi-pot/HV testing of insulation (as per IEC-60840) for 66kV cables.

1.1.61 Any other material (not covered under EIL/ Purchaser's supply at clause 1.2) and though not specifically mentioned above but required for completion of the work as per specifications, drawings and instruction of Engineer-in-Charge.

Note: Quantities given in SOR are tentative. Contractor shall take EIL Site In-charge's approval before ordering. In no case contractor shall order any quantity without prior approval.

1.2 INSTALLATION, TESTING AND COMMISSIONING (EQUIPMENT/ MATERIAL SUPPLIED BY PURCHASER)

1.2.1 66kV & 33kV GIS Isolating breaker panels through respective OEM's.

1.2.2 Busducts of various ratings between transformer secondary and switchgear.

1.2.3 Gas ducts for 6.6kV switchgear.

1.2.4 Installation, testing and commissioning of switch-boards, relay and control panels, annunciation panels, UPS system, battery chargers, distribution boards, cubicles with electrical equipment, VSD panels, misc. electrical panels etc.

1.2.5 Installation, testing and commissioning of miscellaneous surface mounted industrial/FLP control gear such as lighting/power panel, push button stations, motor starter, communication equipment, junction boxes, panels, plugs, sockets.

1.2.6 Installation of stationary nickel-cadmium battery banks.

1.2.7 Supply of plugs, sockets and junction boxes- weatherproof metal clad 415V, TPN, industrial type socket and plug with heavy duty interlocking switch, with adequately sized cable adaptor box for incoming and outgoing cable terminations, including supply of double compression brass nickel plated cable glands, tinned copper lugs.

Copyright EIL – All rights reserved

1.2.8 66/6.9 kV ONAN/ONAF outdoor power transformers with online tap changer panels excluding foundation.

1.2.9 6.6/ 0.433 kV ONAN outdoor Distribution Transformers with off circuit tap changer, excluding foundation.

1.2.10 6.6 kV MV switchboards & isolation breaker panels with VCB.

1.2.11 Draw out type 415V LV Switchboards (PMC's/ EPMC's/ PMCC's/ MCC's/ ASB's/ LDB's/ ELDB's).

1.2.12 6.6kV Capacitor Banks.

1.2.13 LV (415 V) bus ducts including all supports.

1.2.14 Flameproof lighting/power panels.

1.2.15 Flame proof receptacles, plugs & sockets.

1.2.16 Installation of Substation automation relay LAN, Master Ethernet Racks and associated equipment of SAS (excluding testing and commissioning).

1.2.17 Installation 230V AC UPS systems including battery banks, battery chargers and ACDBs etc. (excluding testing and commissioning).

1.2.18 Installation 110V AC UPS systems including battery banks, battery chargers and ACDBs etc. (excluding testing and commissioning).

1.2.19 Installation 110V DC systems including battery banks, battery chargers, BMS and DCDBs etc. (excluding testing and commissioning).

1.2.20 Connection, testing, no load running and commissioning of 6.6 kV, 3 Ph Squirrel cage induction/synchronous motors (including all items and accessories).

1.2.21 Connection, testing, no load running and commissioning of 415V, 3 phase & 240V, single phase squirrel cage induction motors.

1.2.22 Connection, testing and commissioning of 415V, 3 phase & 240V, single phase auxiliary heaters.

1.2.23 Connection, testing, no load running and commissioning of Motor operated valve actuators.

1.2.24 Laying, termination, straight through jointing, testing & commissioning of 66kV (E) grade Cu. Conductor, corrugated aluminum sheathed, single core, XLPE insulated, armoured and FRLS PVC outer sheathed cables (To be laid in readymade concrete lined trenches, buried trenches, road crossings, pipes and on above ground GI cable trays on offsite pipe racks & substations, including supply and fixing of trefoil clamp for single core cables, in substation and offsite area etc.). Contractor to note that the 66kV cabling work shall be carried out by cable OEM only. Details of OEM shall be informed during detail engineering.

1.2.25 Laying, termination, straight through jointing, testing & commissioning of 33kV (E) grade, Al. conductor, single core, XLPE insulated, armoured and FRLS PVC outer sheathed cables (To be laid in readymade concrete lined trenches, buried trenches, road crossings, pipes

Copyright EIL – All rights reserved

and on above ground GI cable trays on offsite pipe racks & substations, including supply and fixing of trefoil clamp for single core cables, in substation and offsite area etc.). Contractor to note that the 33 KV cabling work shall be carried out by specialized agency having PTR (past Track Record) for laying, termination testing & commissioning of 33kV (E) or above cable. Contractor to submit PTR for approval of Owner/EIL.

1.2.26 Laying, termination, straight through jointing, testing & commissioning of 6.6 kV (UE) grade, Cu./ Al. conductor, multi core, XLPE insulated, FRLS, armoured cables (To be laid in readymade concrete lined trenches, buried trenches, road crossings, pipes and on above ground GI cable trays on offsite pipe racks & sleepers, substation, in substations, unit and offsite area, etc).

1.2.27 Laying, termination, testing & commissioning of medium voltage 1100V, XLPE insulated, FRLS type, armoured power and twisted pair control cables to be laid in readymade concrete lined trenches, modular cable duct, buried trenches, road crossings, pipes and on above ground cable tray in substation, control room, unit and offsite area, pipe racks/sleeper etc.

1.2.28 Laying termination, testing & commissioning of optical fibre (OFC) cable with HDPE duct for feeder differential protection.

1.2.29 FLP control stations and FLP MOV distribution boards (MOV DB).

1.2.30 FLP equipment like lighting fixtures, lighting and power panels, junction boxes, lighting poles, plugs, welding receptacles, sockets etc. including all lighting for Tech structure including complete platform lighting including all light fixtures, lighting panels, circuit wiring, cabling etc. as required.

1.2.31 F.A system equipment like Fire Alarm Panel, MCPs, detectors, Exit Signage, hooters etc.

1.2.32 Plant Communication system equipment's like loudspeakers, field call stations, desktop operator call stations, amplifiers, acoustic hoods, beacon lamps etc.

1.2.33 NIFPS system equipments including laying and termination of cables, pipe fitting's, valves, flanges etc.

1.2.34 Any other material and though not specifically mentioned above but required for completion of the work as per specifications, drawings and instructions of Engineer-in-Charge.

1.3 MISCELLANEOUS

1.3.1 The job includes repairing of all civil works damaged during installation of electrical facilities and civil works connected with grouting of equipment, providing foundations for control stations, lighting poles, earth pits etc. Scope of work under this contract shall be inclusive of breaking of walls/ floors and chipping of concrete foundations necessary for the installation of equipment, materials and making good of the same. Scope shall also include removal & reinstallation of False Flooring Panels (with suitable modification, as required) after installation of electrical equipment.

1.3.2 The work shall be carried out in best workmanship-like manner, in conformity with these specifications, approved drawings and the instructions, from time to time, of the owner or Engineer-in-Charge.

Copyright EIL – All rights reserved

1.3.3 Laying of cables in existing trenches to be done in some part of plant area. Contractor to take all precautions to safety of existing cables. No cables should be damaged. If any cable gets damaged during process then these are to be repaired at contractor cost by heat shrink sleeve/straight through joint/replacement as per extent of damage and site conditions. All above repairs/replacement cost are to be borne by contractor and immediate action to be taken by contractor. Decision of EIL/Owner is binding on contractor for repairs.

1.3.4 The scope of contract shall include clearing of temporary constructions, waste materials and loose earth, which might get collected in and nearby the work site during execution of work and after final completion.

1.3.5 Coordination between various agencies/ equipment vendor/ other contractors working at site and providing all assistance and interface connections as per drawings to enable others to take up testing and commissioning activities of their equipment/ systems.

1.3.6 Rerouting of existing underground cables/earth strips fouling in way of other contractor's excavation. The charges will be paid as per SOR rates equivalent to new work.

1.3.7 Cable end termination and straight through joints to be executed through trained cable jointer having 10 years plus experience in cable jointing work. The jointer should be hired/ deputed from Manufacturer Company of which make approved jointing/ termination materials are supplied.

1.3.8 6.6 KV grade cables should be tested for VLF test and sheath integrity test.

1.3.9 LV cables sheath integrity test to carried out by contractor and if any found the cable sheath is damaged then the damage is to be repaired for waterproof repairs. No separate cost for these repairs will be paid.

1.3.10 Supply and installation of all other accessories not specifically mentioned herein but nevertheless necessary for completion of job.

1.3.11 Engineering and preparation of specifications and drawings for electrical equipment and installation wherever applicable/ required by Purchaser and submitting the same to Purchaser for approval/ comments.

1.3.12 Correction and submission of all Purchasers' drawings to AS-BUILT status. The same is deemed to be included in the rates quoted for the respective items. No separate SOR item has been considered for the same.

1.3.13 Obtaining clearance and approvals for installation/drawings from Central Electricity Authority/ Chief Electrical inspectorate/ Chief Controller of Explosives PESO/ (CCoE), any other statutory authority for energizing the complete electrical facilities covered under this tender and obtaining PESO/ (CCoE) approval for items/package for installation and use in the hazardous classified area in which they are located. No separate payment shall be made to contractor for obtaining these approvals.

1.3.14 Contractor should deploy the engineers/technicians and skilled work force having relevant work expertise in electrical construction work. The technical staff should have required statutory technical certification and experience required for the job execution. If EIL/Owner finds the quality issue of work quality/ technical knowledge of any deputed technical staff the same staff is to be replaced by contractor with competent technical person.

Copyright EIL – All rights reserved

1.3.15 Contractor should comply the statutory provisions of Chief Electrical Inspector office / MP state statutory authorities for electrical job execution and required permissions and fulfilling the requirement of Electrical engineer and technicians and their qualifications.

1.3.16 Minor modifications, wherever needed, for the free-issued material/ equipment/ devices to enable cable entry/ termination, wiring changes etc.

1.3.17 Sealing of openings made in walls/ floors, firewalls for cables etc., using acceptable practices and standards.

1.3.18 Fire resistant paint shall be provided as per OISD recommendation for all terminations (up to 1 m) from cable gland at switchgear end. Fire resistant paint shall also be provided at the load end terminations (up to 1 m) for motors / DBs / JBs /Receptacles etc. Cables, before and after upto a length of 2m from the GI kick pipe entry in process area & pump houses shall be provided with fire proof coating as per IEC -60331.

1.3.19 Modification works in 33kV & 6.6kV HV switchboards, 415V MV switchboards, located in Existing Substation buildings.

1.3.20 6.6 kV HV termination kits and straight through jointing kits shall be Heat shrinkable type.

1.3.21 HV and MV cable terminations SOR items are inclusive of testing & commissioning of cables & terminations and no separate payment is admissible towards testing & commissioning of cables.

1.3.22 Letter painting and marking with radium stickers on indoor/outdoor electrical equipment such as switchboards, panels, local control stations, motors, light fittings etc.

1.3.23 Removal and reinstallation of false ceiling in Buildings (Sub Stations/Control Rooms) as per site requirement for installation of MS/PVC conduits for above false ceiling. No separate payment shall be made for removal and reinstallation of false ceiling.

1.3.24 Removal and reinstallation of cover slabs of RCC trench for laying of cables. No separate payment shall be made for removal and reinstallation of RCC trench cover slabs.

1.3.25 Vendor specific miscellaneous accessories like clamps etc. required for cable trays shall be supplied by Contractor as part of respective SOR Item. No separate payment shall be made for same.

1.3.26 After the job completion, contractor shall update the `ISSUED FOR CONSTRUCTION' drawings to 'AS-BUILT' status. Final certified 'AS- BUILT' drawings shall be submitted by the contractor to owner in both hard and soft copies.

1.3.27 Preparation of cable drum schedules for HV, MV Power & Control cables to minimise cable wastage.

1.3.28 Terminal strip identification tag and terminal number identification tags shall be provided for interface box, marshalling panel, junction box, local control station etc.

Note: Wherever separate SOR items do not cover above activities, these shall be deemed

Copyright EIL – All rights reserved

to be included in contractor's scope without any extra price and cost implication.

1.4 WORKS EXCLUDED

Works listed herein are specifically excluded from the scope of this contract:

1.4.1 Supply of equipment/ material as listed under Cl. 1.2 above

1.4.2 Testing and commissioning of Substation Automation system including, HMI & relay metering LAN for EHV (66kV), HV (33kV & 6.6 KV) and MV (415 V) Systems.

1.4.3 Testing and commissioning of DC system including battery banks, battery chargers. BMS and DCDBs.

1.4.4 Testing and commissioning of UPS system including battery banks, battery chargers, BMS and ACDBs.

1.5 SPECIFIC REQUIREMENTS

1.5.1 It is noted that the Electrical Heat Tracing (EHT) system shall be included as a Lump Sum item under the composite tender scope. However, to cater for any addition or deletion during execution, the Contractor shall provide unit rates for associated supply, installation, testing, and commissioning activities. These unit rates shall be incorporated through a dedicated Annexure to the Schedule of Rates (SOR) and shall be applicable for any approved variations.

1.5.2 The Danger Boards shall have Skull–Bone & Voltage Level indication in English & Hindi Languages (White coloured letters on red background), with minimum dimensions of 250 mm X 250 mm.

1.5.3 As per CEA Guidelines (Regulations–16 for Safety), all electrical panels shall be provided with warning notice "Disconnect / Isolate power supply before opening panel covers" on the removable covers on live bus-bar sections.

1.5.4 Regarding working at height / cable tray fixing / cable laying at height, the following points shall be taken care of:

(a) All items in the Schedule of Rates shall be inclusive of all constructional infrastructures like scaffolding / staging, including material and workmen to put such facilities in place.

1.5.5 All lighting panels, power panels and welding receptacles shall be provided with 4pole incoming.

1.5.6 Control cable shall be twisted pair individual and overall shielded type.

1.5.7 For obtaining approval of completed installations from the Central Electricity Authority (CEA) / Chief Electrical inspectorate, no separate payments shall be made for obtaining the CEA approvals (in parts or complete).

1.5.8 RCCB shall be provided at each outgoing of the LP/PP.

1.5.9 Fire proofing paint for cables complying to IEC-60331 with 90 minutes fire rating. Type test certificates for the same shall be furnished by Bidder before order placement.

Copyright EIL – All rights reserved

1.5.10 The doors for all interface boxes / marshalling panels/ boxes shall be with hinged doors and shall have padlock provision facility.

1.5.11 Rotation of terminal box of HT & LT motor by 90/180 degree wherever required including all labor, material etc. shall be considered in contractor's scope. No separate payment shall be done for the same.

1.5.12 To and Fro shifting of motors from site (from all elevations) to location inside petchem complex/existing refinery designated by engineer in-charge. Bidder to ensure that motors can be shifted from site to electrical shop for overhauling during commissioning stage. No separate payment shall be done for the same.

1.5.13 SOR Item no. 01EE.1100.10: Anchor fasteners used for Base frame of Switchgear, Cable tray support in Cable cellar etc. shall not be payable in this item".

1.5.14 Termination of 6.6kV cable through Elastimold Kit shall be done by certified Elastimold jointer only.

1.5.15 Mobilization of Scaffolding for carrying out site work at elevations such as installation of Lighting fixtures, tray supports & tray installation works etc. is included in contractor's scope. No safety violation in this regard shall be accepted. No separate payment shall be done for the same.

1.5.16 Heat Run test shall be conducted on each rating of Lighting Transformer. Bidder to note that no additional payment shall be made on account of this and prices of the same shall be included by bidder in the respective SOR item.

1.5.17 Earth pit number shall be marked and painted on each earth pit. Earth pits shall be painted as per standard i.e., earth pit for equipment earthing, body earthing etc. shall be of green colour, earth pit for transformer neutral earthing shall be of black colour, earth pit for lightning protection shall be of blue colour.

1.5.18 Cable tags shall be printed stainless steel metal tags / non-magnetic non-corrosive metal tags and nylon rope shall be used as cable tie.

1.5.19 High Pot testing of HT cables and equipment shall be performed after terminations / jointing in line with requirements specified in EIL standard spec. 6-51-0087.

1.5.20 Make of fuses shall be finalized as per make of fuse provided in free issued switchboards. Accordingly, the makes shall be finalized by contractor after obtaining approval from Engineer-in-Charge.

1.5.21 All push button stations shall be provided with 2 nos. earthing lugs / studs.

1.5.22 Testing and commissioning of safe area/ FLP Motor Operated valve (MOV) actuators shall be done by bidder through MOV Actuator OEM Engineer. Bidder to quote accordingly.

1.5.23 DC high voltage test shall be conducted as per Cl. 3.13.1 of EIL spec. 6-51-0087 on all HV feeders' cables and also on 1100V grade cables where straight through joints have been made.

1.5.24 Lighting installation shall be tested for correct illumination levels, with fittings installed. Final LUX level study shall be carried out after completion of project activities by Contractor before handing over to Client.

Copyright EIL – All rights reserved

1.5.25 Contractor shall submit vendor drawings of those material, equipment, items for which supply is included in contractor's scope of supply (such as dry type lighting distribution transformer, 6.6kV extension panels, 415 V feeder modifications, Space heater PDB, marshalling panels, power and control cables, High mast Lighting system, all hazardous area equipment etc.) and only after approval of EIL/BPCL, the material/item/equipment shall be considered before ordering/manufacturing. However, it is to be understood that the review of drawings shall not absolve the basic responsibility of Contractor to check total compliance to specifications included in tender document.

1.5.26 Cable lugs shall be crimping type of following material. All the cable lugs shall be long barrel type. Lugs having sector shaped/ circular barrel shall be used for making connections for cables having sector shaped/ circular geometry of conductor respectively. Lugs shall be as per the following:

a) Aluminium conductor cable termination on Aluminium bus bar/ terminals in switchboards - Aluminium lugs
b) Aluminium conductor cable termination on copper bus bar/ terminals in switchboards - Bimetallic lugs having Al barrel & tinned Cu palm
c) Copper conductor cable termination on Aluminium bus bar in switchboards – Bimetallic lugs having tinned Cu barrel and Al palm
d) Copper conductor cable termination on copper bus bar/ terminals in switchboards- Tinned copper lugs

Owner's MV cables shall be Copper/Aluminium cables and all owner's control cables shall be Copper cables.

1.6 CO-ORDINATION WITH OTHER CONTRACTORS/ AGENCIES

It is the responsibility of the contractor to coordinate and provide all necessary assistance to other contractors/ agencies/ vendors involved in the complex for proper and timely execution of the works.

1.7 STATUTORY APPROVAL OF WORKS

1.7.1 Contractor shall make an application on behalf of the Purchaser for submission to CEA/ Electrical Inspectorate along with copies of required certificates complete in all respects and submit to the Engineer-in-Charge for onward transmission well ahead of time so that the actual commissioning of system/ equipment is not delayed for want of inspection by the Inspector. Contractor shall arrange the actual inspection of work by the Electrical Inspector. Necessary coordination and liaison work in this respect shall be the responsibility of the contractor. For PESO/ CCoE approval of imported items, Contractor shall interact with PESO/ CCoE, as required, and obtain their approval for use of the equipment in hazardous areas, as applicable, based on certificates from authorities of countries of origin as supplied by respective equipment manufacturer. Contractor shall carry out all related activities as per directions of Engineer-in-Charge.

1.7.2 The Inspection and acceptance of work as above shall not absolve the Contractor from any of his responsibilities under this contract.

1.7.3 Any other statutory approval of works required for the electrical installation (such as OISD, PESO/CCoE, etc.) is also included in contractor's scope.

Copyright EIL – All rights reserved

SPECIAL INSTRUCTIONS TO VENDOR
(INSTRUMENTATION)

PROJECT : **EPCM SERVICES FOR ETHYLENE CRACKER UNIT AND U&O FOR BINA PETCHEM & REFINERY EXPANSION PROJECT, BPREP**

OWNER : **M/s BHARAT PETROLEUM CORPORATION LIMITED**

UNIT : **UTILITIES AND OFFSITES**

JOB NO. : **B957**

Rev. No	Date	Purpose	Prepared by	Checked by	Approved by
A	17.03.2026	ISSUED FOR TENDER	AS	JJ	AR

Copyright EIL – All rights reserved

1.1 BPCL Bina Refinery located at Bina, Madhya Pradesh is setting a new world scale Ethylene Cracker and Associated Units and Ethylene and Propylene based Petrochemical units for its diversification to Petrochemicals along with expansion of its existing refinery capacity to about 11 MMTPA. As a part of the Petrochemical project, it is proposed to install following facilities. The units/blocks under this Petrochemical Block are as follows:

Unit	Capacity	Licensor
Ethylene Cracker Unit (ECU) & Auxiliary Unit (AU)	1200 KTPA	Lummus
Polypropylene Unit	550 KTPA	Grace
LLDPE/HDPE Swing	2x 575 KTPA	Univation
Butene-1	50 KTPA	Axens
OFFSITE FACILITIES (Engineered by EIL)		
Tank Farms (Tanks, Bullets, Spheres, DWST) **TF-20** (RPG, BTX UNIT FEED, OFFSPEC BENZENE, TOLUENE, C9-180, HEXENE-1 & HEXANE) :- 10 Nos. **TF-21** ETHYLENE DWST:- 2 Nos. **TF-22** OFF SPEC ETHYLENE & RAW C4 MIX/OFFSPEC BUTENE-1:- 2 Nos. **TF-23** ISO PENTANE:- 2 Nos. **TF-24** PROPYLENE & OFF SPEC PROPYLENE:- 6 Nos. **TF-26** BUTENE-1:- 2 Nos. **BDT Area TF** BTX & PFO Storage :- 9 Nos.		
BDT (Bina Dispatch Terminal Augmentation)		
Petchem Loading Gantry		
UTILITY SYSTEMS (Engineered by EIL)		
Steam Generation Package		
Compressed Air and Cryogenic Nitrogen Plant		
Cooling Towers (CT-1 & CT-2)		
RWTP, RODM & ZLDP		
Flare System		
FGRS (Flare Gas Recovery System)		
Raw Water Pumping System		
ETP		
Polymer Warehouse		
Fire Water Pumping System Augmentation		

1.2 This tender covers the Instrumentation works involved in the following units in two parts:

PART A (WEST SIDE) :

- Flare System
- FGRS
- Refrigerated Ethylene Storage tank (DWST) TF21 package
- TF-20
- Raw Water Pumping System
- Cooling Towers (CT-1 & CT-2)
- RWTP, RODM & ZLDP

Copyright EIL – All rights reserved

- Petchem Loading Gantry
- Polymer Warehouse

PART B (EAST SIDE+ BDT) :

- TF-22, 23, 24, 26
- Steam Generation Package
- Compressed Air and Cryogenic Nitrogen Plant
- ETP
- Bina Dispatch Terminal Augmentation

1.3 Electrical Codes : As per IS/ IEC

Area Classification of Field for Tank Farms, BDT (Bina Dispatch Terminal Augmentation), Petchem Loading Gantry, Steam Generation Package, Cooling Towers (CT-1 & CT-2), ETP, Flare System, FGRS (Flare Gas Recovery System): Zone 2 Gas Gr. IIA/IIB, T3

Area classification of Field for Fire water pump house, Compressed Air and Cryogenic Nitrogen Plant, RWTP, RODM & ZLDP, Raw Water Pumping System, Polymer Warehouse : Safe Area

The various Control Rooms (CR) and Satellite Rack rooms (SRRs) associated with as part of the tender are as follows :-

Room	Grouping of units	Location	
		Non-hazardous Area	Hazardous Area
PETCHEM MCR	Operation and Monitoring of following units: ➢ ECU, AU & CT-01 ➢ LLDPE/HDPE Swing & CT-02 ➢ Butene-1 & Tankages TF#20, TF#21,TF#22,TF#23,TF#24,TF#26 ➢ Polypropylene Unit, Flare, FGRS	✓	
SRR-101	ECU & CT-01	✓	
SRR-102	ECU AU	✓	
SRR-103	LLDPE/HDPE Swing & CT-02	✓	
SRR-104	Butene-1 & Tankages TF#22,TF#23,TF#24,TF#26	✓	
SRR-105	Polypropylene Unit, Flare, FGRS & Tankages TF#20, TF#21	✓	
CR-01	Operation and monitoring of Compressed Air and Cryogenic Nitrogen Plant	✓	

Copyright EIL – All rights reserved

CR-02	Operation and monitoring of RWTP, RODM & ZLDP and Raw Water Pumping System	✓	
CR-03	Operation and monitoring of ETP	✓	
CR-04	Operation and monitoring of Petchem Loading Gantry	✓	
Existing CPP Control Room	Operation and monitoring of Steam Generation Package	✓	
UB-2 SRR	Steam Generation Package	✓	
Existing BDT Control Room	Operation and monitoring of Bina Dispatch Terminal Augmentation	✓	
Existing SRR#7	Fire Water Pumping System Augmentation.	✓	
Polymer Warehouse	Operation and monitoring of Bagging and Palletizing Machines	✓	
New Admin Building	For Locating DCS Backup Storage Server and extending F&G & CCTV Consoles.	✓	

The type of power supplies being used in these units is 110 V AC UPS, 110 V DC, 24 V DC, 240 V AC Non-UPS.

1.4 The units covered in this tender (as mentioned above) comprise of the following major packages:

S. No.	Package	Package Vendor	Mode of Execution
	PART A		
1.	FLARE PACKAGE	To be ordered	LSTK (#)
2.	FLARE GAS RECOVERY PACKAGE (FGRS)	To be ordered	$
3.	COOLING TOWER-1 & 2	M/s IWCL	LSTK (#)
4.	REFRIGERATED ETHYLENE STORAGE TANK PACKAGE (DWST) TF-21	M/s VTV	LSTK (#)
5.	RWTP, RODM & ZLDP	M/s VA Tech Wabag	LSTK
6.	ETP	To be ordered	LSTK
7.	POLYMER WAREHOUSE	To be ordered	$
8.	PETCHEM LOADING GANTRY UNLOADING COMPRESSORS	To be ordered	$
	PART B		
1.	COMPRESSED AIR AND CRYOGENIC NITROGEN PLANT	M/s Linde	LSTK
2.	STEAM GENERATION PACKAGE	M/s BHEL	LSTK

$:- Supply by Vendor and Site erection by Instrumentation MEI Contractor.

Copyright EIL – All rights reserved

:- Laying of all cables from package battery limit to respective SRRs by MEI Contractor.

The Control systems considered for the above Units / Systems are as below:

A) Ethylene Cracker Unit (ECU) & Auxiliary Unit (AU), Polypropylene Unit, LLDPE/HDPE Swing, Butene-1, Tank Farms TF-20/21/22/23/24/26, Flare System & FGRS (Flare Gas Recovery System)

Control System for all these Units and its packages shall be in DCS and PLC supplied by Main Plant DCS / PLC Vendor located in the respective SRRs for monitoring and controlling from Petchem MCR.

B) Compressed Air and Cryogenic Nitrogen Plant

Control System of this system / package shall be in package vendor supplied DCS / PLC based control system supplied by Package Vendor for monitoring and controlling in CR-01 with an OFC connectivity to Petchem MCR for data exchange.

C) RWTP, RODM & ZLDP

Control System of this system / package shall be in package vendor supplied DCS / PLC based control system supplied by Package Vendor for monitoring and controlling in CR-02 with an OFC connectivity to Petchem MCR for data exchange.

D) ETP

Control System of this system / package shall be in package vendor supplied DCS / PLC based control system supplied by Package Vendor for monitoring and controlling in CR-03 with an OFC connectivity to Petchem MCR for data exchange.

E) Petchem Loading Gantry

Control System of this loading gantry along with unloading compressors shall be in Terminal Automation System (TAS) along with PLC based control system supplied by TAS Vendor for monitoring and controlling in CR-04 with an OFC connectivity to Petchem MCR for data exchange and TAS console extended to BDT Control Room.

F) Bina Dispatch Terminal Augmentation

BDT Augmentation shall be implemented in existing Terminal Automation System (TAS) along with DCS and PLC based control system supplied by existing TAS Vendor (M/s. Honeywell Automation India Ltd) for monitoring and controlling in existing BDT Control Room.

G) Steam Generation Package

Control System for Steam generation Package shall be implemented in DCS and PLC supplied by package Vendor located in the UB-2 SRR for monitoring and controlling from existing CPP Control Room.

Copyright EIL – All rights reserved

H) Bagging & Palletizing Machine

Control System for Bagging & Palletizing Machines located in Polymer Warehouse shall be implemented in PLC based control system supplied by package Vendor located in the Polymer Warehouse for machines local operation with an OFC connectivity to SRR#104 & SRR#105 for data exchange with Main Plant DCS.

1.5 This document shall be read in conjunction with Standard specifications for erection tender (6-52-0060), specifications, standards, drawings and other documents attached with this tender. The same forming a part of the Tender document consists of Instrumentation works related to above Process units catering to existing refinery revamp at BPCL Bina, Madhya Pradesh.

1.6 This tender comprises of the following SOR document comprising of Instrumentation works of the respective Parts as tabulated below:

Sl. No.	SOR Doc. No.	Part
1	B957-999-69-41-PK-T-9501-A	Part A
2	B957-999-69-41-PK-T-9501-B	Part B

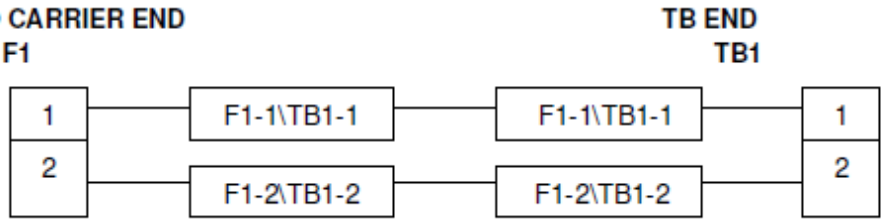
Contractor's scope of work shall include complete Instrument installation and supply with details as listed under "Schedule of rates for Instrumentation Works, scope of work detailed in Standard specification for erection tender 6-52-0060, this document and other standard specifications, & drawings enclosed.
Contractor scope of supply shall also include supply of instrument items specifically listed in the "Schedule of rates" with specifications attached elsewhere in the tender document. Contractor shall refer to the engineering drawings issued for construction at the time of Site work for ascertaining the quantity of each supply item listed in the SORs to be procured by them and finalize the quantity accordingly before procurement with the approval of the Purchaser. The supply items shall be procured from the Project enlisted vendors listed in this document.

Contractor shall understand the requirement of this tender in totality, including various implications of the content of all documents of this tender, before the SOR is filled and quoted.

The instrumentation works shall include, as a minimum:

a) Cable laying also includes laying of cables between junction boxes within package vendor Battery limit/ LCP in the package vendor Battery limit and Petchem Main Control Room (MCR)/ SRR/ other CRs, Cable laying between Petchem Main Control Room (MCR)/ SRR / other CRs and field, cable laying wherever required from package vendor supplied instruments & their junction boxes/LCPs.

b) Instrument installation also includes package vendor supplied loose instruments with or without hook-up materials as per the instruction of engineering–in-charge.



1.7 The Contractor shall be responsible for complete activities including activities of all sub-contractors under him for the complete instrument works as part of his scope.

Copyright EIL – All rights reserved

1.8 The ferruling philosophy/type shall be cross ferruling as detailed below for the cable termination at DCS / PLC based control system end. Silicon sleeve shall be used for cross ferruling.

Ferrules used shall be single sleeve with source destination type.

Example:

Ferruling scope at DCS/ PLC end shall be by Purchaser's DCS/ PLC vendor and at field / Package LCP end by Contractor.

1.9 **Cable duct**

a) Contractor scope shall include the supply, fabrication and erection of instrument cable ducts and its accessories in the main pipe rack, as listed under schedule of rates attached elsewhere in the tender document and as per the drawing (7-52-0254 for GI) attached. Instrument Contractor's scope shall also include removal of duct cover as and when required during Site work execution. Cost of the same shall be considered in the erection of the duct accordingly.

b) Ducts shall be fabricated type as per the drawing (7-52-0254 for GI) and shall be laid as per the overall duct layout drawing B957-999-16-51-00801 & B957-999-16-51-00812 attached with the tender. All the accessories like tee, bends shall be provided as required.

c) Cable duct shall be fabricated out of GI sheets as per 7-52-0254. Bolts & Nuts for ducts shall be of SS material.

d) Contractor's scope shall also include the rectification of defects occurred to ducts caused during cable laying as per SOR (Item No 01II.610).

1.10 **Cable tray**

a) All cables on the main sleeper shall be laid in cable duct. All branch cables shall be run on cable trays. The cable trays shall be made of Hot Dip galvanized MS sheets.
b) Each individual cable routed through trays must be clamped or tied using SS wires. The overall clamping shall be with aluminium clamp instead of tying with cable armour. Nuts/Bolts for cable tray fixing shall be SS.
c) Contractor shall select the vendor of ducts/trays based on the Proven Track Record of six months after installation in commissioned Hydrocarbon Project. (Proven ness considered from the last day of the last month of the Tender Bid due date).

1.11 **Instrument Air Line Installation:**

Copyright EIL – All rights reserved

a) Instrumentation airline pipe & pipe fittings shall be of SS material up to Instrument Air distribution manifold. Material of Tube shall be SS 316L and Tube fittings shall be SS 316.

b) The instrument air supply to individual users shall be as per typical hook-ups drawing 7-52-1904 & 7-52-1905 attached elsewhere in the tender document. Contractor shall lay 1" instrument air line from the header upto the Instrument Air distribution manifold (6/12 way) and further distribution shall be carried out using ½" or ¼" instrument air supply tubing to individual instrument, by Contractor, as per the requirement.

c) Typically, 5 mtrs. of SS tube laying shall be considered in the quoted rates for each control valve tubing hook-up SOR clause..

d) Contractor shall note that the Instrument Air distribution manifold shall be brought close to the individual users and installed in such a way that further distribution of individual ½" or ¼" piping/tubing length shall be maintained at minimum from the end user. A typical airline distribution shall be prepared by contractor at site and shall be submitted to Engineer-In-charge for review/ approval before proceeding with fabrication & erection.

e) Instrument Airline piping/ tubing for valves shall be properly routed in perforated trays in such a way that the operation of the valve, opening of the valve shall not face any hindrance. All Instrument Air distribution manifold shall be tagged. Also contractor shall provide SS tag plate at pneumatic ball valves at Instrument Air distribution manifold end & and at end user for cross identifying both sides for maintenance.

1.12 Contractor shall note the following

a) Loop checking of Temperature transmitter shall include loop checking from the respective RTD/Thermocouple.

b) Installation mentioned in the SOR for the no. of transmitters shall be based on the installation standard mentioned against each type.

1.13 Contractor's scope shall include laying, dressing, tagging, ferruling, glanding, pair / core identification & termination of all field cables in the field instruments/ junction boxes. Refer Annexure-1 for general scope demarcation for site activities between Control System Vendor and Contractor. This shall also be read in conjunction with the SOR and Standard specifications for erection tender (6-52-0060).

1.14 The fieldwork shall be carried out under strict safety regulations and work permits as laid down by the client. The Contractor shall take extreme care in ensuring the safety and all safety gear like helmets, belts, safety shoes etc., for the Contractor's personnel.

1.15 Painting colour of yoke will be intimated during execution.

1.16 **Junction boxes & Cable glands / adaptors**

Copyright EIL – All rights reserved

a) Contractor's scope shall include the supply of various junction boxes and cable glands / adaptors as per the quantity indicated in SOR meeting Standard specifications 6-52-0048 attached with tender from the vendor list as given below:

1) BALIGA LIGHTING EQUIPMENTS (P) LIMITED
2) SUDHIR SWITCHGEARS PVT LTD
3) KAYSONS TECHNO EQUIPMENTS PVT. LTD.
4) FCG HI-TECH PRIVATE LIMITED
5) PEPPERL & FUCHS MANUFACTURING (INDIA) PRIVATE LIMITED
6) FCG POWER INDUSTRIES PVT LTD
7) PHOENIX MECANO INDIA PVT. LTD.
8) FLAMEPROOF EQUIPMENTS PVT.LTD
9) FLEXPRO ELECTRICALS PVT LTD
10) R STAHL PVT LTD

b) All junction boxes shall be weatherproof to IP 65 for intrinsic safe instruments and weatherproof to IP 65 & flameproof Ex'd' to area classification for flame proof instruments as specified in the attached Instrumentation SOR as per as per IS/IEC 60079.

c) Following shall be considered for the junction boxes for the termination of multipair signal cables:

- No. of terminals inside junction boxes: - 48 Nos.
- No. of cable entries for multipair cables: - 2 Nos. of 1 ½" NPT with 1 entry plugged.
- No. of cable entries for single pair cables: - 12 Nos. of 1/2" NPT.
- Color of Junction boxes: - Blue for intrinsic safe instruments & Grey for flameproof/ Exd instruments. The same will be firmed up during junction box drawing review.
- Junction boxes shall have bottom entry for single pair as well as multipair cables.
- Price for the cable glands & plugs shall not be considered in the price of junction boxes since separate SOR items have already been considered for the supply of cable glands and plugs.

d) The junction box terminal block mounting rail, hinges, screw and handle shall be of minimum Stainless Steel material.

e) Actual Tag No for junction boxes will be furnished during junction box drawing review for indicating on the JB name plate.

f) Further to Sl. No. 2.2.5 of Standard specification for Junction boxes and cable glands (6-52-0048) attached with tender, exact cable dimensions shall be verified by Contractor based on the cable dimensions at site for the design of cable glands. Adapters if required to suit to the Purchasers exact cable dimensions shall be in Contractor's scope. No implication on account of supply of cable glands suiting to actual cable dimension is allowed.

g) All cable glands shall be of SS 304 and they shall be of double compression type suitable for armoured cables. Slipper type PVC sleeves (cable shrouds) shall be supplied by contractor over cable glands for all cable entries in junction boxes. Cost of the PVC sleeves shall be considered in the price of the junction boxes.

Copyright EIL – All rights reserved

h) All cable glands shall be flameproof Ex'd' (both JB and Instrument side) irrespective of the area classification.
i) All signal JB's shall be with hinged type cover.
j) Junction Box Terminals shall be 'push-fit clamp on type' with side cable termination.
k) Junction boxes shall be of Bolted design with SS bolts.

1.17 Tube & Tube fittings

a) Contractor's scope shall include the supply SS316L & Copper tube and various SS316 & brass fittings as per the quantity indicated in SOR meeting Standard specifications 6-52-0068 & 6-52-0067 attached with tender from the vendor list as given below:

Vendor list for Tube Fitting (Non HC Service)

1. PRECISION ENGINEERING INDUSTRIES
2. ARCELLOR CONTROLS INDIA
3. SEALEXCEL (INDIA) PVT. LTD.
4. MULTIMETAL INDUSTRIES
5. ARYA CRAFTS & ENGINEERING PVT LTD
6. ASTEC VALVES & FITTINGS PVT. LTD.
7. COMFIT & VALVES PVT. LTD.
8. TRUEWAY ENGINEERING INDUSTRIES
9. PRECISION ENGINEERING INDUSTRIES
10. ASTEC VALVES & FITTINGS PVT. LTD
11. FITOK INCORPORATED
12. SWAGELOK COMPANY
13. EXCELSIOR ENGG. WORKS
14. EXCEL HYDRO PNEUMATICS PVT LTD
15. WESMEC ENGINEERING PRIVATE LIMITED
16. PRIME ENGINEERS
17. HAM-LET (ISRAEL-CANADA) LTD.
18. PARKER HANNIFIN CORPORATION
19. SSP FITTINGS CORPORATION
20. TK FUJIKIN CORPORATION
21. APTEK INSTRUMENTATION PVT LTD
22. HAVI ENGINEERING INDIA PVT LTD
23. MET-LOK VALVES AND FITTINGS
24. FLUID CONTROLS PVT LTD
25. PANAM ENGINEERS LIMITED
26. HP VALVES & FITTINGS INDIA PRIVATE LTD
27. SHREEMARUTI INSTRUMENTS PVT LIMITED
28. MET-LOK VALVES AND FITTINGS
29. DK-LOK CORPORATION
30. TUBEFIT ENGINEERS
31. VENTIL FLOWSERVE PRIVATE LIMITED
32. SHARP ENGINEERING
33. CRANE INSTRUMENTATION & SAMPLING PFT CORP.
34. SWASTIK ENGINEERING WORKS

Vendor list for Instrument Tubing (Non HC Service)

Copyright EIL – All rights reserved

1. RATNAMANI METALS AND TUBES LTD
2. TK FUJIKIN CORPORATION
3. SHUBHLAXMI METALS AND TUBES PVT. LTD
4. REMI EDELSTAHL TUBULARS LTD (FORM RMIL)
5. SURAJ LIMITED
6. KRYSTAL GLOBAL ENGINEERING LIMITED
7. MAXIM TUBES COMPANY PVT LTD
8. TUBACEX TUBES AND PIPES PRIVATE LIMITED
9. HEAVY METAL & TUBES (INDIA) PRIVATE LTD
10. JINDAL SAW LTD (KOSI WORKS)
11. DK-LOK CORPORATION

b) Contractor shall ensure that SS316L tubes offered by them shall have molybdenum content of minimum 2.5%.

c) All SS316 fittings shall be flare less double compression type.

d) Copper tubes covered in the SOR shall be BARE type.

e) Contractor shall also follow Inspection & Test Plan (ITP) for 6-81-2067 & 6-81-2068 Inspection and test plan for instrument tubing and instrument tube fittings attached with tender.

f) Tube and tube fittings and Instrument Valves shall be supplied from the vendor list mentioned above. However, Contractor to note that tube and tube fittings and Instrument Valves for the hydrocarbon service as mentioned in Item Nos. 01II.550.70.3V2, 01II.550.50.1V75, 01II.550.50.1V76, 01II.550.50.4V12 in B957-999-69-41-PK-T-9501-B shall be supplied from the Project vendor list as given below ONLY:

	SS TUBES (HC SERVICES)	
Sl No.	Supplier Name	Country
1	SANDVIK ASIA PVT. LTD.	INDIA
2	BOMBAY FLUID SYSTEM COMPONENTS (P) (SWAGELOK Make)	INDIA
3	SUPER TECHNICAL(INDIA) PVT LTD. (PARKER Make)	INDIA
	TUBE FITTINGS (HC SERVICES) & SS ISOLATION VALVE HC SERVICE	
Sl No.	Supplier Name	Country
1	BOMBAY FLUID SYSTEM COMPONENTS (P) (SWAGELOK Make)	INDIA
2	SUPER TECHNICAL(INDIA) PVT LTD. (PARKER Make)	INDIA

1.18 **Instrument Air ball valves**

a) Contractor's scope shall include the supply of ½" Instrument air SS316 ball vales as per Standard Specifications for Instrument Valves and Manifolds (6-52-0069) enclosed with tender from the vendor list as given below:

Vendor list for Instrument Valves and Manifolds (Non HC Service)

Copyright EIL – All rights reserved

1. SHREEMARUTI INSTRUMENTS PVT LIMITED (INDIA)
2. EXCEL HYDRO PNEUMATICS PVT LTD (INDIA)
3. COMFIT & VALVES PVT. LTD. (INDIA)
4. BAUMER TECHNOLOGIES INDIA PVT.LTD (INDIA)
5. ASTEC VALVES & FITTINGS PVT. LTD. (INDIA)
6. ARYA CRAFTS & ENGINEERING PVT LTD (INDIA)
7. FLUID CONTROLS PVT LTD (INDIA)
8. SWASTIK ENGINEERING WORKS (INDIA)
9. CHEMTROLS INDUSTRIES PVT. LTD. (INDIA)
10. PANAM ENGINEERS LIMITED (INDIA)
11. HAVI ENGINEERING INDIA PVT LTD (INDIA)
12. HP VALVES & FITTINGS INDIA PRIVATE LTD (INDIA)
13. MET-LOK VALVES AND FITTINGS (INDIA)
14. HAM-LET (ISRAEL-CANADA) LTD. (ISRAEL)
15. PRIME ENGINEERS (INDIA)
16. PARKER HANNIFIN CORPORATION (UNITED STATES)
17. TK FUJIKIN CORPORATION (KOREA)
18. ANDERSON GREENWOOD CROSBY (UNITED STATES)
19. CRANE INSTRUMENTATION & SAMPLING, INC. (UNITED STATES)
20. METAVAL ENGINEERING PRIVATE LIMITED (INDIA)
21. EXCELSIOR ENGG. WORKS (INDIA)
22. WIKA PROCESS SOLUTIONS INDIA PRIVATE LIMITED (INDIA)
23. MET-LOK VALVES AND FITTINGS (INDIA)
24. SWAGELOK LIMITED (UNITED KINGDOM)
25. SWAGELOK COMPANY (UNITED STATES)
26. ASTEC VALVES & FITTINGS PVT. LTD. (INDIA)
27. WESMEC ENGINEERING PRIVATE LIMITED (INDIA)
28. PRECISION ENGINEERING INDUSTRIES (INDIA)

1.19 Cable entry into the Control rooms shall be through Multi Cable Transit (MCT) blocks. MCT frames/blocks shall be supplied by Purchaser (through control system vendor) and MCT frames shall be installed by Contractor. Refer Annexure-1 for general scope demarcation for site activities between Control System Vendor and Contractor.

1.20 Contractor's scope shall include installation of ISMC for Junction box installation, wherever any column/structure not available. This includes providing anchor/ fasteners/ welding of base plate etc. Refer SOR Item No. 01II.600.11 regarding installation of junction boxes on free standing support including supply, fabrication and installation of supports along with required ISMC channel and accessories and as per instructions of Site In-charge. Refer to Std. drgs. 7-52-0104 & 7-52-0106 attached with the tender.

1.21 The Contractor shall order 50% of perforated trays, angle trays, ducts, junction boxes, glands and Canopies required as per the schedule of rates immediately on placing of order. Rest shall be ordered as per the actual site requirements and AFC drawings but within the project time frame for that activity.

1.22 Contractor's scope shall include the PMI (Positive material Identification) test for all the pipe and fittings of instrument impulse line hook-ups of Alloy steel (AS) and stainless steel (SS) material. The cost of the above is deemed to be included by the Contractor in the rate quoted for all impulse line installations in Stainless steel (SS) and Alloy steel (AS).

Copyright EIL – All rights reserved

1.23 Contractor's scope shall include making holes in the RCC for fixing up of supports for instrumentation items, trays, JB frames etc.

1.24 For installation of instruments on Pre-fabricated hookups, Contractor's scope shall include erection of supports on the main pipeline wherever required, as per the respective installation standards and as per the instruction of Engineering-in-charge. Field transmitter supports should be properly clamped to the pipe for pre-fabricated wherever required and closed couple installation. No air gap shall be kept between support clamp and pipe.

1.25 Location and flow direction of on-line instruments including Orifice Plates, Control valves and On-Off Valves, Mass Flow Meters, etc. shall be checked by the Contractor. Contractor shall also check & report to the Engineer-in-Charge for advising the Piping erection team for the correct orientation of pressure taps of orifice flanges prior to welding of the first isolation valves In case of any discrepancy, the same shall be reported to the Engineer-in-Charge immediately for rectification.

1.26 The drawings for canopies enclosed with tender are with FRP construction and same shall be considered for transmitters & JB. Prefabricated FRP canopy for transmitters shall cover top and all 3 sides. Canopy for JB shall cover 3 SIDES. Canopy thickness shall be 3mm minimum. FRP canopy shall have Acrylic window & mounting bracket plate material shall be SS304. Color of the canopy shall be Light grey. Tag number shall be painted on the canopy. Glass content mentioned in 7-52-0105 shall be read as 30%.

1.27 Canopy for junction boxes in shutdown service the background color of tagging shall be red and a further label shall be fitted stating "This box contains trip circuits".

1.28 Canopy for junction boxes in intrinsically safe junction boxes the background color shall be blue and a further label shall be fitted stating "This box contains I.S. circuits".

1.29 Canopy for DP type flow / pressure instruments shall be designed by the contractor properly coordinating the actual installation requirements and ensuring that the valve manifold is kept outside the canopy for operation without removing the canopy for both normal and prefabricated hookups. Contractor shall ensure 1 sample canopy of each application are brought to site and coordinated with exact installation prior to giving the manufacturing clearance for the canopies.

1.30 Typical characteristics of FRP canopy shall be following:

a) High mechanical strength
b) Weather resistant (Resistant to most of the acids, alkalies vapors & fumes).
c) UV resistant
d) Anti-Static
e) Special rubber grommets for Cable/ Tube entry.

1.31 Contractor to select vendor based on their proven track record of installation in Hydrocarbon Projects. Contractor shall submit all the canopy drawings to Purchaser for approval.

1.32 Contractor shall follow Piping material specification attached elsewhere with the tender and its requirements like welding, testing, NDT etc.

Copyright EIL – All rights reserved

1.33 Documentation shall be provided as per the Doc. No. 6-78-0002 “Specification for documentation requirements from Contractors”.

1.34 Contractor shall follow the Doc. No. 6-78-0001 “Specification for quality management system requirements from bidders”.

1.35 Contractor shall ensure adequate monsoon protection while carrying out instrumentation work stipulated under the Contract.

1.36 Contractor shall follow Inspection & Test Plan (ITP) for Instrumentation work 6-82-3400. However, for instrument loop checking Annexure-1 & 2 of Standard specification for erection tender (6-52-0060) shall be followed.

1.37 For Optical fiber cable laying, Contractor shall consider all associated activities for cable splicing, light testing etc. For cable laying in HDPE conduit, Contractor shall consider all the required equipments like blowing machine, compressor etc., rate for the same deemed to be included in the respective SOR item.

1.38 For installation of miscellaneous items as per SOR (Item No 01II.450), bidder shall not consider supply & installation of Yoke support for items like Air filter Regulators/ Boosters/ Quick Exhaust Valve/ Air Lock Relays, Volume bottles and accessories like Volume boosters, Quick exhaust relay etc. However, required tubing works for the installation of the same will be in Contractor’s scope.

1.39 Cable Drum schedule shall be provided with approximate lengths. However, Contractor shall measure the actual length and shall cut the cable with the approval of Engineering-in-charge. Cable drums maybe be provided with RFID tags containing cable drum details information. The contractor shall coordinate with the Engineer-in charge during cable drum allotment for updating the same in the Site Cable drum allocation system.

1.40 Contractor shall carryout painting as per painting specifications attached elsewhere with the tender.

1.41 Refer to Standard specification for erection tender (6-52-0060): Project specification attached with the tender shall be referred for the ‘’6-44-0016’’ wherever mentioned in 6-52-0060.

1.42 Refer to Cl. No. 3.1.6.33 & 4.14 of Standard specification for erection tender (6-52-0060) fire proofing of cable duct and trays are not applicable for this Project.

1.43 Refer to 3.2.2 of Standard specification for erection tender (6-52-0060). Installation of line mounted instruments like Control valves, On-Off Valves, Coriolis Mass Flow Meters, Ultrasonic Flow Meter, Magnetic Flow Meters, Vortex Flow Meter, Variable Area Flow Meters, Venturi Flow Meter, Integral Orifice Flow Meter, Pressure Safety Valves, Self Actuated Pressure Control Valves, etc. shall be in Contractor’s scope as per SOR Item No. 01II.950.

1.44 Refer to 3.2.7 of Standard specification for erection tender (6-52-0060). Painting of impulse lines shall be in Contractor’s scope as per SOR Item No. 01II.950.13.

1.45 Refer to Instrumentation SOR item 01II.500.20: Price for Loop checking from DCS/PLC system shall not be considered as separate price for the same has been considered under SOR item 01II.510.

Copyright EIL – All rights reserved

1.46 All the Instrumentation drawings attached with the tender are only for reference. Latest revision of drawings shall be provided to after award of contract as part of site erection.

1.47 The installation hookup drawings attached with the tender may vary. Exact installation hookup drawings shall be provided to after award of contract as part of site erection. Contractor shall note that for the instrument installation of any new installation standard over and above that referred in the tender, contractor shall execute the installation work based on the rates for the similar installation standard attached with the tender. Similarly, shall be the case for the various testing requirements like PWHT & Radiography also.

1.48 All items supplied by Contractor shall be inspected at respective manufacturer works as per the inspection test plans attached elsewhere with the tender.

1.49 Further to Cl No. 4.8.12 of Doc. No. 6-52-0060, all multipair cables shall have identification tag with JB no. at every 50-meter interval even in duct.

1.50 Contractor's scope shall also include communication systems like walky / talky or flameproof mobiles required for field activities like loop checking etc for field coordination.

1.51 Contractor's scope shall also include the preparation of witness calibration certificate after the calibration of various PSV/TSV. Contractor to note that each safety relief valve shall be subjected to a seat leakage test in accordance with API standard 527 and acceptance criteria shall be zero leak (no bubbles). The test medium shall be air or N2, irrespective of service fluid mentioned in data sheet. Valves should be with zero leak at 90 % of the set pressure.

1.52 MOC of earthing wire for SOR items under Nos. 01II.650 shall be copper instead of GI wires. The JBs carrying 110 V AC/ DC signals shall also be body earthed to the plant power earthing system. However, the power earthing of the 24 V DC signal JBs is not required.

Annexure-1

Scope demarcation for site activities between Control System Vendor and MEI Contractor:

S. no.	*Activity*	*Control System Vendor Scope*	*MEI Contractor Scope*
1.	Installation of MCT frames & blocks including the installation of insert blocks, stay plates, dummy blocks etc.	No	Yes
2.	Cable laying till MCT frame	No	Yes
3.	Cable laying from MCT (including pulling through MCT frames and fixing the insert blocks) to cabinets in existing / new control room / Rack Room including free issue (package cabinets).	No	Yes

Copyright EIL – All rights reserved

4.	Multipair cable continuity checking and meggering from existing control room to field	No	Yes
5.	Tagging, glanding, ferruling and termination of cables in cabinets in existing control room including free issue (package cabinets) & including supply of glands.	Yes	No
6.	Shifting of control system vendor panels from Purchasers Warehouse to existing / new control room / rack room.	Yes	No
7.	Shifting of Package Vendor supplied panels / cabinet from Purchasers Warehouse to existing / new control room / rack room.	No	Yes
8.	Installation of control system vendor panels in existing / new control room / rack room.	Yes	No
9.	Coordination with control system Vendor for estimating the exact cable distance from field to cabinet and also smooth handover of cables at respective panel.	Yes	Yes

The scope demarcation as mentioned above is for Contractor's general information. However, any activity required to be carried out by the Contractor at the field shall be executed by Contractor based on the SOR rates. However, for CR-01, CR-02, CR-03 and UB2-SRR all activities shall be carried out by the respective LSTK contractor.

Cables mentioned above pertains all types of cable i.e. Serial, OFC, Multipair, Power, as applicable.

As a general philosophy, since Petchem MCR is located in Part B Area, all interconnecting OFC cables from various SRR's / CR (irrespective of the location of SRR / CR in Part A / Part B area) to Petchem MCR shall be in the scope of Part B contractor scope.

Part B contractors' scope shall include laying of OFC cable from Petchem MCR to BDT Control Room and also to New Admin Building. Also, Part B contractors' scope shall include OFC cable laying from New Admin Building to BPCLs Township (outside Refinery / Petrochemical area) Tapti Complex and Township Data Center along with the preparation of trench 300 mm (W) x 1000 mm (D).

However, scope of supply & installation of ducts shall be in the respective Part A / Part B contractor scope as per the respective areas as mentioned in the overall duct layout attached with the tender.

Price for item no. 01II.610 mentioned in the Instrumentation SOR shall be quoted considering the activities mentioned in the table above.

Copyright EIL – All rights reserved

1.53 SITE CONDITIONS

The site environmental site conditions are as follows:

- Ambient temperature (Min & Max): 1.1°C & 45.6°C
- Relative Humidity (%): 16@ t min; 80@ t max
- Rainfall data for 24-hours: 360 mm. Total annual rainfall is 900-1100 mm.

ANNEXURE-I: INHIBITOR EFFICIENCY TEST PROCEDURE

Copyrights EIL – All rights reserved

1.0 SCOPE

1.1 This specification covers the requirement of pre-commissioning chemical cleaning and post-cleaning passivation treatment of fabricated and erected carbon steel compressor suction lines, inter stage suction lines, knock out drums and spillback lines of compressors at plant site prior to commissioning by chemicals circulation method. This technical procedure is applicable and suitable only for carbon steel surfaces. Materials other than carbon steel should not come in contact with pickling solutions. Refer clause 1.4 of this specification for exceptions.

1.2 This specification defines the procedure for the chemical cleaning and passivation. However, EPC/LSTK Contractor shall prepare the detailed chemical cleaning markup on the applicable P&IDs and submit for EIL review & approval

1.3 All valves, gaskets, control valves including butterfly valves, filters, venturies, instruments etc. that may be damaged during chemical cleaning should be dropped before chemical cleaning.

1.4 All accessories dropped from the loop prior to cleaning/pickling are to be boxed up as per the procedures after successful completion of cleaning/pickling process and inspection of the loop. After boxing up the loop, the same shall be inspected for completeness by contractor / EIL.

1.5 In case the valves, a portion of piping and equipment made of material other than carbon steel can't be isolated from the loop, then the procedure given in clause 15.0 shall be followed.

1.6 In case of contractor wish to use HCL method then it is mandatory to ensure that, HCL method will not impart any adverse effect to the service or catalysts.

1.7 Where lines are required to be chemically cleaned, the limit of cleaning in branch lines (which are not marked or not necessary) shall be to the first block valve or flange.

2.0 OBJECTIVE

The object of chemical cleaning of carbon steel items is to remove the loose rust, dislodging the burs, welding slag and mill scales adhering to the internal surface so that maintenance of compressors is reduced due to frequent choking of strainers. This procedure specifies the method of cleaning and passivation of internal surface of carbon steel items, based on use of inhibited hydrochloric acid followed by passivation with SHMP (Sodium Hexa-Meta Phosphate), prior to taking in service for the first time after installation/ fabrication.

This cleaning will enable the removal of:

a) Paint or varnish, if used for protective purposes.
b) Grease or oil
c) Mill scales
d) Loose rust
e) Welding slag

Copyrights EIL – All rights reserved

Any deviation from this specification should be recorded and shall have approval from owner/ owner's representative prior to application. The final result of this cleaning is that the metal surfaces are completely clean, dry and passivated without signs of corrosion.

3.0 PREPARATION OF TEMPORARY CIRCUITS AND SPECIFIC REQUIREMENT OF EQUIPMENT AND FACILITIES FOR CARRYING OUT CHEMICAL CLEANING

3.1 The cleaning may be carried out by circulating the specified solutions in the specified sequence and conditions.

3.2 Temporary piping and a pump of appropriate capacity suitable for chemical cleaning may be used for this purpose as part of the circuit.

3.3 The pump capacity shall be adequate to the required head of the highest point of the chemical cleaning circuit and to obtain a flow velocity of approximately 0.5 m/s in the maximum diameter piping of the circuit with full bore liquid flow.

3.4 Flow meter, pressure gauges and temperature gauges at discharge of the pump and highest point of the circuit both shall be installed in the chemical cleaning circuit. The flow, temperature and pressure gauges must have been prior tested, calibrated by the contractor / agency and the calibration certificates shall be submitted to EIL for review prior to the installation in the cleaning /pickling loop.

3.5 All necessary temporary piping, fittings, flanges, pumps, tanks, heater coils, gaskets, thermometers, hydrometers, valves, test coupons, spares, field laboratory facilities with all accessories required for conducting testing during cleaning operation, chemicals and safety accessories for operation personnel etc. shall be arranged by the contractor at site prior to chemical cleaning.

3.6 Approximately one meter length of a rusted spool piece of CS with flange at both the ends and having minimum diameter of 4" or above shall be kept in chemical cleaning circuit so as to visually inspect the same after chemical cleaning and passivation is done.

3.7 The temporary piping should be of carbon steel with minimum 3" dia size including drain line. The chemical solution tank capacity shall be 40% of the hold up volume of the cleaning circuit.

3.8 The contractor should arrange for at least 3 nos. HDPE / MSRL tanks of 10 cubic meter capacity for acid solution, alkali solution and water.

3.9 Heating shall be done by purging of medium Pressure (MP) / Low Pressure (LP) steam or by using boiler / electrical heater etc. In case of heating by media other than steam, the contractor shall arrange the equipment for the same.

3.10 The required number of operating and supervisory manpower to be involved and deployed in the cleaning /pickling operations shall be submitted by the contractor to EIL so as to ensure continuous availability of manpower for supervision, monitoring and making reports during the operation.

4.0 SEQUENCE OF OPERATION

The sequence of operations shall be as follows:

Copyrights EIL – All rights reserved

a) Flushing with water to remove dirt, dust, loose rust and any foreign matter.
b) Degreasing by alkali circulation.
c) Inhibited acid circulation.
d) Neutralization with soda ash / caustic soda.
e) Rinsing.
f) Passivation by SHMP solution circulation.
g) Drying and preservation.

5.0 CHEMICALS

The following chemicals are recommended for use in chemical cleaning operation:

5.1 Caustic Soda- technical grade conforming to IS: 252 (latest edition).

5.2 Hydrochloric acid-commercial / technical grade conforming to IS: 265 (latest edition).

5.3 Corrosion inhibitor- Rodine-213 special or equivalent.

5.4 Glassy SHMP conforming to IS: 574 (latest edition).

5.5 Soda ash, technical grade, conforming to IS: 251 (latest edition).

5.6 Potable water should be used for preparation of chemicals solution and flushing / rinsing operation etc.

5.7 All chemicals used for chemical cleaning should be as per specifications and shall be with test certificates from manufacturers. The same shall be reviewed by EIL. All chemicals used for chemical cleaning shall be tested in owners' laboratory for purity, specific gravity, chlorides, iron (Fe), and other impurities, if any. The same shall be submitted to EIL for review.

6.0 INSPECTION OF CORROSION INHIBITOR EFFICIENCY

A solution of inhibitor shall be prepared in hydrochloric acid as specified by the manufacturer and shall be tested for (a) the inhibitor efficiency and (b) the effectiveness of the solution in removing mill scale as per Annexure-I. The same shall be witnessed by EIL.

7.0 CLEANING PROCEDURE

The chemical cleaning shall be carried out as follows:

7.1 The circuit (loop) shall be checked with circulation of water to test its tightness. Any leakage, if observed, shall be attended and tightened.

7.2 The circuit (loop) shall be flushed with water to remove all extraneous matter, dirt and dust etc.

7.3 Filling and circulation of sodium hydroxide solution for 2 hours (min.)

7.3.1 Temperature of sodium hydroxide solution during circulation should be 55-65^{0}C.

Copyrights EIL – All rights reserved

7.3.2 Concentration of sodium hydroxide should be 20 g/ l (on 100% purity basis).

7.4 Drain the sodium hydroxide solution. Fill with water and drain. This operation of rinsing with water should be continued till the pH of water at inlet and outlet ends are same.

7.5 Filling and circulation of inhibited hydrochloric acid solution for 6 hrs. (min)

7.5.1 Temperature of inhibited hydrochloric acid solution during circulation should be 50-60 ^{0}C.

7.5.2 Concentration of hydrochloric acid solution should be 5-10% (typically 8%) by wt. HCl (on 100% purity basis) and Rodine-213 special or equivalent should be added in the acid solution in proportion of 1 litre of Rodine-213 special or its equivalent to 100 liters of 30-33% HCl. However, exact concentration and duration of acid solution used shall be decided based on visual inspection of carbon steel piping for presence of rust and mil scale.

7.6 Drain the inhibited HCl solution. Fill the system with 1-2 % solution of soda ash or caustic soda and circulate for 1 hour at 40-45 ^{0}C.

7.7 Drain the neutralizing solution. Fill with water and drain. This operation of rinsing with water should be continued till the pH of water at the inlet and outlet ends is same.

7.8 Filling and circulation of SHMP solution for 2 hrs. Then hold for 10-12 hrs.

7.8.1 Concentration of SHMP solution should be 2-3% by wt. (on 67% P2O5 basis).

7.8.2 Temperature of SHMP solution during circulation should be 70-75 deg C.

Note: To prevent re-oxidation, the passivation solution must be introduced immediately after the flushing operation as per clause 7.7.

7.8.3 Drain the passivated solution without flushing with water. Then allow self-drying.

7.9 Finally dry the circuit with clean dry instrument air circulation.

7.10 The operations (7.1 to 7.9) in any one loop, when commenced, must be completed without interruptions.

8.0 OPERATION AND MONITORING:

Satisfactory performance of the chemical cleaning depends upon proper operation. Following steps should be considered during preparation of loops and operation:

8.1 Full bore flow should be ensured while circulating various chemicals. Pressure and temperature gauges shall be provided in the circuit for monitoring of pressure and temperature during the chemical cleaning job.

8.2 Vents should be provided in all high points including large diameter horizontal pipes for effective removal of air and acid fumes during cleaning operation. All vents should be operated intermittently to ensure full bore flow throughout the operation and no air pockets should be left in the system during pickling operation.

Copyrights EIL – All rights reserved

8.3 Drain valves should be provided at all low points for effective circulation of pickling solution and removal of sludge, if any, and no trapping of chemicals at time of changing of chemicals.

8.4 Suitable high-pressure pumps of at least 100 HP capacity with 50 m head and with necessary flow rate of 50-100 m^3/hr should be provided to maintain good velocity (approximately 0.5 m/s) throughout operation and there should be effective return of flow from all outlets and vent lines. Minimum two pumps should be provided (one under operation and another standby). The pumps should be of adequate head to maintain the required velocity in the circuit. The efficiency of pump should be checked periodically.

8.5 While preparation of loop, equipment like coolers and suction drums should not be taken into circuit. Pickling of equipment or suction drums should be done separately.

8.6 Flushing should be done with high velocity water in reverse direction for effective removal of dirt, dust, loose rust and any foreign matter etc.

8.7 The corrosion inhibitor efficiency should be determined in the laboratory before pickling is started and witnessed by EIL.

8.8 All chemicals should be tested as per specifications before use. The contractor should also furnish the test certificates for all chemicals used for pickling operation for review by EIL.

8.9 Whenever acid is added, the corrosion inhibitor should be added first.

8.10 Standard solution for determination of iron in acid solution is required prior to pickling operation.

8.11 During pickling operation, 2 weighted carbon steel test coupons should be exposed, one inside the inhibited acid solution in the tank and another at the return line. The mill scale free coupons should be removed after acid circulation is over for determination of loss of weight. The coupons with mill scale are intended for indicating removal of mill scale after acid circulation and can be removed after completion of operation for final inspection.

8.12 Acid strength, total iron and ferric iron should be determined every hour during operation. Periodically acid strength should also be checked from all outlets, vents and drain lines.

8.13 After acid pickling and neutralization, water flushing will be carried out and continued till a pH ~ 7.0 is obtained at outlets so that it facilitates the subsequent passivation with sodium hexametaphosphate.

8.14 During SHMP circulation, presence of phosphate should be checked from all outlets, vents and drain lines.

8.15 All data should be recorded in checklist during pickling operation including chemicals consumption and observations, if any.

8.16 Segment(s) of CS piping, if any, which cannot be conveniently cleaned by chemicals circulation method may be cleaned by filling and/or dipping/immersion method. All the conditions of above operations are generally applicable for this method.

Copyrights EIL – All rights reserved

9.0 CONTROLS FOR THE CLEANING PROCESS

9.1 All the specified parameters shall be followed during the cleaning process. All tests should be conducted by the contractor to control the process.

9.2 The strength of the cleaning solutions shall be checked for acid concentration every hour during the cleaning operation. If the strength is found to below 5% by wt., the solution shall be drained in part and brought in the specified range of 5-10% wt. by addition of fresh acid.

9.3 The total iron and ferric iron content of the cleaning solution should be monitored to avoid the attack on the metal. The total iron content shall not exceed 5000 mg as Fe in 1 liter of the cleaning solution. The limits for iron as ferric iron shall not exceed 0.4% by wt. If the limits for total iron and ferric iron are attained, the cleaning solution shall be drained in part and brought in the specified range by addition of fresh solution.

9.4 During the cleaning / pickling operations, care should be taken not to exceed the design temperature and pressure of the loop at any point of time.

10.0 PRESERVATION

The pickled and passivated lines should be preserved in clean and dry condition. The necessary preservation procedure should be followed as recommended by EIL/ owner as per the preservation period. The preservation shall be done by filling with nitrogen if the compressor is not commissioned immediately.

11.0 NEUTRALISATION

Contractor shall finalize the disposal scheme in consultation with OWNER/PMC before start of the chemical cleaning activity and shall comply to all the necessary OWNER's requirements. The contractor shall make necessary arrangement for complete neutralization of all effluents like acids & alkalis. The effluents shall be analyzed before discharging and if necessary, additional chemicals shall be added for neutralization so that discharged mixtures shall have pH ~7.0.

12.0 INSPECTION

In the temporary piping loop, a temporary carbon steel spool of approximately one meter length shall be incorporated at a suitable location. After pickling and drying operation, visual inspection of the temporary spool, coupons and of the loop should be carried out at convenient location(s) as seen from ends to ensure the surfaces are completely clean, dry and free from rust giving uniform gray appearance on the original surface. The visual observations shall be recorded.

13.0 SAFETY PRECAUTIONS

The alkali and hydrochloric acid solutions involved for chemical cleaning are corrosive for the skin and proper care shall be taken in the handling of the chemicals.

13.1 Adequate ventilation shall be provided during the acid cleaning operation to protect the health of workmen.

Copyrights EIL – All rights reserved

13.2 The handling of acid preparation bath etc. and heating must be supervised by a competent supervisor.

13.3 Safety goggles shall be worn by operators and workmen during pickling operation.

13.4 Rubber aprons, protective boots and hand gloves shall be worn by workmen.

13.5 Temporary barricades shall be provided around the areas where acid and alkali is being handled and entry in to the barricaded areas shall be strictly with proper safety gears

14.0 TECHNICAL SUPERVISION AND QUALITY ACCEPTANCE

The chemical cleaning operation should be conducted under close chemical controls by the contractor and EIL site construction department. The EIL site may have technical guidance from the EIL, Process department during the execution and quality acceptance. SMMS may be consulted for technical guidance for initial startup during the execution the chemical cleaning and passivation. The acceptance of cleaning shall be done by EIL site as per the contractual requirements.

15.0 ALTERNATE PROCEDURE TO BE USED IN CASE OF CS/ LOW ALLOY STEEL IN COMBINATION WITH SS

PROCEDURE FOR CHEMICAL CLEANING OF CARBON STEEL, LOW ALLOY STEELIN COMBINATION WITH STAINLESS STEEL PIPING AND STAINLESS STEELVALVES /VESSELS, PRIOR TO COMMISSIONING BY INHIBITED AMMONIATED CITRIC ACID CIRCULATION METHOD.

1.0 SCOPE

This specification covers the chemical cleaning (pickling) of the fabricated and erected, carbon steel, low alloy steel and with stainless steel combination piping at site prior to commissioning by chemicals circulation method. The technical specifications describe the procedure and sequence of operations for chemical cleaning (pickling) and passivation of the piping.

2.0 OBJECTIVE

The objective of chemical cleaning of, carbon steel, low alloy steel with stainless steel combination piping is to remove the loose rust, dislodging the burs, welding slag and mill scales adhering to the internal surfaces of piping. The procedure specifies the method of cleaning and passivation of internal surface of piping based on the use of ammoniated citric acid followed by passivation with tri-sodium phosphate (Na_3PO_4) + $NaNO_2$ circulation. Any deviation from this specification should be recorded and discussed with owner/EIL prior to application.

3.0 SEQUENCE OF OPERATION

The cleaning of piping shall be carried out in the following sequence:

(a) Flushing with potable water to remove dirt, dust, loose rust and foreign matter followed by DM water flushing.

(b) Degreasing with potassium hydroxide (caustic potash).

Copyrights EIL – All rights reserved

(c) Flushing with DM water till inlet and outlet water pH is same

(d) Circulating with ammoniated inhibited citric acid

(e) Flushing with DM water

(f) Circulating with tri-sodium phosphate (Na_3PO_4) + sodium nitrite (NaNO2)

(g) Drain, dry and take the system into service

(h) If the pipe is not taken into service immediately after drying the pipe should be filled with N2 and capped at both ends.

4.0 PREPARATION OF TEMPORARY CIRCUITS

Temporary piping, pumps of suitable capacity, fittings, flanges, tanks, gaskets, heating arrangement, hydrometers, valves, test coupons, spares, laboratory facilities with all accessories required for conducting tests during cleaning operation, chemicals and safety accessories for operation, personnel etc. shall be arranged by contractor at site prior to cleaning operation. Quantity of chemicals required should be calculated based on the holdup volume of the temporary circuit.

5.0 PROCEDURE

5.1 The circuit (loop) shall be checked with circulation of potable water to check tightness. Any leakage if observed to be attended and tightened.

5.2 The circuit (loop) shall be flushed initially with potable water to remove all extraneous matter, dirt and dust etc. followed by DM water flushing.

5.3 Filling and circulation of potassium hydroxide (caustic potash) solution of 2% concentration on 100% purity basis in DM Water at 55-65^{0}C temperature for 2 hours.

5.4 Drain the potassium hydroxide solution. Fill with DM water and drain. The operation of rinsing with DM water should be continued till pH of water at inlet and outlet ends are same.

5.5 Filling and circulation of ammoniated citric acid of 3% concentration by weight (on 100% purity basis) in DM water with pH being adjusted to 3.5-4.0 with ammonia and 0.1% corrosion inhibitor Rodine 92 or equivalent by weight. The temperature of circulating citric acid solution should be 80^{0}C. The circulation should be continued for 6 hrs.

5.6 During circulation of ammoniated citric acid, the total iron content of the circulating solution should not exceed 5000 mg/l (with 3% w/w citric acid solution) and pH should be maintained at 3.5-4.0. If at any stage total iron content exceeds 5000 mg/l, the acid should be drained in part and replaced with fresh acid.

5.7 Drain the citric acid and rinse with DM water. Fill with DM water and the operation of rinsing with potable water should be continued till pH at inlet and outlet ends of water are same.

Copyrights EIL – All rights reserved

5.8 Fill with tri-sodium phosphate (1%) + sodium nitrite (0.5%) by weight (on 100% purity basis) and circulate for 2 hours. Drain, allow to self dry and finally dry with compressed air.

5.9 Suitable high pressure pumps with necessary flow rate should be provided to maintain good velocity (preferably 0.5m-1m/s) throughout operations of chemical cleaning and there should be effective return of flow from the outlet and the vent.

6.0 CHEMICALS

Chemicals used for chemical cleaning should conform to the following specifications.

6.1 Citric acid monohydrate, conforming to IS:5464-1970 Gr.2
6.2 Corrosion inhibitor Rodine 92 or equivalent
6.3 Ammonia liquor technical grade, conforming to IS: 799-1978
6.3 Potassium hydroxide (KOH) conforming to IS:6831 latest edition
6.5 Tri sodium phosphate (Na_3PO_4) technical grade as per IS:573.
6.6 $NaNO_2$ IS-879-1981 sodium nitrite
6.7 Potable water for flushing should have chlorides of 50 ppm maximum.
6.8 DM water.

7.0 SAFETY PRECAUTIONS:

The alkali and acid solutions involved for chemical cleaning are corrosive for the skin and proper care shall be taken in the handling of the chemicals.

Copyrights EIL – All rights reserved

ANNEXURE-I

INHIBITOR EFFICIENCY TEST PROCEDURE

1.0 PREPARATION OF TEST COUPONS

Carbon steel coupons of size 7.5cm x 5cm shall be cut from hot rolled (AISI 1020 or equivalent grade) steel strip or plate. The edges and sharp corners shall be ground smooth. A 5mm diameter hole shall be provided for suspension. The coupons thus prepared shall be used in the tests.

2.0 IDENTIFICATION

The coupons shall be provided with letters and/ or number at one corner using punch.

3.0 SURFACE PREPARATION

For conducting the test to determine inhibitor efficiency the coupons shall be free from mill-scale by grinding followed by polishing using emery paper. The final surface shall be bright using Oakey emery paper No.0. Coupons for conducting the test of action of cleaning solution in removing mill-scale shall be in the as received condition of the surface i.e. with the mill scale on.
All the coupons shall be weighed separately correct to 1mg using a balance.

4.0 CLEANING SOLUTION

The cleaning solution is the inhibited hydrochloric acid. The concentration of hydrochloric acid solution should be 5-10% by wt. and inhibitor should be added in the proportion of 1 litre Rodine 213(special) or equivalent to 100 litre commercial hydrochloric acid(30-33% wt./wt.). The solution, thus, prepared shall match with the actual solution to be used in the chemical cleaning. The acid strength of the solution shall be determined by titration with standard alkali.

5.0 TEST FOR INHIBITOR EFFICIENCY

Test shall be carried out in duplicates in glass containers preferably in one litre capacity beakers. One litre of cleaning solution each shall be transferred to beakers and the solution shall be heated to the maximum temperature in the specified range for the process. The coupons shall be completely exposed to the action of the acid by suspension from the hole so that the upper edge shall be at least 1cm below the liquid surface. The temperature shall be held as above through-out the duration of the test.

5.1 Identical test shall be carried out using un-inhibited acid of the strength equivalent to that of the cleaning solution.

5.2 After the exposure of the coupons to the cleaning solution for the duration of actual cleaning, all the coupons shall be removed from the acid solution and clean is running tap water to remove acid and finally in distilled water. The coupons shall be dried and transferred to desiccator before weighing.

5.3 The weight loss of the coupons shall be determined and the corrosion rates calculated. The average corrosion rate of the coupons exposed to the cleaning solution shall be less

Copyrights EIL – All rights reserved

5.4 than 3% of the average rate thus obtained for the coupons exposed to uninhibited acid. (I.e. percent corrosion inhibition should be 97% (min.). Approval of the Engineer-in-Charge should be obtained for the inhibitor efficiency obtained in the test.

5.5 If chemical cleaning using citric acid method is being adopted, Rodine 92 (or equivalent) shall be used for the efficiency test in line with the procedure mentioned in this annexure.

1.0 SCOPE

This technical specification covers the minimum requirement for chemical cleaning and passivation of the fabricated and erected carbon steel VHP/HP Steam piping at site prior to commissioning by chemical circulation method.

This specification defines the procedure for the chemical cleaning. However, EPC/LSTK Contractor shall prepare the detailed chemical cleaning markup on the applicable P&IDs and submit for EIL review & approval.

2.0 OBJECTIVE

The objective of chemical cleaning of carbon steel VHP/HP Steam piping is to remove the loose rust, dislodging the burs, welding slag and mill scales adhering to the internal surfaces of piping. This procedure specifies the method of cleaning and passivation of internal surface of piping based on the use of inhibited ammoniated citric acid followed by passivation with Tri sodium phosphate (Na_3PO_4) + Sodium nitrate ($NaNO_2$) circulation. Any deviation to this specification should be recorded and discussed with OWNER/EIL prior to application.

3.0 SEQUENCE OF OPERATION

The cleaning of piping shall be carried out in the following sequence:-

(a) Flushing with potable water to remove dirt, dust, loose rust and foreign matter followed by DM / BFW water flushing.
(b) Degreasing with Sodium Hydroxide (caustic Soda).
(c) Flushing with DM/ BFW till inlet and outlet water pH is same.
(d) Circulating with ammoniated inhibited citric acid
(e) Flushing with DM/ BFW
(f) Circulating with Tri sodium phosphate (Na_3PO_4) + Sodium Nitrite ($NaNO_2$)
(g) Drain, dry and take the system into service
(h) If the pipe is not taken into service immediately after drying the pipe should be filled with N2 and capped at both ends.

4.0 PREPARATION OF TEMPORARY CIRCUITS:

Temporary piping, pumps of suitable capacity, fittings, flanges, tanks, gaskets, heating arrangement, hydrometers, valves, test coupons, spares, laboratory facilities with all accessories required for conducting tests during cleaning operation, chemicals and safety accessories for operation, qualified personnel etc. shall be arranged by contractor at site prior to cleaning operation. The contractor of chemical cleaning shall prepare all the necessary temporary chemical cleaning circuits at site and submit for approval by owner before execution. Quantity of chemicals required should be calculated based on the total hold-up volume. Pumps of suitable capacity shall be arrange at site by the contractor.

Copyright EIL – All rights reserved

5.0 PROCEDURE

5.1 The circuit (Loop) shall be checked with circulation of potable water to check tightness. Any leakage if observed to be attended and tightened.

5.2 The circuit shall be flushed initially with potable water to remove all extraneous matter, dirt and dust etc. followed by DM water flushing.

5.3 Filling and circulation of sodium Hydroxide (caustic soda) solution of 1% wt in DM/BFW (concentration on 100% purity basis) at 65-75^{0}C temperature for 2 hrs.

5.4 Drain the sodium Hydroxide solution. Fill with DM/BFW and drain. The operation of rinsing with DM water should be continued till pH of water at inlet and outlet ends are same.

5.5 Filling and circulation of ammoniated citric acid of 3% concentration (on 100% purity basis) by weight in DM/BFW with pH being adjusted to 3.5 - 4.0 with ammonia and 0.1% corrosion inhibitor Rodine- 92 or equivalent by weight. The temperature of circulating citric acid solution should be 80^{0}C. The circulation should be continued for 6 hrs. or till iron and acid concentration are stabilized.

5.6 During circulation of ammoniated citric acid, the total iron content of the circulating solution should not exceed 5000 mg/litre (with 3% w/w citric acid solution) and pH should be maintained at 3.5-4.0. If at any stage total iron content exceeds 5000 mg/liter, the acid should be drained in part and replaced with fresh acid.

5.7 Drain the citric acid and rinse with DM/BFW. Fill with DM/BFW and the operation of rinsing should be continued till pH at inlet and outlet ends of water are same.

5.8 Fill with Tri Sodium phosphate (1%) + Sodium Nitrite(0.5%) by weight (on 100% purity basis) and circulate for 2 hrs. drain, allow to self dry and finally dry with compressed instrument air.

5.9 If the pipe is not taken into service immediately after drying, the pipe should be filled with N2 and capped at both ends.

5.10 Suitable highpressure pumps with necessary flow rate should be provided by the contractor to maintain good velocity (preferably 0.5-1.0 M/Sec.) throughout operations of chemical cleaning and there should be effective return of flow from the outlet and the vent.

6.0 CHEMICALS & UTILITIES

Chemicals used for chemical cleaning should conform to the following specifications.

6.1 Citric acid monohydrate conforming to IS : 5464-1970-Gr.2 (latest edition)

6.2 Rodine 92 or equivalent

6.3 Ammonia (Technical grade.)

6.4 Sodium Hydroxide (NaOH) Technical grade conforming to IS:252 latest edition

6.5 Tri sodium phosphate (Na_3PO_4) technical grade as per IS :573

6.6 $NaNO_2$ IS-879-1981 (latest edition)

6.7 Potable water (chlorides 50ppm maximum)

6.8 DM water

7.0 NEUTRALIZATION AND DISPOSAL OF CHEMICALS

The necessary arrangement for neutralization like HDPE tank/temporary neutralization pit shall be made available for complete neutralization of pickling acids and alkalis. Prior to discharging of effluent in the sewer system, it shall be analyzed and if necessary, additional chemicals shall be added for complete neutralization so that discharged mixtures shall have pH 7.0 in order to prevent any damage to

Copyright EIL – All rights reserved

paving, manholes and sewers etc. Permission shall be taken from engineer-in-charge/OWNER for disposal of neutralized effluent into storm water drain / nearest Effluent pit etc.

8.0 SAFETY PRECAUTIONS

The alkali and acid solutions involved for chemical cleaning are corrosive for the skin and proper care shall be taken in the handling of the chemicals.

RECOMMENDED PROCEDURE FOR EXTERNAL CHEMICAL CLEANING AND PASSIVATION OF WELD JOINTS OF SS TANKS AND PIPES

1.0 SEQUENCE OF OPERATION

The sequence of operation shall be as follows:

1.1 Wash with D.M. water

1.2 Applying the acid pickling paste.

1.3 Final wash with DM water

2.0 PICKLING & PASSIVATION PROCEDURE

2.1 Wash the girth weld joints, tees elbows of SS with DM water.

2.2 Prepare a paste with 15% concentration Nitric acid (on 100% purity basis), 0.1% hydrofluoric acid (on 100% purity basis) and with required quantity of Silica insulation fine grog of 0-0.5mm size with minimum 85% SiO_2. Apply the paste on SS welds joints, and fittings which needs to be cleaned, with a uniform thickness. Allow the paste to be on the surfaces for about 30 minutes.

2.3 Remove the acid paste and wash with DM water thoroughly without any traces of paste.

1.0 GENERAL

1.1 This specification shall be applicable for the work covered by the contract and without prejudice to the provisions of various international codes of practice, standard specifications etc. It is understood that the CONTRACTOR shall carry out the work in all respects with the best quality of materials and workmanship and in accordance with the best engineering practice and instructions of Engineer-In-Charge in consultation with EIL-SMMS.

1.2 This specification covers the requirement for protective coating for new construction, revamp and refurbishment.

2.0 SCOPE

2.1 Scope of work covered in the specification shall include, without being limited to, the following:

This specification defines the requirements for surface preparation, selection and application of primers and coatings on external surfaces of items mentioned in clause 2.2 of this specification and quality control, inspection & testing of the coating systems. The items listed in clause 2.2 and the heading of tables of paint systems are non-exhaustive. However, the CONTRACTOR is fully responsible for carrying out all the necessary painting, coating and lining job on external and internal surfaces as per the contract requirement, technical data sheets and drawings etc.

As a special requirement of this PROJECT, Contractor/fabricator/supplier of insulated equipment like vessels, reactors, columns and equipment shall identify the type of under insulation coating required based on the criticality of the equipment in consultation with BPCL/EIL. Prior approval of BPCL/EIL is a mandatory requirement in this case.

2.2 Extent of work covered in this specification

2.2.1 The following surfaces and materials shall require shop, pre-erection and field painting, as applicable:

a. All Carbon Steel structures.

b. All Carbon Steel and Alloy steel piping, equipment, valves, fittings & stacks.

c. All Carbon Steel and Alloy steel tanks.

d. Tanks internal as per applicable datasheets, drawings & contract requirements.

e. All insulated CS, LAS, & alloy steel pipes, equipment, vessels, reactors, valves, fittings & stacks.

f. All insulated SS, DSS & SDSS pipes, equipment, vessels, reactors valves, fittings, vessels & stacks.

g. All insulated critical CS, LTCS. SS & alloy steel equipment like vessels, reactors, column & equipment

Copyright EIL – All rights reserved

(application of Thermally sprayed aluminum coating based on the criticality)

h. All structural steel supports, walkways, handrails, ladders, platforms etc.

i. Flare lines, external surfaces of steel chimney with or without refractory lining and internal surfaces of steel chimney without refractory lining.

j. RCC structures as per applicable drawings/relevant documents.

2.2.2 Marking and Identification of painted items:

a. Identification of color bands on all piping, as required, including aluminum cladding over insulation, galvanized, SS and nonferrous piping.

b. Identification lettering/ numbering on all painted surfaces of equipment/piping, aluminum cladding over insulation, galvanized, SS and non-ferrous piping.

c. Marking / identification signs on painted surfaces of equipment and piping including hazardous service.

2.2.3 Supply and prequalification testing of all primers, paints and all other materials required for painting (other than OWNER supplied materials)

2.2.4 Application of pre-erection/fabrication and shop primer.

2.2.5 Repair work of damaged pre-erection/ fabrication and shop primer and weld joints in the field/site before and after erection.

2.2.6 Quality control, testing and inspection during all stages of work (surface preparation, application of coating and testing of applied coating).

2.2.7 Exclusions:

(a). All metallic surfaces do require painting except for following materials. These materials are not painted unless specified by the contractual provisions and the same shall be painted as per the relevant specifications:

- Un-insulated stainless steel.
- Plastic and/or plastic-coated materials.
- Galvanized Iron.
- Aluminum.
- Ni-Alloys.
- Glass.
- Ceramics.
- Machined surfaces.

Copyright EIL – All rights reserved

- Label and names plates.

Note: Galvanized steel doesn't require painting for corrosion protection. However, if painting is mandated due to OWNERs instructions/contractual provision/ for colour coding requirement mentioned in this specification or by OWNER, then the coating system in Table 4.0 shall be followed.

(b). This specification does not include fire retardant paints/intumescent epoxy coatings for steel structure, and the EIL specification B957-999-06-43-IF01 addresses the same.

3.0 REFERENCE CODES & STANDARDS

3.1 Latest editions of the following codes and standards are applicable for the work covered by this specification:

American Society for Testing and Materials (ASTM):

ASTM Volume 6.01	Paint - Tests for Chemical, Physical, and Optical Properties; Appearance
ASTM Volume 6.03	Paint -- Pigments, Polymers, Resins, Naval Stores, Cellulosic Esters, and Ink Vehicles
ASTM D6677	Standard Test Method for Evaluating Adhesion by Knife
ASTM D5894	Standard Practice for Cyclic Salt Fog/UV Exposure of Painted Metal, (Alternating Exposures in a Fog/Dry Cabinet and a UV/Condensation Cabinet)
ASTM D870	Standard Practice for Testing Water Resistance of Coatings Using Water Immersion
ASTM D2485	Standard Test Methods for Evaluating Coatings for High Temperature Service
ASTM D2247	Standard Practice for Testing Water Resistance of Coatings in 100 % Relative Humidity
ASTM D4417	Standard Test Methods for Field Measurement of Surface Profile of Blast Cleaned Steel
ASTM D4541	Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers
ASTM D4060	Standard Test Method for Abrasion Resistance of Organic Coatings by the Taber Abraser
ASTM D4752	Standard Practice for Measuring MEK Resistance of Ethyl Silicate (Inorganic) Zinc-Rich Primers by Solvent Rub
ASTM D638	Standard Test Method for Tensile Properties of Plastics
ASTM D4940	Standard Test Method for Conductimetric Analysis of Water Soluble Ionic Contamination of Blast Cleaning Abrasives
ASTM D4285	Standard Test Method for Indicating Oil or Water in Compressed Air
ASTM D543	Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents

4.0 SURFACE PREPARATION

4.1 General

Adhesion of the paint film to the surface depends largely on the degree of cleanliness of the metal surface and proper surface preparation have large contribution to the success of the paint protective system. Following method shall be employed for surface preparation:

a. Abrasive blast cleaning: Applicable in all cases.
b. Mechanical or power tool cleaning: Shall be used for repair & touch up, and any other area due to practical constraints with prior permission from EIL Engineer-in charge.

Copyright EIL – All rights reserved

4.2 Applicable Standards:

Latest editions of the following codes and standards are applicable for the surface preparation work:

TABLE-1: SURFACE PREPARATION STANDARDS

Sl. No.	GRADE OF SURFACE CLEANLINESS	VARIOUS INTERNATIONAL STANDARDS (EQUIVALENT)		
		ISO 8501-1/ SIS-05 59 00	SSPC, USA	NACE, USA
1.	Solvent cleaning	-	SSPC-SP-1	-
2.	Manual or hand tool cleaning	St 2	SSPC-SP-2	-
3.	Mechanical or power tool cleaning	St 3	SSPC-SP-3	-
4.	White metal	Sa 3	SSPC-SP-5	NACE No.1
5.	Near white metal	Sa 2½	SSPC-SP-10	NACE No.2
6.	Commercial Blast	Sa 2	SSPC-SP-6	NACE No.3
7.	Brush-off Blast for SS, galvanized steel and non-ferrous metals	-	SSPC-SP-16	-
8.	Surface Preparation of Concrete	-	SSPC-SP-13	NACE No.6

4.3 Sequence of surface preparation:

4.3.1 Solvent Cleaning

Mill scale, rust, rust scale and foreign matter shall be removed fully to ensure that a clean and dry surface is obtained. Unless otherwise specified, surface preparation shall be done as per provisions of relevant tables given elsewhere in this specification. Before surface preparation by blast cleaning, the surface shall be cleaned to remove all grease, oil etc. as per SSPC-SP-1.

4.3.2 Blast cleaning with abrasives

The surfaces shall be blast cleaned using one of the abrasives listed below and at an appropriate distance & angle depending on nozzle size maintaining constant velocity and pressure.

a. The quality of abrasives shall be free from contaminants and impurities and shall meet the requirements of SSPC AB1.

b. The compressed air shall be free from moisture and oil.

c. On completion of blasting operation, the blasted surface shall be clean and free from any scale or rust. Blast cleaning shall not be done outdoors in bad weather without adequate protection. If there is dew on the metal surface, it shall be cleaned. If possible, a vacuum collector shall be installed to collect and recycle the abrasives.

Copyright EIL – All rights reserved

d. Surface roughness profile: The surface roughness profile for carbon steel and low alloy steels to be coated shall be in accordance with the written recommendations of the paint Manufacturer and shall be measured as per ASTM D4417, method B. When roughness profile is not specified by the paint Manufacturer, then surface roughness profile as specified below in this specification shall be followed.

- The surface roughness profile shall be between 40 µm and 70 µm for coatings up to thickness 500 µm and between 70 µm and 125 µm for coating systems over 500 µm thickness. In all cases, the surface roughness shall have a sharp angular profile.

- If stainless steel, hot dip galvanised or non-ferrous metal surfaces are to be painted then blast cleaning shall be carried out as per SSPC-SP-16, using a fine non-iron containing abrasive.

- On galvanised surfaces, the zinc layer shall not be damaged; a smooth uniform surface roughness shall be achieved. No defects such as break through or crisping of the zinc layer shall occur. The surface roughness shall be in the range of 20 µm to 30 µm or as agreed with the paint Manufacturer.

e. Abrasives: Abrasive for use in blast cleaning steels shall be in accordance with ISO 8504-2. Steel or iron grit is commonly used as recyclable abrasives. When steel shot is used, it shall be used together with steel grit. The shot content of such a mix shall not exceed 67 %.For blasting stainless steel, non-(free) iron containing abrasive shall be used, e.g. Garnet or aluminium oxide. Abrasives used for blast cleaning shall be free from oil, grease, moisture, chloride contamination etc. and shall have crystalline silica not more than 1%.

Test methods for abrasives shall be in accordance with the tests specified in the ISO 11125 and ISO 11127 series for metallic and non-metallic abrasives respectively. Each batch of abrasive should be tested to check that the abrasive meets the requirements as specified in the relevant ISO standard. The conductivity of non-metallic abrasives to be used for stainless steels shall be maximum 15 mS/m. For all other non-metallic abrasives, the conductivity shall not exceed 25 mS/m. OWNER/PMC shall approve the use of alternative abrasive materials. Abrasive used shall be as per following specification:

Type	Generic Name	Standard
Metallic	Iron grit	ISO 11124-2
	Steel grit	ISO 11124-3
Natural mineral	Staurolite	ISO 11126-9
	Garnet	ISO 11126-10
Synthetic material	Aluminium oxide	ISO 11126-7
	Cu Slag	ISO 11126-3

Note:

Aluminum oxide or other abrasive (free from any chloride or iron/steel contamination) shall be used for blasting stainless steel. Copper slag and sand shall not be used.

Copyright EIL – All rights reserved

4.3.3 Mechanical or power tool cleaning

Power tool cleaning shall be done by mechanical striking tools, chipping hammers, grinding wheels or rotating steel wire- brushes. Excessive burnish of the surface shall be avoided as it can reduce paint adhesion. On completion of cleaning, the detached rust, mill scale etc. shall be removed by clean rags and /or washed by water/steam and thoroughly dried with compressed air jet before application of paint.

4.4 General Notes for surface preparation/blasting and paint application:

a. Surface shall not be coated in rain, wind or in an environment where injurious airborne elements exist.

b. Surface shall not be coated when the steel surface temperature is less than 3°C above dew point.

c. Surface shall not be coated, when the relative humidity is greater than 85%.

d. Surface shall not be coated when the temperature is below 10°C and the ambient/substrate temperature is below the paint manufacturers recommended temperature of application and curing.

e. Surface shall not be coated when surface temperature is greater than 40°C (unless a higher temperature is agreed by the paint manufacturer)

f. The paint application shall not be done when the wind speed exceeds 20 km per hour.

g. The illuminance during coating and inspection shall be at least 500 Lux.

4.5 Use of Dehumidifier

In case of internal coating of storage tanks, dehumidifier shall be used to control humidity level below 60%. Dehumidifier should depress the dew point of air in the enclosed space, sufficient enough so as to maintain it more than 3ºC below the metal substrate temperature during entire period of blasting and coating application. During the interval time between application of primer coat and subsequent intermediate and top coats or between blast cleaning completion and start of application of primer coat, dehumidifier unit should be in continuous operation to ensure that no condensation occurs on the substrate.

The Engineer in-Charge shall have the right to disallow usage of dehumidifier if the performance is not meeting the specified requirements. Under such circumstances, the CONTRACTOR shall remove the equipment and replace the same with another equipment to provide satisfactory results without any additional cost to the OWNER.

Copyright EIL – All rights reserved

4.6 Surface preparation of concrete:

The external surface of RCC to be painted shall be dry and clean. Any loose particle of sand, cement, aggregate etc. shall be removed and surface shall be prepared as per SSPC-SP-13.

5.0 COATING APPLICATION

5.1 Blast cleaned surface shall be coated with complete application of primer as soon as practicable but in no case later than 4 hours the same day. However, at times of unfavorable weather conditions, the Engineer-In-Charge shall have the liberty to control the time period, at his sole discretion and/or to insist on re-cleaning before primer application is taken up. In general, during unfavorable weather conditions, blasting and painting shall be avoided as far as practicable.

5.2 To the maximum extent practicable, each coat of paint shall be applied as a continuous film with uniform thickness and free of probes. Any spots or areas missed in application shall be re-coated and permitted to dry before the next coat is applied.

5.3 Each coat shall be in proper state of cure or dryness before the application of succeeding coat. Material shall be considered dry for re-coating when an additional coat can be applied without the development of any detrimental film irregularities such as lifting or loss of adhesion of the under coat. Manufacturer's instructions shall be followed for inter-coat interval.

5.4 When the successive coat of the same colour have been specified, alternate coat shall be tinted, when practical, sufficiently to produce enough contrast to indicate the complete coverage of the surface. The tinting material shall be compatible with the material underneath and shall not be detrimental to its service life and shall be recommended by the original paint manufacturer.

5.5 Airless spray application shall be in accordance with steel structure paint manual Vol.1 & Vol.2 by SSPC, USA

5.6 Brush application of paint shall be in accordance with the following:

a. Brushes shall be of a style and quality that will enable proper application of paint.

b. Round or oval brushes are most suitable for rivets, bolts, irregular surfaces, and rough/ pitted steel. Wide flat brushes are suitable for large flat areas but they shall not have width over 5 inches.

c. Paint shall be applied into all corners.

d. Any runs or sags shall be brushed out.

e. There shall be a minimum of brush marks left in the applied paint.

f. Surfaces not accessible to brushes shall be painted by spray, daubers, or sheepskin.

Copyright EIL – All rights reserved

5.7 Applied paint should have the desired wet film thickness specified by manufacturer. For each coat, the painter should know the WFT corresponding to the specified DFT and standardize the paint application technique to achieve the desired WFT. This has to be ensured in the qualification trial.

5.8 Irregular surfaces such as sharp edges, welds, small brackets, and interstices may stripe coated to ensure specified DFT is achieved. Paint manufacturer recommendation should be followed before deciding for brush application.

5.9 Unless otherwise instructed, final coating (i.e. application of field primer, intermediate and top coats) on pre-erection/ shop primed equipment shall be applied at site, only after all welding & testing like NDT are completed as well as after completion of steam blowing.

5.10 Drying of coated surfaces

a. No coat shall be applied until the preceding coat has dried. The material shall be considered dry for re-coating when another coat can be applied without the development of any film irregularities such as lifting or loss of adhesion of undercoats. Drying time of the applied coat should not exceed maximum specified for it as a first coat. If this exceeds, the paint material has possibly deteriorated or mixing is faulty.

b. No paint shall be force dried under conditions which will cause chalking, wrinkling, blistering formation of pores, or detrimentally affect the conditions of the paint.

c. No drier shall be added to paint on the job unless specifically called for in the manufacturers' specification for the paint.

d. Paint shall be protected from rain, condensation, contamination, snow and freezing until dried to the fullest extent practicable.

5.11 Spot repair of damaged primer

a. Where pre-erection/shop primer has been damaged at isolated localized spots during handling and transportation or after erection / welding, its repair shall be done as given below and as per the Table-3 of this specification.

b. Surface preparation: Quickly remove the primer from damaged area by mechanical scraping and emery paper conforming to SSPC-SP-3 to expose the white metal. Blast clean the surface, if possible. Feather the primed surface, over the intact adjacent surface surrounding the damaged area, by emery paper.

Primer shall be applied (as per the applicable design temperature and in conjunction with Table-3) wherever damage was observed on pre-erection / pre fabrication or shop primer.

c. If damaged areas are found to be extensive and spread over large areas (as required by Engineer-in charge), then entire pre-erection/pre-fabrication/shop primer shall be removed by blasting to achieve

Copyright EIL – All rights reserved

SSPC-SP-10 and entire blasted surface shall be primed again with F-8/ F-9 or F-16, as applicable, for the intended design temperature. (See note of Table-3). If the prepared surface lies adjacent to a sound coated surface, the surface preparation shall overlap the coated surface by at least 50mm. The remainder of existing coated surface shall be properly protected with shields or screens to prevent any possible damage to the coating.

5.12 Equipment:

a. All tools, brushes, rollers, spray guns, blast material, hand power tools for cleaning, all equipment, scaffolding materials, shot & grit blasting equipment, air compressors etc. required shall be suitable for the work and shall be arranged by the CONTRACTOR in sufficient quantity at the site. The manufacturers test certificates ***/*** data sheets for all the above-mentioned items shall be reviewed by Engineer-In-Charge at site before start of the work.

b. All paint spraying equipment, including mixers, shall be thoroughly cleaned before mixing of new materials. All coating materials shall be mixed and thoroughly stirred in accordance with the instructions of the paint Manufacturer. Sufficient agitation to maintain good mixing shall be applied until the product is used. If air is entrapped in the product during mixing/stirring, sufficient time should be allowed for the air bubbles to escape before application. Only thinners specified by the paint Manufacturer shall be used.

5.13 Shop coating

a. Shop coated equipment (coated with primer & finishing coat) should not be repainted unless paint is damaged. Repair of primer shall be carried out as per Table-3 of paint systems depending upon the compatibility of paint. Intermediate and final coats over repaired primer shall be as per applicable tables mentioned in this specification. The recommendations of paint manufacturer's datasheets including maximum overcoat interval shall be followed and recorded in the coating inspection logbook.

c. Shop primed equipment and surfaces will only be 'spot cleaned' in damaged areas by means of power tool brush cleaning or hand tool cleaning and then spot primed before applying one coat of field primer, unless otherwise specified. If shop primer is not compatible with field primer, then shop coated primer should be completely removed before application of selected paint system for a particular environment.

d. For package units/Items/ OEM equipment, shop primer & coating system should be as per the paint system given in this specification. However, manufacturers' standard may be followed after review by EIL but shall adhere to the minimum DFT specified in ISO-12944-5; C5 (Very high durability). For system under insulation, minimum guidelines as per NACE RP 0198 shall be followed.

In this case, guarantee of the coating system lies with package supplier/OEM. EIL's decision in this regard is final and binding on Supplier/Contractor/manufacturer.

Copyright EIL – All rights reserved

5.14 Guidelines for Documentation / records

a. A written quality plan with procedure for qualification trials and for the actual work including test and inspection plan & procedure for approval before start of work.

b. Daily progress report with details of weather conditions, particular of applications, no. of coats, overcoating intervals, pot life and type of materials applied, anomalies, progress of work versus program.

c. Results of measurement of temperatures, relative humidity, surface profile, film thickness, holiday detection, adhesion tests with signature of appropriate authority.

d. Particulars of surface preparation and paint application during trials and during the work.

e. Details of non-compliance, rejects and repairs.

f. Type of testing equipment and calibration.

g. Code and batch numbers of paint materials used.

Note: The coating applicator must maintain a job record consisting of all the information as per 5.12.b. to 5.12.g above as well as the approved procedure of work (5.12.a. above). The job record consisting of information in accordance to 5.12.b. to 5.12.g shall be entered on daily basis and should be daily signed by Engineer-in-charge. A sample template for daily coating inspection report is given in Annexure-III as reference.

6.0 PAINT MATERIALS

Typical characteristics and codes of various paint materials used in this specification are as follows.

TABLE-2: PAINT MATERIALS
(Refer to general notes at the end of this table)

DESCRIPTION	P-6	P-7	P-4	F9
Technical name	Epoxy Zinc Phosphate Primer	Cold Galvanizing product	Etch Primer/Wash Primer	Inorganic zinc silicate coating

Adhesion, MPa (ASTM D 4541)	>6	>7	NA	>8	>7, Tensile strength >20N/mm2 (ASTM D 638)
Temperature resistance (min.) °C (ASTM D 2485) *Note 8	125 (Method A)	150 (Method A)	650 (Method B)	200 (Method A)	90 (Method A)

General notes for TABLE-2:

1. Covering capacity and DFT achieved per coat depends on method of application. Covering capacity specified above is theoretical. For estimation of actual quantity of paints required, include the losses during application. Minimum specified DFT should be maintained in any case.

2. All primers and finish coats should be ambient temperature curing and air drying unless otherwise specified.

3. All paints shall be applied in accordance with manufacturer's instructions for surface preparation, intervals, curing and application. Wherever a deviation is noticed from the specification in manufacturer data sheet, more stringent one between the data sheet and the specification shall prevail e.g. if this specification recommends Sa 2 ½ and the manufacturer data sheet requires Sa3, the surface preparation shall be done as per Sa 3. However, in another case if this specification

Copyright EIL – All rights reserved

requires the surface preparation of Sa 2 ½ and the manufacturer data sheet recommends only Sa 2 as minimum, the surface preparation shall be done as per Sa 2 ½.

4. Technical data sheets for all paints shall be supplied at the time of submission of quotations.

5. Internationally recognized & acceptable testing method shall be used for lab testing wherever testing standards are not mentioned.

6. Touch dry, hard dry, pot life, full cure period, & over coating interval shall be as per manufacturer's data sheets and no testing is required. Slight variation in the values of these parameters along with weight per liter may be permissible with the discretion of engineer-in-charge in consultation with EIL-SMMS.

7. Temperature resistance tests (ASTM D2485) shall be carried out for minimum required temperature resistance indicated.

8. Wherever ASTM D 2485 method B is applicable, test results of the panels subjected to salt spray (ASTM B 117) after muffle furnace exposure shall be submitted for pre-qualification purpose.

9. F6-C shall be suitable for drinking water service and should have certification from competent authority.

10. Alkyd type paint system have potential flaking problems and therefore, F11 shall not be alkyd type.

11. Maximum overcoat interval shall be as per Paint manufacturer's datasheet.

7.0 SELECTION OF COATING SYSTEMS

The external coating system for EIL projects should be selected based on the C5 environment (very high durability) as per ISO12944-2, design temperature, involved services of the steel substrate and plant location.

The paint system to be applied for a specific job shall be arrived at sequentially as given below:

a. Identify the environment from area classification details and choose the appropriate table.
b. Identify the design temperature from the technical documents.
c. Identify the specific field paint system and surface preparation requirement from the above identified table and temperature range.
d. Identify the shop priming requirement from based on compatibility of the above paint system.
e. Identify the need of repair of shop primer and execute as per Table-3.

7.1 Classification based on plant location:

a) Plant located in inland area (more than 50 km from coast).

Copyright EIL – All rights reserved

- For offsite areas and utilities: Table-5 to be followed.

- For process units, DM plant, CPP and Cooling towers, ETP, RWTP: Table-6/7 as applicable to be followed.

b) Plant located on sea coast or within 50 km from sea coast.

- For process units, DM plant, CPP, Cooling tower, ETP, RWTP, offsite & utilities etc.: Table-6/7 as applicable to be followed.

c) For external surface of above ground tanks, Table-8 to be followed for all locations (inland or coastal)

TABLE-3: REPAIR OF PRE-ERECTION/PRE-FABRICATION OR SHOP PRIMER AFTER ERECTION/WELDING

(For all un-insulated CS, LTCS & alloy steel items in all environments)

Sl. No.	Design Temp. in ºC	Surface Preparation	Coating System	Total DFT in Microns (min.)	Remarks
3.1	-45 to 80	SSPC-SP-3	1 coat of F-8 @ 125 µ DFT/coat+ 1 coat of P-6 @ 40 µ DFT/coat	165	See Note-1 below and clause 5.11
3.2	81 to 250	SSPC-SP-11	1 coat of F-9 @ 65-75 µ DFT/coat + 1 coat of F-11 @ 20 µ DFT/coat	85-95	
3.2	251 to 400	SSPC-SP-11	1 coat of F-9 @ 65-75 µ DFT/coat + 1 coat of F-12 @ 20 µ DFT/coat	85-95	
3.3	401 to 550	SSPC-SP-3	1 coat of F-16 @ 125 µ DFT/coat	125	

Note for Table-3:

1. The application and repair of pre-erection/pre-fabrication and shop primer given in above tables shall be done for all the items to be painted. In case the damages of primer are severe and spread over large area as per Engineer In charge discretion, entire primer shall be removed by blasting to achieve SSPC-SP-10 and surfaces shall be suitably primer coated as mentioned in Table 5.0 to Table 18.0. After the repairs of the primer, suitable intermediate and final coats shall be applied as per applicable coating systems mentioned in Table 5.0 to Table 18.0.

Copyright EIL – All rights reserved

TABLE-4: COATING SYSTEM FOR GALVANIZED ITEMS (Refer clause 2.2.7)

Sl. No.	Design Temp. in °C	Coating System	Total DFT in Microns (min.)	Remarks
4.1	Up to 60	Hot Dip Galvanizing with thickness as per ISO 1461, Surface preparation over galvanization as per SSPC SP 16 & ISO 12944-4; 1 coat of F-6B @ 100µ DFT/coat + 1 coat of F-2 @ 40 microns DFT/coat	140µ of finish coat (excluding the thickness of galvanizing)	Special primers like etch primer (surface preparation) may also be considered for coating on galvanized surfaces

Notes for Table-4:

1. F-6B shall be modified type and suitable for coating over galvanization. Paint suppliers confirmation is mandatory.

2. Repair of the damaged areas of galvanized coatings due to welding during erection shall be carried out as per recommended practice ISO 1461, using cold galvanizing spray process. Organic paint systems are not acceptable for the repair.

3. After repair of damaged galvanized coating by cold galvanization (P-7), the repaired area shall be top coated with paint system as given in table-4 above (i.e. 1 coat of F-6B @ 100µ DFT/coat + 1 coat of F-2 @ 40µ DFT/coat).

4. Galvanized gratings don't require painting in general until otherwise specified elsewhere or as per the requirement of the OWNER. Galvanized items may require painting to meet the colour coding requirement of the OWNER. Contractor has to ensure the applicable colour coding prior to application of coating as per this clause.

TABLE-5: COATING SYSTEMS FOR INLAND PLANTS (OFFSITES & UTLITIES)

(For all new un-insulated above ground CS, LTCS & Alloy steel piping, equipment, structures, valves, Vessels & columns, stacks etc.)

Sl. No.	Design Temp. in °C	Surface Preparation & Pre-erection/Shop Primer	Coating System		Total Final DFT in Microns (min.)	Remarks
			Intermediate Coat	Finish Coat		
5.1	-45 to -15	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/coat	-	-	65-75	a. No over-coating shall be done on

Copyright EIL – All rights reserved

5.2	-14 to 80	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/coat + 1 coat of P-6 @ 40 µ DFT/ coat	1 coat of F-6B @ 100 µ DFT/coat	1 coat of F-2 @ 40µ DFT/coat	245-255	F-9. b. Surface profile for F-9 shall be 30-40 µm c. F11 shall not be Alkyd type. d. F-12 shall be ambient temperature curing type
5.3	81 to 250	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/coat + 1 coats of F-11 @ 20µ DFT/coat	-	1 coats of F-11 @ 20µ DFT/coat	105-115	
5.4	251 to 400	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/coat + 1 coats of F-12 @ 20µ DFT/coat	-	1 coats of F-12 @ 20µ DFT/coat	105-115	
5.5	401-650	SSPC-SP-10; 1 coat of F-16 @ 125 µ	-	1 coat of F-16 @ 125 µ	250-300	-

TABLE-6: COATING SYSTEMS FOR CORROSIVE AREAS (PROCESS UNITS, COOLING TOWER, DM, CPP, ETP, RWTP etc.)

(For all new un-insulated above ground CS, LTCS & Alloy steel piping, equipment, structures, valves, vessels & columns, furnace stacks etc.)

Sl. No.	Design Temp. °C	Surface Preparation & Pre-erection/Shop Primer	Coating System		Total DFT in Microns (min.)	Remarks
			Intermediate coat	Finish Coat		
6.1	-45 to -15	SSPC-SP-10; 1coat of F-9 @ 65-75µ	-	-	65-75	a)No over coating on F-9

Copyright EIL – All rights reserved

6.2	-14 to 80	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/ coat + 1 coat of P-6 @ 40 µ DFT/ coat	2 coats of F-6B @ 100 µ DFT/coat	1 coat of F-2 @ 40µ DFT/coat	345-355	is allowed b) F-12 shall be ambient temperature curing type c) F11 shall not be Alkyd type. d) Surface profile for F-9 shall be 30-40 µm
6.3	81 to 250	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/coat + 1 coats of F-11 @ 20µ DFT/coat	-	1 coat of F-11 @ 20µ DFT/coat	105-115	
6.4	251 to 400	SSPC-SP-10; 1coat of F-9 @ 65-75µ DFT/ coat + 1 coats of F-12 @ 20µ DFT/coat	-	1 coat of F-12 @ 20µ DFT/coat	105-115	
6.5	401-650	SSPC-SP-10; 1 coat of F-16 @ 125 µ	-	1 coat of F-16 @ 125 µ	250-300	-

NOTES for TABLE-5 & TABLE-6:

1. The list of items given in the heading of the above table is not exhaustive. There may be more items for a particular contract where these specifications are used. The CONTRACTOR is fully responsible for completing painting including prefabrication primer for all the items supplied and fabricated as per contract document and scope of work.

2. If the application of pre-erection/pre-fabrication/shop primer has already been completed, the same shall not be repeated in the field. In case the damages to the primer coat are severe and spread over large areas, the Engineer-In-Charge may decide & advise re-blasting and re-application of the primer coat. Repair of pre-fabrication/pre-erection primer, if required, shall be done as per Table-3.

3. Flare line within unit or offsite areas shall be coated as per clause 6.4 of Table-6.

Copyright EIL – All rights reserved

4. For external surface of RCC Chimney, 2 coats of F-6 B@ 100µ DFT/coat to obtain a total DFT of 200 µ shall be applied after proper surface preparation as per guidelines in clause 4.6. Suitable PU top coat shall also be considered.

5. At the site, shop primer coated prefabricated items/structures/equipment/vessels shall be stored in the shed area and contractor shall brush off any chalking observed with emery paper, prior to application of subsequent coats.

TABLE-7: COATING SYSTEMS FOR EFFLUENT TREATMENT PLANT (ETP) & RODM

Sl. No.	Design Temp. in °C	Surface Preparation	Coating system		Total DFT in Microns (min.)	Remarks
			Primer	Finish Coat		
7.1	For external surfaces of steel items: screens, walk way bridges, clarifier/thickener scrapping mechanism, baffles, Media filters/vessels (PSF, DMF, MMF, & ACF etc.), vertical pumps, CS/MS tanks/ vessels and structures.					
	-14 to 80	SSPS-SP-10	1 coat of F-9 @ 65-75µ DFT/coat + 1 coat of P-6 @ 40 µ DFT/ coat	2 coats of F-6B @100µ DFT/coat + 1 coat of F-2 @ 40µ DFT/coat (2x100+40= 240)	345-355	Note 1
7.2	For internal surfaces of steel items: all effluent handling units such as TPI, DAF, tube settlers, clarifiers, tanks, sludge tanks and sewage tank, wet slop oil tanks etc., scrapping mechanism in clarifier etc.					
	-14 to 80	SSPS-SP-10	1 coat of F-15 @ 100µ DFT/coat.	2 coats of F-15 @100µ DFT/coat (2x100=200)	300	-
7.3	All R.C.C./concrete surfaces exposed to effluent water / liquid such as tanks, structures, drains etc., all effluent handling units such as API, TPI, DAF, tube settlers, clarifiers, tanks, sumps, sludge sumps/tanks and sewage sumps/tank, wet slop oil sump/tanks etc.					
	-14 to 80	As per clause 4.6 of this specification	Epoxy screed lining		3000	Note 1
7.4	Internal surface of equipment like Media filters/vessels (PSF, DMF, MMF, & ACF etc.), activated carbon filters, alkaline, acids & other high corrosive service					
	Up to 90	SSPC-SP-10	1 coat of clear two component solvent free vinyl ester primer @ 100µ DFT/ Coat + 2 coats of F-20 @ 500µ DFT/ Coat		1100	Note-2

Copyright EIL – All rights reserved

NOTES for TABLE-7:

1. Contractor shall follow manufacturer recommendations to develop epoxy screed lining procedure for EIL review and approval.

2. This coating system is applicable in conjunction with relevant PDS of the equipment.

TABLE-8: EXTERNAL COATING SYSTEMS FOR CARBON STEEL AND LOW ALLOY STEEL STORAGE TANKS
(except for crude tanks. Refer Annexure-II for Crude Oil Tanks painting)

Sl. No.	Design Temp. in °C	Surface Preparation	Coating system (Note-1)		Total DFT in Microns (min.)	Remarks
			Primer	Finish Coat		
8.1	All external surfaces of shell, wind girders, appurtenances, roof tops of all above ground tank including top side of external and internal floating roof and associated external structural works.					
8.1.1	-14 to 80	SSPC-SP-10	1coat of F-9 @ 65-75µ DFT/coat + 1coat of P-6 @ 40µ DFT/ coat	2 coats of F-6B @ 100µ DFT /coat + 1 coat of F-2 @ 40µ DFT/ coat	345-355	
8.1.2	81 to 450	SSPC-SP-10	1coat of F-9 @ 65-75µ DFT/coat	1 coat of F-16 @ 125 µ DFT / coat	190-200	
8.2	External surfaces of bottom plate (in contact with soil) for all storage tanks.					
8.2.1	-14 to 80	SSPC-SP-10	1 coat of F-9 @ 65-75µ DFT/ coat	3 coats of F-7@ 150µ DFT/coat (3x150=450)	515-525	-
8.2.2	81 to 200	SSPC-SP-10	1 coat of F-17 primer @ 400µ DFT/ coat	1 coat of F-17 finish coat @ 400µ DFT/ coat	800-825	Note-4
8.3	For underside of the bottom plate (not in contact with soil) (in case tank is not lifted during PWHT) (Note- 2)					

Copyright EIL – All rights reserved

8.3.1	-29 to 400	SSPC SP-10	1 coat of F-16 @ 125 µ	2 coat of F-16 @ 125 µ/coat	375	Note-3

Notes for TABLE-8:

1. All paint coating application including primer for tanks shall be carried out at field after erection and completion of entire welding.
2. For underside of bottom plate as per clause no.8.3.1:

a) Painting shall be carried out before laying the bottom plate for tanks with non-Post Weld Heat Treatment (PWHT).

b) For tanks with PWHT, painting shall be carried out after PWHT.

c) In case tank is not lifted during PWHT then painting shall be applied before laying the bottom plate.

3. This coating system is also applicable for temperature ranges not covered in 8.2 above.

4. This coating system is also applicable for bottom plates having MOC as Stainless Steel.

TABLE-9: INTERNAL COATING SYSTEMS FOR CARBON STEEL AND ALLOY STORAGE TANKS
(except for all crude tanks. Refer Annexure-II for Crude Oil Tanks)

Sl. No.	Design Temp. in °C	Surface Preparation	Coating system		Total DFT in Microns (min.)	Remarks
			Primer	Finish Coat		
9.1	Internal surface of cone roof with supporting structures, top shell course for free board height, underside of floating roof, oil side surface of pontoons, support structures and ladders and other CS internals etc., inside of bottom plate, internal surface of bare shell for 1.5 mtr from bottom, for storing petroleum products and intermediates such as Isomerate, Reformate, NHT / CCR / DHT feed, HSD, Gasoline, Naphtha, SKO, MS - Motor Spirits, LCGO, MTBE and Dry Slop.					
9.1.1	-14 to 45	SSPC-SP-10	1 coat of F-9 @ 65-75 µ DFT/coat	-	65-75	-

Copyright EIL – All rights reserved

9.1.2	46 to 90	SSPC-SP-10	1 coat of F-15 primer @ 100µ DFT/ coat	1 coat of F-15 intermediate coat @ 100µ DFT/coat + 1 coat of F-15 finish coat @ 100µ DFT/ coat	300	-
9.2	Internal surface of cone roof with supporting structures, top shell course for free board height, underside of floating roof, oil side surface of pontoons, support structures and ladders and other CS internals etc., inside of bottom plate, internal surface of bare shell for 1.5 mtr from bottom, for storing petroleum products and intermediates such as VR, VGO, IFO/RFO, HCGO and Black Slop and other high temp. hydrocarbons					
9.2.1	91 to 150	SSPC-SP-10	-	1 coat of F-17 @ 400µ DFT/coat	400	-
9.2.2	151 to 180	SSPC-SP-10	-	3 Coat of F-19 @ 125	375	F-19 shall be suitable for immersion service of the given products
9.3	Amine and Sour water storage tank All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					
9.3.1	up to 90	SSPC-SP-10	1 coat of F-15 primer @ 100µ DFT/ coat	1 coat of F-15 intermediate coat @ 100µ DFT/coat + 1 coat of F-15 finish coat @ 100µ DFT/ coat	300	-
9.4	Potable, Raw, Fire water, De-mineralized (DM) water & Condensates etc. All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					
9.4.1	-14 to 60	SSPC-SP-10	1 Coat of F-6A @ 100µ DFT/coat	1 coat of F-6C @ 300-350 µ DFT/ coat	400-450	-
9.4.2	61 to150	SSPC-SP-10	1 coat of F-15 primer @ 100µ DFT/ coat	1 coat of F-15 intermediate coat @ 100µ DFT/coat + 1 coat of F-15 finish coat @ 100µ DFT/ coat (100+100=200)	300	-
9.5	Hydrochloric acid (HCl) 10 % All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					

Copyright EIL – All rights reserved

9.5.1	-14 to 60	SSPC-SP-10	1 Coat of clear two component solvent free vinyl ester primer @ 100µ DFT/ Coat	2 Coats of F-20 @ 500µ DFT/ Coat	1100	-
9.6	Aggressive solvents like hexane, hexene, benzene, xylene and toluene etc.: All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					
9.6.1	-14 to 65	SSPC-SP-10	1 coat of F-9 @ 65-75µ DFT/ coat	-	65-75	-
9.7	Ethylene glycol tanks: All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					
9.7.1	All	SSPC-SP-10	-	3 coats of F-17 @ 75µ /Coat; (3x75=225)	225	-
9.8	Inside pontoon and inside of double deck of all floating roofs					
9.8.1	-14 to 80	SSPC-SP-3	1 coat of F-8 @ 100µ DFT/coat	1 coat of F-8 @ 100µ DFT/coat	200	-
9.8.2	81 to150	SSPC-SP-10	1 coat of F-15 primer @ 100µ DFT/ coat	1 coat of F-15 intermediate coat @ 100µ DFT/coat + 1 coat of F-15 finish coat @ 100µ DFT/ coat (100+100=200)	300	-
9.8.3	151 to 200	SSPC-SP-10	-	1 coat of F-17 @ 400µ DFT/coat	400	-
9.9	Alkalis up to 50 % concentration: All internal surfaces but not limited to internal surfaces of shell for full height, bottom plate, accessories, roof and roof structures of cone and dome roof tanks etc.					
9.9.1	Up to 60°C	SSPC-SP-10	1 coat of F-15 primer @ 100µ DFT/ coat	2 Coats of F-6 A @ 100µ DFT/coat (2x100=200)	300	-
9.10	Internal surface of underside of floating roof, bottom plate, complete shell course for full tank height, including immersed gauge pipe, still well etc. and their supporting structure, ladders and other CS internals etc. for storing **ATF-Aviation Turbine Fuel**.					

Copyright EIL – All rights reserved

9.10.1	Up to 80˚C	SSPC-SP-10	1 coat of primer* @ 75µ DFT/ coat	1 Coats of F-6 C @ 300µ DFT/coat (1x300=300)	375	**Primer shall be compatible with F6C. F6C shall comply with the requirements of EI-standard 1541. Shade of the paint shall be Off-white.**
9.11	Internal surface of underside of fixed roof and supporting structure for internal floating roof tank for storing **ATF-Aviation Turbine Fuel**.					
9.11.1	Up to 80˚C	SSPC-SP-10	1coat of F-9 @ 65-75µ DFT/coat + 1coat of P-6 @ 40µ DFT/ coat	2 coats of F-6A @ 100µ DFT /coat	305	

General Note for Table-9: The list of surfaces to be painted are not exhaustive. All internal surfaces of all type of tanks including structural items shall be coated as per the above table. No CS surface shall be kept un-painted.

TABLE-10: COATING SYSTEMS FOR EXTERNAL SIDE OF UNDERGROUND CARBON STEEL PLANT PIPING AND VESSELS

Sl. No.	Design Temp. in °C	Surface Preparation & Shop Primer	Coating system		Total DFT in Microns (min.)	Remarks
			Surface Preparation & Primer	Finish Coat		
10.1	Underground carbon steel plant piping.					
10.1.1	25 to 80	-	As per document B957-000-06-42-PLS-04	3layer polyethylene (3LPE) coating as per document B957-000-06-42- PLS-04	3.5 mm	--

Copyright EIL – All rights reserved

10.1.2	81 to 200	-	SSPC-SP-10; 1 coat of F-17 primer @400 µ DFT/ coat	1 coat of F-17 @ 400 DFT/coat	800	-
10.1.3	201 to 400	SSPC-SP -10	1 coat of F-16 primer @125 µ DFT/ coat	2 coats of F-16 @125µ DFT/ coat	375	Note 1
10.2	External side of underground vessels					
10.2.1	-45 to 80	SSPC-SP -10; 1 coat of F-9 @ 65-75µ DFT/ coat + 1 coat of F-7 @ 100µ DFT/coat	-	2 coats of F-7 @ 100µ DFT/coat	365-375	-
10.2.2	81 to 200	SSPC-SP -10	1 coat of F-17 primer @400 µ DFT/ coat	1 coat of F-17 @400µ DFT/ coat	800	-
10.2.3	201 to 400	SSPC-SP -10	1 coat of F-16 primer @125 µ DFT/ coat	2 coats of F-16 @125µ DFT/ coat	375	-

Notes for TABLE-10:

1. Coating system as per Sl. No. 10.1.3 is applicable for underground CBD line subjected to higher temperature (201-400 deg. C) and in cyclic service. Contractor shall submit suitable product datasheet, PTR and test certificate, for EIL review and approval.

Copyright EIL – All rights reserved

TABLE-11: COATING SYSTEMS FOR UNDER INSULATION (ALL UNIT AREAS & OFFSITES)
(For insulated piping, equipment, storage vessels, tanks, columns etc. of CS, LTCS, Alloy steel, SS, DSS and SDSS in all environments.)

Sl. No.	Design Temp. °C	Surface Preparation & Pre-erection/Shop Primer	Coating system		Total DFT Microns (min.)	Remarks
			Primer	Finish paint		
11.1	Carbon steel, LTCS and Alloy steel Piping, Storage tanks, Vessels, Equipment etc.					
11.1.1	-45 to 125	SSPC-SP-10; 1coat of F-15 @ 100µ DFT/coat	None	2 coats of F-15 @100µ DFT/coat	300	Note 1
11.1.2	126 to 560	SSPC-SP-10; 1 coat of F-16 @ 125µ DFT/coat	None	1 coat F-16 @ 125µ DFT/coat	250	
For Carbon steel, LTCS and Alloy steel Critical equipment like vessels, reactors, columns & equipment						
11.1.3	200-540	Temporary oil based varnish coating to be provided for transport and storage	Thermally Sprayed Aluminium coating (TSAC) Refer ANNEXURE-I			Critical equipment is identified through respective data sheets. Note 4
11.2	Stainless Steel, Duplex Stainless steel, Super Duplex stainless steel & Piping, Tanks, Vessels & Equipment etc.					
11.2.1	-45 to 125	SSPC-SP-16; (15-25µ surface profile) 1 coat of F-15 @100 µ DFT/coat	None	2 coats of F-15 @100µ DFT/coat	300	Note 1
11.2.2	126 to 650	SSPC-SP-16; (15-25µ surface profile) 1 coat of F-16 @125µ DFT/coat	None	1 coat of F-16 @125µ DFT/coat	250	
11.3	Cyclic service of CS, LTCS, SS, DSS, SDSS & Alloy Steels (Note-1)					

Copyright EIL – All rights reserved

11.3.1	-45 to 150 (Note-1)	SSPC-SP-10 For CS, LTCS & Alloy steel. SSPC-SP-16 for SS; (15-25µ surface profile) 1 coat of F-15 @100 µ DFT/coat	None	2 coats of F-15 @100µ DFT/coat	300	Note-2&3
11.3.2	-180 to 650	SSPC-SP-10 for CS, LTCS & Alloy steel. SSPC-SP-16 for SS (15-25µ surface profile) 1 coat of F-16 @ 125µ DFT/coat	None	1 coat of F-16 @ 125µ DFT/coat	250	

Notes for TABLE 11

1. Coating system for any other design temperature range not covered in Sr. No. 11.1 & Sr. No. 11.2 shall be as per Sr. No. 11.3.2.

2. In case of overlapping of cyclic temperature ranges as mentioned in 11.3.1 and 11.3.2 then clause 11.3.1 shall be followed.

3. Alternatively, for this temperature range, 1 coat of F-17 @ 400 µ is also acceptable.

4. For all insulated CS, LTCS & LAS vessels, reactors, column & equipment, Contractor/supplier shall verify with BPCL/EIL for applicability of TSA as under insulation coating.

General notes for TABLE-11:

1. “Cyclic Service” is characterized by rapid or periodical temperature fluctuation or temperature cycles or as defined in the process datasheet.

2. The blasting abrasives for SS and alloy steels shall be aluminum oxide or garnet only.

3. The coating system applicable for any other temperature range shall be reviewed if it is encountered.

				Primer	Finish paint		
18.1	Cold Collector, Transfer line, TPR & PG boiler inlet channel at HGU	400	Note-1				

Notes for TABLE-18:

1. Contractor shall propose suitable product for the temperature indicative paint application in the given temperature range, and submit their datasheet, Past Track Record and test certificate, for EIL review and approval.

GENERAL NOTES FOR TABLE: 5 TO 18

1. For uninsulated or insulated items, scope of surface preparation, application of primers to finish coat including repair shall be as per applicable contractual documents like SOR, MR, and PR etc. The list of items is not exhaustive.

Copyright EIL – All rights reserved

2. At the site, shop primer coated prefabricated items/structures/equipment/vessels shall be stored in the shed area and contractor shall brush off any chalking observed with emery paper, prior to application of subsequent coats.

8.0 GUIDELINES FOR STORAGE & HANDLING

8.1 All paints and painting materials shall be stored in rooms only which are to be arranged by CONTRACTOR and approved by Engineer-In-Charge for the purpose. All necessary precautions shall be taken to prevent fire. The storage building shall preferably be separate from adjacent building. A signboard bearing the word "PAINT STORAGE- NO NAKED LIGHT-HIGHLY INFLAMMABLE" shall be clearly displayed outside. Manufacturers' recommendation /Materials safety datasheet shall be followed for storage and handling of paint materials.

Note: This standard doesn't address all the safety concerns if any, associated with its use. It is responsibility of the user of this specification to establish appropriate safety and health practice and determine the applicability of regulatory limitations prior to use.

9.0 COLOUR CODE, IDENTIFICATION AND MARKING

9.1 For identification of pipelines, the following color-coding scheme shall be followed (except for ATF)

TABLE-19: COLOR CODING

SR. No.	SERVICE	RECOMMENDED COLOUR FOR PAINT SYSTEM	RAL COLOUR CODE	
			BASE COLOUR	BAND COLOUR
HYDROCARBON LINES (UNINSULATED)				
1	CRUDE SOUR	Basalt Grey with 1 deep orange band	7012	2011
2	CRUDE SWEET	Basalt Grey with 1 signal red band	7012	3001
3	LUBE OILS	Basalt Grey with 1 grass green band	7012	6010
4	FLARE LINES	White Aluminum	9006	
5	LPG	Deep Orange with 1 oxide red band	2011	3009
6	PROPYLENE	Deep Orange with 2 Cobalt blue bands	2011	5013
7	NAPTHA	Deep Orange with 1 grass green band	2011	6010

122	SS-321	Pigeon Blue	5014	
SAFETY COLOUR SCHEMES				
123	DANGEROUS OBSTRUCTION	Jet Black and Briht Red Orange band	9005	2008
124	DANGEROUS OR EXPOSED PARTS OF MACHINERY	Bright Red Orange	2008	

Note for Table-19:

1. As per latest DGCA guide line for ATF service color coding shall be Leaf Brown with two black bands.

2. Sr. no 104 - “All other tanks” having pure white (RAL 9010) as top coat shall have intermediate coat in colour: Signal white (RAL 9003) or Traffic White (RAL- 9016) to have lighter intermediate coat.

9.2 Ground Color

The system of colour coding consists of a ground colour and secondary colour bands superimposed over the ground colour. The ground colour identifies the basic nature of the service and secondary colour band over the ground colour distinguishes the particular service. The ground colour shall be applied over the entire length of the un-insulated pipes. For insulated lines, ground colour shall be provided as per specified length and interval to identify the basic nature of service and secondary colour bands to be painted on this specified length to identify the particular service. Above colour code is applicable for both unit and offsite pipelines.

9.3 Color band & Identification lettering (except for ATF service)

For ATF service, 2 color bands of 100 mm with 50 mm gap in between them shall be provided.

The following specifications of color bands shall be followed for identifying the piping contents, size and location of bands & letters. The bandwidth and size of letters in legends will depend to some

Copyright EIL – All rights reserved

extent upon the pipe diameter. Either white or black letters are selected to provide maximum contrast to the band color. Bands are spaced 25 mm apart when two bands are employed.

Outside dia of pipe or covering in mm	Width of color band in mm
19-32	200
38-51	200
64-150	300
200-250	600
Over 250	800

In addition, ground colour as per specified length should be provided on insulated piping for easy identification of nature of fluid, on which the colour bands should be painted for identification of each service. The length of the ground colour should be 3 times the width of normal band or 2 meters, whichever is suitable depending on the length of the pipe.

Size of letters stenciled/ written for equipment shall be as given below:

Column and vessel: 150 mm (Height)

Pump, compressor and other machinery: 50 mm (Height)

9.3.1 Color band

In addition, the contents of the pipe and/or direction of flow may be further indicated by arrows and legend. If a hazard is involved it must be identified clearly by legend.

The location and size of bands, as recommended, when used, shall be applied to the pipe.

• On both sides of the valves, tees and other fittings of importance.

• Where the pipe enters and emerges from walls and where it emerges from road & walkway overpasses, unit battery limits.

• At uniform intervals along long sections of the pipe.

• Adjacent to tanks, vessels, and pumps.

9.3.2 Color band specification

The location and size of bands, as recommended, when used, shall be applied to the pipe.

• Unit Area: Bands at intervals of 6.0 meters.

• Offsite Area: Bands at intervals of 10.0 meters.

• Each pipe segment will have minimum one band indication, irrespective of length.

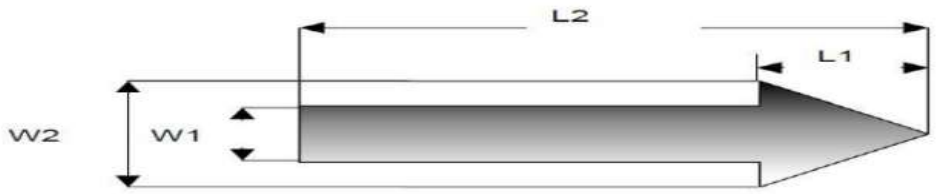
Copyright EIL – All rights reserved

- The bands shall also be displayed near walkways, both sides of culverts, tanks dykes, tanks, vessels, suction and discharge of pumps/ compressors, unit battery limit, near valves of line, etc.

9.3.3 For piping, writing of name of service and direction of flow for all the lines shall be done at following locations

• The letters will be in black on pipes painted with light shade colors and white on pipes painted with dark shade colors to give good contrast.

• Only writing of service name shall be done on stainless steel lines. Precautions should be taken while painting by using low chloride content painting to avoid any damage to the stainless-steel pipes. It is preferable to use adhesive plastic tapes to protect stainless steel pipes.



Size of Lettering and Direction Arrow shall be as follows:

Lettering

Pipe diameter	Width x Height- spacing
2" to 6" inclusive	30 x 30mm - 10 mm min.
6" to 50" inclusive	80 x 80mm - 25 mm min.
Greater than 50"	100 x 100mm - 30 mm min.

Direction arrow

Pipe Diameter	W1 (mm)	W2 (mm)	L1 (mm)	L2 (mm)
2" to 6" inclusive	10	30	45	135
6"to50" inclusive	40	80	90	270
Greater than 50"	50	100	150	450

10.0 QUALITY CONTROL, INSPECTION AND TESTING

10.1 All painting materials including primers and thinners brought to site by CONTRACTOR for application shall be procured directly from manufactures as per specifications and shall be accompanied by manufacturers' test certificates. Paint formulations without certificates are not acceptable (see section 12.0 & 13.0).

10.2 The CONTRACTOR must produce test certificate from pre-qualified paint manufacturer for various tests as detailed out in section 15.0 of this document. The Engineer-In-Charge, in consultation with SMMS, shall have the right to test wet samples of paint at random for verifying quality of paint supplied.

Copyright EIL – All rights reserved

CONTRACTOR shall arrange to have such tests, as instructed, performed at his cost at any one of the NABL accredited laboratories under a TPI agency.

Samples for the test will be drawn at random in presence Engineer-In-Charge or his representations. Following tests to be carried out if called:

a. Specific Gravity
b. % solids by weight (% zinc content in case of inorganic or organic zinc primer)
c. Drying time (touch dry & full curing)
d. Adhesion test on a test panel prepared at the site (ASTM D 6677).

Test methods for above tests shall be as per relevant ASTM or ISO Standard.

10.3 The painting work shall be subject to inspection by Engineer-In-Charge at all times. In particular, following stage-wise inspection will be performed and CONTRACTOR shall offer the work for inspection and approval of every stage before proceeding with the next stage. The record of inspection shall be maintained in the registers. Stages of inspection are as follows:

a. Surface preparation
b. Primer application
c. Each coat of paint

10.3.1 Following tests are to be carried out during surface preparation:

a. Test for presence of oil/grease and contamination

The steel substrate after degreasing as per SSPC-SP-1 shall be tested as per following procedure to validate absence of oil and grease contamination:

- Visual inspection - continue degreasing until all visible signs of contamination are removed.

- Conduct a solvent evaporation test by applying several drops or a small splash of residue-free tri-chloromethane on the suspect area especially pitting, crevice corrosion areas or depressed areas. An evaporation ring formation is indicative of oil and grease contamination. Continue degreasing and inspection till test is passed.

b. **Tests for surface finish of blasted surface** shall be done by visual inspection using SSPC-VIS1. Clear cellophane tape test as per ISO 8502-3 shall be used to confirm absence of dust on blasted surface. Checks shall be done on each component at least once per 200 m^2 of blasted surface and a minimum of 3 checks per shift.

c. **Test for presence of soluble salt** as per method ISO 8502-9. Maximum allowable salt content shall be considered 20 mg/m^2.Checks shall be done on each component at least once per 200 m^2 of blasted surface and minimum of 3 checks per shift. In case salt exceeds specified limit,

Copyright EIL – All rights reserved

the contaminated surface shall be cleaned by method as per Annexure-C of ISO 12944-4 (water cleaning). After cleaning, surface shall be retested for salt after drying.

d. **Blast Profile Measurement**: (In-Process testing during actual production before application coating). The angular profile depth measurement shall be done by profile tape as per method ASTM D 4417 method B (Profile depth gauge micrometer)/ calibrated Digital gauge meter. Spot measurement shall be carried out every 15m^2 of blasted surface. At each spot three measurements shall be taken over an area of 10 m^2 and average of measurements to be recorded and reported. If profile is less than specified range, blasting shall continue till greater specified depth profile is achieved.

e. **Tests for blasting media:** Blasting Media (For every fresh batch of media and one random test during blasting)**.** Blasting Media shall be visually inspected for absence of contamination and debris using 10 X magnification.

- Inspection for the absence of oil contamination shall be conducted using following procedure:
  - Fill a small clean 200 ml bottle half full of abrasive.
  - Fill the bottle with potable water, cap and shake the bottle.
  - Inspect water for oil film/slick. If present, the blasting media is not to be used.

- Soluble salt contamination if suspected shall be verified by method ASTM D 4940. If present, media to be replaced.

- Clean blasting equipment, especially pot and hoses, and then replace blasting media and retest.

f. **Test for Blasting Air** (Once Daily before start of blasting and once at random during Blasting). The air for blasting shall be free from moisture and oil. The compressor air shall be checked for oil and water contamination per ASTM D 4285.

In addition to above, record should include type of shop primer already applied on equipment e.g. zinc silicate or zinc rich epoxy or zinc phosphate. Any defect noticed during the various stages of inspection shall be rectified by the CONTRACTOR to the entire satisfaction of Engineer-In-Charge before proceeding further. Irrespective of the inspection, repair and approval at intermediate stages of work, CONTRACTOR shall be responsible for rectifying any defects found during final inspection/guarantee period/defect liability period as defined in general conditions of the contract. Dry film thickness (DFT) shall be checked and recorded after application of each coat and extra coat of paint should be applied to make-up the DFT specified without any extra cost to OWNER, the extra coat should have prior approval of Engineer-in-charge.

10.4 Final inspection of finished coating shall consist of the following:

Coating DFT & WFT check: DFT measurement shall be as per ISO 2808. Type-II electronic gauge shall be used as described in ASTM D7091. DFT gauge calibration, adjustment of gauge coating thickness, frequency and number of coating thickness measurement shall be as per ASTM D7091

Copyright EIL – All rights reserved

and SSPC-PA2. Measured DFT shall have a tolerance as per SSPC-PA-2 level-3 of the dry film thickness, specified in this specification. Once in every layer of coating application, spot checks of WFT shall be carried out during the coating application according to ISO 2808, Method No. 1A- comb gauge. This is to ensure that film thickness is being achieved as per the specification. The frequency of WFT check shall be one per 10 m^2.

Adhesion testing: Adhesion of the primer to the steel substrate and inter-coat adhesion of the subsequent coat(s) after curing for at least a week after application of the topcoat shall be examined by a knife test in accordance with ASTM D6677. For the knife test, if the rating is better than 8, the adhesion is considered acceptable. The adhesion is destructive and tested areas shall be repaired afterward using the spot repair procedure. Alternatively, the applicator may perform the adhesion test on a steel panel coated using the same surface preparation and coating application procedure as the work piece. Adhesion testing shall be carried out for each component at least once per 200 m^2 of coated surface.

Holiday detection check: Holiday testing of non-conductive coatings shall be carried out in accordance with NACE SP0188. For immersion, buried & under insulation services, 100% of coated area shall be inspected for holidays. For atmospheric exposure, 10% of coated area which must include weld seams, corners and edges to be holiday tested. Voltage at which test is to be carried out will depend upon DFT of coating being tested and shall be as per NACE SP0188. Any holiday is unacceptable and should be marked and repaired immediately**.**

The CONTRACTOR shall arrange for spot checking of paint materials for specific gravity, glow time (ford cup) and spreading rate.
