11.0 PAINT MATERIAL GUARANTEE CERTIFICATE

The CONTRACTOR shall guarantee that the chemical and physical properties of paint materials used are in accordance with the specifications contained herein/to be provided during execution of work and shall submit necessary certificate of the paint material.

12.0 QUALIFICATION CRITERIA OF PAINTING CONTRACTOR/SUB-CONTRACTOR

Painting CONTRACTOR who is awarded any job for EIL, Projects under this standard must have necessary equipment, machinery, tools and tackles for surface preparation, paint application and inspection. The CONTRACTOR must have qualified, trained and experienced surface preparator, paint applicator, inspector and supervisors. The CONTRACTOR supervisor, inspector, surface preparator and paint applicator must be conversant with the standards referred in this specification.

13.0 PRE-QUALIFICATION/ACCEPTANCE CRITERIA FOR PAINT COATING SYSTEM

13.1 Pre-qualification of paint coating manufacturer and their products

Paint manufacturer meeting the following requirements shall be considered by the CONTRACTOR for supply of the paint products.

Copyright EIL – All rights reserved

a) Manufacturer should have been in continuous business of paint coating formulation and manufacturer for at least past 5 years.
b) Manufacturer should possess past experience of supplying products to hydrocarbon, petrochemical, fertilizer, chemical processing, offshore or heavy industry in the past 5 years.

c) Coating manufacturer should have supplied at least 10000 litre of an individual product to hydrocarbon, petrochemical, fertilizer, chemical processing, offshore or heavy industry.

d) The manufacturer's manufacturing procedure & QA/QC system shall meet ISO 9001 requirements and preferably should possess ISO 14000 certificate.

e) The Quality control set up should be manned by qualified paint technologists whose biodata should be sent along with quality control organization chart.

The Past Track record of the manufacturers as mentioned above shall be substantiated by providing relevant documents to EIL-SMMS for their review and acceptance. This shall include Work Orders, Purchase orders and ISO 9001 certification covering all the requirements mentioned from bullets a) to e) above.

CONTRACTOR shall procure the paint materials from the qualified manufacturer meeting above requirements and after obtaining prequalification testing approval as per requirements mentioned in clause 15.2 below.

13.2 Pre-Qualification Testing procedure:

The paint manufacturer engaged by the mechanical contractor shall carry out the tests in NABL accredited government laboratories or in suggested list of laboratories below, as a part of qualification. Paint manufacturer shall provide the paint samples to laboratory for testing of the parameters mentioned in Table-2 (typical characteristics) and Table-20 (tests on coating systems) of this specification. The testing laboratory will confirm the compliance of the paint material with respect to the acceptance criteria mentioned in the respective tables.

Colored photographs of coated test panels should be taken before and after the test and should be enclosed along with test report. Contractor shall furnish these test certificates along with all necessary supporting documents/information to EIL-SMMS for approval/ acceptance. The paint manufacturer will be qualified and approved by EIL-SMMS for supply of paints after review/assessment of the submissions made by the contractor. Test certificates which are more than 3 years old will not be considered. Paint manufacturers are advised to carryout pre-qualification testing accordingly for paints supply to EIL projects.

List of suggested laboratories:

1. National Test house – Kolkata
2. National Test house-Mumbai

Copyright EIL – All rights reserved

3. HBTU- Kanpur
4. GIRDA (Gujarat Industrial Research & Development Agency)- Vadodara
5. Indian institute of chemical technology – Hyderabad
6. RITES – Kolkata
7. ICT- Mumbai

TABLE-20: PRE-QUALIFICATION TESTING

SYSTEM No.	COATING SYSTEM	REFERENCE CLAUSE (from table-3 to 12)	TOTAL DFT µ (min)
1.	F-9+P6+F6B+F2	6.2	345
2.	F9+F12+F12	6.4	105
3.	F9+F11+F11	6.3	105
4.	F15+F15+F15	11.1.1	240
5.	F16+F16	8.3.1	250
6.	F17	9.2.1	400
7.	F8	3.1	125
8.	F20+F20	9.5.1	1100
9.	F6C+ F6C + F6C	Annexure II	675
10.	F9+F7+F7+F7	10.2.1	365
11.	F15+F6A+F6A	9.9.1	280
12.	F19+F19+F19	9.2.2	375

S. No.	TEST	FOR SYSTEM NUMBER	DURATION	ACCEPTANCE CRITERIA
1.	Cyclic Test Salt Spray : 72 hrs. Drying in air: 16 hrs. UV-A340 nm weather meter: 80 hrs. One cycle: 168 hrs. (25 cycles at 168 hrs. each cycle) (ASTM D5894)	1	4200 hrs.	Shall pass. No chalking, cracking, flaking, blistering or peeling shall be observed.
2.	Chemical Resistance Test (ASTM D543)			
2a.	10% & 40% NaOH	4, 6, 8, 10 11 & 12	1000 hrs.	Shall pass. No cracking, discoloration, blistering, peeling or softening of film shall be observed.
2b.	5% H2SO4		168 hrs.	
2c.	Xylene		4 weeks	
2d.	Acetone		4 weeks	

Copyright EIL – All rights reserved

2e.	Ethanol		4 weeks	
2f.	Kerosene		4 weeks	
2g.	Sea water		2000 hrs.	
3.	Immersion in DM/DI water @90^0 (ASTM C868)	4, 6, 8, 10 11 & 12	30 days	No softening, blistering or film damage.
4.	Resistance to DM water using water immersion. (ASTM D870)	9	2000 hrs.	Shall pass. No chalking, cracking, flaking, blistering or peeling.
5.	100% Humidity Test (ASTM D2247)	1 to 12 (except system-2 & 3)	1440 hrs.	Shall pass
6.	Thermal Shock Resistance Test; 5 cycles @ 30 minutes in furnace at 120 ° C and 15 minutes in water after quenching in water for each cycle. (ASTM D2485 method A)	2, 3, 5, & 11 (For system-2, testing to be done after heating the panels at 400°C for 2 hrs.) & (For system-3, testing to be done after heating the panels at 250°C for 2 hrs.)	-	Shall pass
7.	Cathodic Disbondment Test (ASTM G42 @80°C)	4, 5, 10, 6 & 11	-	Diameter of cathodic

Copyright EIL – All rights reserved

				Disbondment < 10 mm with 6 mm diameter artificial holiday.
8.	Assessment of Adhesion and artificial ageing as per ISO 19277	4, 5, 6, 7, 11 & 12	-	Shall Pass

Each coating product to be qualified shall be identified by the Specific gravity of base and curing agent (ISO 2811). The identification shall be carried out on the batch, which is used for the pre-qualification testing.

13.3 Information to be furnished during delivery of paint materials:

CONTRACTOR along with delivery of paint material has to furnish following information from paint manufacturer to EIL for acceptance/approval of products:

a) Batch test certificates:

Along with paint products delivery to site from the pre-qualified coating manufacturer, CONTRACTOR has to produce test certificate (from paint manufacturer) for each category of product for the following test items. All test results must mention clearly the batch no. and category of product tested. Tests to be conducted for following properties:

- Specific Gravity
- % solids by weight (% zinc content in case of inorganic or organic zinc primer) ~ ASTM D521.

b) Product information sheet/ technical data sheet for each category of product.
The contractor shall be fully responsible for the quality of the paints products as per prequalification testing. After the paint materials are supplied to site, the supplier shall organize random sampling and testing in a NABL laboratory as per discretion of the Engineer-in-charge in consultation with SMMS. Failing to meet the specified quality requirements may cause rejection of the paint products.

c) Remaining Shelf life shall be at least 50% of the total duration at the time of above application of procured material by contractor / owner. However, it is preferred to have the materials from the fresh stock for better performance of coatings.

14.0 METHOD OF SAMPLING & DISPATCH FOR LABORATORY TESTING

(Pre-Qualification tests (sec. 13.2), Batch testing (sec. 13.3) and Inspection testing (sec. 10.0))

14.1 Samples of coating materials should be submitted to the laboratory in sealed containers with batch no. and test certificate on regular format of manufacturer's testing laboratory.

Copyright EIL – All rights reserved

14.2 All test panels should be prepared by testing laboratory. Surface preparation for a system shall be done in accordance with this specification. For individual products testing, minimum shall be Sa 2.5. Colour photographs of test panels should be taken before and after the test and should be enclosed along with test report. Sample batch no. and manufacturer's test certificate should be enclosed along with the report. Test report must contain details of observation and rusting if any, as per the testing code.

14.3 Manufacturers should intimate EIL, details of sample submitted for testing, name of testing agency, date, and contact personnel of the testing agency.

15.0 RCC PAINTING

RCC structures shall be coated with protective coatings as per the requirements laid out in respective drawings/relevant documents.

15.1 Concrete surface preparation and coating application

a. The proper surface preparation of concrete surface is critical for ensuring strong adhesion of coatings, sealants, overlays, and repair materials. The surface preparation removes contaminants, weak layers (like laitance), and provides a rough texture for mechanical bonding.

b. The prepared concrete surface should be free of contaminants, laitance, loosely adhering concrete, and dust, and should provide a sound, uniform substrate suitable for the application of protective coating or lining systems.

c. The surface preparation shall remove protrusions such as from sharp edges, fins, and concrete spatter, voids and other defects that are at or near the surface. Concrete damaged by exposure to chemicals shall be removed so that only sound concrete remains. All contamination, form-release agents, efflorescence, laitance and curing compounds shall be removed.

d. Detergent water cleaning as described in ASTM D4258 shall be used to remove oils and grease from concrete.

e. The minimum surface preparation shall be as per SSPC-SP-13, Clauses 4.3.1, 4.3.2 & 4.4. The surface preparation method, or combination of methods, should be chosen based on the condition of the concrete and the requirements of the coating system to be applied by the CONTRACTOR. Inspection testing and acceptance criteria as applicable shall be as described in sections 5 & 6 of SSPC-SP-13.

f. The DFT of the applied coating shall be checked by using ultrasonic DFT gauge in accordance with SSPC-PA-9

g. All concrete surfaces to be prepared and coated shall be visually inspected for signs of concrete defects, physical damage, chemical damage, contamination, and excess moisture.

Copyright EIL – All rights reserved

h. All concrete should be cured using the procedures described in ACI 308. Curing requires maintaining of sufficient moisture and temperatures for a minimum time period. The surface preparation performed on insufficiently cured or low-strength concrete may result in excessively coarse surface profile or excess removal of concrete.

i. Concrete that has been damaged because of physical forces such as impact, abrasion, or corrosion of reinforcement shall be repaired before surface preparation if the damage would affect coating performance. Repairs should be made in accordance with ACI 301, ACI 562, ACI 546.

15.2 RCC coating system

Table 21- Coating system on concrete surface

S. No	Description	Coating system	Remarks
1	RCC super structure surfaces	1 Priming coat of water based 100% Acrylic exterior emulsion anti-carbonation primer with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50µ per coat + 3 coats of finish coat with water based 100% acrylic exterior emulsion anti-carbonation paint with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50 µ per coat = 3×50 = 150 µ	Note 1
2	All external Cooling tower RCC surfaces and structures, which are prone to carbonization as well as algae & fungus attack due to continuous exposure of water & sea water etc.	1 Priming coat of water based 100% Acrylic exterior emulsion anti-carbonation primer with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50µ per coat + 3 coats of finish coat with water based 100% acrylic exterior emulsion anti-carbonation paint with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50 µ per coat = 3×50 = 150 µ	Note 1
3	Cooling tower internal surfaces including all the inner surfaces but not limited to walls, columns, beams, basins, sumps, channels, all RCC above fills and below fills etc.	3 coats of F-7 @ 125 µ per coat. Total DFT=375 µ	-

Copyright EIL – All rights reserved

Notes for Table 21:

1. Contractor shall propose suitable coating product and submit their necessary datasheet, test certificates and Past Track record for EIL review and approval.
2. No painting shall be done in rainy season.
3. Painting shall be done in given pattern in desired colors preferably bright in shades. Colour Shall be Azure Blue for RCC foundations of pumps & Equipment and Ivory for Piperack. and track. For any other RCC structures, contractors shall propose suitable color code for EIL review and approval.

ANNEXURE-I

Copyright EIL – All rights reserved

SPECIFICATION FOR THERMALLY SPRAYED ALUMINIUM (TSA) COATING

1.0 SCOPE

The following sections outlines the requirement of supply, application and testing of thermally sprayed aluminum coatings (TSAC) for corrosion protection of insulated critical carbon steel, LTCS, LAS equipment like vessels, reactors, columns & equipment within the design temperature range of 200-540°C. Contractor shall establish the criticality in consultation with BPCL/EIL, and finalize the type of under insulation coating required.

2.0 ITEMS TO BE THERMALLY SPRAYED

Vessels, reactors, columns & equipment to be protected by TSAC shall be as per Table 11.0 of this specification. Components thermally sprayed shall not have any uncoated area or shall not be in mechanically connected by flanges etc. to any uncoated bare steel work. Such adjacent areas to TSA coated areas, if not coated by TSA shall have suitable paint coating system as per the standard specification.

3.0 TSAC REQUIREMENTS

3.1 Surface Preparation

All the parts to be sprayed shall be degreased according to SSPC-SP 1. The absence of oil and grease after degreasing shall be tested by method given elsewhere in the specification (Refer Sec. 6.7 of this annexure). Thereafter the surface to be abrasive blasted to white metal finish as per NACE 1/SSPC-SP 5 for marine and immersion service. Using SSPC VIS 1, it is to be visually assessed that the blast cleaned surface meets requirement of SSPC-SP 5. Thereafter clear cellophane tape test as per ISO 8502-3 shall be used to confirm absence of dust on the blasted surface. Finally blasted surface shall be tested for presence of soluble salts as per method ISO 8502-9. Maximum allowable salt content shall be considered 20mg/m^2 (2 micrograms/cm^2). In case salt content exceeds specified limit. The contaminated surface shall be cleaned by method as per Annex C of IS 12944-4 (Water Cleaning). After cleaning the surface shall be retested for salt content after drying. Testing shall be carried out at least on each component, once per 200 m^2 and a min of 3 times per shift during progress of work.

The blasting media shall be either chilled iron or angular steel grit as per SSPC-AB-3 of mesh size G-16 to G-40. Copper, Nickel slag, Garnet or Aluminum Oxide as abrasives will also be suitable having mesh size in the range of G16 to G24 (10-30 mesh), conforming to SSPC-AB-1. Mesh size shall be required as appropriate to the anchor tooth depth profile requirement and blasting equipment used. The blasted surface should be having angular profile depth not less than 65 microns with sharp angular shape but shall not exceed 85 microns. The profile depth shall be measured according to NACE standard RP 0287 (Replica Tape) or ASTM D 4417 method B (Profile depth gauge).

Copyright EIL – All rights reserved

For manual blasting one profile depth measurement shall be taken every 10-20 m^2 of blasted surface.

Surface preparation shall be completed in one abrasive blast cleaning operation wherever possible.

If rust bloom (visual appearance of rust) appears on the blast cleaned surface before thermal spraying, the affected area shall be reblasted to achieve specified degree of cleanliness after which only thermal spraying shall commence.

Air blasting pressure at nozzle shall be normally maintained at 100 psi. Air pressure and media size should be reduced and adjusted to preclude damage/distortion to thin gauge materials. Blasting time on work piece should be adjusted to only clean the surface and cut required anchor tooth with minimum loss of metal. Blast angle should be as close to perpendicular as possible but in no case greater than $\pm$ 30 ^{0} from perpendicular to work surface. Blasting media must be free of debris, excessive fines, and contaminants such as NaCl and sulfur salts (Ref. Sec. 6.0 of this annexure). Blast cleaning shall not be performed when the surfaces to be blasted are wet or less than 3°C above dew point temperature or when the relative humidity in the vicinity of the work is greater than 85%.

3.1.1 Blasting Equipment

The TSAC applicator shall use mechanical (centrifugal wheel) or pressure pot blast cleaning equipment and procedures. Suction blasting equipment shall not be used. Sec 6.6.2 of this annexure shall be used to validate clean and dry air.

3.1.2 Feed Stock

The feed stock shall be in the form of wire. The feed stock shall be 99.5% aluminum of commercial purity grade, its composition shall be in accordance with requirement of BS 1475 or ISO 209-1 type A1 (wrought aluminum and aluminum alloys, wire). Wire shall be supplied in protective wrapping indicating batch number and other details.

3.1.3 Thickness Requirement

The nominal thickness of finished TSAC shall be 250 microns having minimum value of 225 microns at low thickness areas (valleys) and not more than 275 microns at peak areas.

The finished thickness shall be measured using SSPC-PA 2 type 1 fixed probe gauge (Magnetic Gauge).

3.1.4 Coating Bond Strength Requirement

The TSAC coating shall have a minimum individual tensile-bond strength value of 1000 psi for flame sprayed and 1500 psi for arc sprayed coating with an average of 2000 psi for arc

Copyright EIL – All rights reserved

sprayed coatings. Minimum tensile bond strength should be achieved by proper anchor tooth profile of blasted surface, laying down the TSA thickness in multiple passes and carrying out TSA application under controlled environment

3.1.5 Porosity

All thermally sprayed metallic coatings will have porosity. For thermally sprayed aluminum coatings porosity shall not exceed 15% of total surface area for flame sprayed coating and 8% for arc spray coating.

4.0 Thermal Spray Application Procedure

Items in the atmospheric zone to be coated by TSA shall be applied by either Flame spray or Arc spray method only. For coating under insulation, application shall be by arc wire method.

4.1 Equipment Set Up

4.1.1 Thermal spray equipment shall be set up calibrated, operated (1) according to manufacturer instructions/technical manuals and also TSAC applicators refinement thereto and (2) as validated by Procedure Qualification (Sec 7.0 of this annexure).

4.1.2 Spray Parameters

Spray parameters (see 4.1.3 below) and thickness of each crossing pass shall be set and shall be validated with bend test (See 6.5 of this annexure).

4.1.3 Spray Parameters

Spray Parameters	Method of Application	
Arc voltage	Arc wire Spray	Flame Wire Spray
	27 V	-
Air pressure	80 psi	80 psi
Steel surface cleanliness	NACE-1 white metal	NACE-1 white metal / or near white metal
Steel surface profile	60-75 microns	60-75 microns
Arc current	250-280A	-
Coating thickness	225 microns (nominal)	225 microns(Nominal)
Coating adhesion	> 1500 psi (Total coating), see 3.1.4	>1000 psi
Coating porosity	Less than 8%	Less than 15%.
Spray distance (spray Gun work piece)	6-8”	5-7”
Spray Pass width	40mm	20 mm

Copyright EIL – All rights reserved

The above parameters to be validated with a bend test by the contractor before start of work (for details of bend test see Sec 6.5 of this annexure).

4.2 Post Blasting Substrate Condition and Thermal Spraying Period.

4.2.1 The steel surface temperature shall be at least 3^0C above dew point of ambient air temperature.

Steel substrate surface temperature shall be recorded by with a contact pyrometer.
Thermal spraying should commence within 15 minutes from the time of completion of blasting

4.2.2 Holding Period

Time between the completion of final anchor tooth blasting and completion of thermal spraying of blasted surface should be no more than four hours. If within this period rust bloom appears Sec 4.4.1 of this annexure will apply.

4.3 Pre-Heating

For flame spraying, the initial starting area of 1-2 square feet to be preheated to approx.120 °C to prevent condensation of moisture in the flame on the substrate. For arc spraying the preheating is not required.

4.4 Thermal Spraying

Spraying should commence only after validation of equipment set up by procedure qualification test and spray parameter validation tests described in Sec 7.0 and 6.5 respectively. Thermal spraying must commence within 15 minutes from the time of completion of blast cleaning

The specified coating thickness shall be applied in several crossing passes. The coating bond strength is greater when the spray passes are kept thin. Laying down an excessively thick spray pass increases the internal stresses in TSAC and decreases the bond strength of total TSAC. The suitable thickness for crossing passes shall be determined by procedure qualification test described in Sec 7.0 of this annexure.

For manual spraying, spraying to be done in perpendicular crossing passes to minimize thin spots in coating. Approx. 75-100 microns of TSAC shall be laid down in each pass.

The surface geometry of the item or area to be sprayed should be inspected before application. The spraying pass and sequence shall be planned according to following.

Copyright EIL – All rights reserved

- Maintain Gun as close to perpendicular as possible and within $\pm 30^0$ from perpendicular to the substrate.

- Maintain nominal standoff distance and spray pass width as given below:

Spray method	Standoff (Inches)	Spray pass width (Inches)
Arc Wire	6-8	1 ½ (40mm)
Flame wire	5-7	¾ (20mm)

4.4.1 Rust Bloom (Visual appearance of rust or Discoloration)

If rust bloom appears on the blasted surface before thermal spraying, the affected area shall be re-blasted to achieve the specified level of cleanliness.
If Rust bloom in form of discoloration, or any blistering or a degraded coating appears at any time during application of TSAC, then spraying shall be stopped and acceptable sprayed area shall be marked off. The unsatisfactory areas shall be repaired to the required degree of surface cleanliness and profile.
Blast the edges of the TSAC to provide for 2-3" feathered area overlaps of the new work into existing TSAC.
Then apply TSAC to the newly prepared surfaces and overlap the existing TSAC to the extent of feathered edge so that overlap is a consistent thickness.

4.4.2 Masking

Masking all those parts and surfaces which are not required to be thermally sprayed as instructed by purchaser should be inspected by applicator to ensure that they are properly marked and covered by purchaser.

Complex geometries (flanges, valve manifolds, intersections) shall be masked by applicator to minimize overspray i.e. TSAC applied outside spray parameters (primarily gun to substrate distance and spray angle).

4.4.3 TSAC Finish

The deposited TSAC shall be uniform without blisters, cracks, loose particles, or exposed steel as examined with 10 X magnification.

5.0 SEALER

Sealant shall be applied after satisfactory application of TSAC and completion of all testing and measurements of the finished TSAC as per Sec 6.0 of this annexure. For shop work, sealer shall be applied immediately after thermal spraying and for field work sealer

Copyright EIL – All rights reserved

shall be applied within 8 hours. The sealcoat shall be thin enough to penetrate into the body of TSAC.

The sealant shall be silicone alkyd aluminium paint having DFT not more than 35-40 micron. Typically seal coat shall be applied at a spreading rate resulting in theoretical 38 microns DFT. The seal coat shall be applied in accordance with SSPC-PA 1 and the paint manufacturer instruction for sealing.

6.0 TESTING AND MEASUREMENT SCHEDULE

6.1 Surface Finish

That the blasted cleaned surface meets the required criteria (NACE 1/SSPC-SP 5) shall be visually inspected using SSPC-VIS 1. The clear cellophane-tape test as per ISO 8502-3 shall be used to confirm absence of dust or foreign debris on the cleaned surface. Checks shall be done on each component at least once per 200 m^2 of blasted surface and minimum of 3 checks per shift.

6.2 Blast Profile Measurement: (In-Process testing during actual production before application of TSA coating)

The angular profile depth measurement shall be done by profile tape as per method NACE Standard RP 0287 or ASTM D 4417 method B (Profile depth gauge micrometer). Spot measurement shall be carried out every 15m^2 of blasted surface. At each spot three measurements shall be taken over an area of 10 cm^2 and average of measurements to be recorded and reported.
If profile is <65 microns blasting shall continue till greater than 65 microns depth profile is achieved.

6.3 TSAC Thickness (In-Process Testing For finished coating during regular production)

6.3.1 TSAC finished thickness shall be measured using SSPC-PA 2 type 1 fixed probe gauge.

6.3.2 For flat surfaces, measurements shall be taken along a straight measurement line, one measurement line for every 15 m^2 of applied TSAC shall be selected along which 5 measurements to be taken at 25 mm internal and average to be reported.

6.3.3 For curved surface or complex geometry, 5 measurements shall be taken at a spot measuring 10 cm^2 in area. One spot to be taken for every 15 m^2 of applied TSAC area.

6.3.4 The TSAC thickness in surface changes or contour changes, welds and attachments shall be also measured and reported.

6.3.5 If TSAC is less than specified minimum thickness, apply additional TSAC until specified thickness range is achieved.

Copyright EIL – All rights reserved

6.3.6 All locations and values of TSAC thickness measurements shall be recorded in Job Record (JR).

6.4 Tensile Bond Testing (In-Process testing for finished coating during regular production)

- Tensile Bond strength of the TSAC finish coat shall be determined according to ASTM D 4541 using a self-aligning adhesion tester.

- One measurement shall be made every 50 m^2. If tensile bond at any individual spot is less than 1000 psi for flame sprayed coating and 1500 psi for arc sprayed coating the degraded TSAC shall completely remove and reapplied.

- The tensile bond portable test instrument to be calibrated according to ASTM C 633

6.5 Bend Tests

Bend test shall be carried out at beginning of each work shift. Bend tests shall also be conducted on sample coupons before start of thermal spraying work to qualify the following as mentioned earlier in this specification.

- To qualify spray parameters and thickness of each crossing pass.

6.5.1 Test Procedure

a) Five corrosion control steel coupons each of dimension 50 mm x 150 mm x 1.3 mm thk. to be prepared.

b) Surface shall be prepared by dry abrasive blast cleaning as per this specification.

c) TSAC shall be applied as per specified thickness range. TSAC should be sprayed in crossing passes laying down approx. 75-100 microns in each pass.

d) TSAC applied coupons shall be bent 180^0 around a 13 mm diameter mandrel.

e) Bend test shall be considered passed if on bend radius there is

- No cracking or spalling or lifting by a knife blade from the substrate

- Only minor cracking that cannot be lifted from substrate with a knife blade.

f) Bend test fails if coating cracks with lifting from substrate.

6.6 Tests for blasting media, blasting air

Copyright EIL – All rights reserved

6.6.1 Blasting Media (For every fresh batch of media and one random test during blasting)

Blasting Media shall be visually inspected for absence of contamination and debris using 10 X magnification.

a) Inspection for the absence of oil contamination shall be conducted using following procedure:

- Fill a small clean 200 ml bottle half full of abrasive.
- Fill the bottle with potable water, cap and shake the bottle.
- Inspect water for oil film/slick. If present, the blasting media is not to be used.

b) Soluble salt contamination if suspected shall be verified by method ASTM D 4940. If present, media to be replaced.

c) Clean blasting equipment, especially pot and hoses, and then replace blasting media and retest.

6.6.2 Test for Blasting Air (Once Daily before start of blasting and once at random during blasting)

The air for blasting shall be free from moisture and oil. The compressor air shall be checked for oil and water contamination per ASTM D 4285.

6.7 Test for presence of oil/grease and contamination

The steel substrate after degreasing as per SSPC-SP 1 shall be tested as per following procedure to validate absence of oil and grease contamination.

a) Visual inspection - Continue degreasing until all visible signs of contamination are removed.
b) Conduct a solvent evaporation test by applying several drops or a small splash of residue-free trichloromethane on the suspect area especially pitting, crevice corrosion areas or depressed areas. An evaporation ring formation is indicative of oil and grease contamination.
Continue degreasing and inspection till test is passed.

7.0 TSAC APPLICATOR QUALIFICATION

Following tests to be carried out as part of procedure qualification test for the applicator.

- Thickness measurement
- Coating bond strength
- Porosity test
- Bend strength

Copyright EIL – All rights reserved

TSAC applicator's surface finishing and application process and equipment set up, calibration and operation shall be qualified by application of TSA on a reference sample which shall be used as a comparator to evaluate the suitability of application process. Only that applicator will be permitted to carry out the work when test specimens coated by the applicator meets the desired requirements as cited below.

The sample shall be made of a steel plate measuring approx. 18"x 18" x ¼" thick. If the actual work is less than ¼" thick then the sample to be made from material of representative thickness.

The surface preparation, TSAC application shall be made with actual field equipment and process/spray parameters and procedures as per the specification. The depth profile of blasted surface, TSAC coating thickness for each cross pass and total thickness range shall be as per specification.

The surface preparation and thermal spraying shall be carried out in representative environmental conditions spraying with makeshift enclosure.

7.1 After application of coating, thickness and tensile bond measurements shall be made in following manner.

- Divide the sample piece into four quadrants.
- Measure thickness along the diagonal line of each quadrant.
- Four each quadrant five in-line thickness measurements at 1" interval shall be done using SSPC-PA 2 type 2 fixed probe gauge. Thus, a total of four "five in line" thickness measurements to be done for the whole sample.
- One tensile bond measurement using ASTM D 4541 type III or IV portable self-aligning test instrument to be done at center of each quadrant. Total of 4 measurements for the sample.
- One porosity evaluation test by Metallographic examination shall be conducted to demonstrate the achievement of porosity within the limits specified. Sample shall be prepared for Metallographic examination as per ASTM E-3.
- The procedure shall be considered qualified if thickness and tensile-bond strength and porosity values meet the specification requirement.

7.2 Bend test: Bend test shall be carried out as detailed at sec. 6.5 of this annexure.

Copyright EIL – All rights reserved

Applicators thermal spray equipment set-up, operation and procedure of application including in-process QC checkpoints adopted during procedure qualification as described above should be always subsequently followed during entire duration of work.

8.0 DOCUMENTATION

The following information shall be provided by TSAC applicator before award of work.

- TSAC application process consisting of equipment capabilities and their technical parameters, feed stock material and source of procurement.

- Detailed application procedure and in-process quality control check points for (a) surface preparation (b) thermal spraying (c) seal coats.

- Type and specification of instruments to be deployed for measurement of blast profile depth, TSAC thickness and tensile bond.

- Paint manufacturer data sheet for the selected sealing coat to be applied.

- Applicator shall submit repair procedure and all relevant documents for restoring the existing TSAC which will be removed for routine maintenance/NDT testing.

9.0 RECORDS

- The TSAC applicator shall maintain job record to record production and QC information. All the results of the tests and quality control checks shall be entered in the record for each component/part thermally sprayed. All the result of tests (thickness, tensile bond, bend tests) and other validation tests (e.g. procedure qualification test, test for surface cleanliness after abrasive blasting, test for cleanliness of abrasives and air) shall also be recorded and duly signed by owner.

- All the information mentioned in Sec 8.0 above should also form part of the Job record.

- Any modification affected after procedure qualification in the procedure, QC, spray parameter, equipment spec to the original information (submitted before award of the work) must also form part of Job record.

10.0 WARRANTY

The TSAC applicator shall warrant the quality of material used by providing the purchaser with a certificate of materials used to include

- Spray feed stock: Alloy type/designation, Lot Number, wire diameter, chemical analysis, name of supplier, manufacturer.

Copyright EIL – All rights reserved

- Sealant: Name of manufacturer, application data sheet.

11.0 SAFETY

The TSAC applicator shall follow all safety procedures required by the purchaser/owner. Owner shall also give compliance requirement to be followed by applicator. The applicator shall follow all appropriate regulatory requirements.

12.0 CODES AND STANDARDS

This specification shall apply in case of conflict between specification and following applicable standards:

AWS C. 2.17	Recommended Practice for Electric arc Spray.
ASTM C 633	Test Method for Adhesive/Cohesive Strength of Flame Sprayed Coatings.
ASTM D 4285	Method for indicating Oil or Water in Compressed Air.
ASTM D 4417	Test Method for Field Measurement of Surface Profile of Blasted Steel.
BS 2569	Specification for Sprayed Metal Coating.
NACE Standard RP 0287	Field Measurement of Surface Profile of Abrasive Blast Cleaned Steel Surfaces Using a Replica Tape.
ASTM D 4541	Test method for Pull-Off Strength of Coating Using Portable Adhesion Testers.
ANSI/AWS C2.18	Guide for the Protection of Steel with Thermal Spray Coatings of Aluminum, Zinc and Their Alloys and Composites.
NACE No. 12/AWS C2.23M/SSPC-CS 23.00	Specification for the application of thermal spray coatings (Metallizing) of aluminum, zinc, and their alloys and composites for the corrosion protection of steel.
SSPC Publication	The inspection of coatings and linings: A Handbook of Basic practice for Inspectors, Owners, and Specifiers.
SSPC-AB 1	Mineral and Slag Abrasives.
SSPC-AB 3	Ferrous Metallic Abrasives.
SSPC-PA 1	Shop, Field, and Maintenance Painting of Steel.
SSPC-PA 2	Measurement of Dry Coating Thickness with Magnetic Gages.
NACE No. 1/SSPC-SP 5	White Metal Blast Cleaning.
NACE No. 2/SSPC-SP 10	Near –White Metal Blast Cleaning.
SSPC-VIS 1	Guide and Reference Photographs for Steel Surfaces Prepared by Dry Abrasive Blast Cleaning.

25. CRUDE OIL TANKS PAINTINGS

25.1 Scope

This standard exclusively covers the painting of crude oil storage tanks in BORL Refinery including COT, Vadinar. This standard has been derived from existing SOP/09/11, Rev.-1 & AE-S-5430, Rev. 2 (BPCL, MR) and painting practices being followed at BPCL MR. Intent of this standard is to have better protection of Crude tanks against adverse environments.

25.2 Tank operating conditions

Operating temperature: Not above 65 degree Celsius.
Operating pressure: Ambient.

25.3 Surface preparation

The purpose of surface preparation is to create a continuous highly adherent, homogeneous and defect free paint film with an even thickness over the tank surfaces. For new painting, **all the internal & external surfaces shall be blasted to achieve the surface profile as given in Annexure – A.** Light shades and streaks are not allowed. When steel shot is used, it shall be used together with steel grit. The purpose of surface preparation is to create a continuous highly adherent, homogeneous and defect free paint film with an even thickness over the tank surface. Compressed air used shall be free of moisture and oil. Adequate separators and traps shall be provided, installed in the coolest part of the system. The presence of oil and water shall be determined at least two (2) times per eight hours and following every compressor start-up. The air discharge temperature shall not exceed 100 °C. The blasting nozzles should be venturi style with tungsten carbide or boron carbide as the materials for liners. Blasting nozzles shall be replaced when the specified minimum blast pressure, surface cleanliness and surface roughness can no longer be achieved. Blasting equipment and the equipment being blasted shall be properly earthed to prevent the occurrence of electrostatic discharges. If possible, vacuum collector shall be installed for collecting the abrasives for recycling. Recycled shot shall be used only after ensuring that it is clean enough to provide the minimum surface preparation mentioned above.

When working in confined spaces, adequate ventilation and intrinsically safe lighting shall be used. As a minimum, ventilation shall ensure sufficient air changes such that the threshold limit value (TLV) of the various coating materials in use shall not be exceeded. Access for coating work should be constructed so as to provide easy and sufficient access for surface preparation, painting and inspection of all surfaces

25.4 Recommended environment conditions for Paint Application

For all cases, paint manufacturer guidelines shall be followed. Following restrictions are given as

recommended practices:

25.4.1 Coating application shall not be permitted in the following conditions.

4.1.1 During fog, mist or rain.

4.1.2 When the relative humidity is 85 percent or above.

4.1.3 When the steel surface temperature and/or ambient temperature is below 10°C (50°F).

4.1.4 When the steel surface temperature and/or ambient temperature is above 50°C (120°F).

4.1.5 When the steel surface temperature is less than 3°C (5°F) above the dew point.

25.4.2 For all internal painting work, the dehumidification of the surrounding air dew point shall be maintained 5 degree Celsius below the prevailing surface temperature. The relative humidity shall be maintained not more than 45% from preparation to curing of coatings. It is strongly recommended to use Dehumidifiers to maintain the better conditions for painting and effective results.

25.4.3 The measurement of the following shall ensure prior to start of work and shall be done every three hours for the entire duration of the painting work and shall extend till the paint is dried and cured.

4.3.1 Relative Humidity (RH).

4.3.2 Ambient air temperature.

4.3.3 Surface temperature of the object being painted.

4.3.4 Air temperature at surrounding of the painting.

4.3.5 Air flow

25.4.4 There shall be no welding activity or radiography testing on the shell during and after installation of coating system.

25.4.5 Humidity and dew point readings shall be taken with a sling Psychometric meter and calculated using psychometric tables.

25.4.6 Coatings shall not be applied before the surface has been inspected and the preparatory work approved.

25.4.7 All edges shall be ground to a minimum radius of 3.2 mm. Flame cut areas and weld spatter shall have been ground flush. All rough welds shall be ground to remove sharp edges and other such irregularities. The amount of grinding performed shall be judicious and performed only to the extent necessary to prepare the weld surface and surrounding metal surfaces in accordance with the specification. Over grinding, which would result in

decreasing the wall thickness or the integrity of the weld beyond the limitations imposed by good welding practices, applicable welding codes, or tank or vessel ratings, shall be avoided. All weld spatter and arc strikes must be removed. (Refer NACE SP 0178).

25.4.8 Salt water spray areas shall require fresh water blasting or fresh water (Max. Chloride content 50 ppm) mopping to remove the salts deposited on metal surface before application of primer. Mopping can be repeated before application of other coats to remove salts deposited on previous coats, if such deposits are suspected.

25.4.9 Blast cleaned steel surfaces shall not be touched by bare hand.

25.4.10 If the surface being cleaned is adjacent to a coated surface, the blast cleaning shall cut in to the coated surface by at least 50 mm. The edges of the existing coating system shall be feathered. The remainder of the existing coated surface shall be properly protected with shields or screens to prevent any over blast damage.

25.4.11 To prevent dust and abrasive contamination, blast cleaning shall not be carried out adjacent to painting operations or wet (painted) surfaces.

25.5 Mixing and Painting

25.5.1 Mixing & Thinning

All paint spraying equipment, including mixers, shall be thoroughly cleaned before mixing of new materials. All coating materials shall be mixed and thoroughly stirred in accordance with the instructions of the paint Manufacturer. Sufficient agitation to maintain good mixing shall be applied until the product is used. If air is entrapped in the product during mixing/stirring, sufficient time should be allowed for the air bubbles to escape before application.

25.5.2 Application of paint/primer:

5.2.1 Blast cleaned surface shall be coated with one complete application of primer as soon as practicable but in no case later than 4 hrs. the same day or as per the time frame stipulated in the technical data sheet of the paint, whichever is earlier.

5.2.2 To the maximum extent practicable, each coat of material shall be applied as a continuous film uniform thickness free of porous. Any spots or areas missed in application shall be recoated and permitted to dry before the next coat is applied. Applied paint should have the desired wet film thickness.

5.2.3 No coat shall be applied until the preceding coat has dried and cured as

recommended by Paint Manufacturer. Next coat shall be applied within the time stipulated by the paint manufacturer. Before over coating, over-runs, drips and smears shall be removed and any coating damage or imperfection shall be repaired. The material shall be considered dry for re-coating when another coat can be applied without the development of any film irregularities such as lifting or loss of adhesion of undercoats. Drying time of the applied coat should not exceed maximum specified for it as a first coat; if it exceeds the paint material has possibly deteriorated or mixing is faulty.

5.2.4 No paint shall be force dried under conditions, which will cause cracking, wrinkling, blistering formation of pores, or detrimentally affect the conditions of the paint. No drier shall be added to paint on the job unless specifically called for in the manufacturer's specification for the paint. Paint shall be protected from rain, condensation and contamination until dry.

5.2.5 All paints and painting materials shall be stored only in rooms to be arranged by contractor and approved by Engineer-in-charge for the purpose. All necessary precautions shall be taken to prevent fire.

5.2.6 Surface preparation and paint application shall be done in presence of Manufacturer’s representative. Manufacturer’s representative shall have necessary certification from agency like NACE to supervise and ensure the quality of paint applied.

5.2.7 All personnel shall be provided with personnel protection, e.g. protective clothing, safety glasses, safety shoes, hard hats, goggles, respirators, earplugs, fresh air-fed hood and any other necessary safety equipment. All safety equipment shall be maintained in a good working condition. Warning signs shall be prominently displayed at all access points to areas where abrasive blasting and painting is in progress.

5.2.8 The Contractor shall protect all equipment, structures and any other areas from mechanical damage, environmental damage, blockage or obstruction and damage caused by over blasting, dripping paint, paint splashes and overspray.

5.2.9 To minimize the risk of damage, no lifting, transportation, erection or fabrication operations shall be done before the paint has been fully dried and/or cured.

5.2.10 Abrasive blast cleaning and coating operations should be carried out during daylight hours. However, grit blasting and coating may be carried out at night providing the lighting and environmental conditions are acceptable. Minimum lighting requirements for abrasive blasting, painting and inspection are 500 lux.

5.2.11 For internal tank coatings and the external coatings of buried or immersed equipment and structures, pinhole testing for electrically non-conductive coatings shall be carried out in accordance with NACE SP0188. The high voltage technique shall be used; nominally set at 5 V/µbased on DFT, or as agreed with the paint Manufacturer but not exceeding 25 kV in total. For coating thickness < 500 µ DFT, the low voltage wet sponge technique shall be used.

25.5.3 Spray application

Spraying is the required method of application. The painting Contractor shall supply the required range of spray tips, sizes and fan angles for the work being undertaken. The spray pressure shall be uniform and the spray pattern smooth.

25.5.4 Brush application

Brush application may be done for Maintenance operations, in those cases where spray application may affect other plant, equipment, property or personnel in or near the work site. Where the coating product is specified as only being suitable for brush application. Manufacturer shall confirm in writing that paint is suitable for brush application and will able to meet the guarantee period. Brush application shall be done only with concurrence of Engineer in charge. Coatings applied by brush shall be smooth and even

25.5.5 Roller application

Roller application shall only be allowed for steel floors and for panels and equipment inside climate-controlled areas. Rollers shall be of good quality to ensure uniformity of the applied coating.

25.5.6 Stripe coat

Before spray application of each coat, irregular surfaces such as sharp edges, welds, small brackets, interstices etc. shall be stripe-coated, usually by brush, to ensure the specified film thickness is provided. Stripe coat shall be applicable in all the painting systems.

25.5.7 Repair of coating defects

Damaged areas, defects in the coating system such as over-runs, drips and smears that have to be removed or areas with inadequate dry film coating thickness shall be re-cleaned. The re-cleaning shall carry over on to the sound coating for not less than 50 mm all round, the edges of which shall be feathered.

After the surface cleaning, the specified coating system shall be re-applied. Any additional coats shall blend in with the final coating at adjoining areas. Paint Manufacturers shall be consulted if the existing coating requires abrading before over-coating to obtain good bonding.

25.5.8 Only thinners specified by the paint Manufacturer shall be used

25.6 Paint Procurement

Painting Contractor shall procure paint material from BORL approved manufacturers only.

25.7 Inspection and testing

25.7.1 Refer **section 18** or point no. **25.12** for testing of paint material

25.7.2 Minimum suggested stages of inspection shall be:

a. Surface Preparation
b. Primer application
c. Each coat of paint

25.7.3 All defects noticed during stages of inspection, shall be rectified free of cost by the contractor. All records shall be kept by the contractor.

25.7.4 Wet film thickness measurements shall be made throughout the course of painting in order to ascertain the adequacy and uniformity of thickness. The readings shall be taken at least one every ten (10) square meters.

25.7.5 Dry film thickness shall be taken on each coat after drying and curing of the coat. Dry film thickness (DFT) readings shall be taken using a non-destructive dry film thickness instrument capable of storing the readings. Sufficient readings shall be taken covering each coat prior to application of the following coat to ensure the correct required DFT.

25.7.6 The DFT indicated against each system shall be obtained by applying one or more coat of the paint based on paint properties. The Contractor is responsible to obtain the indicated DFT as per painting system specification.

25.7.7 DFT meter used shall be calibrated before each inspection and shall be witnessed by the Inspector. It is the duty of the Inspector to satisfy him/herself with the performance of the DFT meter.

25.7.8 Criteria for acceptance of painting work shall be in accordance with table – 2.

TABLE - 2

Test	Standard	Frequency	Acceptance criteria
Surface cleanliness	ISO 8501-1	One per ten (10) square meters	Sa 2 ½
Surface Profile	ISO 8503-2	One per ten (10) square meters	As per coating procedure / data sheet
Total Soluble salt contamination [1]	ISO 8502-9	One per twenty (20) square meters or minimum 5 tests whichever is more.	<5 g/cm^2
Dust	ISO 8502-3	One per ten (10) square meters	Rating 2 or better
Adhesion	ISO 4624	One pretest panel, per shift	5 MPa
Holiday Detection	NACE SP0188	100% of surface	Zero defects
Dry Film Thickness [1]	SSPC PA-2	As per Annexure - F	Shall not be less than 80 % and more than 120 % of the Specified dry film thickness. (DFT).
Wet Film Thickness	ISO 2802	One per ten (10) square meters	Consistent with providing required DFT

25.8 Painting Contractor's Responsibility

25.8.1 Contractor shall mobilize the adequate capacity dehumidification unit at site for all internal painting work, if required. The surrounding air dew point shall be maintained 5 degree Celsius below the prevailing surface temperature. The relative humidity shall be maintained not more than 45% from preparation to curing of coatings.

25.8.2 The contractor shall ensure proper functioning of the dehumidification unit, measuring RH and temperature, measuring air flows and maintained 24 hours till coating work is completed in the tank.

25.8.3 All paints and consumables for a particular tank painting work shall be sourced from one manufacturer only to have desired paint performance, guarantee and single point responsibility.

25.8.4 Painting contractor shall deploy adequate number of NACE CIP Level 2 qualified

coating Inspectors to supervise, monitor, inspect & control entire painting process right from the surface preparation, storage, handling, mixing and application on substrate of the painting/coating and to ensure the compliance of this specification. These qualified painting inspectors will report to and shall get guided by BORL Inspection Dept.

25.8.5 Each contractor shall possess relevant standards and deploy all inspection tool/instrument to carry out the all above inspection and testing as per relevant standard.

25.8.6 Organizing of testing all the painting parameters, supply of all the testing instruments, consumables for testing each parameter as defined in clause 7.10 above, including getting accepted by BORL, shall be the responsibility of painting contractor.

25.8.7 The Inspection test plan which will be mandatory part of the contract shall be prepared by the above qualified coating inspector and get it approved by BORL inspection department. The Contractor's qualified coating inspector and BORL shall sign an inspection report as per approved inspection test plan.

25.8.8 The report shall consist, as a minimum, of the following in addition to the inspection parameters and acceptable criteria:

8.8.1 Names of the applicator and the responsible personnel.
8.8.2 Dates when work was carried out.
8.8.3 Paint testing parameters tested
8.8.4 Equipment and techniques used.
8.8.5 Type and calibration of instruments used.
8.8.6 Weather and ambient conditions.

25.9 Frequency and Guarantee of painting

25.9.1 Frequency of Crude oil tanks Painting system for both internal and external painting shall be once in 10 years.

25.9.2 Painting Contractor shall furnish Guarantee for minimum 10 years for both internal and external painting with shot blasting as per Annexure – B, C, D & E.

25.9.3 BORL reserves the right to invoke the guarantees in case contractor (paint applicator) or contractor fail to repair the paint failed area within reasonable time.

25.10 Painting system

25.10.1 The painting system shall be as mentioned in Annexure – A.

25.10.2 No painting is considered for roof legs for new tanks. Roof legs to be hot dip galvanized. Schedule 80 pipes to be used for both roof legs and sleeves. The sufficient clearance shall be ensured between sleeves and roof legs. However, painting shall be as per directions & recommendations of inspection in case of Old roof legs with CS pipes or as applicable.

25.11 SIGN WRITING

All painting work information shall be mentioned (sign writing) with date of completion on Tank shell as per Engineer-in-charge instructions.

25.12 INSPECTION AND TESTING OF PAINTING MATERIAL

25.12.1 All the procured paint material along with batch/test certificates shall be offered for BORL inspection for approval. Remaining Shelf life shall be at least 90% of the total duration at the inspection above.

25.12.2 All paint materials shall be accompanied by Manufacturer Test Certificate. Inspection Engineer at his discretion may test paint formulations, if required.

Page 1410 of 5448 : B957-TENDER_DOC-B957-999-69-41-PK-T-9501 : Rev. A

ANNEXURE – A

THIS PAINTING SYSTEM SHALL BE APPLICABLE FOR CRUDE TANKS AT COT VADINAR FOR ALL EXTERNAL PAINTINGS EXPOSED TO ENVIRONMENT AND FOR CRUDE TANKS AT BINA REFINERY FOR TOP SHELL COURSE PAINTING (FREE BOARD) & EXPOSED PORTION OF FLOATING ROOF
(APPLICATION - AIRLESS SPRAY)

SR. NO.	SURFACES	SURFACE PREPARATION	SURFACE PROFILE	PRIMER	FINISH COAT	TOTAL DFT, MICRONS

Notes

1) Contractor shall submit suitable product datasheet, PTR and test certificate, for EIL review and approval.
2) Stripe coat is must for weld area, edges and corners.
3) Over zinc silicate, intermediate coat to be applied in mist coat and full coat technique.
4) In PU paint of silver shade, total thickness to be built in two coats.
5) For PU paint QUVA 340 requirement of 80 % gloss retention after 3000 hrs.
6) All sharp edges to be grinded well before painting.
7) Pitted area having width greater than 2mm or depth greater than 5 mm to be filled with solvent less polyamine adduct cured epoxy.
8) Camouflaging not to be done

AMENDMENTS/ADDITIONAL REQUIREMENTS

Specification No.: 6-77-0001 Rev.5

Title: Welding specification for fabrication of piping

Following amendments/additional requirements shall be applicable:

1. Addition in Clause 5.0:

   5.9: The ferrite number of the austenitic welds shall be in the range of 3FN to 8FN unless otherwise specified in the welding specification chart for piping. The ferrite number shall be measured during welding procedure qualification.

2. Modification of Clause 14.2 (e) as : New PQR shall be established for this job.

3. Addition in Clause 14.6 (a):

   Wherever MPI is required for inspection of alloy steel welds, use WFMPI instead of MPI.

4.

5. Addition in Clause 14.8:

   Hardness checking of alloy steel welds (P No. 4, 5A, 5B, 15E) shall be verified using the standard blocks having same P No.

6. Exhibit- M (Automatic Welding Procedure Guideline) added:

EXHIBIT M: AUTOMATIC WELDING PROCEDURE GUIDELINE

1.0 INTRODUCTION

All welding procedures can be classified as manual, semi-automatic, mechanized, automatic and robotic system. Automatic welding is a generic term for welding processes using equipment that perform welding of two components without the continuous involvement of an operator. It increases the productivity, improve weld quality, reliability and safety.

2.0 SCOPE

This document provides the guidelines for use of various arc welding processes as automatic/robotic/mechanized system in the field. Autogenous welding process is not permitted. The use of this procedure is mainly aimed at piping and structural weld joints.

3.0 DEFINITIONS

Automatic welding is defined as "Welding with equipment which performs the welding operation without adjustment of the controls by a welding operator. Manual adjustments may be made between welding operations but not during welding. The equipment may or may not perform the loading and unloading of work."

Mechanised welding is defined as "Welding in which the welding parameters are controlled mechanically or electronically and may be manually varied during welding to maintain the required welding position."

Robotic welding is defined as "Automatic welding using a robot that can be pre-programmed to different welding paths and fabrication geometries."

Welding operator is defined as "one who operates machine or automatic welding equipment." **Semiautomatic arc welding** is defined as "arc welding with equipment which controls only the filler metal feed. The advance of the welding is manually controlled."

4.0 REFERENCE STANDARDS

a) IS-7310-1,Approval tests for welders working to approved welding procedure, Part I: Fusion welding of steel.

b) AWS D1.1, Structural welding code—Steel.

c) ASME BPV SECTION IX, Welding, Brazing and Fusing qualifications.

d) ISO 14732, Welding personnel—Qualification testing of welding operators and weld setters for

e) mechanized and automatic welding of metallic materials.

f) API RP 582, Welding in the oil and gas industries.

5.0 BASE MATERIALS APPLICABLE

CS, LTCS, Alloy steels, Stainless steels, Ti alloys, Ni alloys

6.0 WELDING PROCESS

The limitations stated in API RP582 (latest edition) for various welding process shall be applicable in addition to the following.

a) Orbital Tungsten Inert Gas (TIG) welding

b) Gas Metal Arc Welding (GMAW)

- GMAW equipment manufacturer shall specify the range of current for various filler wire diameters for classification as short-circuit, spray, globular and pulsed metal transfer mode.
- GMAW-S (short-circuit) shall be used in the root pass when the backside of the weld is accessible and the root pass is completely removed from the backside.

c) Flux Cored Arc Welding (FCAW)

- Only Gas shielded FCAW process shall be employed for pressure retaining weld joints.
- During butt welding, FCAW process shall be employed for other than root passes.

d) SAW

- For field application, the welding machine set-up shall be approved by the site-in-charge.
- Alloy fluxes shall not be used as defined in ASME Section II Part C SFA 5.17 and SFA 5.23.
- The maximum bead width shall be 7X the electrode diameter.
- The maximum individual layer thickness for submerged arc welds shall not exceed 9.5mm or 3 times electrode diameter.
- Fluxes recommended for single pass by manufacturer shall not be used for multiple pass welds.
- Welding procedure shall be requalified whenever welding flux or wire is changed from one manufacturer to another, or from one grade to another of the same manufacturer.
- SAW shall not be used for pipes of NPS 8 inch and below.

7.0 WELDING PROCEDURE QUALIFICATION

a) Welding procedure qualification shall be carried out using same make and model of welding equipment, program, controller parameter settings.

b) The position limitations listed in ASME Section IX, QW-461.9 shall be considered an essential variable for procedure qualifications.

c) Bevel preparation and tolerances for the test piece and production joints shall be similar.

Repair welding procedure shall also be qualified. Manual welding process may be used for repair procedures.

8.0 WELDING OPERATOR QUALIFICATIONS

a) Operators handling robotic welding system and automatic welding machines shall have completed specialized training and safety courses and submit valid certificate issued by their company.

b) Each welding operator shall be qualified as per ASME Section IX or any other standard specified in the design code for all welding.

c) The test records of all welding operators shall be available at all times at the job location.

9.0 PRODUCTION WELDING

a) Joint bevel preparation and fit-up shall be similar to that carried out during welding procedure qualification.

b) Only qualified operators shall be performing the Welding.

c) Any unplanned interruptions during welding shall be reported to the site-in-charge. Welding shall be resume after assessing the impact of interruption on weld quality.

d) Inspection of finished welds shall be carried out as per the ITP.

e) Repair rate of each welding operator shall be recorded.

JOB SPECIFICATION FOR EXTERNAL COATING OF BURIED PIPING, VALVES, FLANGES AND FITTINGS

1.0 SCOPE

This specification specifies the minimum technical requirements for pipes externally coated with extruded / sintered 3-layer polyethylene (3LPE) in shop or field and the fittings / flanges / valves / strainer body externally coated with liquid epoxy in the shop or field. These externally coated pipes and fittings are intended for the usage in the buried conditions. The list of items to be coated given in this specification is not exhaustive. This specification is applicable for all items which are in buried condition.

This specification does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this specification to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

2.0 REFERENCES

BS EN ISO 21809-1: External coatings for buried or submerged pipelines –Polyolefin coatings
DIN 30670: Polyethylene coatings on steel pipes and fittings – Requirements and testing
DIN EN 10289: Steel tubes and fittings for onshore and offshore pipelines
BS EN ISO 21809-3: External coatings for buried or submerged pipelines -Field joint coatings

3.0 MATERIALS

3.1 Coating materials shall be suitable for the service conditions and the pipe sizes involved in the project. The 3LPE coating system for pipes shall comprise of a powder epoxy primer, polymeric adhesive and a medium or high-density polyethylene top coat. The coating materials i.e. epoxy powder; adhesive and polyethylene compound shall have proven compatibility. The compatibility of all the three components shall be ensured by manufacturer / applicator.

3.2 Fittings shall be coated with liquid applied epoxy coating material

3.3 Buried field joints of 3LPE pipe shall be coated with heat shrinkable sleeves / Cold applied tapes defined as per clause 4.3 of this specification.

4.0 FUNCTIONAL REQUIREMENTS AND PROPERTIES OF COATING

4.1 3LPE coated pipes

4.1.1 General requirements

The 3LPE coating shall preferably be applied by side extrusion method as per BS EN ISO 21809-1 for piping which are having a design temperature up to 80°C. However, for design temperature up to 70°C, 3LPE coating by sintering method is also acceptable and shall conform to DIN 30670 (Type S) and table-1 of this specification. Total thickness of the coating shall conform to thickness class ‘n’ as per table-3 of DIN 30670.

Cut back provision for pipes and fittings shall be as follows:

For pipes smaller than DN 600 the length of the cutback shall be no greater than 150 mm, for larger pipes the cutback shall be (150 ± 20) mm. For three-layer coatings, the epoxy resin and adhesive layers at the pipe ends shall be removed to at least 80 mm

Copyright EIL – All rights reserved

from the welding bevel. A not less than 20 mm strip of epoxy resin or epoxy resin and adhesive should extend from the cutback of the polyethylene coating. For coating thicknesses up to 2.2 mm the bevel angle shall be no greater than 45°, for greater coating thicknesses the bevel angle shall be no greater than 30°.

Table-1: Properties of 3 LPE Coatings

PROPERTY	REQUIREMENT	TESTING AS PER DIN 30670	NOTES
Cathodic disbondment (CD test)	23 °C/28 d or 60 °C/2 d max. 7 mm	Annex C	-
Peel strength	70 N/cm (23 °C) 30 N/cm (70 °C)	Annex D	For system testing single values shall beno more than 25 % lower than the required average value.
Continuity (holiday detection)	No discharges	Annex E	25 kV test
Elongation at break(23 °C ± 2 °C)	min. 300 %	Annex F	-
Impact resistance(23 °C ± 2 °C)	≥ 7 J/mm	Annex H	25 kV test No discharges
Low temperature impact resistance	≥ 7 J/mm (−40 °C ± 2 °C)	Annex H	25 kV test No discharges
Indentation resistance	max. 0,2 mm (23 °C) max. 0,4 mm (70 °C)	Annex I	-
Specific electrical coating resistance (23 °C ± 2 °C)	≥ 10^8 Ωm²	Annex J	-
UV resistance	⊿MFR ± 35 %	Annex K	-
Thermal ageing resistance	⊿MFR ± 35 %	Annex L	-

4.2 Epoxy coated fittings, flanges and valves

Fittings shall be coated with liquid epoxy conforming to DIN EN 10289 (Class C and type 3) and table-2 of this specification. Thickness of the coating shall be minimum 1500 microns. Wherever epoxy coated fittings are to be welded with 3LPE coated pipes or fittings, it is the responsibility of the supplier/coating applicator to ensure a proper cut

Copyright EIL – All rights reserved

back in such a way that the coating is not damaged during welding. Specific written approval of EIL to be obtained in case there is difficulty in complying with this requirement, supplier to submit justification for the same. The joints between two epoxy coated fittings shall be coated with liquid epoxy as per DIN EN 10289, Class C and type 3.

Table-2: Properties of Liquid Epoxy Coatings

PROPERTIES	REQUIREMENTS		TESTING AS PER DIN EN 10289
Hardness Shore "D"	Specified by the manufacturer		Clause 7.3
Appearance and continuity	Uniform colour, smooth appearance and free from defects		Clause 7.4
Cut back	(150 ± 20) mm		Clause 7.5
Holiday detection	Free from holiday		Clause 7.6
Impact resistance	(23 ± 2) °C	(- 5 ± 3) °C	Clause 7.7
	5 J X k X mm (mm of coating thickness)	3 J X k X mm (mm of coating thickness)	
Adhesion test Resistance to removal	(23 ± 2) °C	maximum service temperature ± 2 °C	Clause 7.8
	min. rating 2	Results for information	
Cathodic disbondment	Average	Maximum	Clause 7.10
	<=6 mm	<= 8 mm	
Specific electrical insulation resistance	Minimum Rs after set number of days at constant temperature		Clause 7.11
Indentation resistance	(23 ± 2) °C	maximum service temperature ± 2 °C	Clause 7.13
	max 0.2 mm	<=30 % of initial measured thickness	

4.3 Field joint coating

The joint between 3LPE coated pipe and epoxy coated fitting shall be protected by heat shrinkable sleeves / cold applied tapes conforming to codes 14-B / 19-E respectively as per BS EN ISO 21809-3.The FJC shall meet the requirements as mentioned in table-3 & 4 of this specification.

Note: Liquid epoxy coating conforming to DIN EN 10289, Class C and type 3 can also be applied as field joint coating where there is practical difficulty in applying HSS / Cold applied tapes subject to approval by the OWNER / PMC. A certificate for compatibility of liquid epoxy with 3LPE coated pipes shall be obtained from liquid epoxy coating manufacturer and submitted to OWNER / PMC for approval. Epoxy coating shall comply to the Table-2 of this specification.

Indentation resistance at a pressure of 10 N/mm2	T_{max}	mm	≤1,0	Annex E

5.0 INSPECTION AND TESTING

The contractor shall establish and maintain a proven quality assurance system to ensure that supplied pipes & fittings comply in all respects with the requirements of this specification. The minimum inspection and testing to be performed shall be as per relevant clauses of DIN 30670, BS EN ISO 21809-1 & 3 and DIN EN 10289. Prior to starting the coating job, the contractor /supplier/coating applicator shall prepare coating application procedure and ITP based on the above mentioned standards in consultation with OWNER/PMC and submit for their approval. Coating Job shall start only after approval of the same.

6.0 HANDLING, TRANSPORTATION AND STORAGE

6.1 The vendor shall load, unload, transport and stockpile the coated pipes, flanges, valves and fittings within the coating plant using approved suitable means and in a manner to avoid damage to the coating.

6.2 Coated pipes, flanges, valves and fittings may be handled by means of slings and belts of proper width (minimum 60 mm) made of non- abrasive/non-metallic materials. In this case, pipes, flanges, valves and fittings to be stacked shall be separated row by row to avoid damages by rubbing the coated surface in the process of taking off the slings. Use of round sectional slings is prohibited. Forklifts may be used provided that the arms of the forklift are covered with suitable pads, preferably rubber/PVC/Teflon.

6.3 Coated pipes, flanges, valves and fittings at all times shall be stacked completely clear from the ground, at least 300 mm, so that the bottom row of pipes remains free from any stagnant surface water. The pipes and fittings shall be stacked at a slope so that driving rain does not collect inside the pipe. Coated pipes and fittings may be stacked by placing them on ridges of sand free from stones and covered with a plastic film or on wooden supports provided with suitable cover. Flanges and valves shall be provided with covers/wrapping to ensure that there is no water stagnation/accumulation to protect the coating. This cover can be of dry, germ free straw covered with plastic film, otherwise

Copyright EIL – All rights reserved

foam rubber may be used. The supports shall be spaced in such a manner as to avoid permanent bending of the pipes. Stacks shall consist of limited number of layers such that the pressure exercised by the pipe's own weight does not cause damages to the coating. Each pipe section shall be separated by means of spacers suitably spaced for this purpose. Stacks shall be suitably secured against falling down and shall consist of pipe sections having the same diameter and wall thickness. The weld seam of pipes shall be positioned always in a manner so as not to touch the adjacent pipes. The ends of the pipes and fittings during handling and stacking shall always be protected with bevel protectors.

6.4 The trucks used for transportation shall be equipped with adequate pipe supports having as many round hollow beds as there are pipes to be placed on the bottom of the lorry bed. Total width of the supports shall be at least 5% of the pipe length and min. 2 no. support shall be provided. These supports shall be lined with a rubber protection and shall be spaced in a manner as to support equal load from the pipes. The rubber protection must be free from all nails and staples where pipes are in contact. The second layer and all following layers shall be separated from the other with adequate number of separating layers of protective material such as straw in plastic covers or mineral wool strips or equivalent, to avoid direct touch between the coated pipes.

All stanchions of Lorries used for transportation shall be covered by non-abrasive material like rubber belts or equivalent. Care shall be exercised to properly cover the top of the stanchions and other positions such as reinforcement of the truck body, rivets, etc. to prevent damage to the coated surface. Slings or non-metallic straps shall be used for securing loads during transportation. They shall be suitably padded at the contact points with the pipe.

6.5 In case of any marine transportation of coated pipes, flanges, valves and fittings involved, the same shall be carried out in compliance with API RP 5LW.

7.0 MARKING

Vendor shall place marking on the outside surface of the coating at one end of the coated pipe and marking shall be as per the requirements of DIN 30670, BS EN ISO 21809-1 & 3 and DIN EN 10289.

1.0 SCOPE OF WORK

Copyright EIL – All rights reserved

1.1 SCOPE OF WORK FOR CATHODIC PROTECTION SYSTEM (CP SYSTEM)

The work to be performed by the EIL/ OWNER approved CP contractor shall comprise of design, detailed engineering, supply, installation, testing and commissioning of Impressed Current Cathodic Protection (CP) System for soil/ sand side corrosion prevention of Underground Vessels inside pit filled with sand/soil within the scope of this project.

This document is not intended to be all-inclusive and the use of the guidelines set forth here do not relieve the CONTRACTOR of his responsibility of providing adequate CP System, which shall be proved performing to the entire satisfaction of the OWNER/ EIL.

The successful EPC contractor shall furnish all necessary details with supporting documents of proposed CP contractor (List of orders executed with copies of work orders/ technical details of work executed, completion certificate of CP contractor during detail engineering stage.

The contractor needs to supply all materials, consumables in his scope of supply from EIL/ Owner approved vendor list. The items which are not listed, the same shall be considered based on proven track record (PTR) basis for application of minimum one year period and five years for critical items such as MMO wire anode (filled with factory coke breeze and connecting lead cable), Surge diverter, SSPC (solid state polarization cell) / DC Decoupler and Reference electrode with satisfactory performance record (Refer technical specification of items). The contractor shall provide all construction tools, tackles, equipment and personnel necessary for the work and prepare detailed engineering package including construction drawings before starting of the work. After commissioning of the system commissioning report along with as built drawings including soft copies in latest version of AutoCAD and operating manuals to be prepared.

The Contractor needs to keep vigilance and take all precautionary measures to prevent fire hazards during execution of job.

1.2 SCOPE OF WORK FOR CATHODIC PROTECTION SYSTEM INSTALLATION

1.2.1 Item wise works envisaged under this Contract will comprise of the following:

Preparation and submission of Detail Engineering package as per Design basis and job specifications enclosed in this document. The detail engineering package shall include, as a minimum, design calculations, Bill of quantities, layout drawings of all materials/ equipments of CP System, Connection schemes and wiring diagrams, Installation procedures, name of equipment suppliers, shop/ field testing & inspection plan for equipment, necessary technical information/ datasheets, fabrication/ construction drawings, testing and commissioning procedures and formats, Quality control/ Quality assurance documents etc. & obtain approval from OWNER/ EIL before execution of work. CONTRACTOR needs to obtain approval on all layout drawings of cathodic protection materials/ equipment at site from OWNER/ EIL before starting the installation work.

1.2.2 Carry out Soil Resistivity test, detailed engineering, Supply all materials, equipment and perform all erection and installation work as per approved detail-engineering package. Provision of all service connection to T/R units including power cable starting from power source to PDB and PDB to TRU shall be in CONTRACTOR's scope of work.

Copyright EIL – All rights reserved

1.2.3 Shop testing of all major contractor supplied CP equipment (T/R, Anode, Cables, Junction Boxes, and RTU etc.) and submission to EIL of Test results/ certificates for approval before delivery of equipment.

1.2.4 Field-testing of individual components of CP System as per approved detail engineering package. Final commissioning of installed system as per approved procedure and submission to EIL of results thereof.

1.2.5 Liaison with other agencies, seek and obtain all permission related and obligatory to his part of the work.

1.2.6 Preparation and submission of 1 set of soft copy and 6 sets of hard copies to client and one set each soft and hard copy to EIL for records for all as built CP System package comprising of operation and maintenance manual for equipment, as-built drawings, Material specifications and Pre-commissioning/ Commissioning results.

1.2.7 After Commissioning of the CP System, if it is found that structure to electrolyte potential achieved at some location is in the range which is below acceptable limit as per code, then a supplementary CP System need to be installed to bring the potential level at such locations within acceptable limit as mentioned vide section 2.0 for "Design Basis/ Philosophy for CP System".

1.2.8 CONTRACTOR shall give performance guarantee for CP System for applicable equipment as per design basis and job specifications and operation guarantee of the material and equipment supplied by him as well as guarantee against defective workmanship for installation work carried out by him.

1.3 INSTRUCTION TO BIDDERS

1.3.1 Site Particulars

It shall be the bidder's responsibility to have a thorough understanding of the reference documents, site conditions and specification included therein. The intending bidders shall be deemed to have visited the site and have studied the conditions before submitting the Bids. Non-familiarity with the site conditions will not be considered a reason either for extra claims or for not carrying out the work in strict conformity with the drawings and specifications.

1.3.2 Every item of work and supply by CONTRACTOR shall be subject to Engineer-In-Charge scrutiny, supervision and approval. Any work carried out or supplies affected without such approval shall stand automatically rejected and his claim for compensation for such unauthorized work shall be null and void.

1.4 SPECIFIC REQUIREMENTS FOR CP SYSTEM WORKS

1.4.1 General

Clauses given under specific requirements for CP System works shall be read in conjunction with

Copyright EIL – All rights reserved

General conditions of contract and in case of any conflict, the provisions of specific requirements for CP System works will override the provision of general conditions of contract.

1.4.2 EIL/ OWNER shall have the right to inspect the following:

- Workshop & production facilities available with CONTRACTOR or its tie up agency.
- Fabrication/ testing of material/ equipment to be supplied by CONTRACTOR or its tie up agency for CP system.

1.4.3 It shall be Bidder's responsibility to arrange access for EIL/ OWNER Personnel for such visits. All costs related with travel, boarding, lodging for EIL/ OWNER personnel for such visits (if any) shall be borne by EIL/ OWNER.

1.4.4 Materials

1.4.4.1 Material Supplied By Owner

No material for CP System shall be supplied by owner.

1.4.4.2 Material Supplied by Contractor

The Contractor shall procure, supply all materials, equipment and consumables required for the work in his scope. Technical specifications of major items are given in section 3.0 for "Job specification for CP System", of this document. Supply of all balance materials, consumables not covered in section 3.0 for "Job specification for CP System", but required for completion of work as per this specification shall be entirely Contractor's responsibility. The rates quoted for the execution of the Contract shall be inclusive of all Contractor supplied material and equipment.

1.4.5 Warranty

Contractor needs to provide design guarantee for the system as per codes and standards & the protection criteria mentioned in the section Design basis/ Philosophy of this document also shall replace/ repair or reinstall free of cost any material/ equipment supplied or installed by him in case it fails to operate due to defective material or workmanship as per requirements of this specification within 12 (Twelve) months from the date of issue of completion certificate and acceptance of the CP System by Owner. Contractor shall replace at his own cost if any item found defective or missed before handing over the system to owner.

Comprehensive Annual Maintenance (AMC) for CP System for 1 year is in CP Contractor’s scope after Guarantee/ Warrantee period is over.

1.4.6 Construction Aids, Equipment, Tools and Tackles

Contractor shall be solely responsible for making available for executing the work, all requisite construction equipment, special Aids, tools, tackles and testing equipment and appliances, all instruments including automatic Programmable current interrupters required for commissioning and

Copyright EIL – All rights reserved

interference testing of the system. Such construction equipment shall be in first class operating condition. Any discrepancies pointed out by Owner/ EIL shall be immediately got rectified, repaired or the equipment replaced all together by Contractor. Owner/ EIL shall not in any way be responsible for providing any such equipment, machinery tools and tackles etc. The Owner/ EIL reserves the right to re-arrange such deployment depending upon the progress and priority of work in various sections at no extra cost to Owner.

1.4.7 Transportation, Packing and Handling

Contractor shall be responsible for transportation of all equipment/ materials required for CP system work and unload the same at allotted area at site.

1.4.7.1 To protect all the material during period of dispatch, storage and erection against corrosion, incidental damage due to vermin, sunlight, rain, high temperature, humid atmosphere, rough handling in transit and storage in open during monsoon including delays in transit. Bidder shall be responsible for any damage to equipment/ material due to above reasons.

1.4.7.2 Bidder to refer Section 2.0 for "Design Basis/ Philosophy for CP System", Section 3.0 for "Specification for CP System material & equipment", Section 4.0 for “Mandatory Spares for Cathodic Protection System”,

1.0 Codes and Standards

The entire work shall be performed as per the following codes/ standards.

NACE	: SP-0169, SP-0285, SP-0177, SP-0286
OISD	: OISD 150
DIN EN 50162 VDE 015:	Protection against corrosion by stray current from direct current (DC) systems.
BS EN 12954	: Cathodic protection of buried or immersed metallic structures
IEC/ NEC/ IS	: Relevant codes
IS/ IEC: 60079	: Electrical Apparatus for Explosive Gas Atmosphere
IS/ IEC: 60529	: Classification of Degree of Protection Provided by Enclosures

Indian electricity act and rules framed there under.

Fire insurance regulations.
Regulations laid by Chief Electrical Inspector of State.
Regulations laid by Chief Inspector of Explosives.
Regulation laid by Factory Inspector of State.

Wherever the requirements in this specification are in conflict with any of the above standards, the requirements of this specification shall be binding.

2.0 Design basis:

Impressed Current Cathodic Protection (CP) System to be provided for Carbon Steel material for soil side corrosion prevention of underground vessels inside the pit and their connecting lines as applicable for the tender. Anodes to be considered for impressed current CP System shall be Mixed Metal Oxide (MMO) tubular and close distributed long line mixed metal oxide (MMO) wire anode piggyback connected with anode lead cable, factory pre-packed with coke breeze with factory connected tail cables as per structure design and site condition.

No Insulating joints shall be installed to isolate any incidental structures from CP System within the Battery limit. Hence the structures intended to be cathodically protected shall be in electrical continuity with many foreign structures within the plant complex such as RCC pavements, RCC foundations, earthing grids, other U/G structures, which are not intended to be protected. The CP current requirement therefore shall be governed by following factors:

- Surface area and coating quality of structures to be protected.
- Surface area and surface condition of nearby foreign structures including earth grid.
- Relative position of anode between foreign structure and structure intended to be protected.

To take care of such situation CP System shall be designed & installed in two stages by providing one preliminary design and another supplementary design for Impressed Current CP System as follows:

Preliminary design:

A preliminary design shall be made as per required scheme which shall be approved by Owner/ consultant. The quantities required for T/R units, Power Distribution Boards, anode beds of various configurations, Junction boxes (AJB, CJB, MJB, etc.), Cables of various sizes, Thermit weld connections,

Copyright EIL – All rights reserved

and any other materials as required shall be calculated by CP CONTRACTOR. The locations of T/R units, Distribution Boards, anode beds of various configurations, Junction boxes (AJB, CJB, MJB, etc.), Cables of various sizes, Thermit weld connections, shall be marked by CONTRACTOR in appropriate layout drawings and shall be submitted along with Detail engineering package to OWNER/ EIL for approval. The T/R Units, PDB, and MJB shall be installed at one location under a common sun/ rain shed in non-classified area near the equipment. Based on site condition, CP contractor shall decide location/distance of the CP equipment from the site plot plan/layout. Cathodic protection Transformer Rectifier unit (CPTR Unit) shall be oil cooled, outdoor type. The power supply for the T/R Unit/ PDB shall be drawn from the identified cubical of the electrical substation nearest to the equipment.

Supplementary design:

After energising CP System as per preliminary design, the unprotected/ under protected and over protected areas shall be identified and a supplementary design is to be made to bring all structures intended to be protected within acceptable potential limits.

The following criteria shall be followed to determine the protection levels:

- Maximum allowable equipment to soil potential with respect to Cu/ $CuSO_4$ ref. Cell: –1.10V (Instant OFF) for impressed current system.
- Minimum allowable equipment to soil potential with respect to Cu/ $CuSO_4$ ref. Cell: –0.850 V (Instant OFF) or –100mV polarization shift .
- Discretion to use any of the criteria shall solely rest with Owner/ Owner's Representative.
- Interference Criteria: +50mV positive shift.
- Design life of Anode = 25 years (minimum) for impressed current CP system.

a) While deciding number of modular type 75V/75A, 50V/50A, 25V/25A , 50V/75A, 50V/25A, 25A/12 V capacity T/R units, considerations must be given to see no T/R unit is loaded more than 75% of its rated output voltage & current capacity throughout design life while feeding load to a single or group of anode beds.

b) For continuous wire anode the anode current capacity shall be considered as 30mA/m for design purpose and tubular anode 6A rated current output to be considered.

c) Identification and mitigation of interference between structures to be protected as well as between the structures to be protected and foreign structures need to be carried out by the contractor as per the requirements of the codes mentioned in this document.

d) Earthing of all T/R Units, PDB and Junction Boxes need to be done by connecting the same with plant earthing grids, wherever plant earthing grids are not available nearby, a separate earth pit approved by OWNER/ EIL may be considered by contractor.

e) To avoid cable damage in the long run, all cables are to be laid at the cable trays wherever possible; underground cable laying through PVC/ HDPE conduit should be considered only when no cable trays are available nearby. All CP System cables need to be laid at power cable trays, all multi core- monitoring cables may be laid in either electrical or instrumentation cable trays whichever is available.

Copyright EIL – All rights reserved

f) The type of coating and operating temperature of each Equipment should be taken into consideration for all detail-engineering calculations.

g) If operating temperature of Equipment exceeds 25 deg C, protective current density shall be corrected @ 0.5mA/m2/deg. C up to 60 deg.C.

h) Connection of drainage cables and measurement cables to the structure shall be done by Thermit welding method.

i) Sand resistivity need to be considered for the structure CP System design as minimum 200 ohm- m or as measured at site whichever is higher.

j) The structure shall have suitable paint for the soil side corrosion protection

k) Reference cell shall be supplied along with required length of lead cable connected at manufacturer's factory as far as possible.

2.1 Design Scheme for Cathodic Protection (CP) System:

Free ends of each string anode shall be terminated to AJB through loop connection on sand cushions. Outdoor type, Transformer-Rectifier unit (T/R Unit) shall be installed to energise the anode strings through anode junction boxes (AJB). Rating of T/R unit shall be 75V/75A, 50V/50A, 25V/25A, 50V/75A, 50V/25A, 25A/12 V based on design calculations. T/R Unit shall have one or two outgoing positive header cables, which shall be terminated to post/ structure mounted AJB to be installed at suitable location near the structures. T/R Unit shall have one out going negative header cable, which shall be terminated, to a cathode junction box cum test station (CJB). CJB cum test station (CJB) shall be located at suitable location near the structures for the drainage connection and potential measurement. Two drainage cables and two measurement cables from each structure shall be terminated to its CJB. Power supply for the T/R Unit shall be drawn from the nearest S/S. OWNER shall provide one 63A/ 250A, 415V, TP circuit breaker/ Switch Fuse unit at the nearest S/S. CONTRACTOR need to lay one 3-phase, 4-wire (Required cable size) power supply cable from this circuit breaker/ Switch Fuse unit outlet to one outdoor type PDB near the T/R Unit location for distribution of power to the T/R Unit. The reference cell cables and the measurement cables from each structures shall be routed through the respective cathode junction box cum test station (CJB) to a single Monitoring Junction Box (MJB), which shall be located near the T/R Units and have the provision of measurement of structure to soil potential.

Also for monitoring of structure to soil potentials at the T/R unit, monitoring cables consisting of reference cell and measurement cables shall be laid between MJB and T/R unit for connection of at least three reference cells to T/R Unit panel. Rotary Selector shall be used at the TR Unit for measurement of potential for each reference cell. The T/R Units, PDB, MJB and RTU shall be installed at one location under a common sun/ rain shed in non-classified area near the Electrical S/S or near the process unit/ offsite area to be decided jointly at the detailed engineering stage by EIL / OWNER.

Copyright EIL – All rights reserved

Common Computerized central monitoring of all T/R units and the permanent reference cells of CP System shall be provided with the help of microprocessor based CP System remote terminal unit (RTU) for subject unit area. The central monitoring unit shall be located at Central Electrical substation.

2.1.1 U/G vessels:

RCC pit shall be provided for the U/G vessel, Anodes string employed for C.P. System of U/g vessels shall be located within the RCC pit. Specific installation requirements of String Anode shall be as follows:

- Anode strings shall be installed in the sand cushion surrounding the vessel at a distance of 500 mm from the vessel.
- Separation distance between consecutive String anode loop shall be uniform.
- Length of each longer side of the loop string anode shall be same as the length of the vessel + 0.6m.
- Minimum 4 No. of strings should be considered for each vessel.

Free ends of each anode string should be connected to AJB located at each end of the vessel. Thus 2 No. of anode lead cables from each anode string shall be terminated to AJB.

2.2 Detailed Engineering Works to be performed by Contractor for CP System:

Following detailed engineering works are to be performed by contractor based on scheme given vide item no. 2.1 and design basis given vide item no. 2.0 of this document for CP System:

- List of materials/ equipments to be procured from Indian market/ foreign market.
- Item wise list of vendors with their reference lists for supply of materials/ equipment.
- Calculation and Preparation of Bill of Quantities for all CP system materials and equipment required.

Bill of quantity along with detailed calculations and preparation of specifications, installation work procedures & fabrication/ construction drawings for following items:

- CP System power distribution board (PDB): Total quantity and connection scheme showing group of T/R units to be connected with each CP System PDB and connection details between owner's switch board and each CP System PDB.
- T/R unit: Total quantity, detailed circuit diagrams and their installation drawings.
- AJB/ CJB/ MJB: Total quantity and connection Scheme showing how group of anodes, anode beds and structure/ equipment are to be connected with each AJB/ CJB/ MJB. Also, fabrication drawing & schematic drawing for internal terminal arrangements and installation drawings for a typical AJB/ CJB/ MJB.
- Anodes: Total nos. of Anode strings and anode string to anode lead cable joint details for entire CP System and their layout arrangement drawings showing no. of anode strings in each. structure/ equipment. Construction drawings and work procedures for anode to cable jointing and also for installation of anode strings.

Copyright EIL – All rights reserved

Design calculations showing:

- Cables: Total quantity of cables and their layout drawing for each CP Station as well as for entire CP System for +ve header cables, -ve header cables, anode lead cables, earthing cables, drainage cables, power supply cables and multi-core monitoring cables.

- Cable to structure/ equipment joint: Total quantity of joints and details of a typical joint.

  T/R unit wise CP System layout drawing showing how each T/R unit is connected with group of anode strings for UG Vessel through AJB/ CJB/ MJB.

- Test points: All reference cells and anode strings should be marked in a single layout drawing.

- Overall CP System layout drawing including all test points, anodes, anode beds, AJB, CJB, MJB, cable routes on a plot plan. All CP System materials/ equipment shall be marked properly for easy identification on all appropriate drawings as well as on site.

- Preparation of testing & commissioning procedure for CP System.

- Preparation of construction drawings with soft copies before starting of installation/ procurement work, Preparation of Soft & hard copies of as built drawings after completion of CP System work, shall also be furnished.

- Quantified list of the major construction equipment, tools, tackles etc. including Diesel engine pump set for dewatering at cable/ pipe trench the BIDDER proposes to use for execution of the work.

- Details & list of vehicles proposed to be used by the CONTRACTOR during the entire construction & commissioning period for transportation of material, equipments, as well as movement of personnel within the plant area.

- Bar chart giving details how BIDDER plans to execute the work within the specified time schedule.

- Quality Assurance Plans/ Procedure

The CONTRACTOR shall establish document and maintain an effective Quality Assurance system as outlined in recognized codes etc. and Quality Assurance Plans included in Specifications etc. to ensure that the work is performed in a planned, systematic manner to the best quality standards and properly documented to provide confidence that materials supplied and/ or work executed and services performed by him conform to the applicable specifications and all the requirements of contract document and work executed by him shall perform satisfactorily over the entire period of its life.

The Quality Assurance Systems Plans/ Procedures of the CONTRACTOR shall generally cover the following aspects/ details, which shall be furnished by BIDDER along with, his detail- engineering package.

Copyright EIL – All rights reserved

i) A Quality Assurance Organogram with curriculum vitae of key personnel responsible for the Quality Assurance at site.

ii) Complete details pertaining to the responsibility authority and accountability of the Quality Assurance Organization of the CONTRACTOR at site.

iii) Equipments, material, Erection, Installation, Testing and commissioning control plans for quality testing/ inspection etc.

iv) Quality Control of processes such as Thermit welding, anode to cable jointing etc.

v) Control Procedures/ Plans for calibration and safe up-keep of instruments, gauges and similar testing equipments etc.

vi) Quality audit & Maintenance/ records/ procedures etc.

vii) Other relevant details.

Quality Assurance System Plans/ Procedures of the CONTRACTOR shall be furnished in the form of a QA manual. BIDDER shall be required to provide explanation pertaining to the details furnished by him in accordance with provisions contained in this clause and any further details, as sought for by OWNER/ EIL. In addition, all the Quality Assurance Programs/ Plans as per specifications enclosed with the Contract shall be fully complied with by the Contractor.

- Precautionary measures to be taken to prevent fire hazard during Thermit welding and Pin Brazing of structure/ equipment for the purpose of cable to structure/ equipment joint as well as during installation, operation & maintenance of CP System.

- All other information as required in individual job specifications shall be furnished by CONTRACTOR in his detail-engineering package.

3.1 SPECIFICATION
FOR OIL COOLED TRANSFORMER/ RECTIFIER UNIT

Copyright EIL – All rights reserved

SPECIFICATIONS AND TESTING OF OIL COOLED TRANSFORMER RECTIFIER UNITS

The specifications and testing procedure of transformer units are given as follows:

3.1 TRANSFORMER RECTIFIER UNITS (T/R UNITS)

The transformer rectifier units shall be a standard product of a manufacturer regularly engaged in production of cathodic protection power supplies. The units shall be supplied in accordance with the following specifications and data sheets.

3.1.1 CODES AND STANDARDS

In general the T/R Unit covered by this specification shall unless otherwise specified, be in line with the requirements of any of the latest applicable standard of:

a) Indian Standards Institution (ISI)

b) International Electrotechnical commission (IEC)

c) American Standards Institution (ANSI)

d) British Standards Institution (BS)

Wherever the requirements in this specification are in conflict with any of the above standards, the requirements under this specification shall be binding.

3.1.2 TRANSFORMER

The main transformer will be the isolation type having separate primary and secondary windings. An electrostatic shield, composed of heavy copper foil, shall be placed between the two windings and grounded to the rectifier cabinet, for this purpose a visible lead should be brought out from the copper foil which shall be connected to any of the mounting stud of the transformer core. Transformer winding wire insulation, winding interlayer insulation, core to winding insulation shall be class F type. The transformer core and winding will be dipped in thermosetting varnish and baked. Transformer varnish will meet the standards for 155 degree C operation. The transformer winding shall withstand 2,000 volt (RMS at 50 hertz) applied for one minute between the windings and between each winding and the transformer core. Maximum temperature of transformer oil will not exceed 85 Deg.C and air temperature inside the upper cabinet will not exceed 85 Deg.C at full load current at ambient temperature of up to 45 deg.C. Transformer full load efficiency will not be less than 95%.The auto transformer shall be similar to main transformer except it will have single winding and tapping for manual mode of control.

3.1.3 RECTIFYING ELEMENTS

The power rectification shall be done by Silicon diodes mounted on heat sinks of sufficient size to prevent the diode case temperature from exceeding 100^{o}C at ambient temperature as per data sheet. The peak inverse voltage rating and current ratings of the diodes shall be as per data sheet. The diodes shall be connected in Bridge circuitory for full wave rectification. Each diode in the bridge circuit shall be protected by a HRC fuse.

Copyright EIL – All rights reserved

3.1.4 A.C. INPUT

The transformer rectifier units shall be designed to operate on 240 volts (±10%) AC single phase, 50 Hz power supply. Inrush current limiting reactor of suitable rating to be provided at input line of the main transformer to avoid possibility of abnormal tripping of MCB while closing circuit using MCB.

3.1.5 D.C OUTPUT

The transformer rectifier shall be designed to operate continuously at 100% rated output current and 100% rated output voltage at input supply voltage 240v (±10%) without exceeding specified hot spot temperature limit and without damaging any components.

3.1.6 D.C OUTPUT ADJUSTMENTS

The DC output control shall be available in any of the following modes, with the help of a selector switch.

3.1.6.1 MANUAL MODE

Output voltage at 23 equal steps up to 100% rated voltage shall be available by means of coarse and fine tap changing switches for rated input supply voltage and 100% rated output current. Tapping for output voltage control shall be taken from a separate auto transformer. The controlled output voltage of the auto transformer shall be fed to main transformer input. The output of the main transformer shall be rectified for DC load supply.

3.1.6.2 AUTO MODE

Unit shall have CONSTANT OUTPUT CURRENT/ VOLTAGE CONTROL (AVCC MODE) in AUTO MODE as per Data Sheet.

CONSTANT CURRENT AND VOLTAGE CONTROL (AVCC MODE)

It will be possible to operate the T/R unit in either Constant Voltage Mode or Constant Current Mode.

Constant Voltage control feature shall be achieved by automatically adjusting T/R unit output voltage between 0 to 100% rated voltage through close loop control using T/R unit output voltage as feedback taken from the voltage divider inside the T/R unit so that T/R unit output voltage of any value between 0 to 100% rated voltage does not vary more than ±0.5V of set value when there is a change in input supply voltage of ±10% or change in load resistance over a specified range decided by the ratio of output voltage & current rating of the T/R Unit

Copyright EIL – All rights reserved

3.1.7 DC OUTPUT RIPPLE

The filter circuit shall be designed in such a manner that ripple factor does not exceed 5% RMS at rated load both in Auto and manual mode.

3.1.8 INPUT OVERLOAD PROTECTION

Protection from overloads on the input will be provided by Miniature circuit breakers of suitable rating on the input side. The trip point will be unaffected by ambient temperature. The trip handles of individual poles of circuit breaker will be mechanically linked so that all lines are opened when an overload occurs. In addition to above MCB, HRC fuse of suitable rating should be connected before MCB so that AC .input current is limited to max. 10% excess rated input current as per data sheet.

3.1.9 OUTPUT OVERLOAD PROTECTION

Protection from overload on the output in auto mode for T/R unit having either constant current control or constant pipe to soil potential control will be provided by another close loop SCR control circuitry giving automatic constant current control same as mentioned vide 3.1.6.2(i) except that it will act as back up control to main auto mode control. Separate PCB shall be used for main auto mode control and the backup control. The current limit for backup control is to be set by two limit switches marked "coarse" and "fine". The limits of the two switches shall be algebraically additive and shall give equal 30 steps up to 110% rated current. One scale calibrated in Ampere shall be provided with each limit switches so that current limit can be set by operator at any desired value in 30 equal steps. In any circumstances even in case of short circuit the T/R unit output current should not exceed the current limit set by the backup control.

In addition to above electronic current limiting feature HRC fuse of suitable ratings to be used at positive and negative terminals as well as one double pole MCB of suitable rating to be connected after HRC fuse at the output to disconnect T/R unit quickly in case of over loads in the output circuit or for ease of isolating T/R Unit from the circuit when it is desired to keep the T/R Unit in standby mode.

3.1.10 VOLTAGE SURGE PROTECTION

Each silicon controlled rectifier (SCR) and Diodes shall be protected from voltage surges by means of R-C/MOV circuitry. This R-C circuitry/MOV will be rated as recommended by the manufacturer of the SCR/

Diodes so that they will conduct heavily before the peak inverse voltage ratings of the SCR/ Diodes are reached. In addition, lighting arrestors and zener Barrier type or MOV type surge Diverters shall be provided in the AC input and DC output circuit of the Transformer rectifier as per data sheet.

Copyright EIL – All rights reserved

3.1.11 COOLING

The transformer/ rectifier will be Natural oil cooled (ONAN) completely enclosed IP55 construction. The temperature of the oil measured at the top layer shall not be more than 85 ^{O}C and maximum air temperature of the upper cabinet should not be more than 85^{O}C for ambient temperature of up to
45 ^{O}C.

3.1.12 INPUT AND OUTPUT TERMINALS

DC terminals made of tinned plated copper shall be located convenient to the cable entrance. The terminals shall be suitable for cable sizes as per data sheet. Three negative and three positive output terminals shall be provided.

AC terminals shall be insulated to withstand 2000 volts 50Hz to the enclosure, shall be shielded to prevent accidental contact and shall be sized to take cable sizes as per data sheet.

3.1.13 METERS

The transformer rectifier units shall be equipped with separate continuous reading voltmeter and ammeter for the DC output and the A.C. input voltage, current and Structure to electrolyte Potential measurement meter with selector switch for selection of different Structure to electrolyte Potential measurement meter. All meters shall be electronic digital type with LED display arrangement and should be able to indicate the current and voltage ranges as per data sheet up to a resolution of one decimal place for DC Ammeter & Voltmeter and 2decimal places for PSP meter. Digit size should be 12.5mm (minimum). All meters shall be rectangular in shape and accurate to within 2% at full load at ambient temp. as per data sheet. They shall be temperature compensated to vary no more than 1% per 10% temperature changes.

All AC&DC voltmeters shall be provided with separate fuse and toggle switch whereas all Ammeters shall be provided with only toggle switch.

3.1.14 ANNUNCIATION

Each transformer rectifier shall be supplied with a continuous signal light which will go out at loss of AC input. In addition to this each T/R unit should give annunciation for Auto and manual mode of operation by continuous signal light. T/R unit should also indicate the failure of each fuse in bridge rectifier and two DC output fuses by an independent LED for each.

3.1.15 ENCLOSURES

"The enclosure of T/R unit shall be plinth mounted type having two compartments. Lower compartment shall contain main transformer, Auto-transformer, DC choke and the compartment should be filled with Transformer oil to IEC 296. The upper compartment shall contain the SCRs, Diodes, indicating meters, Protective devices, Electronic control circuits/ control cords etc. and shall be provided with a plexi glass viewing window. Both the compartments shall be completely enclosed type having IP55 construction.

Copyright EIL – All rights reserved

The enclosure shall have a frame work made of minimum 50mmx 50mm x 3mm angle iron, the upper cabinet body shall be made of minimum 12SWG(2.5mm) W.T. sheet steel, lower cabinet shall be 10 SWG(3.0mm) W.T sheet steel. Size of enclosure shall be minimum 1500(H) x 700(W) x 550mm (D) or higher size than this. Necessary fins for the cooling purpose shall be provided at lower compartment. A detachable sun/ rain shade to be provided of suitable size.

The transformer rectifier shall be provided with the following accessories.

- Steel channel under the base for plinth mounting.
- Lifting lugs of size suitable for lifting complete transformer rectifier unit when full of oil
- Sunshade/ rain shade.
- Oil filing hole with screw cap and drain plug.
- An oil sight gauge comprising a flat toughened glass window through which the oil is viewed. The viewing window shall have a white background.
- Silica gel breather suitable for 10KVA transformer to be located inside the upper cabinet of T/R unit.
- A removable dial type thermometer graduated in degrees Celsius with a red mark on the scale at the maximum oil temperature.
- Thermometer pocket
- Locatable control cabinet with viewing window to IP-55 as a minimum.

Accessibility shall be provided by hinged and removable front and back shutters. A plexi glass viewing window shall be provided at the front shutter to allow the meters to be read without opening the front shutter. One drawing pocket shall be made at inner side of the front shutter. One holder for 5W LED lamp connection shall be provided at a strategic point inside the cabinet to facilitate proper illumination during operation and maintenance. The enclosure shall be supplied with an engraved warning level with the words "DANGER". Two junction boxes shall be provided at both sides of the upper compartment, one of them A.C. cable entries and other for D.C. cable entries. Gland plate should be provided against each junction box for fixing single compression cable glands for A.C DC control/monitoring cables. One 240V, 5A Socket shall be provided at a strategic point inside the cabinet to facilitate connection of soldering iron during maintenance. After fabrication the entire enclosure shall be sand blasted to SA 21/2 surface to surface or chemically treated with Industry Standard 7 Tank treatment process. An inorganic zinc primer shall then be sprayed to a total thickness of 3 mils. The finish coat shall be a dark grey shade of polyamide cured epoxy in three coats to achieve total thickness of 10 mils. Alternatively Powder coating of total thickness 100-125 Microns is also acceptable.

3.1.16 ENCLOSURE EARTHING

All normally dead metallic parts shall be electrically continuous, earthing terminals shall be suitable for 35mm square cable connection, one earthing terminal shall be made for earthing connection to power supply earthing and two earthing terminals shall be made for earthing connection to the local earthing pits.

The earth connection points shall be protected against corrosion. It shall not be necessary to scrape the paint away in order to make an effective earth connection. Provision shall also be made adjacent to each gland plate for cable gland earthing connection.

Copyright EIL – All rights reserved

3.1.16.1 Cable Terminations

i) Cable glanding and terminating facilities and terminals shall be suitable for the specified cable type and conductor size. Consideration and provision shall be taken by the manufacturer on the equipment design for the use of cables with aluminium conductors. Cable glands & cable lugs shall be in the scope of supply for CP system installation contractor.

i) Terminal blocks shall be arranged and positioned to afford easy access for carrying out external cable termination, testing, inspection and maintenance. There shall be ample clear space allowed between the terminal block and the gland plate for the spreading and termination of external conductors.

iii) All terminal blocks shall be shrouded or provided with transparent covers. Pinch screw type terminals are not acceptable.

iv) Three positive and three negative post type DC output terminals shall be provided for the T/R Unit. Each post shall be fitted with double nuts and washers.

v) Terminals for different voltages shall be separated by partitions.

vi) A terminal box or chamber with undrilled gland plate or entry panel of sufficient dimensions to terminate the specified incoming and outgoing cables shall be provided. Direction of cable entry shall be from below.

vii) Termination of single core cables shall be through a suitable gland plate and provision made for bonding and earthing any armour and/ or concentric ground conductors.

viii) Cable terminal arrangements for power and control cables may be integrated provided that a barrier separates the two.

ix) Auxiliary wiring shall have copper conductors of the manufacturer's standard sizing (subject to Buyer's approval).

x) Suitable terminals for three nos. ref. cell cables, one no. measurement cables and a selector switch for permanent ref. cell to be provided for T/R unit panel for connection to PSP meter. Wiring shall be crimped using self-insulated compression type terminal blocks which shall be suitably identified. Conductors shall be fitted with sleeve ferrules bearing the same identification as the terminal to which they are connected. Minimum conductor size shall be 1.0mm2 (current density shall not be more than 3A/mm^2 for copper conductor). However, Electronic wiring can be done with 0.5 mm^2 conductor.

3.1.17 NAME PLATE

A permanently stamped stainless steel metal plate shall be attached to outside of the case with the following information.

a. Manufacturer's name

Copyright EIL – All rights reserved

b. AC input voltage and current rating

c. AC frequency
d. Phase
e. Output DC Volts and Amps. rating
f. Weight in Kg of T/R unit
g. Model number
h. Serial number
i. Year of Manufacture

3.1.18 SPECIFICATION OF 75V, 50A T/R UNIT

A. AC input voltage : 240 Volts ±10% 50 Hz single phase
B. AC input Current : 30A (Max.)
C. DC power output : 3.75 KW (Max.)
D. KVA rating of transformer : 7.5KVA
E. DC output voltage : 75V
F. DC output current : 50A

G. Current rating
- Diodes: 100A(Max. Average forward current)
- SCR : 85A(Average on state current), 133A (RMS on state current)

H. Full load efficiency
- Transformer alone : More than 95%
- Transformer Rectifier Assembly : More than 75%

I. Full load power factor : 0.8 lagging
J. Insulation level : 2KV
K. Peak Inverse Voltage
- Diodes/SCR's : 1500V(PIV)

L. Filtering circuit : L.C.filter
M. Ripple and Hum at rated output : Not more than 5% RMS

N. Surge Diverters
i) For diodes/SCR's : R-C circuitry of rating as advised by manufacturer of SCR/ Diodes or MOV
ii) For input of T/R unit : 2 nos. Zener Diodes of voltage rating 300V RMS, spark over voltage 1000V(Peak), RIR Type A6 FMR 100 BB or equivalent MOV type surge diverters.
iii) For output of T/R : 2 nos. Zener Diodes of voltage unit rating 300V RMS, Spark over voltage 800V(Peak), RIR Type A6 FMR 80 or equivalent MOV type surge diverters.

O. Lightening arrestor: 2 nos. each at the input and output of the T/R unit of voltage rating 500V RMS, Max. 1.2/50 micro Seconds impulse spark over voltage 2.5KV(Peak), Max. discharge residual voltage at 5KA, 8/20 micro second impulse current wave 2.5KV @1.5KA, Max. impulse current discharge capacity 4/10 micro second impulse current wave 10KA(Peak), LAMCO PL01 L.T-2.8 or equivalent make.

Copyright EIL – All rights reserved

P. Protection : MCB suitable for motor load having thermal over load and magnetic short circuit Protection for input current in addition to separate HRC fuse protection for each Diode, HRC fuse

at out put and input terminals, glass cartridge fuse, in the live line of all lamps, auxiliary power lines to control circuit and voltmeter circuits.

Q. Construction : Plinth mounted outdoor type.

R. Cooling : Oil cooled

S. Meters/ Instruments: As per Sec.3.1.13.

1No.DC voltmeter 0-200V,
1No.DC Ammeter 0-60A
1No.AC voltmeter 0-300V
1No. AC Ammeter 0-30A
1No.Corrosionvoltmeter,0-19.99V,10Mohm input resistance.

Other accessories:

a) Silica Gel Breather
b) Dial type thermometer 8 Dial 2 1/2" graduate in degree celsius with one red mark on the scale at the maximum oil temperature.
c) Thermometer Pocket
d) Oil filling screw cap and drain plug.
e) An oil sight gauge comprising a flat long head glass window with white back-ground through which oil is viewed.
f) Sun shade/rain shade.

T. Enclosure: Per sec. 3.1.15

U. Cable Entry: Through single compression Aluminium gland of following sizes of cables. Gland plates are to be provided at the junction boxes located at both side of upper compartment:
+ve and -ve header : $95mm^2$/ $50mm^2$ 1-core, 4nos.
Power supply cable : $25mm^2$, 3-core, 1 No.
Monitoring cable : $6mm^2$, 1-core, 3 nos
(Monitoring cable to be used in case permanent ref.cell is used for monitoring pipe/ structure to soil potential)

V. Enclosure painting : As per sec. 3.1.15

W. Fabrication, Schematic: Supplier to furnish for EIL approval schematic wiring diagram and fabrication drawing prior to fabrication of T/R units.

X. Spare parts & Additional features : Supply as per Sec.3.1.18.

Y. Ambient temp. : 45 deg.C

Z. Type of control required in Auto mode: Constant current control and constant voltage control (AVCC MODE)

Copyright EIL – All rights reserved

3.1.19 DATA SHEET OF 50V, 25A T/R UNIT

A.	AC input voltage single phase	:	240volts±10%50HZ B.
B.	AC input current	:	10A (max.)
C.	DC power output	:	1.25KW (max.)
D.	KVA rating of transformer	:	2.5 KVA

1No.Corrosionvoltmeter,0-19.99V,10Mohm input resistance.

3.1.20 Testing of T/R units

All T/R units shall be tested by contractor and inspected by EIL/Owner before despatch, testing shall be conducted in accordance with codes and standards enclosed in this document, as per routine tests done by manufacturer and additional tests as mentioned below:

3.1.20.1 Efficiency test of Transformer Rectifier Assembly at 25%, 50%, 75% and 100% rated output current both in Auto and manual mode of operation.

3.1.20.2 No load output voltage test in Manual mode for each voltage setting using coarse and fine tap switches at rated input voltage of 240V AC.

3.1.20.3 Output voltage and current test in Manual mode for each voltage setting using coarse and fine tap switches for the following conditions.

i) Input voltage 240V AC,load resistance1.5 ohm for 50A T/ R& 2.0ohm for 25AT/R

ii) Input voltage 264V AC,load resistance1.5 ohm for 50A T/R & 2.0ohm for 25AT/R

iii) Input voltage 216V AC,load resistance1.5 ohm for 50A T/R& 2.0ohm for 25AT/R.

3.1.20.4 Output voltage test at rated output current setting in Auto mode for the following conditions.

i) Input voltage 240V AC,load resistance:1.5ohm for 50A T/R & 2.0ohm for 25AT/R

ii) Input voltage 264V AC,load resistance:1.5ohm for 50A T/R & 2.0 ohm for 25AT/R

iii) Input voltage 264V AC,load resistance 0 ohm (short circuit across +ve and-ve terminal of T/R unit). Set back up control 50A & 25A for 50 A & 25A T/R unit respectively.

iv) Input voltage 216V AC,load resistance:1.50 ohm for 50A T/R & 2.0 ohm for 25A T/R

Output current and voltage shall be recorded for each of above conditions (i) to (iv).

Copyright EIL – All rights reserved

3.1.20.5Heat run test for max. Temp rise to be conducted for main transformer, Autotransformer, filter choke, Diodes and SCR's, at 50A output current for 50A T/R Unit & 25A current for 25A T/R unit for 24hours continuous operation . Number of T/R units to be considered for Heat run tests and actual duration for which test to be conducted up to 24 hours (max.) shall be decided by EIL and owner. Thermocouple instrument shall be used for measurement of temperature. The sensors shall be clamped at different locations inside the closed T/R unit cubical and the cable of the sensors shall be connected to temperature indicator through a selector switch outside the T/R unit cubical during heat run test.

3.1.20.6 Insulation resistance test using 500V megger for Auto transformer and Main transformer between primary and secondary, primary and earth, secondary and earth.

3.1.20.7 Dielectric strength test using 2KV for 1 min. duration for Auto transformer, main transformer between Primary and secondary, primary and earth, secondary and earth.

3.1.20.8 Polarity test in Auto and manual mode of operation of T/R unit.

3.1.20.9 Calibration test for all Ammeters and volt meters.

3.1.20.10 Auto mode over load protection test:

Set back up control at 50 Amp. and increase current from zero to max. Possible using main Auto control for T/R Unit having constant current control. In case of Auto PSP control T/R unit ref. feed back signal to be varied from min. to max. set potential of T/R unit using battery & rheostat in place of ref. half cell signal, current during the test should not exceed more than 50A in both cases.

3.1.20.10.1 Constant Current Test

i) D.C Current Regulation against variation in AC Input

Put the unit in constant current mode and set the output current at 50 A by the help of current setting potentiometer and observe the variation in, if any, of output current with variation of AC input voltage at the steps keeping the output load constant: 216V, 240 V, 264 V.

ii) D.C Current Regulation against variation in Load Voltage

Keeping the AC input voltage at 240 V constant , set the output D.C current at 50 A and observe for any variation of DC current with variation of output load voltage at three different values ensuring that at each output load voltage, taking care voltage limit set value is not exceeded.

Repeat the above at 50A and finally at 25A set output current.

3.1.20.11 Constant voltage test for control circuitory. Supply voltage of T/R unit to be applied 240V 216V and 264V.

For each input supply voltage the reference voltage, +ve DC and -ve DC voltages of Auto mode control circuit to be checked whether they are constant.

Copyright EIL – All rights reserved

3.1.20.11.1 D.C Voltage Regulation against variation in Load Current

Keeping the AC input Voltage at 240 V constant, set the output D.C voltage at 75 V and observe for any variation of D.C Voltage with variation of output load current at three different values ensuring that each output load current, current limit set value is not exceeded .

Repeat the above at 24 V and finally at 12 V set output Voltage.

3.1.20.12 Ripple factor test

T/R unit shall be operated at full load both in Auto and Manual mode. In each case ripple voltage to be checked on a cathode ray oscilloscope (CRO). Peak to Peak ripple wave from shall be limited within 10.5 volt in CRO screen for7 5 volt TR unit & 7.0 volt for 50 volt TR unit.

3.1.20.13 Annunciation check:

Annunciation check to be done for power on, manual mode operation and auto mode operation.

3.1.20.14 Auto mode constant PSP operation test:

Connect one battery with variable rheostat in place of reference cell feedback signal and conduct the following test:

i) Make both T/R unit set potential & feedback signal from battery 1.0V, Switch on T/R unit & note T/R output current. Increase feedback signal from 1.0V to 1.5V and again bring back to 1.0V. Note change in the T/R output current.

ii) Conduct similar test as item (i) above with decrease of feedback signed from 1.0V to 0.5V and again back to 1.0V. Note change in the T/R output current.

of choke at 50A T/R unit output current =

3.1.20.15 Test certificate/ documents in 6 copies are to be furnished by vendor before despatch of T/R unit to site. The test certificate shall contain results for the tests from 3.1.20.1 to 3.1.20.14 given above in addition the following observations:

- Sl. No. of T/R unit
- D.C. output rating of T/R unit
- External dimensions of T/R unit
- Weight of T/R unit
- Thickness of M.S .sheet steel used for T/R unit enclosure.
- Painting details of enclosure.
- Visual inspection details of T/R unit stating:

a) All components of T/R unit are as per specification

b) All items are labeled properly for identification purpose.

Copyright EIL – All rights reserved

c) Number used in ferrules of cable leads are matching with schematic/ wiring diagram of T/R unit furnished.

3.1.22 DRAWINGS/ DOCUMENTS

Following drawings/ documents shall be furnished by vendor within 15 days from award of contract for approval of the same by EIL/ OWNER before starting of fabrication. Approved drawings after incorporation of comments (if any from EIL/ OWNER shall be furnished in 6 copies alongwith reproducible during the delivery of T/R units:

3.1.22.1 Fabrication drawings and data sheet of T/R unit giving dimensions, rating, weight, including installation/ foundation arrangement details.

3.1.22.2 Front view and typical sections of T/R unit panel with arrangement of equipment, control, protection and metering.

3.1.22.3 Data sheet of all accessories and circuit element of T/R unit including ratings.

3.1.22.4 Schematic and wiring diagram of T/R unit circuitory giving Auto/ Manual Mode of control including circuit details of all control cards.

3.1.23 INSTRUCTION BOOK

3.1.23.1 The instruction book in 10 copies shall be presented in such manner as to enable it to be used by personnel who are unfamiliar with the operation and maintenance of the T/R unit. The instruction book to be furnished along with supply of T/R unit.

3.1.23.2 CONTENTS

The instruction book shall contain

- A description of the T/R unit.
- Instruction for the installation, testing commissioning and safe operation and maintenance.

The information shall be presented as follows:

1. Index of contents

2. General description giving brief description of the T/R and its use.

Detailed description of T/R unit

This description shall include the technical characteristics, physical and mechanical limitations, and item wise the components, accessories and spare parts.

4. Description of the operation of the T/R unit. This description shall be clear, concise and in

Copyright EIL – All rights reserved

a logical sequence, using schematic diagram, wiring diagram and fabrication drawing.

5. Procedures for testing and adjusting the T/R unit:

The complete procedure for testing and adjusting the T/R unit during plant operation, periodic maintenance and overhaul shall be covered.

6. Maintenance Instructions:

This section shall be divided into two parts:

a) Preventive maintenance which shall indicate the periodic inspection required the inspection procedure and cleaning procedures.

b) Break down maintenance which shall include instruction for trouble shooting of the electrical circuits. The procedure for the removal and replacement of all parts listed as spares shall be given.

7. Spare parts

The instruction books shall give all the necessary details so as to procure all the spare parts from the manufacture or from open market.

8. Each instruction book shall be accompanied with one set of final approved Drawing/ documents as listed vide item 3.1.21.

- COVERING OF THE INSTRUCTION BOOKS: The instruction book shall be presented in a stiff covered binder with the following information printed on the cover:
    - the client's name
    - the location of the installation
    - the name of the installation
    - the title of the instruction book.

3.1.24 Following additional features are to be provided with T/R Unit

i) T/R UNIT INTERRUPTION

The T/R units shall have programmable current interruption facility according to a schedule defined by the user through the Central Monitoring and Control System. Interruption ON / OFF cycle should be programmable in the time ratio selectable from 0 to 9999 seconds in increments of 1 second. The interruption device shall be solid state type without any mechanical moving parts and shall have arrangement for bypass.

The interrupter clock of TR Unit should accept external time synchronization signal from the

central monitoring system having GPS synchronized current interrupter for measurement and recording of interrupted OFF potential recording in synchronization with other T/R units.

Copyright EIL – All rights reserved

ii) ANNUNCIATION FOR FUSE FAIL

T/R unit should be provided with Electronic Fuse fail Indicator. The Fuse fail indicator should sense signals from each Fuse in series with diode in the rectifier circuit as well as each fuse in DC

output circuit and on its failure, it should identify the fuse failed with the help of an independent LED for each fuse for local visual alarm.

iii) MANDATORY SPARE PARTS

Mandatory spare parts as mentioned at Section 4.0 in this document need to be supplied for the T/R Units.

IV) T/R UNIT REMOTE MONITORING

T/R Units should be provided with transducers for providing 4-20 mA output signals or direct signals as required for remote monitoring unit (RMU) interface for remote monitoring of T/R Unit output voltage and current. Alternatively, if this feature is built into the RTU, then separate transducers are not required in the T/R unit.
Necessary terminals are to be provided at suitable locations of the T/R unit panel for easy termination of onward wiring by others for remote monitoring purpose.
Each T/R Unit shall accept set point signals for DC Voltage and DC Current from Remote Monitoring & Controlling Panel and accordingly shall control its output from 0 to 100%.

Copyright EIL – All rights reserved

3.2 SPECIFICATION FOR CP SYSTEM POWER DISTRIBUTION BOARD (PDB)

Copyright EIL – All rights reserved

3.2 Power Distribution Board (PDB):

The Power distribution board (PDB) shall be plinth mounted outdoor type and shall be installed at non-classified locations near a single or group of T/R Unit under a sun/ rain shed. The enclosure of shall be IP-55 as per relevant IEC/ NEC/ IS codes.

The Power distribution board (PDB) shall be composed of one no.3 phase, 4-wire 250A/ 63A, incoming MCCB and 12/3 no. 1 phase, 63A outgoing MCB for input power supply to TR Unit as well as 6No.6A outgoing MCB for central monitoring system power supply. The incoming switch shall be 3-pole and outgoing switches shall be 2-pole. 4 Nos. of 25x 5mm tinned copper bus bar shall be used which should be taped by PVC tape of red, yellow and blue colours for dentification of the three phases and black colour for neutral. Wiring inside PDB shall be done using $50mm^2$, 1-core, copper conductor, PVC insulated, unarmored cable between TPN switch neutral and neutral bus whereas rest of the wiring shall be done by $25mm^2$, 1-core, copper conductor, PVC insulated unarmored cable. All single core cables shall be used red, yellow and blue coloured for phase connections and black coloured for neutral connection. All cables terminations shall be through Tinned copper cable lugs of matching cable size. All cable entries to the PDB panel shall be through Aluminium single compression glands. One gland for $300mm^2$ / $50mm^2$, 3-phase, 4-core incoming cable connection shall be provided at left side bottom of the panel, 12/3/6 glands to be provided at right side bottom of the panel for outgoing cable connections for 63A PDB. The outgoing cables shall be $25mm^2$, 1-phase, 3-core Aluminum conductor cables for TRU power input and $16mm^2$, 1-phase, 3-core Aluminum conductor cables for central monitoring system power supply. Size of the PDB Panel enclosure shall be adequate to accommodate all components easily and shall be made of 12 SWG sheet steel. Two nos. hinged front shutters shall be provided. The shutters shall be screwed to the panel enclosure structure at the centre in addition it shall have lockable handles. Painting details of inside and outside surfaces of the PDB panel shall be as follows: After fabrications the entire enclosure shall be sand blasted to a SA2½ surface. An inorganic zinc primer shall then be sprayed to a total thickness of 3 mils. The finish coat shall be of polyamide cured epoxy in three coats to achieve total thickness of 15 mils. The finish coat shall be a dark grey or yellow shade as per choice of EIL/ OWNER.

Copyright EIL – All rights reserved

3.3.1.0 Scope

3.3.1.1 Anodes

Mixed Metal oxide coated Titanium tube anodes shall be dimensionally stable and will be supplied with anode lead cable connected to it.

3.3.1.2 ANODE DATA SHEET

Sl.No.	Description	Details
1.	Anode Type	Dimensionally stable Anode (DSA)
2.	Anode Shape & Dimension	Hollow Tubular 750mm long x 25.4mm OD, W.T: 1 mm ± 0.1 mm
3.	Anode weight	0.210 kg ± 5%
4.	Anode Material	Titanium seamless tube of Grade 1, ASTM B 861, overlayed with mixed oxide of noble metals.
5.	Anode design life	30 years
6.	Anode consumption rate (Kg/A-yr) at 100 A/m^2 Current density	2 mg/A-yr.
7.	Metal Oxide coating thickness weight (gm/M^2)	6 gms/m^2(at 100 A/m^2 for 30 years design life)
8.	Optimum Recommended anode current density (A/m^2) i) With Carbonaceous backfill in soil ii) Without backfill in soil iii) Fresh water	 $100A/M^2$ Vendor to furnish Vendor to furnish
9.	Rated current output	6 Amps
10.	Anode Centralizer for 8" NB casing pipe	1 Nos. per anode. Vendor to furnish details.
11.	Mechanical & Physical Properties: i) Electrical Resistivity (ohm Cm) of Metal Oxide ii) Contact resistance of anode to cable iii) Pull out strength iv) Anode fabrication v) Anode to cable connection details vi) Anode to cable joint insulation details	 10^{-5} Ohm Cm 0.9 milli ohms (max.) 200 kg(min) or breaking strength of cable Vendor to furnish details Vendor to furnish details Vendor to furnish details
12.	Dead Weight for Anode	Each anode to be supplied with a dead weight. Details of the same to be furnished by vendor

Note: All information to be furnished by vendor as per data sheet shall be furnished with his offer.

Copyright EIL – All rights reserved

3.3.1.3 Anode Lead Cable

Anode lead cables to be connected between each anode and AJB shall be 7 strands, 10mm^2 stranded copper conductor, single core, unarmored, with a double insulation system. The primary insulation shall be 0.04/0.1 inch thick cross-linked polyvinylidene floride (PVDF) 1100 Volt grade. The secondary insulation shall be 0.065 inch thick high molecular weight polyethylene (HMWPE) sheathing jacket over the primary insulation. For anode lead cable, manufacturer should have minimum 7 years of manufacturing experience and having proven track record of minimum 5 years of successful performance. The minimum 5 years of performance certificate of this item for any hydro carbon industry /pipelines needs to be furnished by the contractor. The proposed make/model of these items being supplied by contractor shall be subject to acceptance as per sole discretion of EIL/Owner.

Anode to Lead cable jointing and insulation shall be done by using straight through jointing kit which is to be provided by anode manufacturer. Anode to Lead cable jointing and insulation shall be done at manufacturer's work shop.

3.3.1.3.1 Anode to Cable connection

Anode lead cable conductor shall be crimped with tubular anode at the center of anode or at the ends and shall be sealed to prevent ingress of water at the joint. Fabrication details of the joint including sealing arrangement and test procedure of the joint shall be furnished by vendor for EIL's approval before making the joints.

Copyright EIL – All rights reserved

3.4 SPECIFICATIONS FOR PERMANENT REFERENCE CELL

Copyright EIL – All rights reserved

3.4 SPECIFICATIONS FOR PERMANENT REFERENCE HALF CELL

3.4.1 For monitoring of soil side potential:

a. Type of ref. half cell : Cu/ $CuSO_4$ type.

b. Body : Impact resistance

d. Each reference shall be supplied in cotton bag of chemical backfill (as per manufacturer recommendation) and complete with 25 M (minimum) cable as per specification. Contractor to measure the actual length of measurement cable required at site during detailed engineering stage and cut the required length from cable drum so as to avoid cable-to-cable joint. Alternatively, moisture proof joints may be carried out at site by trained jointer with holiday testing with manufacturer reference cell cable.

e. Location of half cell : 150 mm from structure

f. Design life : 25 years

g. Stability : ±10 mv with 3 Micro- A load.

h. Make : Shall be suitable for 15-40 deg.C temperature application in sand.

i. Measurement Cable: 4-6mm^2, stranded Cu conductor, Single core, screened/ armoured, PVC insulated and sheathed, 1100 V grade.

Reference Cell Cable: 4-6mm^2, stranded Cu conductor, Single core, screened/ armoured, PVC insulated and sheathed, 1100 V grade.

Contractor shall get the electrodes approved before placement of order. For Reference cell, manufacturer should have minimum 7 years of manufacturing experience and having proven track record of minimum 5 years of successful performance. The minimum 5 years of performance certificate of this item for any hydro carbon industry /pipelines need to be furnished by the contractor. The proposed make/model of these items being supplied by contractor shall be subject to acceptance as per sole discretion of EIL/Owner.
Necessary test certificates from manufacturer giving calibration test, results, date of manufacture shall be furnished during delivery. Any delivery effected without prior approval of owner will be at suppliers risk & cost.

3.5 SPECIFICATION FOR MIXED METAL OXIDE TITANIUM WIRE ANODE FOR CP SYSTEM

Copyright EIL – All rights reserved

3.5.1.0 MIXED METAL OXIDE TITANIUM WIRE ANODE

Factory coke backfilled fabric jacketed Mixed Metal Oxide coated Titanium wire anodes shall be a standard product of the manufacturer regularly engaged in the production of such anodes for use in impressed current Cathodic Protection system. The make / model of MMO wire anode being proposed by CP System contractor shall be subject to acceptance as per sole discretion of EIL / OWNER. The anode manufacturer should have minimum 7 years of manufacturing experience for the similar type pre-packed with coke-breeze MMO Ti Wire anodes and also proven track record for minimum five years of successful performance of such anode for UG Vessels protection for any hydrocarbon plant need to be furnished by the CP System contractor.

3.5.1.1 Anodes

Mixed Metal oxide anodes shall be dimensionally stable. Each wire anode shall be supplied with anode lead cable piggy back connected to it i.e there will be connection between the Primary anode and the internal header cable at every 3m (max) distance. The connection shall be multi- step and water proof.

Anode Data Sheet:

a.	Anode Type	Dimensionally stable Anode (DSA)
b.	MMO Anode Shape & Dimension	Wire anode 1.5 mm ± 0.10mm*
c.	MMO Anode weight	Vendor to Specify
d.	MMO Anode Material	Commercially pure solid Titanium wire, grade 1/2, ASTM B 863, over laid with mixed oxide of noble metals suitable for soil application
e.	Anode design life	30 years
f.	i) Anode consumption rate (Kg/A-yr.) at 100 A/M2 C. density. ii) Overall OD of anode string with calcined petroleum coke breeze and its fabric jacket enclosure	i) 2 mg/A-yr. ii) 35mm (min.)
g.	Metal Oxide coating thickness weight (gm/M2)	6gms/m^2(min.) / MMO coating on titanium suitable for current output and design life.
h.	Optimum Recommended anode current density (A/M2) i) With Carbonaceous backfill in soil ii) Without backfill in soil iii) Fresh water	i) 100A/m^2 ii) Vendor to furnish iii) Vendor to furnish
i)	Minimum rated current output in soil/ sand	50mA/m

Copyright EIL – All rights reserved

j)	Mechanical & Physical Properties i) Electrical Resistivity (ohm Cm) of Metal Oxide	10^{-5} Ohm Cm
k)	Contact resistance of anode to cable	0.9 milli ohms (max.)
l)	Anode fabrication	Vendor to furnish details
m)	Anode to cable connection details	100% water proof. Vendor to furnish
n)	Anode to cable joint insulation details	Vendor to furnish
o)	Allowable attenuation of potential along anode	1% for dry sand of resistivity 20,000 ohm-cm 10% for wet sand of resistivity 500 ohm-cm.
p)	Spacing between consecutive anode to cable joints	3 meters
q)	Coke breeze backfill	Vendor to furnish (as per manufacturer standard)
	Carbon content	99% min
	Coke Resistivity	< 1 ohm
	Bulk density of coke breeze	1180 kg/ m^3 min
r)	FABRIC	The anode wire with surrounding coke breeze should be held together by an Integrated woven, acid resistant and porous jacket assembly.
s)	**Chloride resistance**	**The fabric should pass the 6 month acid immersion test**

- Following Insulation specification to be followed for supply of anode internal header and anode lead cable. Laboratory testing to be done in national/ international reputed laboratory at anode manufacturing country.

Insulation Type	Insulation Specifications**	
Polyvinylidene Fluoride (PVDF) Irradiation Cross-Linked	Tensile Break Strength Break Elongation Flexural Strength Resistivity Dielectric Constant	4500 PSI min. 50% min. 8600 PSI min. 2×10^{14} ohm-cm min. 8.0 min. at 100 Hz
Ethylene Chlorotrifluoroethylene (ECTFE)	Tensile Break Strength Break Elongation Resistivity Dielectric Constant	6500 PSI min. 100% min. 1×10^{15} ohm-cm min. 2.5 min. at 1 Mhz
High Density High Molecular Weight Polyethylene (HMWPE)	Color Density (minimum) ASTM D1248, Type 3, Class C, Category 5, or IEC 60502-1 Temperature Rating	Black 0.941 grams per cm^3 90°C.

** Standard Test Method ASTM D638 shall be used to determine the tensile strength, flexural strength and break elongation. For the resistivity and dielectric constant tests, Standard Test Methods ASTM D257 and ASTM D150 shall be utilized.

Note: All information is required to be furnished by vendor as per data sheet and shall be furnished with his detail engineering package.

3.5.1.3 ANODE HEADER AND LEAD CABLE

Copyright EIL – All rights reserved

Anode internal header cable and anode lead cable in between each anode string and AJB shall be insulated, 7 strands, 8 AWG/ 10mm^2 stranded copper conductor, single core, unarmoured, with a double insulation system. The primary insulation shall be 0.04/0.1 inch inch **± 0.005 inch** thick cross-linked polyvinylidene floride (PVDF) 1100 Volt grade. The secondary insulation shall be 0.065 inch inch **± 0.005 inch** thick high molecular weight polyethelene (HMWPE) sheathing jacket over the primary insulation.

Jointing of anode lead cable with internal anode header cable and its insulation shall be done by using standard jointing kit which is to be provided by anode manufacturer. However, preference will be given for direct termination of the anode header cable to AJB without any joint in between with internal anode header cable and anode lead cable. Anode lead cable to anode header cable jointing, shall be done at site by a trained cable jointer in case of unavoidable site/ project situation.

3.6.1.3.1 Anode to Cable connection

Vendor should submit procedure and sealing arrangement drawing of the joint and get the Anode lead cable to anode internal piggyback cable joint approved by EIL/ OWNER.

3.5.1.4 QA/ QC for Anodes

Following tests are to be conducted by anode manufacturer. Anodes with cables shall be delivered to site only after EIL/ Owner's approval of the test results, which are to be furnished by anode manufacturer. Detailed procedure for conducting the following tests shall be furnished by manufacturer for EIL/ Owner's approval before commencing tests. All the tests should be conducted in presence of EIL/ OWNER/ TPI (as applicable).

3.5.1.4.1 Visual Inspection Test –

The anode assembly shall be visually inspected for proper compaction of coke breeze and centralization of MMO wire and cable .

3.5.1.4.2 Dimensional check

- Dimensional check of MMO wire anode and OD of complete anode assembly
- Dimensional Check of Anode internal piggyback cable

- Thickness of primary cable insulation
- Thickness of secondary cable insulation

3.5.1.4.3 MMO Wire Anode (Type Test)

- MMO coating loading/ thickness by XRF or SEM method
- Accelerated Life Test NACE TM0108 (latest version)

3.5.1.4.4 Coke Breeze (Type Test)

- Coke Breeze Resistivity as per ASTM G57-06
- Weight of coke breeze per meter of anode

Copyright EIL – All rights reserved

3.5.1.4.5 Anode Fabric (Type Test)

- Acid Immersion Test for 6months (5N HCl Solution)

3.5.1.4.6 Anode Lead cables (Routine tests)

Routine & type test certificates of cable manufacturer to be furnished for anode lead cable as per IEC std. Cable length and identification tag to be verified by measurement.

3.5.1.4.7 Anode to Cable joint test (Routine tests)

Sample anode lead cable to internal anode header cable joint shall be tested for its electrical contact resistance & its value in ohms shall be recorded.

3.5.1.4.8 a) Prototype Test

First anode string / loop shall be subjected to destructive test to determine pull out strength of cable

to anode joint as well as effectiveness of the joint insulation and coke breeze backfilling to be performed at manufacturer's factory or at site (as applicable).

b) Type Test Frequency: - The type test frequency shall be 3 years or in case of any change in the material whichever is stringent

3.5.1.4.9 Test Reports

After conducting each test, reports showing test results should be submitted to EIL/ Owner for approval. Anode/ cable identification No./ batch No. shall be mentioned in test results against each test result. Any delivery made to site before getting EIL/Owner's approval of test reports shall be at manufacturer risk & cost.

3.5.1.4.10 Anode Fabrication

Manufacturers/ supplier shall furnish detailed dimensioned fabrication drawing of anode as well as details of cable connection and its insulation sealing to EIL/ Owner for approval.

Vendor (Anode Manufacturer/ supplier) shall furnish following information for approval before commencement of Anode to cable joint.

- Procedure for making the entire anode to cable joint.
- Procedure for accelerated ageing test of the string anode or test results.

Copyright EIL – All rights reserved

3.6 JOB SPECIFICATION FOR ANODE, CATHODE & MONITORING JUNCTION BOXES FOR CP SYSTEM

Copyright EIL – All rights reserved

3.6.1 Specifications for Anode & Cathode Junction Boxes

3.6.1.1 Anode Junction Boxes and Cathode Junction Box cum test station shall be suitable for Classified Area applications

An anode lead junction box (AJB) will be provided to feed T/R Unit output current to anode strings. These junction boxes will have provision for independent current measurement of each anode output. This will be accomplished by means of individual shunts for each anode circuit.

Drainage cable, reference cell cables and measurement cables from each structure/ equipment shall terminate in its respective cathode junction box cum test station. All the above-mentioned reference cell cables and measurement cables from each CJB shall be terminated into a single Monitoring junction box (MJB). Each CJB shall be connected to the negative terminal of the each T/R unit through loop in loop out arrangement for return of drainage current from structure/ equipment to the T/R unit.

The enclosure of CJB shall be structure/ wall mounted type. Shutter should be provided with closed cell neoprene sealing gaskets. The terminal board shall be of 10mm WT Phenolic laminated sheet on which all terminals and shunts are to be mounted. The terminals shall be made of cadmium plated steel or stainless steel stud nut and washers of M-10 size for termination of anode and cathode lead cables and M-4 size for termination of reference cell and measurement cables. All cable entries shall be through Aluminium double comprehension glands. The external bolt, nuts and clamps to be used for mounting the junction box with back plate/structures shall be MS electro-galvanised or Cadmium plated.

For classified areas, Junction box enclosure shall be of type "Exd" protection Zone 2/Group IIA/IIB application, Temp. Class: T-6, as per IS 5571,5572,2148 & 8289 and relevant IEC/NEC/IS standards. The cable glands shall be FLP double compression type made of Aluminium. Enclosure need to be certified by CMRI. The shutter of the junction box shall be screwed to the body of junction box by using MS electro galvanised/ Cadmium plated nut, bolt and washers. The enclosure of the junction box shall be made of cast aluminium. One earthing terminal shall be provided for earthing the junction box.

3.6.1.2 Monitoring Junction Boxes for non Classified Areas:

Monitoring junction boxes (MJB) will be installed near the T/R Unit and shall be required for monitoring potentials of multiple structure/ equipment . The enclosure for the MJB shall be of IP-55 construction made of 12SWG (2.67) W.T. sheet steel.
The enclosure shall be structure/wall mounted type having removable hinged front shutter with one handle and flush type locking arrangement. Shutter should be provided with closed cell neoprene sealing gaskets. The terminal board shall be of 8mm thick Phenolic laminated sheet on which all terminals shall be made of stainless steel stud, nut and double spring washers of M-4 size for reference cell/ measurement cables. The terminal arrangement shall be such that bottom row is utilised for termination of measurement cables from each structure/ equipment and upper rows one each is allotted for the reference cell cable termination from each structure/ equipment , hence total number of rows shall be one more than the total number of structure/ equipment. All cable entries shall be through Aluminum double compression glands. The external bolt, nuts and clamps to be used for mounting the junction box with back plate/ structures shall be MS electro-galvanised or Cadmium, plated. Shutter should be provided with closed cell neoprene sealing gaskets.

Copyright EIL – All rights reserved

3.6.1.3 Proper fitting of cables at cable glands

It is essential that all cables should fit tight at cable glands. For this purpose vendor need to make openings for glands at junction box or cast/ procure cable glands as per cable samples to be procured for CP System.

3.6.1.4 Painting

Enclosures of all non classified type anode and Cathode junction boxes shall be surface finished with paint as per guidelines outlined in Section 3.11.

3.6.1.5 Inspection & Testing

Fabrication drawing showing internal terminal arrangement of each type of junction box to be submitted by vendor to OWNER/ PMC to obtain approval for a Prototype construction. After inspection and approval of prototype the mass production shall be started. Calibration test for shunts for each junction box to be inspected by OWNER/ PMC before dispatch.

Copyright EIL – All rights reserved

3.7 SPECIFICATION FOR CABLES FOR CP SYSTEM

Copyright EIL – All rights reserved

3.7.1.0 SCOPE

3.7.1.1 CODES AND STANDARDS

In general the cables covered by this specification shall unless otherwise specified be in the line with the requirements of any of the latest applicable standard of IS, IEC, BS and Relevant NEC/ JIS/ JEC standards. Wherever the requirements in this specification are in conflict with any of the above standard, the requirements under this specification shall be binding.

3.7.1.2 ANODE LEAD CABLE

Anode lead cables shall be 7 strands, 10mm^2 stranded copper conductor, single core, unarmoured, with a double insulation system. The primary insulation shall be 0.04/0.1 inch thick cross-linked polyvinylidene floride (PVDF) 1100 Volt grade. The secondary insulation shall be 0.065 inch thick high molecular weight polyethylene (HMWPE) sheathing jacket over the primary insulation.

Insulation Type	Insulation Specifications**	
Polyvinylidene Fluoride (PVDF) Irradiation Cross-Linked	Tensile Break Strength Break Elongation Flexural Strength Resistivity Dielectric Constant	4500 PSI min. 50% min. 8600 PSI min. 2×10^{14} ohm-cm min. 8.0 min. at 100 Hz
Ethylene Chlorotrifluoroethylene (ECTFE)	Tensile Break Strength Break Elongation Resistivity Dielectric Constant	6500 PSI min. 100% min. 1×10^{15} ohm-cm min. 2.5 min. at 1 Mhz
High Density High Molecular Weight Polyethylene (HMWPE)	Color Density (minimum) ASTM D1248, Type 3, Class C, Category 5, or IEC 60502-1 Temperature Rating	Black 0.941 grams per cm^3 90°C.

** Standard Test Method ASTM D638 shall be used to determine the tensile strength, flexural strength and break elongation. For the resistivity and dielectric constant tests, Standard Test Methods ASTM D257 and ASTM D150 shall be utilized.

3.7.1.3 +VE, -VE HEADER CABLE

+ve header and -ve header cables shall be 95mm2, stranded Aluminium conductor, single core, Aluminium wire armoured, PVC insulated and PVC sheathed 1100V grade cable.

3.7.1.4 DRAINAGE CABLE

Drainage cables shall be 50mm2, stranded Copper conductor, single core, Aluminium wire armoured, PVC insulated and sheathed 1100V grade cable.

3.7.1.5 POWER SUPPLY CABLE (Between PDB & T/R Unit)

Power supply cable between Power source or CP System DB and T/R unit shall be 25mm2, stranded Aluminium conductor, 3-core, Aluminium wire armoured, PVC insulated and sheathed 1100V grade cable.

Copyright EIL – All rights reserved

3.7.1.6 POWER SUPPLY CABLE (between Power Source & PDB).

Power supply cable between Power source & CP System DB shall be 300mm2 /50mm2, stranded Aluminium conductor, 4-core, Aluminium wire armoured, PVC insulated & sheathed 1100 V grade cable.

3.7.1.7 EARTHING CABLE

Earthing cable shall be 35mm2 , stranded Aluminium conductor, 1-core unarmoured, PVC insulated and sheathed 1100V grade cable.

3.7.1.8 REFERENCE CELL / MEASUREMENT CABLE BETWEEN REFERENCE CELL / UG VESSEL TO CJB CUM TEST STATION

Instrumentation cable, 4mm^2, 1-core, stranded copper conductor, PE/PVC insulated and PVC sheathed, screened and armoured cable, PE/PVC insulation of each core shall be Numbered or colour coded for easy identification of each core.

3.7.1.9 REFERENCE CELL / MEASUREMENT CABLE BETWEEN CJB TO MJB & MJB TO TRU

Instrumentation cable, 2.5mm^2, 10-core, stranded copper conductor, PE/PVC insulated and PVC sheathed, screened and armoured cable, PE/PVC insulation of each core shall be Numbered or colour coded for easy identification of each core.

3.7.1.10 REFERENCE CELL / MEASUREMENT CABLE BETWEEN MJB & RTU

Instrumentation cable, 2.5mm^2, 20-core, stranded copper conductor, PE/PVC insulated and PVC sheathed, screened and armoured cable, PE/PVC insulation of each core shall be Numbered or colour coded for easy identification of each core.

3.7.1.11 REFERENCE CELL / MEASUREMENT CABLE BETWEEN TRU & RTU

Instrumentation cable, 2.5mm^2, 24-core, stranded copper conductor, PE/PVC insulated and PVC sheathed, screened and armoured cable, PE/PVC insulation of each core shall be Numbered or colour coded for easy identification of each core.

3.7.1.13 POWER SUPPLY CABLE BETWEEN PDB TO RTU FOR CENTRAL MONITORING

Power supply cable between PDB to RTU for central monitoring shall be 16mm2, stranded Aluminum conductor, 3-core, Aluminium wire armoured, PVC insulated and sheathed 1100V grade cable.

3.7.1.14 CABLE DRUMS

All cables to be supplied in wooden drums. Cable lengths in each cable drum shall be 600m (min.) wherever cable lengths are more than 600m.

Copyright EIL – All rights reserved

3.7.1.15 INSPECTION

All cables along with manufacturer's test certificate as per IS standards shall be inspected by OWNER/EIL at the vendor's shop before dispatch. Minimum 15 days advance notice to be furnished by vendor for this purpose. In case of any doubt OWNER/EIL may insist vendor to conduct the tests as per IS standards in presence of OWNER/ EIL at vendor's work shop or some third party reputed laboratory approved by OWNER/ EIL at no extra cost.

3.7.1.16 CABLE IDENTIFICATION

For easy identification of cable, the over sheath of the cable should have yellow colour and "CP SYSTEM CABLES" should be printed using black colour at one meter interval throughout the length of the cable.

Copyright EIL – All rights reserved

3.8 JOB SPECIFICATION FOR CALCINED PETROLEUM COKE BREEZE FOR CP SYSTEM

Copyright EIL – All rights reserved

3.8 SPECIFICATION FOR CALCINED PETROLEUM COKE BREEZE

Calcined Petroleum Coke Breeze shall conform to the following specifications as per latest NACE- SP 0572 std .

A	Chemical Composition:	
	Moisture (on Dry Basis)	< 0.1 (% by mass)
	Fixed Carbon	Minimum 99.0 (% by mass)
B	Bulk density	900 Kg/m^3 to 1200 Kg/m^3
C	Real density	2.03 gm/cc
D	Particle Size	1.00mm (max.), dust free
E	Resistivity	0.1 ohm-cm. at 150 psi.

3.8.1 Test Certificates

Test Certificate shall be furnished for the following:

1. Make of coke breeze
2. Batch no.
3. Chemical composition
4. Bulk density and Real density
5. Particle size analysis
6. Resistivity (ohm-Cm.) at 150 psi compaction

Any delivery effected without prior approval of test certificate by EIL/ Owner will be at suppliers risk & cost.

Above mentioned specification for coke breeze shall be considered for MMO tubular anodes incase required for supplementary design, the coke breeze to be considered for MMO wire anode may be of make as per the anode manufacturer's choice meeting the requirements of the specifications mentioned above.

Copyright EIL – All rights reserved

3.9 JOB SPECIFICATION FOR THERMIT WELDING FOR CP SYSTEM

Copyright EIL – All rights reserved

3.9.1 Thermit Weld Connection:

All cable-to-pipe connections shall be made utilizing the exothermic weld process. All thermit weld connections shall be encapsulated with thermit weld cap and flood coating of coal tar enamel. Each thermit weld connection will basically require the following:

- Thermit weld mold vertical/ horizontal
- Thermit weld metal
- Thermit weld cap Steel disc.
- Copper sleeve
- Flint Igniter
- Mold Cleaner
- Mold Packing
- Coal tar enamel/ two part epoxy resin for encapsulation of the joint.

Copyright EIL – All rights reserved

3.10 MATERIALS/ EQUIPMENT FOR OPERATION AND MAINTENANCE OF CP SYSTEM

Copyright EIL – All rights reserved

3.10 Materials/ Equipment for Operation and Maintenance of CP System:

Following materials/ equipment shall be supplied by the CP System Contractor for operation and maintenance of CP system.

S.No.	Quantity	Description
1.0	1 No.	Digital Multimeter having minimum input resistance 10 Mohm, complete with leads and leather case.
2.0	10 Nos.	Reference electrodes: Portable Copper/ Copper sulphate type having PVC SCH 40 body with transparent window and threaded ceramic porous plug suitable for 15-40 deg.C temperature application in sand.
3.0	1 No.	DC Clipon ammeter in milliamp. / micro amp. range current measurement.

Copyright EIL – All rights reserved

3.11 SPECIFICATION FOR PAINTING CORROSION PROTECTION FOR JUNCTION BOXES, PDB, CABLE MARKERS AND JUNCTION BOXES SUPPORT STRUCTURES

Copyright EIL – All rights reserved

3.11.1.0 Corrosion Protection for Junction boxes, PDB, Cable markers and junction Boxes support structures

All junction Boxes in Non-classified area, PDB and their support structures, MS channels for T/R mounting if any, cable marker Posts shall be galvanized & painted in following manner.

i) Surface preparation

Grit/shot Blasted to SA2 1/2 as per Swedish standard SIS 055900

ii) Galvanizing

Hot dip or spray galvanized to achieve a minimum zinc thickness of 150µm.

iii) Primer Application

Etch Primer with 10 µ DFT based on Polyvinyl Butyral resin + 1 coat of epoxy zinc phosphate primer @40 µ DFT/coat

iv) Paint Application

1 Coat of 2 Pack high build epoxy with Polyamide hardener cure @100 µ DFT/coat followed by 1 Top coat of Acrylic Polyurethane finish paint @40 µ DFT/coat.

Primer & Paint application procedure shall be standard airless spray and as per paint manufacturer's procedure. Name of Paint manufacturer and product should be approved by EIL prior to application. Colour of top coat shall be yellow or grey as per choice of EIL/ OWNER.

3.11.1.1 MS covers for shallow vertical Beds shall be painted with 2 coats of synthetic enamel paint of Asian Paint/Berger or equivalent make. Colour of paint shall be yellow.

Copyright EIL – All rights reserved

3.12 CENTRAL MONITORING SYSTEM

Copyright EIL – All rights reserved

CENTRAL MONITORING & CONTROL SYSTEM (RMC)

3.12.1 Common Computerized Central Monitoring and Control is required for the CP System for each TR unit/ items to be protected inside the Unit. For this purpose, the T/R unit & permanent reference cells should be connected to Remote Terminal Unit (RTU) consisting of microprocessor based CPS controller with alpha- numeric LCD display, memory, real time clock, keypad, battery backup and communication ports or equivalent PLC-SCADA system.

- RTU/ PLC system shall be capable to process minimum 8 analogue input signals (including one each for TR Unit output current & voltage), 4 digital input signals, 2 analogue output signals and 1no. digital output signal for monitoring performance of each TR Unit which shall be considered for structure/ equipment protection

- In addition to this some digital and analog (input) signal should also be kept as 20 % spare capacity.

- Single or multiple RTU/ PLC system may be provided for monitoring and control of all TR unit output and monitoring of potential for structures.

Thus considering few spares minimum analogue inputs, digital inputs, digital outputs and analogue outputs to be processed by each RTU/ PLC system is to be designed by vendor for review / approval by EIL/ OWNER. The system should also have inbuilt mechanisms to reduce / nullify induced AC interference voltages.

The RTU/ PLC Unit shall also be provided with 1 No. digital output for switching operation for TR Unit. This output shall be used to turn the rectifier OFF and ON for depolarised and instant "OFF" readings. The rectifier shall have in-built facility to accept these signals and interrupt its output supply. The digital input/ output channels shall be optically isolated. The RTU/ PLC should include a GPS based time synchronization unit for measurement of true OFF potential readings.

Further, RTU/ PLC shall be provided with 1 or 2 analogue output that can be used for controlling the various modes of the TR unit for remote control.

The RTU/ PLC should be capable of generating alarms when the parameter limits are violated and it should communicate the alarm data in real time and should not wait for the monitoring software query. The field RTU/ PLC units will have capability to control & monitor the T/R unit Voltage/ Current/ PSP & Current interruption by means of commands from the Central Monitoring Panel(CMP). The operator will be in a position to set all the parameters of T/R unit like DC Voltage, DC current, T/R unit current interruption timings/ schedules from the Central Monitoring Panel (CMP).

All CP System parameters shall be monitored and controlled from central control room using suitable software. The communication link between the RTU /PLC and Central monitoring and Control station should be cost effective GSM based wireless technology or RS485 fiberoptic/ Copper communication, whichever is decided by EIL/ OWNER as the communication network. CP System Sub-contractor should design, procure and install the requisite communication system and the cables required for this purpose.

Copyright EIL – All rights reserved

Central monitoring and Control station computer to be provided by the CP System sub- contractor shall consist of standalone computer suitable for CP monitoring application with following minimum specifications:

- Intel Core 2, I-7 (seven) processor
- Genuine Windows latest operating system with License
- 8 GB RAM
- 500 GB HDD
- 24in Flat Panel LCD Color Monitor
- DVD Rom
- Intel Integrated 100/ 1000 Ethernet Network Card
- 1 Serial, 4 USB Ports
- MS SQL Server Latest
- A3 Laser jet printer (HP make)
- Inbuilt UPS system which can operate up to 30 minutes on full load in case of power failure
- Other standard accessories

CP System sub-contractor shall also provide necessary Software for Remote Monitoring & Control as well as for printing of CP reports. The software should be compatible to Windows format and MS SQL Server or Oracle database (10g) with proper License should be used.

3.12.2 Remote Monitoring & Controlling Central Control System

The software and hardware for the proposed SCADA system shall have a proven track record of minimum three years of successful operation in the field of CP monitoring.

The Remote Monitoring & Control Panel (RMCP) shall have a Data Acquisition and Control Hardware operating in Real Time on PC having minimum specification mentioned in item 3.12.1

A Front End Communication Module (FEC) is also required that will be responsible for managing the entire communication traffic between the RMCP and RTU/ PLC.

The T/R Unit Output DC Voltage, DC Current, Reference Electrode Voltages, Alarms are to be extended to RMCP Panel through RTU/PLC units by any of the cost effective communication network such as GSM based wireless technology/ RS485/ fibreoptic/ copper communication whichever is decided by EIL/ OWNER as the communication network for data downloading and remote monitoring & control from master control room.

Each T/R Unit shall accept set point signals for DC Voltage and DC Current from Remote Monitoring & Controlling Panel and accordingly shall control its output from 0 to 100%.

- REMOTE MONITORING SYSTEM - SOFTWARE:

Copyright EIL – All rights reserved

The Remote Monitoring and Control System shall monitor and control various process parameters of Cathodic protection system. The Monitoring software shall be user friendly, Windows compatible, and should allow easy data transfer to other windows based applications or custom applications having ODBC compliant database. The Software shall have built-in graphic package to display graphical representation of the process on-screen with embedded buttons for switching ON/ OFF TR units. Data security should be ensured through three different types of Access Levels namely Expert, Supervisory and Operator. It should have provisions to accommodate future need of addition of new TRs for equipment as may be required from time to time.

If required by client, The software shall be compatible for interfacing of the available CP System monitoring data on LAN at 10 No. additional nodes for management information system for access and reporting for the management. The monitoring software should be capable of generating notification & visual alarm, as and when signals go outside programmed set points and during RTU/PLC failure and TR Unit input power failure. It should generate customized reports as decided by EIL/ OWNER. The software shall allow configuration of emails of OWNERS employees who are responsible for maintenance.

- Remote Terminal Unit – specifications:

Sl No	Parameter	Specifications
1	Model	As per manufacturer
2	Local display & Local Keypad	The RTU shall consist of a 3 x 6 matrix membrane keypad and a 16 x 2 LCD Display with back-lighting for entering local settings and viewing TR parameters locally. Following Local settings can be done using the Key Pad & Display : - Setting Date/ Time - Setting Periodic Logging Interval - Setting of Scaling factor for DC shunt rating - Setting levels for various Alarm notifications - Setting Field ID.
		The LCD will normally display - TR Voltage - TR Current - Reference Potential - AC supply Voltage The RTU/ PLC should be able to be remotely configured for most of the above parameters from the central station.

Copyright EIL – All rights reserved

3	Programmable Periodic Interval	The Periodic Logging & Broadcast interval is programmable from 1 reading per 5 Minutes to 1 reading in 24 hours.
4	CPU	Microprocessor based latest generation design. Built-in Real Time Clock (+/- 1 minute accuracy over one month) Watch dog timer which provides a reset signal to the CPU if not toggled due to any hardware or software failure to ensure fail safe operation.
5	Local Memory	The RTU/ PLC will have sufficient local NVRAM memory to store the monitored data locally. Logged Data shall also be stored in the internal non-volatile Memory of RTU. About 30,000 total Data readings should be able to be stored without downloading. The locally stored data should be retained for upto10 years without external power to RTU/PLC. It will be possible to download the locally stored RTU data on a field Laptop reader through the local communication port in the RTU/ PLC whenever desired.
6	Analog Inputs for each TR Unit- (8 T/R Unit parameters viz □ DC Voltage □ DC Current □ Ref. Cell Potential (5 No.) □ AC supply Voltage + spare)	Fully differential Inputs, 12bit /16-bit resolution Should nullify the effect of AC interferences. High accuracy, High Impedance, with high common mode rejection ratio CMRR. CH-1: 0 – 100V DC (For DC Output Voltage) CH-2: 0 - 100mV DC (For DC Output Current through T/R shunt) CH-3 to 7: -5.0V to +5.0 V DC (For 5 No. Reference potential) CH-8: 0 - 300V AC (For AC supply Voltage Monitoring)

Copyright EIL – All rights reserved

7	Digital Inputs or software for Alarm generation. As required by design	24/12 VDC operated. shall also continuously scan and check for Alarm conditions listed below Following Alarms will be generated using Digital Inputs : • Diode/Output Fuse Fail • Unit Working in Remote Mode • Unit working in Local Mode Following Additional alarms will be generated by Software : • Input AC Supply Fail • Under Protection for Each Ref Electrode • Over Protection for Each Ref Electrode • Reference Fail for Each Ref Electrode The set parameters for the above alarm conditions can be programmed remotely through the central PC
8	Analog Control Outputs for T/R unit control As required by design	4-20mA / 0-5VDC / 0-10 VDC with isolation of 2500Vrms. Resolution – 12 Bit
9	Digital Output – 1 No. For T/R unit Current Interruption	SSR outputs relay 2500 V RMS optical Isolation. Contact rating 2A@ 240 V AC/ 1A @200 V DC On / off delay times 3 msec.
10	Communication	Through RS485 over Copper/ Fibre Optics network for broadcasting data to the Central Station at the programmed periodic interval. E-mail message facility for abnormal condition notification.
11	GPS Interface	Each RTU/ PLC will have built-in GPS module to synchronise the RTC to GPS time. This will ensure uniform real time for all the RTU/ PLCs.
12	Power Supply	230V ± 20%AC, 50 Hz □ 20V to 70V DC □ 12 VDC (Any one type as required by design)
13	Battery Backup	Battery Back-up for up to 2 Hrs of un-interrupted operation including E-mail transmission, in the event of failure of AC supply.
14	Communication Ports	As required by design

Copyright EIL – All rights reserved

15	Protection	Short Circuit Protection Surge Protection using MOV. Over Voltage protection EMI / EMC protection
16	Mounting	Preferably inside TR Unit if not possible then Wall / Pole mounting
17	Operating Temperature range	0 to 55 deg C
18	Humidity	95% condensing
19	Time Stamping	The RTU/ PLC shall have precise, accurate Real Time Clock (RTC) for exact time stamping of data.
20	Enclosure	The RTU/ PLC shall be housed in a compact & sturdy non corroding enclosure suitable for installation inside the shed common for all TR units. ABS / M.S. With IP 55 degree of protection Mounting : Either mounting inside each TR unit or common for all TR unit located under a single shed with Plinth mounting arrangement. Cable Entry : From Bottom
21	Data Download Port	The RTU/ PLC Unit shall have USB port through which the logged data can be downloaded onto the laptop.
22	Centralised Monitoring	The RTU/ PLC shall have built-in fibre optic modem to communicate with the central station Through RS485 over Fibre Optics Communication network. The RTU / PLC shall send the TR Data with exact time stamp directly to the Master Computer at central station at the programmed Periodic Interval. At the central end a PC shall be installed with a fibre optic Front End Communication (FEC) module and centralized monitoring software. The RTU shall also send alarm information with exact time stamp to the central station Periodic Interval. The PC software shall accept the data received from the RTU/ PLC, display it in graphical and analytical formats and store it in database like MS SQL to generate Reports and Graphs. It shall also possible to remotely program the Field RTU/ PLC Unit through the Central PC for configuration details like Setting Date/Time, Setting/ changing Periodic Interval . PC software should be able to monitor and receive data from up to 50 field RTU/ PLC at a time.
23	Compliance	Relevant BIS/ IEC EMI/ EMC standards

Copyright EIL – All rights reserved

3.12.3 Reports

The software should generate reports, which can be viewed as well as printed as listed below:

i) A monthly report showing readings from every system. The reports shall highlight readings outside limits and systems, which did not call.

ii) A single page report yearly report for each remote monitoring. This shall be used to show the monthly readings for each site.

iii) Alarm Reports: This particular report shall give all information about the alarms, which occurred in any abnormal conditions.

iv) Report information shall be compatible with standard spread sheet programs.

v) All above reports of different type should be available in graphical presentation, on screen and printer.

vi) Scaling and calibration of analogue channel can be done by use of supplier Editor Software.

3.12.4 DATA BASE SECURITY

Database shall be in the form of SQL Server. The version of SQL shall be latest with proven track. Following security features shall be provided in the server software:

- Roles
- Fixed Server Roles
- Fixed Database Roles
- User-Defined Roles
- Application Roles
- Granting and Denying Permissions to Users and Roles

Over and above the above features, the software supplied by the vendor shall broadly have following essential features to access the database as applicable.

- Group Creation
- User Creation
- User Group Allocation
- Enable - Disable Account Status
- Audit Trail
- Access Level Based on the operation
- Roles and Reasons
- Password Masking

3.12.5 DESIGN REVIEW:

CP System sub-contractor should prepare detailed engineering package for central monitoring and control system along with schematic drawings and equipment/ materials list including make/ model

Copyright EIL – All rights reserved

of the same and get the same approved by EIL/ OWNER before procurement/execution.

3.12.6 INSPECTION

The prototype inspection along with simulation tests shall be done at specialist agency's office / workshop by EIL/ OWNER before the dispatch of the equipment and materials at site. For this purpose CP System sub-contractor should furnish notice to EIL/ OWNER minimum 15 days before the date of inspection.

Copyright EIL – All rights reserved

3.13 SPECIFICATION FOR SOIL RESISTIVITY TEST

Copyright EIL – All rights reserved

3.13.1 SCOPE

The scope of this standard is to conduct the following tests within a plant complex:

- Soil/sand resistivity up to 10m depth to be measured using Wenner's 4-pin method in offsite/ unit areas/ Vessel pit.

3.13.2 OBJECTIVE

The objective of the tests given by Para 1.0 is to assess the corrosiveness of the soil/ sand & to decide suitable locations for anode beds for CP System for prevention of external corrosion of structure/ equipment within a plant complex.

3.13.3 SOIL RESISTIVITY TEST

In general soil resistivity tests covered by this specification shall unless otherwise specified, be in line with the requirements of BS CP 1021. Wherever the requirements in this specification are in conflict with the above standard, the requirements under this specification shall be binding.

3.13.3.1 SOIL RESISTIVITY TEST BY WENNER 4-PIN METHOD

Soil resistivity by Wenner 4-Pin method to be conducted at 4 anode bed locations as per instructions of EIL, at each location soil resistivity readings to be taken for 2m, 4m, 6m &10m depth for distributed anode beds.

$$\rho = 2\pi AR$$

Where,

ρ	=	Soil resistivity in ohm-cm
A	=	Inter electrode spacing in cm
R	=	Resistance observed from soil resistivity meter in ohm.

While inserting electrodes in soil for taking soil resistivity care should be taken to make good contact of electrodes with the soil, for this purpose limited watering may be required at the electrode penetration points wherever soil is dry or less compact. The depth of penetration of electrodes should not exceed 1/10th of the electrode spacing.

3.13.3.2 CALIBRATION OF SOIL RESISTIVITY METER

Soil resistivity meter should be calibrated at a reputed laboratory before use. The calibration certificate must be furnished to ENGINEER-IN-CHARGE for approval of the meter before use of the same for soil resistivity test at site.

3.13.4.0 REPORT PREPARATION

All soil resistivity readings shall be typed and presented in a tabular form giving co-ordinates and other location reference of each test locations & depth of each reading. The soil resistivity is to be expressed in ohm-cm.

Six copies each of soil resistivity report to be furnished to OWNER/ EIL for record.

4.0 MANDATORY SPARES FOR CATHODIC PROTECTION SYSTEM

Copyright EIL – All rights reserved

4.0 The Bidder shall supply the following spares for each T/R unit:

-	D.C. Voltmeter	Nos.	1
-	D.C. Ameter	Nos.	1
-	A.C. Voltmeter	Nos.	1
-	A.C. Ammeter	Nos.	1
-	Diodes	Nos.	2
-	SCR's	Nos.	2
-	D.C. Fuses for output side	Nos.	5
-	HRC fuse for Diodes	Nos.	5
-	A.C. fuses for input side	Nos.	5
-	D.C. Lightening arrestor	Nos.	2
-	A.C. Circuit breaker(MCB)	Nos.	2
-	Electronic Control Cards each type	Nos.	2
-	Filter circuit capacitor	Nos.	2
-	Signal light assembly for annunciation	Nos.	2
-	R.C. Surge Diverter	Nos.	2
-	Control transformer	Nos.	2
-	Coarse voltage control switch	Nos.	2
-	Coarse current control switch	Nos.	2
-	Fine voltage control switch	Nos.	2
-	Fine current control switch	Nos.	2
-	Auto Manual Mode selector switch	Nos.	2
-	Toggle switches	Nos.	2
-	Assorted Glass cartridge fuses	set.	15

GENERAL NOTES

1.1 Scope :
This document covers the Welding Specification for the piping classes covered in the Piping Material Specification (B957-6-44-0005-PMC01Rev. B dated 22.08.24, B957-6-44-0005-7401 REV.D Rev.0 dated 28.02.2025, B957-6-44-0005-PMC01 Rev.E dated 26.03.2025, B933-6-44-0005 Rev.A dated 19.9.2025, B957-6-44-0005 Rev. 0).WPS and PQR for the field fabrication and erection of piping system shall be made in conformity with this document. In case of any conflict between this document and Piping Material Specification for any piping class, the most stringent requirement shall be followed.

1.2 This document shall be read in conjunction with the latest revisions/editions of the following documents:

a) ASME Boiler and Pressure Vessel Codes

Section II Part C – Specification for Welding Rods, Electrodes, and Filler Metals
Section V – Nondestructive Examination
Section IX - Qualification Standard for Welding and Brazing Procedures, Welders, Brazers, and Welding and Brazing Operators

b) ASME B31.3, Process Piping

c) ASTM E10, Standard Test Method for Brinell Hardness of Metallic Materials

d) Job Specification for Non Destructive Examination Requirements of Piping, B957-6-44-0016

e) Welding Specification for Fabrication of Piping, 6-77-0001 Rev.5. and B957-000-06-41-WSP-0001.

1.3 GTAW process can be applied in place of SMAW process with a corresponding suitable filler metal for the application.

1.4 Abbreviations:

GTAW : Gas Tungsten Arc Welding

PMS : Piping Material Specification

PQR : Procedure Qualification Record

SMAW : Shielded Metal Arc Welding

WSC : Welding Specification Chart

WPS : Welding Procedure Specification

1.5 ASME B31.3 PWHT thickness exemption for P no. 1 materials is not permitted for material thickness greater than 1.5 inch (38mm).

1.6 Additional CLG requirements (Doc no. RA-260816) given in the PMS shall be met.

TECHNICAL NOTES:

1 **THE ROOT PASS FOR SINGLE SIDE WELDING SHALL BE DONE BY GTAW PROCESS**

2 **GTAW SHALL BE EMPLOYED FOR ENTIRE WELDING OF SMALL BORE PIPING, DIAMETER 2" AND SMALLER.**

3 **PRE-HEAT TEMPERATURE OF ATLEAST 50°C SHALL BE PROVIDED FOR THE FIRST TWO PASSES FOR THK>=12.5 mm & ≤ 25 mm.**

TECHNICAL NOTES:

1 **GTAW SHALL BE EMPLOYED FOR ENTIRE WELDING OF SMALL BORE PIPING, DIAMETER 2" AND SMALLER.**

2 **EVERY BATCH OF ALL WELDING CONSUMABLES SHALL BE QUALIFIED FOR NACE SERVICE (NACE MR0103 and TM0284).**

3 **PRE-HEAT TEMPERATURE OF ATLEAST 50°C SHALL BE PROVIDED FOR THE FIRST TWO PASSES FOR THK >=12.5 MM & <= 25MM.**

4 **ALL WELD JOINTS SHALL BE STRESS RELIEVED AND PWHT SHALL BE DONE AS PER LATEST EDITION OF ASME B31.3. HARDNESS SHALL BE MEASURED AFTER PWHT.**

1.0 GENERAL

1.1 This recommended procedure provides the measures for on-stream cleaning and passivation of CS metal surfaces of CW system. The pretreatment involves two steps as follows:

i. Thorough cleaning of the metal surface.

ii. Development of a protective (passive) film on the metal surface.

Pre-treatment applies to all metals except SS (Stainless Steel) and SDSS but is directed primarily to CS surfaces. Pre-treatment applies to pipeline, piping, coolers and any equipment which will come in contact with the cooling water.

Exchangers whose cooling water side MOC is other than CS (like SS & SDSS) need not be included for cleaning cum passivation procedure as per this procedure.

1.2 This specification defines the procedure for the chemical cleaning and passivation. However, EPC/LSTK Contractor shall prepare the detailed chemical cleaning markup on the applicable P&IDs and submit for EIL review & approval.

1.3 Normally microbiological fouling, deposits of phosphates, iron oxides and calcium carbonate scales are expected on CW side. For effective film formation/maintenance by the CI, the metal surfaces shall be free from the foulants and deposits. Fouled surfaces can give rise to severe pitting and localized corrosion.

1.4 Pre-cleaning cum passivation shall be applied to the entire CW system.

1.5 After the pre-treatment is over, the system shall be rapidly switched over to the regular chemical treatment by a suitable specialized CW treatment chemical agency for continuous protection of passivated CW exchangers.

1.6 In case of pre-cleaning cum passivation of isolated units (like new units in an existing plant or non-availability of cooling tower sump/pumps), contractor shall arrange the following:

a) Temporary tanks of suitable volume.
b) Pumps (1 working + 1 standby) of suitable capacity and head to maintain min. flow velocity of 1.5 m/s and full bore flow.
c) Temporary piping from temporary tank to unit cooling water inlet and outlet headers.

1.7 Where lines are required to be chemically cleaned, the limit of cleaning in branch lines (which are not marked or not necessary) shall be to the first block valve or flange.

2.0 PRE-TREATMENT INSPECTION

Prior to pre-treatment, the equipment shall be inspected and if found to contain excessive corrosion products, deposits or foulant, the equipment shall be cleaned with an appropriate cleaning procedure. The CW treatment vendor shall ensure the completion of the cleaning and inspection.

Copyright EIL – All rights reserved

3.0 FLUSHING

3.1 Cooling tower basin and sump should be filled with fresh water, drained and cleaned. All sludge should be mechanically removed if required.

3.2 All coolers/exchangers shall be kept isolated during entire period of flushing. Prior to the flushing, jump-over shall be provided at the inlet & outlet of the exchangers in such a manner that exchangers can be taken into line at a later stage quickly.

3.3 Provision shall be made to flush out water at dead ends of all units. Permanent dummying /capping of farthest ends of CW circuits (both supply and return headers) shall be carried out only after flushing of the circuits. Necessary temporary piping to discharge chemical cleaning effluent away from process units shall be made by the contractor.

3.4 Start filling the system with fresh water for open flushing. Open flushing is to be carried out thoroughly to remove all extraneous matter, loose scales, corrosion products, microbiological debris, mud, lumber chips, paper etc from entire CW system. Once the system is filled, return water to the CW tower is to be drained from the blow down valves. Also, intermittent blowdown from lowest drain points in the unit shall be done during open flushing. Flushing is to be carried out till return water is visibly clear.

3.5 Fill the system with fresh water with the blow down valve closed and start circulating the water. All exchangers shall remain offline. Intermittent blow down are to be carried out from cell basin and from the unit lowest points.

3.6 Open the blow down valve and flush the system with fresh raw water make up for 24 hours. At the end of closed flushing, blow down water quality shall be equal to make-up fresh water.

4.0 CLEANING WITH LOW pH WATER

4.1 All the equipment, headers, piping and coolers shall be taken into circuit and the system shall be put into circulation. Blow down shall be stopped. However coolers/exchangers shall be kept isolated during the initial stage for the first 24 hrs of low pH cleaning.

4.2 The pH of circulating water shall be adjusted in the range of 4.5-5.0 by addition of sulphuric acid.

4.3 Before addition of acid for low pH cleaning, approx. 1% or manufacturers recommended dosage of Corrosion Inhibitor (Rodine-92 or equivalent) shall be added to sulphuric acid. Prior to the start of chemical cleaning, Contractor shall demonstrate the efficiency of CI by using CS coupons dipped in non inhibited and inhibited acid solutions as per the annexure-I.

4.4 The pH shall be held in this range for at least 24 hours. Intermittent blow down/draining is required from blinded or isolated lines, equipments, exchangers etc.

4.5 Thereafter blow down is to be carried out to reduce TSS & iron content. Those lines which are isolated or blinded shall be thoroughly open flushed. Subsequently, makeup water is added to raise the pH to 6.5. Blow down is to be carried out till TSS and iron content of make-up and effluent water are same.

Copyright EIL – All rights reserved

4.6 All jump-over provided at exchangers are to be removed and exchangers are to be taken into line.

4.7 The pH shall be adjusted to 5.0-5.5 by addition of inhibited acid and circulation shall be continued.

4.8 After 48 hours of circulation, blow down shall be started & continued till suspended solids/Turbidity are < 30 mg/l/30 NTU or close to the make-up water quality.

5.0 PHOSPHATE / PHOSPHONATE CLEANING CUM PASSIVATION

5.1 The pH of the circulating water shall be adjusted in the range of 7.5- 8.0 by reducing the acid dose and shall be held in this range throughout the phosphate / phosphonate cleaning operation. All blow down from the system shall be closed.

5.2 Organo Phosphonate HEDP shall be added by gravity to build up a level of 80-100 mg/l as PO_4. HEDP shall be dosed very slowly as this will depress the pH of the CW. If necessary, caustic soda may be added in CW system to maintain pH in the range of 7.5-8.0.

5.3 SHMP solution shall be added to build up a level of 40-50 mg/l as PO_4 .SHMP shall be dosed after HEDP addition is complete and pH is stabilized.

5.4 When phosphate / phosphonate levels and pH are stabilized, preferably ethylene oxide based non-ionic surfactant or alkyl aryl sulphonate based anionic surface active agents @ 30 mg/l (based on total hold up) shall be dosed slowly. This shall also be dosed at the same rate again after 24 hours. This will produce foam in the system. Hence precautions shall be taken for operation of CW pumps.

5.5 Circulation shall be continued under this condition for a period of 7 days and following levels of chemicals shall be maintained in the CW system for this period:

SHMP as PO_4	40-50 mg/l
Organo phosphonate as PO_4 (HEDP,50-60% active acid content)	80-100 mg/l
pH	7.5 –8.0
Non ionic/anionic surfactant (the calculated quantity shall be based on 30 mg/l and added twice only as given in sub clause 5.4)	30 mg/l

5.6 After circulating for 7 days, the system shall be given a heavy blow down without pH adjustment. Regular treatment shall be started when TSS is less than 30 mg/l or close to make up water quality and HEDP is less than 10mg/l as PO_4.

6.0 MONITORING

The pH, phosphate and phosphonate levels shall be monitored regularly throughout the entire operation and recommended levels shall be maintained.

Frequency of analysis is as follows:

Copyright EIL – All rights reserved

During cleaning with low pH water (clause 4.0) *

pH	:	Once in two hours
TSS/Turbidity	:	Once in four hours
Iron content (Fe)	:	Once in four hours

During phosphate cleaning (clause 5.0) *

pH	:	Once in two hours
Inorganic phosphate	:	Once in two hours
Organic phosphate (Phosphonate)	:	Once in four hours
Iron content (Fe)	:	Once in four hours

*One sample from each unit shall also be collected for analysis.

Before starting the pre-cleaning, contractor shall submit all necessary laboratory analysis procedures for review. Contractor shall make arrangements to set-up a fully equipped laboratory with all the necessary chemicals and instruments along with a qualified chemist prior to the start-up for pre-cleaning. Supply of all the reagents and chemicals are in contractors' scope.

7.0 PRE-TREATMENT EVALUATION

To assure that cleaning and passivation have been effective, a slightly rusted CS corrosion specimen shall be inserted into standard coupon testing assembly fitted to the CW return line or the specimen may be immersed in the cold water channel of the cooling tower and shall be inspected visually from time to time. A standard corrosion coupon may be inserted in the corrosion rack at the cooling tower. This may be used to evaluate the efficiency of the passivation along with the rusted coupon observation. Standard coupon shall show a thin uniform passivation layer. Cleaned and passivated surfaces of any piping or exchangers shall contain no loose rust.

8.0 SPECIFICATION OF CHEMICALS

The chemicals shall conform to the following specifications:

Organo phosphonate (HEDP, active acid content 50-60%)	Testing as per ASTM D515-72 and To be obtained from reputed manufacturer.
SHMP	IS : 574 (latest)
H_2SO_4 (98%)	IS : 266 (latest)
Caustic Soda	Technical grade as per IS:252 (latest)

Contractor shall submit relevant test certificates of his chemicals as a proof of presence of minimum active ingredients in the respective chemical products.

9.0 SAFETY PRECAUTIONS

Normal safety precautions shall be taken for handling of chemicals. Protective clothing and safety items shall be used to prevent any injury during the pre-treatment

Copyright EIL – All rights reserved

operation. Temporary barricades shall be provided around the area where acid and alkali is being handled and entry in to the barricaded area shall be strict with proper safety gears. Contractor shall bring only flame proof pumps and equipment.

NOTES:

1. CW System shall be started with the above pre-treatment program prior to normal treatment.
2. HEDP shall only be used. ATMP shall not be used.
3. During on-stream cleaning, if CW temperature exceeds 40^0C, SHMP level as specified in sub clause nos. 5.3 and 5.5 shall be reduced to 20-25mg/l as PO_4.
4. Approximate chemicals requirement for 1000 m^3 hold up of CW system:

Organo phosphonate (HEDP, active acid content 50-60%)	140-180 Kg to maintain level of 80-100 mg/l as PO_4
SHMP	50-60 Kg to maintain a level of 40-50 mg/l as PO_4
Surfactant	30 Kg To maintain a level of 30 mg/l

Actual requirement of chemicals shall be calculated based on actual hold-up of the system and dosage to maintain specified levels. Further additions of chemicals will depend on laboratory results and to be dosed to maintain specified levels for entire operation.

10.0 TECHNICAL SUPERVISION

The chemical cleaning operation shall be conducted under close chemical controls by the contractor and EIL site. The EIL site may have technical guidance from SMMS.

Copyright EIL – All rights reserved

ANNEXURE-I

TEST PROCEDURE FOR INHIBITOR EFFICIENCY

1.0 PREPARATION OF TEST COUPONS

CS coupons of size 7.5cm x 5cm shall be cut from hot rolled (AISI 1020 or equivalent grade) steel strip or plate. The edges and sharp corners shall be ground smooth. A 5mm diameter hole shall be provided for suspension. The coupons thus prepared shall be used in the tests.

2.0 IDENTIFICATION

The coupons shall be provided with letters and/ or number at one corner using punch.

3.0 SURFACE PREPARATION

For conducting the test to determine inhibitor efficiency, the coupons shall be free from mill-scale by grinding followed by polishing using emery paper. The final surface shall be made bright using emery paper. Coupons for conducting the test of action of cleaning solution in removing mill-scale shall be with the mill scale on. All the coupons shall be weighed separately correct to 1mg using a balance.

4.0 CLEANING SOLUTION

The cleaning solution is the inhibited sulphuric acid. Before addition of acid for low pH cleaning, approx. 1% (or in recommend dosage) CI shall be added to sulphuric acid. The pH of sulphuric acid solution shall be in the range of 4.5-5.0.The solution thus prepared, shall be used for conducting the tests.

5.0 TESTS FOR INHIBITOR EFFICIENCY

Test shall be carried out in duplicates in glass containers preferably in one litre capacity beakers. One litre of cleaning solution each shall be transferred to beakers and the solution shall be heated to the maximum temperature in the specified range for the process. The coupons shall be completely exposed to the action of the acid by suspension from the hole so that the upper edge shall be at least 1cm below the liquid surface. The temperature shall be held as above through-out the duration of the test.

5.1 Identical test shall be carried out using un-inhibited acid of the strength equivalent to that of the cleaning solution.

5.2 After the exposure of the coupons to the cleaning solution for the duration of actual cleaning, all the coupons shall be removed from the acid solution and cleaned in running tap water to remove acid and finally in distilled water. The coupons shall be dried and transferred to desiccator before weighing.

5.3 The weight loss of the coupons shall be determined and the corrosion rates shall be calculated. The average corrosion rate of the coupons exposed to the cleaning solution shall be less than 3% of the average rate thus obtained for the coupons exposed to un-inhibited acid. (I.e. percent corrosion inhibition shall be 97% (min.). Approval of the Engineer-in-Charge shall be obtained for the inhibitor efficiency obtained in the test.

1.0 SCOPE

This Specification outlines minimum requirements for external painting of underground SS and Alloy Steel plant piping. This specification covers surface preparation, details about coating system, application methods & pre-qualification testing requirements etc.

2.0 REFERENCE CODES & STANDARDS

The latest editions and revisions of the following Standards shall be used to supplement and define the intentions and requirements of this Specification.

Swedish Standard
SIS 05 59 00 Pictorial Surface Preparation Standards for Painting Steel Surfaces.

American Steel Structures Painting Council Standards
SSPC - PA2 Measurement of Dry Paint Thickness with Magnetic Gauges
SSPC- SP16 Brush-off Blast for SS, galvanized steel and non-ferrous metals

International Standards
ISO 12944-1 Paints and varnishes -- Corrosion protection of steel structures by protective paint systems -- Part 1: General introduction
ISO 12944-3 Paints and varnishes -- Corrosion protection of steel structures by protective paint systems -- Part 3: Design considerations
ISO 12944-4 Paints and varnishes -- Corrosion protection of steel structures by protective paint systems -- Part 4: Types of surfaces and surface preparation
ISO 12944-5 Paints and varnishes -- Corrosion protection of steel structures by protective paint systems -- Part 5: Protective paint systems
ISO 12944-6 Paints and varnishes -- Corrosion protection of steel structures by protective paint systems -- Part 6: Laboratory performance test methods.
ISO 12944-8 Paints and varnishes -- Corrosion protection of steel structures by
ISO 8501-1 Preparation of steel substrates before application of paints and related products — Visual assessment of surface cleanliness. Part 1: Rust grades and preparation grades of uncoated steel substrates and steel substrates after overall removal of previous coatings
ISO 8504-2 Preparation of steel substrates before application of paints and related products — Surface preparation methods — Part 2, Abrasive blast-cleaning
ISO 2808 Paints and Varnishes - Determination of film thickness

3.0 EQUIPMENT

All tools, brushes, rollers, spray guns, blast material, hand power tools for cleaning and all equipments, scaffolding materials, shot & grit blasting equipments & air compressors etc. required to be used shall be suitable for the work and all in good condition and shall be arranged by the contractor at site and in sufficient quantity.
Mechanical mixer shall be used for paint mixing operations in case of two pack systems except that the Engineer-In-Charge may allow the hand mixing of small quantities at his discretion in case of specific requirement for touch up work only.

4.0 GENERAL SEQUENCE FOR SURFACE PREPARATION & PAINTING

4.1 Pre-blasting prior to removal for weld splatters.

Copyright EIL – All rights reserved

4.2 Emulsifying cleaning.
4.3 DM water washing, to remove contaminants
4.4 Shot & Grit blasting
4.5 Dust and grit removal
4.6 Paint application
4.7 Inspection

5.0 PROCEDURE FOR PRE-BLASTING PREPARATION & SURFACE PREPARATION

Pre-blasting

All Sharp edges (if any) shall be rounded by using grinder or disc sander to get minimum 2mm radius (R = 2mm). This can be obtained by way of three passes with the grinding tool on the sharp edges. Weld slag, spatters & weld beads shall be thoroughly removed by chipping and grinding. Under cuts and surface indentations depth exceeding 0.8mm and a width less than its depth should be rectified by welding and grinding (including weld blow holes). Rough weld seam (if any) shall be smoothening by grinding. Overlap weld beads with the sharp notches are to be repaired by welding and grinding.

In case of any localized oil contamination to the surface, same shall be removed by solvent, alkaline detergent or emulsifying agent cleaning as per SSPC-SP-1.

Removal of oil and grease is followed by fresh water washing, to remove contaminants, (soluble salt and welding flux, dirt).

Note: To remove the soluble salt, dirt, and dust, high pressure water cleaning up to a pressure of minimum 250 Bar is required.

Surface preparation

Surfaces to be coated shall be blast cleaned in accordance with SSPC-SP-16. The surfaces shall be blast cleaned using abrasives like Al_2O_3/garnet or non-metallic abrasives at pressure of 7kg/cm^2 at an appropriate distance and angle depending of nozzle size maintaining constant velocity and pressure. The quality of abrasives shall be free from contaminants and impurities and shall meet the requirements of SSPC AB1. Compressed air shall be free from moisture and oil. The blasting nozzles should be venturi style with tungsten carbide or boron carbide as the materials for liners. Nozzles orifice may vary from 3/16" to ¾". Blast cleaning shall not be done outdoors in bad weather without adequate protection or when there is dew on the metal, which is to be cleaned. Surface profile shall be uniform to provide good key to the paint adhesion. If possible vacuum collector shall be installed for collecting the abrasives and recycling.
Blast cleaning shall not be performed where dust can contaminate surfaces or during humid weather conditions having humidity exceed 85%

6.0 COATING SYSTEM

Table-1

Sl. No.	Surface Preparation	Coating System			DFT (µm)
		Primer	Intermediate	Finish coat	
1.1	**For Stainless Steel piping**				
1.1.1	SSPC-SP-16 Min. 50 microns profile	1 coat of Novolac Epoxy phenolic coating (F-17) @300 microns	-	1 coat of Novolac Epoxy phenolic coating (F-17) @300 microns	600 µ min.
1.2	**For Alloy Steel piping**				
1.2.1	SSPC-SP-16 Min. 50 microns profile	1 coat of glass flake epoxy composite coating @ 150 microns	-	1 coat of glass flake epoxy composite coating @ 150 microns	300 µ min.

7.0 GENERIC PRODUCTS' DESCRIPTION

7.1 Novolac Epoxy coating

Generic name: Novolac epoxy phenolic coating cured with Polyamine adduct hardener.
Properties of the coating shall conform to code F-17 specified in table-2 of B957-000-06-42-PLS-01.

7.2 Glass Flake Epoxy Composite coating

Generic name: Two component glass flake reinforced epoxy composite coating having volume solids of min. 70±2 %. This coating shall be suitable for heat resistance up to 250 Deg. C in buried condition.
Mixing and thinning shall be as per manufacturer's recommendation.

8.0 COATING APPLICATION

Primer/first coat of paint shall be applied within 3-4 hours of surface preparation.
All coating shall be applied by airless spray excepting at the following special cases where application can be carried out by brush

- Spot repair
- Stripe coating on edges
- Small bore parts not suitable for spray application.

Copyright EIL – All rights reserved

Irregular surfaces such as sharp edges, welds, small brackets, and interstices may stripe coated to ensure specified DFT is achieved. Paint manufacturer recommendation should be followed before deciding for brush application.

9.0 QUALITY CONTROL, INSPECTION AND TESTING

The painting work shall be subject to inspection by Engineer-In-Charge at all times. In particular, following stage-wise inspection will be performed and contractor shall offer the work for inspection and approval of every stage before proceeding with the next stage. The record of inspection shall be maintained in the registers. Stages of inspection are as follows

(a) Surface preparation
(b) Primer application
(c) Each coat of paint

a. Test for presence of oil/grease and contamination

The steel substrate after degreasing as per SSPC-SP-1 shall be tested as per following procedure to validate absence of oil and grease contamination:

- Visual inspection - continue degreasing until all visible signs of contamination are removed.

- Conduct a solvent evaporation test by applying several drops or a small splash of residue-free tri-chloromethane on the suspect area especially pitting, crevice corrosion areas or depressed areas. An evaporation ring formation is indicative of oil and grease contamination. Continue degreasing and inspection till test is passed.

b. **Tests for surface finish of blasted surface** shall be done by visual inspection using SSPC-VIS1. Clear cellophane tape test as per ISO 8502-3 shall be used to confirm absence of dust on blasted surface. Checks shall be done on each component at least once per 200 m^2 of blasted surface and a minimum of 3 checks per shift.

c. **Test for presence of soluble salts** as per method ISO 8502-9. Maximum allowable salt content shall be considered 20 mg/m2.Checks shall be done on each component at least once per 200 m2 of blasted surface and minimum of 3 checks per shift. In case salt exceeds specified limit, the contaminated surface shall be cleaned by method as per Annexure-C of ISO 12944-4 (water cleaning). After cleaning, surface shall be retested for salt after drying.

d. **Blast Profile Measurement**: (In-Process testing during actual production before application coating). The angular profile depth measurement shall be done by profile tape as per method ASTM D 4417 method B (Profile depth gauge micrometer)/ calibrated Digital gauge meter. Spot measurement shall be carried out every 15m^2 of blasted surface. At each spot three measurements shall be taken over an area of 10

Copyright EIL – All rights reserved

m^2 and average of measurements to be recorded and reported. If profile is less than specified range, blasting shall continue till greater specified depth profile is achieved.

e. **Tests for blasting media:** Blasting Media (For every fresh batch of media and one random test during blasting)**.** Blasting Media shall be visually inspected for absence of contamination and debris using 10 X magnification.

- Inspection for the absence of oil contamination shall be conducted using following procedure:
  - Fill a small clean 200 ml bottle half full of abrasive.
  - Fill the bottle with potable water, cap and shake the bottle.
  - Inspect water for oil film/slick. If present, the blasting media is not to be used.

- Soluble salt contamination if suspected shall be verified by method ASTM D 4940. If present, media to be replaced.

- Clean blasting equipment, especially pot and hoses, and then replace blasting media and retest.

f. **Test for Blasting Air** (Once Daily before start of blasting and once at random during Blasting). The air for blasting shall be free from moisture and oil. The compressor air shall be checked for oil and water contamination per ASTM D 4285.

In addition to above, record should include type of shop primer already applied on equipment e.g. zinc silicate or zinc rich epoxy or zinc phosphate. Any defect noticed during the various stages of inspection shall be rectified by the CONTRACTOR to the entire satisfaction of Engineer-In-Charge before proceeding further. Irrespective of the inspection, repair and approval at intermediate stages of work, CONTRACTOR shall be responsible for rectifying any defects found during final inspection/guarantee period/defect liability period as defined in general conditions of the contract. Dry film thickness (DFT) shall be checked and recorded after application of each coat and extra coat of paint should be applied to make-up the DFT specified without any extra cost to OWNER, the extra coat should have prior approval of Engineer-in-charge.

9.1 Primer Application

After surface preparation, the primer should be applied to cover the crevices, corners, sharp edges etc. in the presence of inspector nominated by Engineer-In-Charge.

9.2 The contractor shall provide standard thickness measurement instrument with appropriate range(s) for measuring.

Surface profile gauge for checking of surface profile, Dry film thickness (of each coat), Holiday detectors / pinhole detector and protector whenever required for checking

Copyright EIL – All rights reserved

9.3 At the discretion of Engineer-In-Charge, the paint manufacturer must provide the expert technical service at site as and when required. This service should be free of cost and without any obligation to the owner, as it would be in the interest of the manufacturer to ensure that both surface preparation and application are carried out as per their recommendations. The contractor is responsible to arrange the same.

9.4 Final inspection of finished coating shall consist of measurement of:

- **Coating DFT & WFT check:** DFT measurement shall be as per ISO 2808. Type-II electronic gauge shall be used as described in ASTM D7091. DFT gauge calibration, adjustment of gauge coating thickness, frequency and number of coating thickness measurement shall be as per ASTM D7091 and SSPC-PA2. Measured DFT shall have a tolerance as per SSPC-PA-2 level-3 of the dry film thickness, specified in this specification. Once in every layer of coating application, spot checks of WFT shall be carried out during the coating application according to ISO 2808, Method No. 1A- comb gauge. This is to ensure that film thickness is being achieved as per the specification. The frequency of WFT check shall be one per 10 m^2.

- **Adhesion testing:** Adhesion of the primer to the steel substrate and inter-coat adhesion of the subsequent coat(s) after curing for at least a week after application of the topcoat shall be examined by a knife test in accordance with ASTM D6677. For the knife test, if the rating is better than 8, the adhesion is considered acceptable. The adhesion is destructive and tested areas shall be repaired afterward using the spot repair procedure. Alternatively, the applicator may perform the adhesion test on a steel panel coated using the same surface preparation and coating application procedure as the work piece. Adhesion testing shall be carried out for each component at least once per 200 m^2 of coated surface.

- **Holiday detection check:** Holiday testing of non-conductive coatings shall be carried out in accordance with NACE SP0188. For immersion, buried & under insulation services, 100% of coated area shall be inspected for holidays. For atmospheric exposure, 10% of coated area which must include weld seams, corners and edges to be holiday tested. Voltage at which test is to be carried out will depend upon DFT of coating being tested and shall be as per NACE SP0188. Any holiday is unacceptable and should be marked and repaired immediately**.**

- The CONTRACTOR shall arrange for spot checking of paint materials for specific gravity, glow time (ford cup) and spreading rate.

Copyright EIL – All rights reserved

10.0 Pre Qualification of the coating materials

For Novolac epoxy phenolic coating, the paint manufacturer engaged by the mechanical contractor shall carry out the tests in NABL accredited government laboratories or in suggested list of laboratories below, as a part of qualification. Paint manufacturer shall provide the paint samples to laboratory for testing of the parameters mentioned in Table-2 of B957-000-06-42-PLS-01 (typical characteristics of F-17) and Table-2 of this specification. The testing laboratory will confirm the compliance of the paint material with respect to the acceptance criteria mentioned in the respective tables.
For Glass Flake Epoxy Composite coating, the paint manufacturer engaged by the mechanical contractor shall carry out the tests as per Table-2 and properties mentioned in product datasheet in any NABL accredited laboratories or in suggested list of laboratories below, as a part of qualification. The test certificates shall be certified by a NACE/AMPP Level-3 certified inspector of a qualified TPI agency.

Colored photographs of coated test panels should be taken before and after the test and should be enclosed along with test report. Contractor shall furnish these test certificates along with all necessary supporting documents/information to EIL-SMMS for approval/ acceptance. The paint manufacturer will be qualified and approved by EIL-SMMS for supply of paints after review/assessment of the submissions made by the contractor. Test certificates which are more than 3 years old will not be considered. Paint manufacturers are advised to carryout pre-qualification testing accordingly for paints supply to EIL projects.

List of suggested laboratories:

1. National Test house – Kolkata
2. National Test house-Mumbai
3. HBTU- Kanpur
4. GIRDA (Gujarat Industrial Research & Development Agency)- Vadodara
5. Indian institute of chemical technology – Hyderabad
6. RITES – Kolkata
7. ICT- Mumbai

Table-2

S. No.	TEST	DURATION	ACCEPTANCE CRITERIA
1.	Chemical Resistance Test (ASTM D543)		
1a.	10% & 40% NaOH	1000 hrs	Shall pass. No cracking, discoloration, blistering,
1b.	5% H2SO4	168 hrs	

Copyright EIL – All rights reserved

1c.	Xylene	4 weeks	peeling or softening of film shall be observed.
1d.	Acetone	4 weeks	
1e.	Ethanol	4 weeks	
1f.	Kerosene	4 weeks	
1g.	Sea water	2000 hrs	
2	Cathodic Disbondment Test (ASTM G95) for 28 days	28 days	Disbondment radius shall be max. 12mm
3	Flexibility 180^0 bend over 3-inch mandrel (ASTM D522)	-	No cracking or delamination
4	Impact Resistance (ASTM G14)	-	Average 8.4 Nm min. for 5 Samples
5	Water Absorption (ASTM D570)	-	Max 2%
6	Thermal Shock Resistance Test (For epoxy composite coating); 5 cycles @ 30 minutes in furnace at 250 º C and 15 minutes in water after quenching in water for each cycle. (ASTM D2485 method B)	-	Shall pass

CONTENTS

1.0 GENERAL

2.0 SURFACE PREPARATION

3.0 PAINT SYSTEM

4.0 APPLICATION, MIXING, THINNING

Copyright EIL – All rights reserved

1.0 GENERAL

This job specification covers the minimum technical requirement for surface preparation, painting of RCC exposed surfaces in plant area which are prone to carbonization as well as algae & fungus attack due to continuous exposure of water & sea water etc. This document is intended for RCC structures susceptible to dampness only and not intended for archaeological or aesthetic purpose.

2.0 SURFACE PREPARATION

Surfaces to be painted should be free from chalking. All dust, grease and lose paint, looser powder particles, fungus/algae need to be completely removed. Remove entirely the previous growth of fungus and algae if any by vigorous wire brushing and cleaning with water. The exterior surfaces should not be affected by any water seepage or by constant dampness. No painting shall be done in rainy season. It is recommended that newly plastered surfaces shall be allowed to cure at least 2 months before painting.

3.0 COATING SYSTEM

Anti-fungal Paint System for Concrete Structures (above ground):

1 Priming coat of water based 100% Acrylic exterior emulsion primer with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50µ

+

2 coats of finish coat with water based 100% acrylic exterior emulsion paint with light fast pigments and resistant to fungus and algae growth, alkali and UV degradation @ 50 µ = 2×50 = 100 µ

Total DFT = 150 µ minimum.
Note: DFT can be checked on a carbon steel panel of 1 ft × 1 ft, applied simultaneously.

4.0 APPLICATION, MIXING AND THINNING

The manufacturer's recommendations given in the printed literature shall be followed.

1.0 SCOPE

Bharat Petroleum Corporation Limited (BPCL) intends Engineer, Procure, Construct, Commission and Operate "EPCM-1 Units & facilities in Bina Petchem and Refinery Expansion Project (BPREP)", at its Bina Refinery in the state of Madhya Pradesh.

The EPCM-1 Units and facilities comprise the following: -

1. Ethylene Cracker (ECU) & Associated Units

2. Utilities and Offsites (U&O)

As part of this project, EIL is preparing the Basic Design and Engineering Package (BDEP), carrying out detail ENGINEERING, PROCUREMENT AND CONSTRUCTION MANAGEMENT for all of the above-mentioned units and facilities.

Detailed scope of work of the mechanical contractor with respect to these facilities is described elsewhere in the bid document. This document provides pre-commissioning, commissioning responsibilities of the contractor.

Contractor will carry out pre-commissioning & commissioning activities (as mentioned in this document) of the facilities as stated above under the guidance / supervision of Owner/PMC operating personnel/ commissioning team. Co-ordination with other Contractors, if any, for pre-commissioning and commissioning of facilities shall be under Contractor's Scope.

Contractor to carry out all activities essential for pre-commissioning/ commissioning even if not specifically mentioned in the document including arrangement of equipment/ cranes/ hydra/ hoists/ temporary facilities/ connections/ fittings/ spools/ consumables/ tools and tackles/ special equipment for catalyst/ catalyst support loading etc.

1.1. The CONTRACTOR shall be responsible to carry out pre-commissioning and commissioning of the Unit as indicated in scope of work.

1.2. A procedure for detailed mechanical completion, pre-commissioning, commissioning and start up shall be developed by CONTRACTOR based on the inputs from the licensor and guidelines provided in this document. Also, CONTRACTOR shall prepare the start – up and shut down procedure along with operating manual of the Unit on the guidelines provided in the document.

1.3. PCAMS Software is used by EIL in start – up and commissioning. Status of all the formats shall be through PCAMS only, hence Contractor to align his system with the PCAMS software and working at site by the Contractor shall be through PCAMS only.

2.0. DEFINITIONS

2.1 MECHANICAL COMPLETION

Copyrights EIL – All rights reserved

Mechanical Completion of systems mean that all installation works of the unit is completed and hydro tested in accordance with approved construction drawings, approved specification, applicable code/s as defined in the bid package, accepted international good engineering practice and all the pre-commissioning activities are completed in a comprehensive manner by the Contractor as detailed in section 2.2.

Contractor shall submit certificate as per FORMAT-I (attached as Annexure-I) stating system/ sub-system, which is mechanically completed along with test certificates connected with the system/sub systems viz. hydrotest reports, NDT reports, inspection certificates, certificates of various statutory bodies etc.

OWNER/ PMC/ Consultant representatives will check the system and shall issue FORMAT- II (as per format given in Annexure-I) which includes deficiencies / modifications, intimation of deviations from P& IDs, requirement of safety, start –up, Operation and Maintenance required for the portion of the work that is declared by the Contractor as mechanically complete.

Contractor shall liquidate all the checklist points agreed between Contractor / OWNER / PMC and issue certificate in form of FORMAT – III (as per format given in Annexure-I). All the coordination for resolution of P & ID issues, alarm/ trip values, interlocks and complex loop issues shall be closed by CONTRACTOR.

Contractor shall get the approval or acceptance of FORMAT-III to carry out pre-commissioning activities as mentioned in section 2.2 under the guidance / supervision of Owner / PMC.

2.2 PRE-COMMISSIONING ACTIVITIES

Pre-commissioning activities will include but will not be limited to the following:

i) Opening & box-up of piping, valves, instruments, spool pieces etc as per pre-commissioning procedure.

ii) Air blowing, cardboard blasting, water flushing, Air drying and steam blowing of pipes, vessels, equipments for clearance of box-up & maintain records for commissioning activities. In case sufficient pressure during water flushing is not available, contractor to make necessary temporary arrangement for getting the required pressure. (Inspection of all vessels and columns shall be jointly by OWNER, EIL / PMC).

iii) Fabrication and supply of temporary facilities, for example, temporary bypasses, spools, blinds, jump-overs, vents, strainers, screens etc. Fabrication/ Purchase of valve keys/ blinds and other pre-commissioning /commissioning related consumables as required.

Copyrights EIL – All rights reserved

iv) Chemical cleaning / Passivation

v) Carry out leak test/ tightness test. Carry-out integrated leak test & maintain records. Attending leaks by tightening to the required torque/replacement of faulty gaskets where necessary.

vi) Receiving material required as per requisite format approved by EIC from owner's store/ warehouse / designated area or any other location within plant premises including loading, unloading and maintain the records.

vii) Contractor to ensure that Gaskets, stud, bolts etc. used are strictly as per piping material specification for the pipe class specified for that line.

viii) Carrying out RIGGING JOBS including dismantling/ erection of structure/ equipment, piping, etc. as per the instructions of the Engineer-in-charge.

ix) Opening & Box Up of Static Equipment / Column/ Vessel / Man ways and Pipe Line Flanges/ Heat Exchangers, Isolation, removal & re-fixing of instruments mounted on Static Equipment / Columns/ Vessels, Heat Exchangers bundle pulling and re-fixing.

x) Opening and Re-Fixing of all Type of Valves including PSVs & control valves, line mounted Instruments Including Both Ways Transportation Between Plant and Work Shop.

xi) SCAFFOLDING ERECTION AND DISMANTLING JOBS including supply and erection of temporary scaffolding & staging, making temporary platforms using pipes, pipe clamps, beam clamps etc. in conformance with established safety codes, BIS codes etc. inside/ outside of equipment like Columns, Vessels, structures etc

xii) Carrying out FILTERS, STRAINERS, STEAM TRAPS, DEMISTER PADS related jobs including removal of auxiliary connections, dropping assemblies, cleaning, finally boxing up the complete assembly with proper alignment, flushing, draining, cleaning and filling up of hydraulic oil consoles / tanks of rotary equipment, removing and cleaning all types of filters and strainers, Cleaning of area / oil spillage, after the job, Cleaning of all types of steam traps, Dropping, cleaning and re-fixing the de-mister pads after inspection, Cleaning and lubrication of fasteners, etc.

xiii) Rechecking of alignments for the rotating equipment.

xiv) Assistance to carry out checks on rotary equipment as per OEM requirement.

xv) Topping up of bearing oil/ lube oil in rotary equipment.

Copyrights EIL – All rights reserved

xvi) Hose connections/ removal.

xvii) Opening & box-up of piping for connection & disconnection of chemical drums / iso containers & their unloading into the system.

xviii) Make cold/ hot alignments, necessary checks, adjustments, repairs required during pre- commissioning & commissioning of the system / equipment.

xix) Install, adjust and replace mechanical seals, packing and accessories, as necessary during pre-commissioning / commissioning period.

xx) Providing assistance to Vendor's Representative for equipment preparation/ repair and any other similar activity as per the commissioning requirement as per the instruction of Engineer-in-charge including supply of necessary hand tools, equipment, consumables (scaffolding, electrodes, gas) and with single point responsibility of contractor's supervision.

xxi) Carry out site modifications as found necessary during system check / inspection from view point of operability, maintenance and safety of the units.

xxii) Check pipe hangers, supports, guides and pipe specialties for hot settings and make minor adjustments as necessary.

xxiii) Carry out cleaning of vessel internal surface, distributors, supports, packing material etc as and when required.

xxiv) Instrument pre-commissioning includes all checks that will ensure instrument operability i.e. remove all shipping stops, check pointer travels, and verify instrument capability to measure, operate and stroke in the direction and manner required by the process application, conduct checking of complex loops and interlocks, instrument loop checking, instrument calibration, check for proper tagging of instruments etc.

xxv) Electrical pre-commissioning including proper earthing, pre-commissioning checks done on cable continuity checks, electrical panels, MCCs, switch gears, motors, transformers etc.

xxvi) Supplying and installation of locks and chains for locking of valves wherever required.

xxvii) To remove insulation from insulated piping, Valves, flanges etc in such a way so that these can be reused and re-fix the same after the job is completed.

xxviii) Carry out dewatering of pits / basins as directed, using electrical pump.

xxix) Maintenance & repairing of valves by a skilled valve repair mechanic.

Copyrights EIL – All rights reserved

xxx) Dropping & reinstatement of valves by a skilled valve repair mechanic.

xxxi) Supply & Installation of barricading tape.

xxxii) Supplying safety appliances & suitable PPEs to all workers.

xxxiii) Removal of scrap to identified area, maintain housekeeping, & return material after the job completion.

xxxiv) CONTRACTOR to ensure during Pre Commissioning, all the accessories / equipment required for availability of utilities for carrying out commissioning works shall be ready at least three months before start of Commissioning activities.

xxxv) CONTRACTOR to coordinate and confirm compliance regarding completion of all, mechanical, Instruments and Electrical installation work.

xxxvi) CONTRACTOR to take trial run of Fire Water system, Gas detector system and other safety system and obtain approval of the same from OWNER/PMC/EIL.

xxxvii) To obtain necessary safety / work permits and comply with all safety norms & regulations.

xxxviii) Supplying consumables required to complete the assigned works including but not limited to the following.

- Welding consumables electrodes, filler wire, Argon gas, Al. lugs etc.
- Flame cutting consumables like DA, O2, etc.
- Cutting wheel, grinding wheel, buffing wheel
- Fuel, oil, Lubricants etc. for running contractor deployed machinery
- Emery papers
- Cardboard for cardboard blasting
- Soap solution with squeeze bottles as required for leak test.
- Plastic sheets
- Gaskets
- Aluminium /brass target plates
- Temporary Strainer SS mesh

2.3 DECLARING READY FOR COMMISSIONING

2.3.1 The unit shall be considered `Ready for Commissioning' (FORMAT – IV) when all the facilities have been completed along with their auxiliaries and support facilities in every

Copyrights EIL – All rights reserved

respect including charging of lubes, chemicals, preparation of solution, last minute modifications, if any, as recommended by OWNER / PMC. All temporary structures, scaffolding etc. used for carrying out pre-commissioning activities shall be removed, all the blinds shall be placed into position as per P&IDs / OWNER/ PMC.

2.3.2. Contractor shall ensure that all safety devices like pressure safety valves (PSV), emergency shutdown valves are tested, witnessed and certified by representative of Contractor / OWNER/ PMC. These certificates are to be handed over to OWNER/ PMC prior to start-up of the UNIT.

2.3.3. Once the Unit has been declared “Ready for Commissioning”, the Contractor shall not carry out any erection related work including hot work without prior permission of the OWNER.

2.4 COMMISSIONING

2.4.1. Commissioning of the Unit will be carried out by Contractor once mechanical completion is over successfully, all pre- commissioning activities are carried out and system is ready for commissioning under necessary guidance and overseeing of PMC/OWNER. Representative from process designer will provide necessary co-ordination during start up and related technical clarifications shall be furnished by them.

2.4.2. Commissioning of the Unit means taking the feed in, passing it through the normal route; establishing the process control parameters first at turn down & then at design throughput stipulated in the process package (guarantee parameters as per bid document) with supplementary instructions if any from OWNER.

2.4.3. Contractor will provide necessary assistance during commissioning of the unit.

2.4.4. The Unit shall be considered to be commissioned successfully once all the system with instrumentation/ control systems and support systems have been on uninterrupted stable operation for not less than 72 hours. Any interruption of duration up to 30 minutes during the commissioning run of 72 hours shall be ignored. However, for interruptions greater than 30 minutes, the commissioning run period shall be extended by the time equal to the interruption plus the time taken to stabilize the Unit back to the normal operating conditions. Whether the 72 hours operation has been successful or not, shall be decided by the OWNER / PMC based on the observations recorded during 72 hours. The countdown for 72 hours operation shall start only after Unit has been on stable operation with all controls and safety system in normal operation for a period of not less than 48 hours. OWNER will issue acceptance certificate (Format-V) accordingly. Three months in advance of starting the commissioning, the CONTRACTOR shall submit proposal to the OWNER’s Representative giving details of

Copyrights EIL – All rights reserved

the programme to be followed during commissioning. This shall be checked by OWNER/ PMC. The CONTRACTOR shall depute operating team comprising of commissioning co-coordinator, process/ operational co-coordinator, mechanical, electrical & instrumentation engineers, technicians/ semi skilled personnel to carryout UNIT start up & commissioning and maintenance under the overall guidance of PMC/ OWNER. OWNER shall depute operating team consisting of process operators (field and control room) and supervisors during the commissioning.

2.4.5. The CONTRACTOR shall provide manpower for pre-commissioning/ commissioning and for 6 months post commissioning of the unit. The bidder CONTRACTOR in his offer shall submit the organization manpower chart of commissioning team and the bio-data of key persons who shall be present at the time of commissioning. The bidder CONTRACTOR shall also specify the planned duration of stay of these personnel.

2.4.6. The CONTRACTOR shall also be required to provide on the job training to OWNER's operation personnel by associating them in all the day to day pre-commissioning, commissioning, maintenance activities and UNIT operations. After successful commissioning of the process Unit same shall be handed over to the OWNER for operation. In case of any constraint in achieving the above process parameters in the Unit by the CONTRACTOR, the same shall be communicated by the CONTRACTOR to the OWNER in writing. This will be reviewed jointly by OWNER/PMC to arrive at a decision on whether the constraint is on account of reasons attributable to the CONTRACTOR or not. The action in either case will be according to the relevant provisions / provided elsewhere in the contract.

2.4.7. CONTRACTOR in some cases may be required to do part commissioning of the mechanically completed sections of the UNIT as per directives from the OWNER.

2.4.8. Upon successful commissioning of the Units the same shall be taken over by the OWNER for day to day operation and maintenance only, the final take-over shall be subject to compliance to all the contractual obligations by the CONTRACTOR. Once the Unit is successfully commissioned CONTRACTOR will issue the format-V to OWNER for take-over of the Unit from CONTRACTOR.

2.5 DOCUMENTS FOR PRE COMMISSIONING / COMMISSIONING

2.5.1 Operating Manual.

The CONTRACTOR shall prepare plant specific draft-operating manual of the Cooling water system and submit to OWNER/ EIL for review at least 120 days prior to mechanical completion. Minimum five copies of draft operating manual shall be submitted by the CONTRACTOR for review.

Copyrights EIL – All rights reserved

In particular, following information shall be covered as a minimum.

- Design basis of Cooling Water system.
- Detailed process description.
- Pre-start checks.
- Pre-commissioning procedures
- Start-up procedure.
- Normal operating procedure.
- Shutdown procedure (Normal & Emergency).
- Vendor instructions for all equipment for maintenance start up, shut down, normal operation and troubleshooting.
- Operating parameters and set points of alarms and trips.
- Operating conditions
- Effect of operating variables on the process.
- Details of interlock logic, trip etc.
- Functional description of safe shut down systems.
- List of emergencies and emergency handling procedures.
- Dosage rate of chemicals used and other related operating information.
- Initial requirement of chemicals for first start-up.
- Safe-handling precautions for chemicals used. (MSDS)
- List of equipment and their major details
- List of all instruments like control valves, transmitters etc.
- Relief valve schedule, tag numbers, set pressure, capacity basis, failure scenarios considered etc.
- Approved/ final PFDs/P&IDs and drawings
- Any other special conditions / instructions / information, etc.
- Summary of chemical consumption.
- Summary of utility consumption.
- Lubrication schedule (with equivalent lubricant available in India).
- Hydrocarbon/chlorine detection and associated safety system.

Copyrights EIL – All rights reserved

- Laboratory analysis requirement and procedure with sampling schedule.
- Procedure for preparation of equipment hand over
- Safe handling of chemicals
- Chemical solution preparation procedures
- MSDS of chemicals

Review of operating manuals shall be done by OWNER/EIL after receipt of draft operating manuals. All the changes, additions, deletion required by the OWNER/EIL shall be communicated to CONTRACTOR and same shall be incorporated in the final operating manual by the CONTRACTOR. Ten copies of final operating manual shall be submitted by CONTRACTOR. The same shall also be forwarded in CD. The final manuals shall be submitted to OWNER at least 90 days prior to mechanical completion. These operating manuals shall be followed during start-up and commissioning of the Cooling Water System. Vendor's operating manual shall not be part of this operating manual and shall be submitted separately.

In case of any revisions due to any reason, the same shall be incorporated and submitted as revised sheets during the start-up and commissioning stage along with updated CDs. However, revised operating manual incorporating changes shall be submitted within one month after the commissioning has been completed.

2.5.2. Pre-Commissioning and Commissioning Network

The CONTRACTOR shall submit the pre-commissioning and commissioning schedule in the form of network detailing therein the sequence of all the pre-commissioning and commissioning activities and duration of each activity to be carried out in each equipment / sub-system of the units. This shall be submitted to OWNER prior to start of pre-commissioning activities. CONTRACTOR shall submit weekly progress report and the status of pre-commissioning and commissioning activities; likely slippage and action being taken by the CONTRACTOR to contain these slippages.

2.5.3. Pre-Commissioning Documents

It shall be the responsibility of the CONTRACTOR to prepare detailed checklist of pre-commissioning and commissioning activities for Cooling Water System. The CONTRACTOR shall submit the said format for approval to the OWNER/ EIL.

Representative of CONTRACTOR shall be available for carrying out check listing. All the checklist points shall be liquidated by the CONTRACTOR. System readiness for Pre-commissioning shall be determined based on the completion of relevant portion of checklist as per approved format and all balance work completed by CONTRACTOR.

Copyrights EIL – All rights reserved

For the purpose of execution of these pre-commissioning activities, the Cooling Water system shall be divided into system and sub-systems so that pre-commissioning activities of each system/ sub-system can be progressively carried out along with the construction activities. The pre-commissioning document shall contain the following as a minimum:

1) System identifications on P&IDs.

2) Pre-commissioning and start-up schedule

3) Detailed procedure for the various pre-commissioning activities i.e. flushing, blowing, drying, leak checking, system tightness, equipment operability test with format to record the observation of each of the activities to be carried out.

4) Procedure and format for operability tests of equipment and system as a whole, wherever applicable.

5) Lube schedule indicating manufacturer (Indian equivalent to lubes, quality, initial fill as recommended, and frequency of changing the lube oil).

6) Detailed procedure for pre-commissioning of Cooling Water System

7) Calibration certificate of all the instruments.

The CONTRACTOR shall submit the draft copy of above mentioned pre-commissioning documents 90 days before the activities are to be carried out. The document shall be reviewed by the OWNER/ EIL. After incorporating OWNER/ EIL's comments, the CONTRACTOR shall submit revised document 60 days prior to start of activities. The documents shall be followed till the project is completed.

CONTRACTOR shall arrange Manpower, instruments and tools required for carrying out pre-commissioning activities. Estimated requirement of raw water, power and plant air which needs to be supplied by OWNER during pre-commissioning and start-up is to be given by CONTRACTOR. After completion of pre-commissioning activities of the facilities CONTRACTOR will submit request to the OWNER for permission for start-up of the system.

Commissioning of the facilities shall not be permitted till all the documents have been submitted by the CONTRACTOR to the OWNER/ EIL. Any delay in commissioning on this account shall be considered as a delay in commissioning by the CONTRACTOR.

3.0. OTHER REQUIREMENTS

i) The Contractor shall also provide `No Smoking' boards & Do’s and Dont’s, boards for other designated instructions in unit areas.

Copyrights EIL – All rights reserved

ii) Contractor shall also ensure implementation of all recommendations arising out of audits viz. internal pre-commissioning audit and audit by statutory bodies like PESO, OISD etc., as and when required.

iii) Before start up of unit, safety audit shall be conducted by Owner/PMC. All such check lists/ deficiency report generated by safety audit team shall be liquidated by the Contractor. The safety audit shall cover aspects such as floor opening, trip hazards, bump hazards, electrical safety concerns, mechanical safety concerns etc.

iv) Correct support, vibration and thermal expansion problems detected during commissioning.

4.0. HOUSE KEEPING

i) Provide continuous clean-up of the construction and operational area.

ii) Remove excess materials, temporary facilities and scaffolding and pick-up trash.

iii) Perform washing for further clean-up as required.

5.0. FINAL INSPECTION BEFORE START OF COMMISSIONING

i) OWNER/Contractor /PMC or any other Third party (Like OISD) shall carry out a final inspection of the UNIT before starting the commissioning activity.

ii) Record of liquidation of checklist point, test record etc shall be submitted by the Contractor to OWNER/PMC. Any deficiency/ changes required in the offered system shall to be liquidated by the Contractor.

iii) It shall be the Contractor's responsibility to repair any damage to the system occurred during storage, installation, pre-commissioning and commissioning stage.

6.0. UTILITIES REQUIREMENT

For commissioning, utilities required like plant air, cooling water, raw water, DM water, steam, instrument air, power to the extent of normal consumption during operation will be provided by BPCL.

For pre-commissioning Raw water, DM water, Steam, Instrument air will be provided by BPCL. Plant air has to be arranged by contractor.

Power shall be provided from new substation for pre-commissioning / commissioning activities.

Copyrights EIL – All rights reserved

However, temporary piping/ fittings required to be done for drawing these utilities shall be in the scope of Contractor.

7.0. SAFETY

i) The Contractor shall follow OWNER's safety practices during execution of pre commissioning / commissioning works. Contractor is required to maintain and follow all safety practices equivalent or better than those being practiced by OWNER for the complex during pre-commissioning and commissioning.

ii) Necessary Hot/ cold work permit shall be obtained to carryout jobs once declared mechanically completed. (Refer OISD-STD-105, work Permit System).

8.0. SCOPE MATRIX

The Dark box in the First Column pertains to the activities to be performed by the Contractor to achieve mechanical Completion as per Contract. The activities indicated in the Second Column are also to be performed by the Contractor. However, the same shall not be reckoned for Mechanical Completion with regard to Contracts. For activities where dark box is placed in both first and second column, the activity needs to be completed by contractor to the extent possible for mechanical completion i.e. the reason for non-completion should not be attributable to the contractor

Work		Work Responsibility		
		CONTRACTOR		OWNER
		1	2	3
1.1	**Manufacturer OR Vendor Service Assistance where responsibility is not indicated in Section 2.**			
1.1.1	Obtain the assistance of the manufacturer or vendor, when necessary, to make a satisfactory installation as agreed on by the Contractor and the Owner	■	□	□
1.1.2	Obtain the assistance of the manufacturer or vendor, as required, for technical assistance during run-in by the Owner's operating and maintenance personnel, for training or for informational and operating purposes	□	■	□
1.1.3	Furnish names and telephone numbers including emergency contact of manufacturers, and vendors, technical service representatives for use by the Owner.	□	■	□
1.2	**Permits**			
1.2.1	Procuring all necessary permits and certifications required to be secured by the Owner for initial use of the plant.	■	□	□
1.2.2	Make applications for all necessary permits issued in the Owner's name that are required for plant use, occupancy and operation.	■	□	□
1.3	**Instructions**			
1.3.1	Maintain an adequate vendor instruction file so that information may be readily retrieved through plant commissioning.	■	□	□
1.3.2	Transmit to the Owner all applicable vendor's or manufacturer's instructions and drawings.	■	□	□
1.3.3	Provide the Owner with any special instructions such as the required procedures for drying liners	■	□	□
1.4	**Removal of Rust Preventives**			

Copyrights EIL – All rights reserved

Work		Work Responsibility		
		CONTRACTOR		OWNER
		1	2	3
1.4.1	Remove all rust preventives and oils used to protect the equipment during the construction period whenever these protective materials will be detrimental to operation	■	□	□
1.4.2	Provide the Owner with a record of work completed.	■	□	□
1.5	**Lubricants**			
1.5.1	Provide a list of the manufacturer's recommended lubricants for use in the plant	■	□	□
1.5.2	Approve the lubricant list	□	□	■
1.5.3	Provide all lubricants	■	□	□
1.5.4	Flush systems and install initial charge of the lubricants. Dispose of all flushing oil in accordance with the Owner's instructions	■	□	□
1.5.5	Maintain Lubrication after initial charge	■	□	■
1.6	**Packing and Seals**			
1.6.1	Install mechanical seals and accessories, as required.	■	□	□
1.6.2	Install permanent packing and accessories as required.	■	□	□
1.6.3	Adjust and replace mechanical seals, packing and accessories as necessary during commissioning period.	□	■	□
1.7	**Removal of Temporary Bracing**			
1.7.1	Remove all temporary supports, bracing or other foreign objects that were installed in vessels, ducts piping, transformers, machinery or other equipment to prevent damage during shipping, storage and erection and repair any damage sustained.	■	□	□
1.8	**Rotation and Alignment**			
1.8.1	Check rotating machinery for correct direction of rotation and for freedom of moving parts before connecting the driver.	■	□	□
1.8.2	Perform cold alignment to the manufacturer's tolerances and record data.	■	□	□
1.8.3	Perform any doweling required.	■	□	□
1.8.4	Perform Hot alignment	□	■	□
1.8.5	Obtain the services of a factory representative to witness installation of equipment as required.	■	□	□
1.9	**Tie-Ins at Unit Limits**			
1.9.1	Prepare all systems for safe tie-ins	■	□	□
1.9.2	Obtain approval and make the necessary tie-ins at the unit limits, as required by the specifications and as directed by the Owner.	■	□	□
1.9.3	Remove blinds, car seals and so forth as required.	□	■	□
1.10	**Leak and Pressure Tests**			
1.10.1	Notify the Owner of the schedule for non-operating field leak tests or field pressure tests on piping and field fabricated equipment, unless otherwise directed by the Owner.	■	□	□
1.10.2	Provide any special media for test purposes.	■	□	□
1.10.3	Conduct all tests in accordance with applicable codes, specifications, regulations and the Owner's instructions.	■	□	□
1.10.4	Witness Tests.	■	■	■
1.10.5	Maintain records as required.	■	□	□
1.10.6	Dispose of all test media in accordance with the Owner's instructions.	■	□	□
1.10.7	Conduct all operational tightness tests.	□	■	□
1.10.8	Trial run of Fire Fighting system	□	■	□
1.10.9	Trial run of Gas Detection system	□	■	□
1.11	**Inspection**			
1.11.1	Provide inspection of the plant to verify that erected facilities	■	□	□

Copyrights EIL – All rights reserved

Work	Work Responsibility		
	CONTRACTOR		OWNER
	1	2	3
conform to flow diagrams, construction drawings, vendor prints and specifications.			
1.11.2 Verify that specified materials have been installed in the plant and document verification to the extent required by the Owner.	■	□	■
1.11.3 Verify and approve the plant inspection. Note any exceptions on a separate work order list (punch list).	□	□	■
1.11.4 Provide for special inspections such as those required by insurance or governmental agencies.	■	□	□
1.11.5 Perform and report routine shop inspection.	■	□	□
1.11.6 Perform shop inspection and witness tests as desired.	■	□	□
1.11.7 Witness final shop inspections, as specified.	■	□	■
1.12 Pressure / Vacuum Safety Relief devices			
1.12.1 Provide the Owner with a list of proper pressure settings.	■	□	□
1.12.2 Transfer relief devices to and from the specified unit	■	□	□
1.12.3 Test and adjust all devices to and from the specified unit	■	□	□
1.12.4 Install all devices after testing, adjusting and tagging.	■	□	□
1.12.5 Maintain records as required.	■	□	□
1.13 Flushing and Chemical/Mechanical Cleaning.			
1.13.1 Conduct all flushing, blowing and chemical/mechanical cleaning operations where such operation can be accomplished without using permanently installed equipment., with details of flushing plans (by CONTRACTOR).	■	□	□
1.13.2 Conduct all flushing and blowing operations where permanently installed equipment must be used to obtainproper line velocities.	■	□	□
1.13.3 Provide any special media for flushing and blowing operations where permanently installed equipment must be used to obtain proper line velocities.	■	□	□
1.13.4 Dispose of all media in accordance with the Owner's instructions.	■	■	□
1.13.5 Turn systems over to the Owner free of trash and construction debris (not necessarily free of welding slag)	■	■	□
1.13.6 Maintain records, as required.	■	■	□
1.14 Temporary Screens, Strainers spools and Blinds.			
1.14.1 Provide and install all required temporary strainers.	■	■	□
1.14.2 Clean strainers, as required during circulation.	■	■	□
1.14.3 Remove strainers when system is adequately cleaned.	■	■	□
1.14.4 Provide install and remove all blinds, spools required for flushing and isolation.	■	■	□
1.14.5 Maintain records as required.	■	■	□
1.15 Purging/Inerting			
1.15.1 Install purge/inerting connections.	■	□	□
1.15.2 Provide purge materials and conduct necessary purge operations.	■	■	□
1.15.3 Provide inerting materials and introduce where specified.	■	■	□
1.16 Vessel Packing and Fixed Beds			
1.16.1 Install all inert materials such as sand, gravel balls rings and saddles.	■	□	□
1.16.2 Install all materials other than the materials specifically noted in Section 2, such as chemicals, resins, desiccants and catalysts.	■	■	□
1.16.3 Install all mixed beds involving combinations of material, covered by 1 and 2 above.	■	■	□
Work	Work Responsibility		
	CONTRACTOR		OWNER

Work	Work Responsibility		
	CONTRACTOR		OWNER
	1	2	3
1.16.4 Inspect the vessel interior before and during loading to ensure proper installation.	■	■	□
1.16.5 Maintain records, as required.	■	■	□
1.17 House-Keeping			
1.17.1 After completion of construction, remove excess material, temporary facilities and scaffolding, rough sweep or rake the area and pick up trash, perform washing or further cleanup, as required.	■	□	□
1.17.2 After completion of construction, maintain adequate housekeeping practices, as required for safe operation.	■	□	□
1.18 Maintenance, Spare Parts and Special tools			
1.18.1 After pre-commissioning is complete, protect equipment from normal weather conditions, corrosion or damage	□	■	□
1.18.2 After pre-commissioning is complete provide adequate maintenance for equipment including the cleaning of strainers and the repairing of steam traps.	■	□	□
1.18.3 Provide the Owner with spare parts list as recommended by the manufacturers.	■	□	□
1.18.4 After pre-commissioning is complete, maintain adequate spare parts and supplies required during commissioning & performance test run.	□	■	□
1.19 Noise Survey			
1.19.1 Conduct individual equipment noise surveys, as required by the Occupational Safety & Health administration on the Owner's specifications.	■	■	□
1.19.2 Document all survey data	■	■	□
2.1 Vessels			
2.1.1 Open the vessel after erection and put in place any internals requiring field installation. These internals will be inspected before and after installation	■	□	□
2.1.2 Open both internal and external manways for inspection of the vessel by the Owner, unless otherwise specified.	■	□	■
2.1.3 Witness inspections to the extent desired.	□	□	
2.1.4 Dry out if required, upon vessel and install materials that are designated in 1.16	■	□	□
2.1.5 Close after proper execution of closure permits.	■	□	□
2.5 Pumps and Drivers			
2.5.1 Level base plates and sole plates and grout all bearing Surfaces.	■	□	□
2.5.2 Alleviate any excess piping stresses that may be imposed on pumps, compressors and drivers.	■	□	□
2.5.3 Chemically clean any completed lube and seal oil system when specified. Dispose of wastes and cleaning media in accordance with the Owner's instructions.	■	□	□
2.5.4 Charge the lube oil, seal oil and oil cooling systems with flushing oil and circulate for cleaning purpose. Dispose of any flushing oil in accordance with Owner's instructions.	■	□	□
2.5.5 Charge the lube oil, seal oil and oil cooling systems with the operating oil recommended by the manufacturer.	■	□	□
2.5.6 Operate equipment and make vibration trip governor and safety device checks and any operating tests and adjustments as required.	■	■	□
2.5.7 Obtain the assistance of service engineer for technical advice during installation or start up if desired.	■	■	□

Copyrights EIL – All rights reserved

2.5.8	Maintain records as required.	■	□	□
2.6	**Tanks**			
2.6.1	After erection and installation, install any internals, which require field installation.	■	□	□
2.6.2	Test tank and internals as required. Dispose of test water in accordance with the Owner's instructions.	■	□	□
2.6.3	Conduct chemical cleaning or flushing operations as required. Dispose of wastes and cleaning media in accordance with the Owner's instructions.	■	■	□
2.6.4	Witness test and inspections to the extent desired.	□	□	■
2.6.5	Close after proper execution of closure permits.	■	□	□
2.7	**Piping System**			
2.7.1	Notify the Owner of test schedule.	■	□	□
2.7.2	Hydrotestically or pneumatically test all piping as required by codes, specifications and the Owner's instructions.	■	□	□
2.7.3	Witness field pressure tests, when notified.	□	□	■
2.7.4	Flush and drain system and install orifice plates. Orifice plates shall not be installed before hydrostatic testing. (see 2.9 for the removal or isolation of other inline components).	■	□	□
2.7.5	Drain system, remove blinds and perform tightness tests as required.	□	■	□
2.7.6	Insulate or, piping system, paint flanges, threaded joints or field welds after the specified testing of each system a has been completed. Unless instructed otherwise by Owner.	■	■	□
2.7.7	All welded joints (longitudinal, girth and nozzle) in underground piping that have not been shop tested shall be left exposed (free of paint, dope and wrap) until the specified testing has been completed. After final testing of these joints cover the system.	■	□	□
2.7.8	Check pipe-hangers, supports, guides, expansion joints and other pipe specialties for the removal of all shipping and erection stops and for the correctness of cold settings for the design service. Also provide the Owner with instructions for hot settings.	■	□	□
2.7.9	Check pipe-hangers, supports guides and pipe specialties for hot settings and make minor adjustments as necessary.		■	□
2.7.10	Install permanent filter elements as required.		■	□
2.7.11	Verify, to the extent required by the Owner that specified valve packing has been provided in valves installed in the plant.	■	□	□
2.7.12	Install car seals on valves whether necessary.	□	■	□
2.7.13	Check and record the positions of all car sealed valves paint of identify valves as required.	□	■	□
2.7.14	Correct support, vibration and thermal expansion problems detected during commissioning.		■	□
2.7.15	Re-torque all hot and cold service bolting during commissioning and startup as required.		■	□
2.8	Electrical Power and Lighting Systems			
2.8.1	Notify the Owner of the test schedule.	■	■	□
2.8.2	Witness tests when notified and record test data as required.	□	□	■
2.8.3	Using a megohmmeter, make insulation tests on all wing except lighting wiring.	■	□	□

Work	Work Responsibility		
	CONTRACTOR		OWNER
	1	2	3

Copyrights EIL – All rights reserved

2.8.4 Using a megohmmeter, make insulation tests on motor and transformer winding from phase to phase and phase go ground.	■	□	□
2.8.5 Make grounding system tests to determine the continuity of connections and the value of resistance to ground.	■	□	□
2.8.6 Arrange for breakdown tests on oil sample from oil insulated transformers larger than 100 kilovolts absolute.	■	□	□
2.8.7 Charge electrical gear with oil and / or other media as required.	■	□	□
2.8.8 Perform trails and adjustments on all switchgear, motor control equipments and generators.	■	■	□
2.8.9 Test and set switchgear and circuit breaker relays for proper coordination.	□	■	□
2.8.10 Obtain local inspector's approval, where required.	■	■	□
2.8.11 Energize all substations with approval of the Owner after completion of all tests.	■	■	□
2.8.12 Check phase sequence polanty and motor rotation.	■	■	□
2.8.13 Check installation of emergency power and lighting systems.	■	■	□
2.8.14 Provide the Owner with a record of work complete.	■	■	□
2.9 Instrument System			
2.9.1 Conduct any non-operating checks to ensure instrument operability, that is remove all shipping stops, check pointer travels and verify instrument capability to measure operate and stroke in the direction and manner required by the process application.	■	■	□
2.9.2 As dictated by the Owner's practice, bench or field calibrate instruments with standard test equipments and make all required adjustments and control point settings.	■	□	□
2.9.3 Clean all transmission and control tuning by blowing with cooled and filtered clean air before connecting to instrument components.	□	■	□
2.9.4 Clean all air-supply headers by blowing with clean air and check them for tightness.	□	■	□
2.9.5 Leak test pneumatic control circuits in accordance with clean the latest edition of ISA Recommended Practice 7.1. Pneumatic control circuit pressure test.	■	■	□
2.9.6 Install and connect all system components and verify their conformance to specification and design criteria for function and range suing dummy transmission signals as need.	□	■	□
2.9.7 Check all electrical signals and alarm wiring for continuity, correct source of power and polarity.	□	■	□
2.9.8 Check thermocouples for proper joining of wires, position of elements in wells proper polarity and continuity of receiving instruments.	□	■	□
2.9.9 Identify orifice plates by tagging.	■	■	□
2.9.10 Check and record bores or orifice plates and install after completion of flushing operations.	□	■	□
2.9.11 Isolate or remove, if necessary, in line components such as control valves, positive displacement meters and turbine meters for pressure testing. Reinstall these items after testing the system with the components removed or isolated	■	■	□
2.9.12 Isolate or remove components for flushing operations and reinstall them on the completion of these operations.	■	■	□
2.9.13 Install any sealing fluids as required.	□	■	□
Work	**Work Responsibility**		
	CONTRACTOR		**OWNER**
	1	2	3

Copyrights EIL – All rights reserved

2.9.14 Fully pressurize and energize the transmitting and control signal system(s) by opening process connections at primary sensors and final regulations and by making control mode settings for automatic operation of equipment as the process unit is charged and brought on stream.	□	■	□
2.9.15 Provide a schedule of recorder charts.	■	■	□
2.9.16 Checking piping from instruments to process piping for tightness'	■	■	□
2.10 Boilers/Heaters			
2.10.1 Make a non-operating boiler pressure test in accordance with applicable codes, specifications and the Owner's instructions, if required.	■	□	□
2.10.2 Inspect the boiler for completeness and correctness of installation and make other non-operating preferring checks.	■	□	□
2.10.3 Check operation of air pre-heaters, dampers soot blowers and other equipment for proper positioning and travel.	■	■	□
2.10.4 Dry refractories during initial firing by following the manufacturer's temperature cycles.	■	■	□
2.10.5 Purge, flush and drain steam mains as necessary.	■	■	□
2.10.6 Obtain and charge treated water of bailout and initial operation as required.	□	■	□
2.10.7 Commission auxiliaries as detailed elsewhere under the appropriate equipment type.	□	■	□
2.10.8 Conduct Boilout, chemical cleaning, and flushing operations, as required .Dispose of wastes, cleaning media, in accordance with Owners, instruction	■	□	□
2.10.9 Conduct initial lightoff, making associated checks and adjustments	□	■	□
2.10.10 Obtain the assistance of service engineer for technical advice during installation of start up if desired.	▮	▮	□
2.10.11 Conduct all operating tests and obtain the required certifications.	□	▮	▮
2.10.12 Check and set pressure relief valves.	□	▮	□
2.11 Miscellaneous Equipment (Agitators, Mixers, Rotary Filters, Weigh Scales and Materials Handling Equipments).			
2.11.1 Fully assemble rotary filters except for final filter media (cloth, precoat or screen).	▮	□	□
2.11.2 Install all final filter media.	□	▮	□
2.11.3 Level and calibrate weigh scales with the assistance of the manufacturer's representation and set tare weights wherever possible.	▮	□	□
2.11.4 Manually check materials handling equipment for freedom and direction of movement.	▮	□	□
2.11.5 Check clearance on materials handling equipment as directed by the Owner.	□	▮	□
2.11.6 Make all final adjustments during run in and conduct any required performance test.	□	▮	□
2.11.7 Obtain a service engineer for technical assistance during installation of startup, if required.	▮	▮	□
2.11.8 As required obtain certification that all lifting and materials handling installations and other items of equipment comply with government regulations.	▮	▮	□

1.0 SCOPE OF WORK

1.1 Broad scope of work

The broad scope of work of the Contractor shall be execution of Architectural works for Buildings or Sheds or Structures as mentioned in accordance with detail scope of work, construction drawings, standards, specifications, schedule of quantities/ rates, contract provisions and as directed by Engineer-In- Charge including:

- Supply and provision of materials, labour, tools, tackles etc.
- Preparation and submission of fabrication or installation or execution drawings.
- Assistance for obtaining approvals from statutory or other Authorities.
- Co-ordination with other Contractors and agencies, Owner, Project Management Consultant (PMC) etc.
- Preparation and submission of "As-built" drawings.
- Any other incidental works not specifically mentioned but required for completion of the work.

1.2 Detail scope of work

1.2.1 Buildings or Sheds or Structures

Scope of work of the Contractor shall include (but not limited to) the following Buildings or Sheds or Structures.

Sl.no	Building	Structure type	Nos
1.	Barricading work		
2.	Compressor Shed 02	The building shall be structural steel shed with Precoated Galvalume/ Zincalume sheet roofing and cladding.	1
3.	Compressor Shed 03	The building shall be structural steel shed with Precoated Galvalume/ Zincalume sheet roofing and cladding.	1

1.2.2 Architectural works

Architectural works in the scope of work of Contractor shall include Architectural elements and finishes such as (but not limited to) Floor finishing, Wood work, Doors & Windows, Plastering, Pointing, Painting, Polishing, Roofing (roof sheeting, flashings, rain water drainage etc.), Waterproofing, Sanitary fittings & fixtures, Insulation, Partition, False ceiling, False flooring, External façade system, External & internal claddings etc. as applicable.

1.2.3 Supply and provision of materials, labour, tools, tackles etc.

Unless otherwise specifically mentioned, supply and provision (including transportation, storage, fabrication, installation and execution etc.) of all materials (consumables and non-consumables), labour, tools, tackles, equipment, plant machinery, staging, scaffolding, HSE (Health, safety, environment) gear etc as required for completion of work is included in the scope of work of the Contractor.

Copyright EIL – All rights reserved

1.2.4 Preparation and submission of fabrication or installation or execution drawings

Preparation and submission of fabrication or installation or execution drawings of Façade system, Cladding system, False flooring, False ceiling, Partitions etc. as applicable is included in the scope of work of the Contractor. Installation or execution of the works shall be in accordance with approved drawings.

1.2.5 Assistance for obtaining approvals from statutory or other Authorities

Contractor shall assist the Owner or PMC or Engineer-In-Charge and do necessary liaison activities as required for obtaining approvals from statutory or other Authorities.

1.2.6 Co-ordination

Contractor shall do all required co-ordination activities with other Contractors and agencies, Owner, Project Management Consultant (PMC) etc for smooth, sequential and complete execution works.

1.2.7 Preparation and submission of “As-built” drawings

Contractor shall prepare “As-built” mark-up prints on construction drawings and subsequently update the same in soft copy (Auto CAD) of the drawings. Contractor shall submit hard copy and soft copy to Engineer-in-charge as specified elsewhere in this Bid package.

1.2.8 Incidental works

Any other incidental works such as cleaning, cutting chases or holes, making good of the damaged works, protection of works, handing over the works in acceptable condition, which are not specifically mentioned but required for completion of work are also included in the scope of work of Contractor.

2.0 SCOPE OF SUPPLY

2.1 Owner’s scope of supply

- Nil

2.2 Contractor’s scope of supply

- Refer clause 1.2.3 above

3.0 LIST OF ATTACHMENTS

3.1 SPECIFICATIONS

S. No.	Specification No.	Rev.	Title
1	6-75-0001	7	Specification for Architectural Works - General.

4	6-75-0005	7	Specification for plastering & pointing.
5	6-75-0007	7	Specification for whitewashing, Colour washing, distempering, Painting & polishing.
8	6-75-0008	7	Specification for roofing.
12	6-75-0014	0	Standard specification for pre-engineered building (architectural)

3.2 STANDARDS

S. No.	Title	Standard No.	Rev. No.
1.	Skirting detail (with brick wall).	7-75-0002	6
2.	Skirting detail (with R.C.C. column).	7-75-0003	6
3.	Glazed Aluminium Door	7-75-0014	6
4.	Glazed Aluminium Window	7-75-0015	6
5.	Steel gate (for entrances upto 6.0m width)	7-75-0054	6
6.	Plinth protection (with building drain)	7-75-0065	6
7.	Steel Door (Pressed Steel) Single Shutter	7-75-0070	6
8.	Steel Door (Pressed Steel) Double Shutter	7-75-0071	6
9.	Metal sheet (flashing detail)	7-75-0091	2
10.	Stainless steel tubular handrail	7-75-0093	2
11.	Ramp detail (for wheel chair users)	7-75-0097	1

3.4 SCHEDULE OF RATES/ QUANTITIES

For schedule of rates of Architectural works refer Document Number B957-999-81-46-PK-SOR -9501

4.0 PREAMBLE TO SCHEDULE OF QUANTITIES

4.1 Rate quoted by the Contractor for the items shall be inclusive of all materials, labour, tools, tackles etc. and other scope or works elaborated in this document and tender/ contract document and shall be applicable for all heights and locations.

4.2 Works shall be executed in accordance with Item description, corresponding specification, standards, drawings and as directed by Engineer-In-Charge. Specification No. 6-75-0001 shall be applicable to all the items with reference to aspects like contradictions amongst items/specifications, and drawings, quality of material, mode of measurement, necessary testing etc.

For CPWD or DSR or local PWD items, corresponding specification shall be referred.

4.3 Items/sub-items against which no quantity is given shall not be quoted by the Contractor and shall not be executed. Such items if any are for reference purpose only.

Copyright EIL – All rights reserved

4.4 Quantities of the items are not final and may vary; actual quantities executed shall be paid.

4.5 All the items included in the schedule of quantities may not be executed.

4.6 Materials shall conform to items, specifications, standards and shall be as approved by Owner or PMC or Engineer-In-Charge. Materials shall be procured from approved Manufacturer or vendor, list of which is included in the Tender or contract document.

4.6.1 Only 'first' quality materials shall be used.

4.6.2 Owner/ PMC reserve the right to choose any of the approved make/ vendors as per the vendor or Manufacturer's list.

4.6.3 In case of products not indicated in the vendor list, BIS marked products shall be used.

4.6.4 Specification of manufacturer's item shall be checked against tender items and specifications before selecting any product or brand name. In case of any discrepancy, tender item/ specifications shall prevail, and any such brand of item shall not be used which is not conforming to tender specifications even if it is listed in this vendor list.

4.6.5 In case of non-availability of any material among approved vendors/ makes in a particular site or region, alternate vendor/ make conforming to national or international codes shall be used subject to approval by owner/ PMC.

4.6.6 In case of non-availability of any vendor among approved vendors in a particular site/ region, alternate vendor's name shall be proposed along with required credentials for EIL's approval.

4.6.7 In case of any product neither covered in the vendor list nor having specifications, the contractor shall submit the proposed product along with technical literature/ specifications (as/ bid), test certificates etc. and other credentials of the manufacturer for Owner/ PMC approval

DESIGN BASIS FOR WIND LOAD ON PIPING

(Engineering & Technology Development)

PROJECT : BINA PETCHEM & REFINERY EXPANSION PROJECT (BPREP), BINA

OWNER : M/s BHARAT PETROLEUM COOPERATION LIMITED

CONSULTANT : Engineers India Ltd.

JOB NO. : B857

1. SCOPE

Rev. No	Date	Purpose	Prepared by	Reviewed by	Approved by
1	30.04.2025	Basic wind Speed is updated	VBA	PG	SVRS
0	19.11.2024	ISSUED AS GUIDE	VBA	PG	SVRS

Copyrights EIL – All rights reserved

The scope of this document is to specify the wind pressure to be considered for calculation of wind load on piping systems. The effect of wind on a piping system is to produce a set of vibratory/dynamic loads acting along different directions depending on the configuration of the piping. However, the design wind load for a piping system is often calculated on the basis of a statically applied maximum pressure(s) that can be expected over the design life of the plant/unit.

2. GENERAL NOTES

The wind load analysis shall be done for the following piping systems.

(i) Two Phase Flow Lines.
(ii) Flare Header.
(iii) Any other line of size 20" (O.D.) & above (including insulation, if any) running above 10-meter height from HPP level.

However, all lines should have a sufficient number of horizontal restraints/guides to resist the design wind load to be calculated as per the formula indicated in section 3 of this document. Additional horizontal supports may be required to reduce excessive horizontal deflection of pipe due to wind load.

3. DESIGN WIND LOAD

The design wind load on a pipe shall be calculated from the following relation:

$$F_{wz} = C_f \; p_d D_o$$

Where F_{wz} = Wind load at height z **per unit length of pipe**
C_f = Shape factor (to be considered as 0.7)
D_o = External diameter of pipe including the insulation
p_d = $K_d * K_a * K_c * p_z$, Design wind pressure on pipe at height z
p_z = Wind pressure on pipe at height z

Height (in 'm') of pipe above ground	≤ 10	15	20	30	50	100
Design wind pressure p_d (in 'N/m^2')	1265	1438	1559	1717	1917	2200

Notes:

(i) Above wind pressures are based on k_1 value corresponding to Basic Wind Speed of 47 m/s and Design Life of 100 years, k_2 value corresponding to Category 3, k_3 (topography factor) value to be 1.0 and k_4 (importance factor for the cyclonic region) value to be 1.0 respectively as defined in IS 875 (Part 3) 2015 amendment no.2.

(ii) K_d (Wind directionality factor) value to be 1.0, K_a (Area averaging factor) value to be 1.0 and K_c (Combination factor) value to be 1.0 respectively as defined in IS 875.

Copyrights EIL – All rights reserved

(iii) Wind pressure for any intermediate height may be linearly interpolated.

4. LOAD COMBINATIONS

All supports should be adequate for the following load combinations due to wind load alone in addition to other load conditions considered for the design of piping:

(i) Sustained load + Wind Load

(ii) Sustained load + Thermal load (operating) + Wind Load

However, the stress in the piping should be checked only for the first load case (i.e., Sustained load + Wind Load) and the maximum stress in the pipe should be limited to 1.33 times the allowable stress at the maximum operating temperature.

SITE SPECIFIC SEISMIC SPECTRA

Site specific seismic spectrum is generated in accordance with Section 7 of IS 1893 (Part 4): 2024 for 10% probability of exceedance in 50 years for different damping values. The design horizontal seismic coefficient shall be estimated in accordance with Clause no. 7.3.1 of IS 1893 (Part 4) using spectral acceleration coefficient presented below. All other seismic parameters shall be as per IS 1893.

Spectral Acceleration Coefficients (S_a/g) for 10% probability of exceedance in 50 years:

Spectral Acceleration Coefficients (Sa/g) for 5% damping for 10% probability of exceedance in 50 years in the horizontal direction shall be based on the following equation. The spectral acceleration values for different damping ratio are presented in Figure 1 and Table 1.

S_a/g (damping: 5%)	= 0.052	for 0.00<T≤0.01 sec
	= 0.043+0.867T	for 0.01<T≤0.10 sec
	= 0.13	for 0.10<T≤0.40 sec
	$= \frac{0.052}{T}$	for 0.40<T≤6.00 sec
	$= \frac{0.312}{T^2}$	for 6.00<T≤10.0 sec

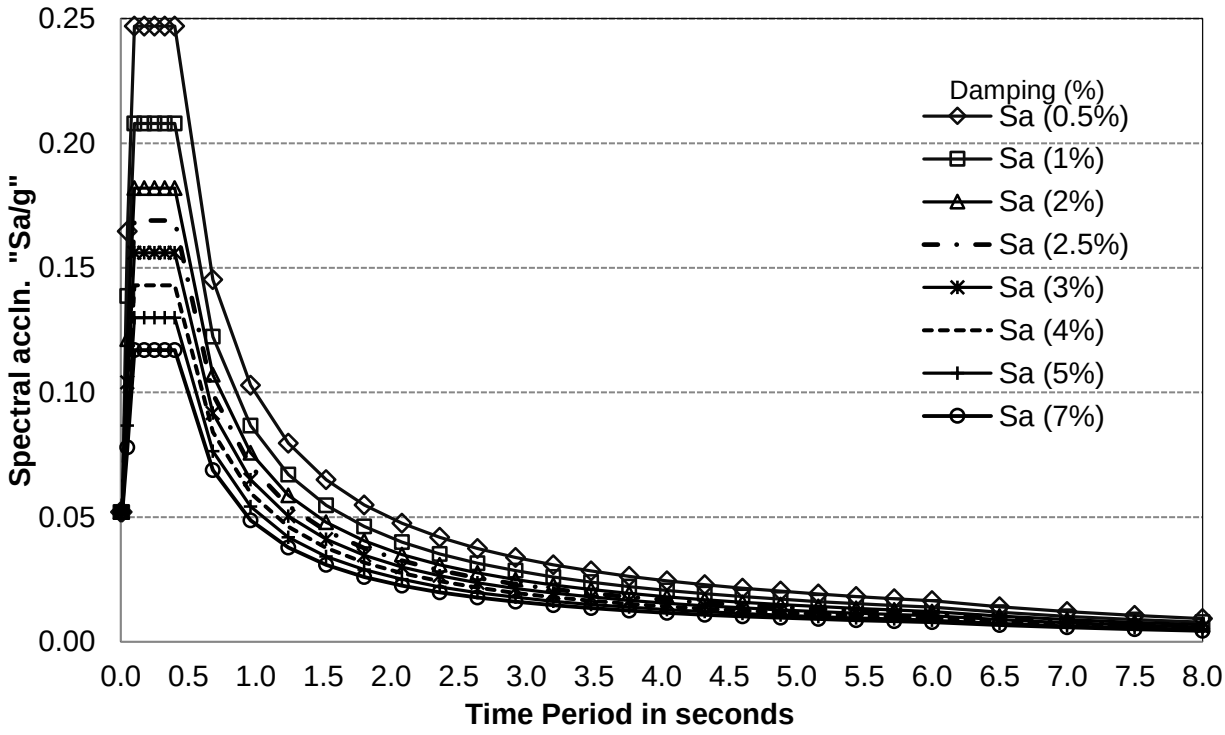

Figure 1: Site specific seismic spectra for 10% probability of exceedance in 50 years

Copyrights EIL – All rights reserved

Table 1: Spectral Acceleration Coefficients (S_a/g) for 10% probability of exceedance in 50 years

Time Period (sec)	Percentage of critical damping

NOTES:

1. For methodology of calculation of seismic forces and other seismic design criteria, refer latest revisions of the following codes:

   IS 1893 (Part 1): 2016 General provisions and buildings

   IS 1893 (Part 4): 2024 Industrial structures including stack-like structures

2. Seismic design of liquid storage tanks shall be in accordance with IS 1893 (Part 2). For tanks not covered under IS 1893 (Part 2), shall be designed with relevant international standards as specified in project specifications (such as API650/620, Eurocodes, etc).
3. When cylindrical storage tanks are designed as per API 650/620 or another relevant standard using site-specific design methods, the percentage of critical damping and response reduction shall be taken in accordance with the respective design codes. For these tanks, importance factor and category shall be as per IS 1893 (Part 4).

Copyrights EIL – All rights reserved

SEISMIC DESIGN REQUIREMENTS FOR PIPING

(Engineering & Technology Development)

PROJECT : **BINA PETCHEM & REFINERY EXPANSION PROJECT (BPREP), BINA**

OWNER : **M/s BHARAT PETROLEUM COOPERATION LIMITED**

CONSULTANT : **Engineers India Ltd.**

JOB NO. : **B857**

Rev. No	Date	Purpose	Prepared by	Reviewed by	Approved by
0	19.11.2024	ISSUED AS GUIDE	VBA	PG	SVRS

Copyrights EIL – All rights reserved

1. SCOPE

This document provides certain guidelines/methods to be used for seismic analysis of the piping. However, detailed mathematical formulations for seismic analysis are outside its scope.

2. DESIGN ACCELERATION DUE TO EARTHQUAKE

The spectral acceleration coefficients (S_a/g) shall be obtained from the site-specific seismic spectra document no. B857-000-16-54-DB-0001. The horizontal seismic acceleration coefficients (A_h) shall be calculated as per section 7.3.1 of IS 1893, Part 4: 2024. I/R ratio (Importance factor to response reduction factor) shall be considered as 0.75 for process piping while for utility piping it shall be 0.6. Vertical acceleration values may be taken as 2/3rd of the corresponding horizontal values.

3. METHOD OF SEISMIC DESIGN

3.1 METHOD OF ANALYSIS

Response Spectrum Method shall be used for seismic analysis of piping. The piping that requires seismic analysis has to be designed for multi-component earthquakes (i.e., two horizontal directions and the vertical direction) as per the procedure given in section 8.3.2.1 of code IS 1893 (Part-4): 2024.

3.2 SUGGESTED DAMPING (IN PERCENTAGE OF CRITICAL) VALUES

Component	Damping Value (%)
All piping except for the following systems	2.0
Integrated systems (i.e. piping modeled alongwith vessel/equipment and structure)	5.0

4. CRITERIA FOR REQUIREMENT OF SEISMIC ANALYSIS

Seismic analysis has to be performed when the piping satisfies any one of the following criteria:

(i) All emergency service lines such as fire water line of diameter 10" and above
(ii) All two-phase flow lines having slug flow of diameter 12" and above
(iii) All lines with 900 # and higher-pressure class of diameter 16" and above
(iv) For those lines which do not come under any of the above types, following criteria shall be considered:

For elevations* < 25.0 m	For elevations* ≥ 25.0 m
Line diameter 26" and above	Line diameter 16" and above

***** Elevation of highest portion of piping

Copyrights EIL – All rights reserved

IMPORTANT NOTES:

1. Gapped restraints/supports which are effective in operating load condition shall be treated as full restraints/supports while carrying out seismic analysis.
2. Only mechanical restraints including snubbers and sway braces should be considered in seismic analysis. Frictional resistance should not be considered as a restraint.
3. Only operating temperature and pressure need to be considered for load combinations involving the seismic effect.

5. LOAD COMBINATIONS

All supports should be adequate for the following load combinations due to seismic load alone in addition to other load conditions considered for the design of piping:

(i) Sustained load + Seismic load
(ii) Sustained load + Thermal load (operating) + Seismic load

However, the stress in the piping should be checked only for the first load case (i.e., sustained load + Seismic load) and the maximum stress in the pipe should be limited to 1.33 times the allowable stress at the maximum operating temperature.

1.0 PURPOSE

The purpose of this document is to detail out the Inspection Methodology & Co-ordination procedure to be adopted for ensuring the quality of the materials being supplied and defines the roles of various agencies involved and the quality system to be adhered to.

2.0 SCOPE

This document is applicable for inspection methodology and coordination procedure of all material to be supplied by the contractor & package orders.

3.0 REFERENCES: This document shall be read in conjunction with the following documents.

a. Bid/Contract Document/Purchase Requisition.

b. Guidelines for Item Categorization Plan (Document No. B957-8-1842-0004) as attached with the Contract documents.

4.0 DEFINITIONS

4.1. OWNER:

Owner shall mean the project owner-BPCL.

4.2. EPMC:

EPMC shall mean Engineers India Limited (EIL).

4.3. CONTRACTOR:

Contractor means any party whose scope includes Engineering, Procurement, Construction and Commissioning of the Unit / Facilities / System covered under the specified scope of work as per the Contract document.

4.4. PACKAGE SUPPLIERS:

Package supplier means any party on which package orders are directly placed by EIL/Owner.

4.5. SUPPLIER

Supplier means any party supplying any of the equipment, material, products and services to the Contractor/Package supplier.

4.6. SUB SUPPLIER

Sub supplier means any party on whom supplier suborders materials and items and whose role is defined in approved ITPs. / QAPs.

4.7. STANDARD INSPECTION AND TEST PLAN (Standard ITP):

EIL's Inspection and Test Plan attached with Bid/Tender documents.

4.8. THIRD PARTY INSPECTIONAGENCY (TPIA):

Third Party Inspection Agency means an inspection agency appointed for carrying out Inspection and witness of tests of item being procured by the Contractor & Package supplier.

4.9. INSPECTION AND TEST PLAN (ITP) / QUALITY ASSURANCE PLAN (QAP):

It is a document generated by the supplier based on the Standard ITP attached with Bid/Tender documents with complete listing of various Inspection stages, tests, reference documents material certification, recording documents requirements and parties involved indicating their roles in various Inspection stages viz. Hold Point(H), Witness Point(W), Random Witness Point (RW) and Review Point (R) of Quality control documents / records for an item.

For items for which Standard ITP are not attached with the Bid/Tender documents:

- Contractor and Package supplier shall generate their own ITP/QAP and shall submit the same for review & approval by EIL/BPCL.

Copyrights EIL–All rights reserved

4.9.1 HOLDPOINT(H):

A Hold Point is a stage designated in the ITP/QAP, which requires Witness Inspection before supplier can proceed with further processing, except for cases where prior written permission for waiver of Witness Inspection by EIL is obtained.

4.9.2 WITNESS POINT(W):

A Witness point is a stage designated in the ITP/QAP, which requires physical Witness Inspection. Contractor and Package supplier shall give proper notifications with a firm schedule to all concerned parties and coordinate with them to complete the stage before proceeding with further processing. In case any or all concerned parties unable to turn up on the scheduled date and time, the Contactor/Supplier shall proceed with the further processing, unless notified otherwise.

4.9.3 RANDOM WITNESS POINT (RW):

A Witness point is a stage designated in the ITP / QAP, which requires witness Inspection on randomly selected samples by inspection engineer. Contractor and Package supplier shall give proper notifications with a firm schedule to all concerned parties and coordinate with them to complete the stage before proceeding with further processing. In case any or all concerned parties unable to turn up on the scheduled date and time, the Supplier shall proceed with the further processing, unless notified otherwise.

4.9.4 REVIEW POINT(R):

A review point is a stage designated in the ITP/QAP which requires the concerned agencies to verify the documents for their correctness and to confirm that the said documents meet the requirements laid down.

4.10. INSPECTION CATEGORY:

Inspection category determines the scope of Inspection for the Supplier, Contractor/TPIA and Package supplier and EIL / OWNER for various materials depending upon criticality as identified in the Item Categorization Plan (ICP) generated as per Table-1 of document No. B957-8-1842-0004 (Guidelines for Item Categorization Plan) enclosed herewith.

4.11. QUALITY CONTROL RECORDS:

These are the documents, which demonstrate achievement of required Quality and effective operation of quality systems during manufacturing of an item as per QAP / ITP. These may include but not limited to following:

- Quality Assurance Plan
- Manufacturing & Quality Control Procedure
- Inspection test plan
- Procedure Qualification Records
- Material Test Certificates
- Stage Inspection Records /Test Reports
- Visual and dimensional inspection records
- Calibration Records
- NDT records
- PMI reports
- Pressure test reports
- Statutory certifications
- Another test reports as specified in relevant codes/ specifications.

4.12. INSPECTION COORDINATOR / INSPECTION MONITOR

An Inspection engineer who is domain expert at EIL-HO/RPO/BO/FPO, nominated by HOD (Inspection), Engineers India limited as nodal officer.

Copyrights EIL–All rights reserved

6.0 METHODOLOGY AND CONTROLS

6.1 GENERAL

6.1.1 The Contractor/Package supplier maintain an effective Quality Assurance System, to ensure that all materials supplied for the Project meet the required Quality standards and specifications.

6.1.2 TPIA shall be appointed by the contractor/Package supplier.

6.1.3 **PROCUREMENT:**

a. All materials shall be procured from the Suppliers approved by EIL / OWNER as per the contract requirements.

b. In case for any item, project vendor/supplier list is not available, Contractor/Package Supplier shall seek specific approval prior to placement of sub-orders on any other Vendor.

6.1.4 Contractor/Package supplier shall ensure that all requisite facilities including testing equipment/Instruments /Gauges having calibration validity with certificate are made available to Inspection Authorities.

6.1.5 EIL/Owner reserves the right to visit supplier / sub suppliers' works at any stage during order execution.

6.1.6 Supplier/sub-supplier shall engage only one approved TPIA for all stages of inspection of project including procedure qualification.

Copyrights EIL–All rights reserved

6.2 CATEGORIZATION

6.2.1. Various materials to be procured by the Contractor/Package supplier depending upon their criticality shall be categorized into following inspection categories for carrying out inspection and testing.

6.2.2. Contractor/Package supplier shall submit at the time of Kick Off Meeting or earlier, the "Categorization Plan for inspection" of all materials to be procured by them for approval, to EIL (Inspection coordinator) and OWNER.

6.2.3. This should include major sub-ordered items, source (Indigenous & Imported) and quantity. Individual ITP for each item shall be submitted to the concerned RPO (where Contractor and Package supplier is located) for their review and approval of individual ITP by EIL-Inspection engineer as per the approved categorization plan.

6.2.4. For site fabricated packages, these documents shall be submitted to RPO nearest to the site.

6.2.5. All material supplied by the Contractor/Package supplier to the Project shall be categorized as Category "A", "B", "C" and "P" as per Table-1 of Document No. B957-8-1842-0004 (Guidelines for Item Categorization Plan) attached herewith.

I. Category-A (Critical Items/Equipment):

- QAP/ITP review by Supplier & Contractor/package supplier & TPIA and approval by EIL.
- All stage & final Inspection witness including documents review and issuance of Inspection Release Note (IRN) by TPIA.
- Witness of stages & Final inspection by EIL including document review & endorsement of IRN.

II. Category-B (Major items / equipment):

- QAP/ITP review by Supplier, Contractor/package supplier & TPIA and approval by EIL.
- All stage & final Inspection witness including documents review and issuance of Inspection Release Note (IRN) by TPIA.
- Witness of Final inspection including document review and endorsement of IRN by EIL.

Note: Though the stage Inspection by EIL has not been envisaged for Category 'B' items, EIL reserves the rights to witness inspection of any stage which shall be decided during ICP/QAP approval stage based on the process criticality and the contract between Owner and EIL.

III. Category-C (Regular items):

QAP/ITP review by Supplier, contractor/package supplier & TPIA and approval by EIL.
Witness of stage & final Inspection including documents review and issuance of Inspection Release Note (IRN) by TPIA and IRN endorsement by EIL.

IV. Category P (Package Order):

All items/components under supply in the Package shall be categorized as Category A, B & C as explained in Clause no. 6.2.5 above. Package supplier shall generate the 'ICP' accordingly and the same shall be approved by EIL.

Notes:

a. Contractor & Package supplier to appoint the 'Third party Inspection Agency-TPIA'. List of approved TPIA's shall be shared as per contract.

Copyrights EIL–All rights reserved

b. In case (for category A and B items), items are to be released based on Inspection by TPIA and review of documents, endorsement by EIL, the same shall be done by the respective RPO/BO/FPO of EIL where supplier / sub-supplier is located.

c. Items coming under the purview of IBR will not have any role of EIL, either in Inspection or documentation reviews.

d. Items under the purview of ASME Code stamps-EIL Inspection Stages shall be identified in ITP as per Categorization plan.

For imported items QAP/ITP review is by Supplier & Contractor/package supplier & TPIA and final approval of QAP/ITP will be by EIL.

6.3 INSPECTION AND TEST PLAN / QUALITY ASSURANCE PLAN (ITP/ QAP):

EIL's Standard ITPs for major items are attached to the bid documents. These ITPs are indicative and generic only. Based on these ITPs, Contractor/Package supplier shall generate detailed ITPs, applicable to the specific item ordered. However, none of the stages shall be waived in detailed ITPs/QAPs without the consent of EIL. Wherever EIL's ITP is not attached, the Contractor/ Package supplier shall generate the detailed ITP.
The ITP/QAP shall give complete listing of stages of inspection, final inspection, tests and material certification requirements for the item, meeting all requirements specified in the Contract Document / Approved project specifications / Approved Drawings & Data sheets and shall clearly indicate Hold (H), Witness (W) Inspection, Random Witness (RW), Review (R) stages of inspection to be carried out by TPIA and EIL. For the supplier, all the stages of inspection shall be HOLD points and no stage shall be offered to TPIA & EIL without having performed / witnessed such stages. The ITP thus generated shall identify and include the following as minimum:

Sequence of all inspection and test activities related to the item manufactured, specific procedures, methods and work instructions to be applied to each activity in manufacturing of the item.

This will include but not limited to:
Material identification/traceability records,
Qualification of welding, welders, welding operators,
NDT procedures & personnel,
Post Weld Heat Treatment procedures,
Positive Material Identification (PMI) including that of welds @ at least10% at random,
Visual / dimensional checks.
Pressure tests,
Performance tests,
String tests, strip tests,

Respective acceptance criteria and pre-shipment clearing procedures etc. as the case may be.

The Contractor/Package supplier may opt for making their own Standard ITP/QAP for each bulk items viz. fittings, flanges, valves, pipes, hoses, gaskets, fasteners, cables, cable glands, instrument tube & fittings, pressure gauge, temperature gauge, level gauge, manometers etc. and go for one time approval for each item type. In case of any non-conformity EIL reserves the right to cancel/amend ITP.

The Contractor/ Package supplier may also opt for using EIL's Standard ITP attached to the bid documents.

The Contractor/Package supplier shall ensure that all personnel engaged in performing the activities have requisite qualification and relevant work experience. Wherever required, specialized operators shall be qualified and certified.

Copyrights EIL–All rights reserved

NDT operators employed, if any, shall be certified as per ASNT / ISNT and shall have valid certificates.

6.4 INSPECTION

6.4.1. The Contractor shall notify in writing to the respective RPO/BO/FPO of EIL coordinating the Contractor's order and with a copy to the OWNER, at least 7days in advance of the date and the place at which the item will be ready for witnessing inspection / testing by EIL and/or OWNER. Following documents shall be submitted along with inspection notice:

- Un priced copy of Purchase Order
- Approved Purchase Requisition
- Approved Drawings
- Agreed Deviations
- Approved QAP / ITP
- Approved Categorization Plan.

6.4.2. The TPIA shall issue an Inspection Certificate-IRN after satisfactory Stage wise & Final inspection including documents review in compliance to 'H', 'W', 'RW'&' R' stages of inspection by all parties as per approved ITP/QAP, PR, Purchase specifications, standards/codes etc.

6.4.3. The Inspection Certificate shall give reference of the purchase order, approved engineering documents (PR, drawings etc.) and approved ITP referred for inspection and tests carried out. The inspection certificate shall list out short supplies / pending work details, if any and order status viz. Partial/Complete.

6.4.4. In case Contractor/TPIA find any deviation or non- conformity with respect to the agreed specifications during manufacturing of the item and where corrective action is not feasible, the Contractor shall report the same to EIL in the designated "Waiver / Deviation Request" format and seek prior approval from EIL/ Owner as applicable, before proceeding further.

6.4.5. The Contractor shall ensure that all items covered by statutory regulations are inspected at the manufacturer's works and are duly certified by competent authority as per stipulated requirements. For such items EIL intervention, if any, shall be indicated in QAP.

6.4.6. Pre-fabricated modules shall be inspected and tested and witnessed by EIL & TPIA as per approved ITP / QAP before dispatch from shop / yard.

6.4.7. Material/ equipment shall be inspected only after receipt of drawings / data sheets approved by EIL/Owner (as applicable) in Code 2. However, dispatch clearance shall be after Code-1 approval.

6.4.8. The Contractor/TPIA shall check the calibration status and traceability of all instruments used by the supplier for testing. Contractor shall submit all NDT calibration blocks along with equipment.

6.4.9. All bulk items like pipes, fittings, fasteners etc. shall be color coded as per instructions given in the specifications by the Supplier and witnessed by Contractor/TPIA.

6.4.10. The Contractor/TPIA shall carry out physical verification of all spares and check their Tag No., Serial No., Model No., Quantity, Model, Size, Rating etc. and review manufacturer's test reports / certificates, Material test certificates etc. to confirm compliance to requirements. Random witness samples shall be selected separately for each inspection stage.

Copyrights EIL–All rights reserved

6.4.11. In case any item is found not complying to the specifications laid down in the contract, it shall be the responsibility of the contractor to ensure replacement / rectification of the equipment/material, as decided by EIL / OWNER.

6.4.12. EIL scope of inspection at foreign supplier works (imported items) shall be as per contract. Contractor, package supplier to appoint TPIA for inspection of imported items.

6.5 INSPECTION CERTIFICATE(IC) / INSPECTION RELEASE NOTE (IRN):

6.5.1. The TPIA issue an IC/IRN after satisfactory completion of all required stages of Inspection as per approved QAP / ITP and after ensuring compliance to specified requirements of all relevant applicable documents. The Inspection Certificate shall give reference of the approved documents including Purchase Requisition /Specification, Drawing, Data sheet, QAP/ITP with revision number referred for inspection and tests carried out, balance activities and short supplies if any.

IC/IRN to be issued only after drawings / data sheets are approved by EIL in Code1/R, unless agreed otherwise.

6.5.2. The IC/IRN shall include the following as minimum.

- Job No. / Project Title / PO No. / Purchase Specification No., Date of inspection and Status of the visit - Initial / Intermediate / Final.
- Item Tag No. / Name / Total quantity ordered / released / offered for inspection and accepted during the visit.
- Manufacturer's Name, Package contractor's name, EIL& OWNER
- Date & Place of Inspection, name of Inspection Agency and Inspection Authority.
- Reference of Documents with Revision status. (It shall be clearly indicated in the inspection certificate that "inspection has been carried out based on code-1 drawings and approved ITP" and comply all PR/Specification requirements.)
- Verification of calibration documents.
- Details of Inspection carried out.
- Results of Inspection.
- Deviations, if any.

6.5.3. IC/IRN issued by the TPIA shall be accompanied with the following as minimum.

- Works Certificate with details of Hydrostatic Test and PMI / Leak Tests (if applicable) for Fabricated equipment
- Works Certificate with details of Performance Test, Mechanical Run Test (if specified in PR) and String Test (if applicable) for Rotating Equipment
- Works Certificate with details of acceptance tests, calibration and Certificate of statutory approvals if applicable.
- Works Certificate with details of Mechanical tests, PMI and Helium Leak tests including lab test reports, if applicable, for all bulk items such as pipes, valves, fittings, fasteners and gaskets.

6.5.4. Contractor shall submit copy of each Inspection Certificate (IC) / Inspection Release Note (IRN), along with all attachments mentioned therein to EIL for IC/IRN endorsement. After IC/IRN is endorsed, Contractor shall distribute the Inspection Certificate to the following officials:

- Project Manager of EIL.
- Inspection Coordinator/Monitor of EIL.
- Resident Construction Manager (RCM) of EIL.
- Owner's Representative at Site.
- Contractor's Ware-house in-charge.

Copyrights EIL–All rights reserved

- EIL/Owner warehouse in-charge at site.

Contact details of all concerned will be intimated after kick off meeting.

Immediately after dispatch, the CONTRACTOR shall submit one set of all documents listed in the "Vendor Data Requirement" sheet attached with the PR/ Contract to RCM of EIL with a copy to owner representative & EIL/owner warehouse in-charge.

7.0 EXPEDITING: The contractor shall perform expediting services of all equipment & materials. Expediting Reports (Fortnightly) shall be generated Purchase Order wise & Vendor wise separately. A standard format to be agreed upon during the kick of meeting with EIL/owner. A consolidated 'Material Status Report-MSR'-Monthly to be furnished including dispatch status. Dedicated qualified experienced manpower shall be deployed at the major centers for expediting services. If required dedicated manpower will be positioned at the vendor works also. In addition to the contractor, EIL will also expedite for identified critical fabricated items or any other item shall also be expedited on case-to-case basis as per job exigencies.

8.0 DOCUMENTATION AND CONTROLS:

8.1 FINAL DOCUMENTS:

On completion of each order, contractor shall submit the final documents to the EIL/Owner in requisite number of hard copies/soft copies (Pen drive/CD) as per the vendor data requirements attached with PR duly reviewed and certified/endorsed by the nominated TPIA & EIL with Seal /stamp at least on the index sheet of final documents/ data folder along with Certificate of Completeness of Final Documentation. Hard copies shall be sent directly to EIL Site office with a soft copy to EIL's Project Manager. Drawings in 'Final documents' shall consist of editable copies also. Final document shall be in one complete binder with proper indexing so as to corelate/retrieve document from binder

8.2 STATUS & MONITORING REPORT:

CONTRACTOR shall closely monitor the manufacturing progress at Supplier's works for various orders and expedite timely delivery of all items at site. If required and found necessary, visits to Supplier shops by EIL/OWNER and meetings with Suppliers shall be organized by the CONTRACTOR. In case of any delay in supply of the items by any supplier, the CONTRACTOR shall initiate remedial actions for expediting delivery of the items.

CONTRACTOR shall submit status report of all procurement items and related information, to the Inspection Coordinator of EIL on a FORTNIGHTLY basis. Reporting Format to be finalized during Kick off meeting (KOM) with the EIL/Owner.

Copyrights EIL–All rights reserved

Distribution of inspection certificate with attachments	To distribute As per contract documents	Not Applicable	Not Applicable	Not Applicable	Not Applicable	Not Applicable	Not Applicable
Final documents (Note-3)	To submit as per Contract document, after endorsing the certification by contractor.	To certify the completeness of the documentation.	To verify & endorse the completion certificate.	To certify the completeness of the documentation .	To verify & endorse the completion certificate.	To certify the completeness of the documentation .	To verify & endorse the completion certificate.

Notes:

1. Though the stage Inspection by EIL has not been envisaged for Category 'B' items, EIL reserves the rights to witness inspection of any stage which shall be decided during ICP/QAP approval stage based on the process criticality and the contract between Owner and EIL.
2. Items not covered in Table-1 of Doc. No. B957-8-1842-0004 shall also be categorized in consultation with Owner / EIL.
3. For Category 'P' items, Package supplier shall submit Final Documents on completion of scope of works or as defined in PO/PR.
4. Flanges, tube sheets, non-standard forgings, forged fittings and Orifice plates/forgings (CS, LAS, SS) of rating 1500# & above shall be considered as 'category-A' item.
5. All types of valves of pressure class 1500# & above shall be considered as 'category-A' items.
6. RTJ-octagonal and 1500# & above ratings gaskets shall be considered as 'category-B' items.

Notwithstanding the above, EIL / Owner reserves the right to participate in any stage / final inspection

1.0 PURPOSE

The purpose of this document is to provide guideline for preparation and approval of item Categorization Plan for Inspection and defines the Inspection scope for various agencies for the Project.

2.0 SCOPE

This guideline is applicable for all material to be supplied by the Contractors and Package orders.

3.0 REFERENCE:

This document shall be read in conjunction with document no. B957-5-1842-0005 **"Inspection Methodology & Co-ordination Procedure for contractor & Package Supplier"** attached to the Contract and other documents mentioned therein.

4.0 ITEMS DO NOT FALL UNDER THIS CATEGORIZATION PLAN:

Contractor / Package supplier should get in touch with 'RCM-Resident Construction Manager' for methodology/ acceptance of these items.

- Cement, Reinforcement bars
- Structural steel material & plates as per IS-2062. Hand railing material
- Wrapping & Coating material.
- Paints, Chemicals and Cleaning agents
- Oil lubricants, Insulation material & Earthing material
- Hardware used at Site for Electrical and Instrumentation items.
- Loose spares
- Any other non-critical item.

5.0 ITEM LIST AND CATEGORY:

Item list is mentioned in the Table-1 of this document. Item not covered in the table-1/ exempted item list as per clause 4.0 of this document, shall also be categorized and submitted for approval from EIL.

Note: The category of items mentioned in the Table-1 is standard. EIL reserves the rights to alter the category of item based on the Process criticality and Client requirement, during approval of ICP/QAP.

Notes:

1. Though the stage Inspection by EIL has not been envisaged for Category 'B' items, EIL reserves the rights to witness inspection of any stage which shall be decided during ICP/QAP approval stage based on the process criticality and the contract between Owner and EIL.
2. Items not covered in Table-1 of Doc. No. B957-8-1842-0004 shall also be categorized in consultation with Owner / EIL.
3. For Category 'P' items, Package supplier shall submit Final Documents on completion of scope of works or as defined in PO/PR.
4. Flanges, tube sheets, non-standard forgings, forged fittings and Orifice plates/forgings (CS, LAS, SS) of rating 1500# & above shall be considered as 'category-A' item.
5. All types of valves of pressure class 1500# & above shall be considered as 'category-A' items.
6. RTJ-octagonal and 1500# & above ratings gaskets shall be considered as 'category-B' items.

Notwithstanding the above, EIL / Owner reserves the right to participate in any stage / final inspection

Copyrights EIL – All rights reserved

PROCEDURE FOR SMART INTEGRATED ENGG., DIGITAL HANDOVER OF DRAWING/DOCUMENT/ 3D MODEL AND DIGITAL INTERVENTION BY BIDDER

PROJECT : BINA PETROCHEMICAL & REFINERY EXPANSION PROJECT, BPREP

OWNER : M/s BHARAT PETROLEUM COOPERATION LIMITED.

CONSULTANT : M/s ENGINEERS INDIA LTD.

JOB NO. : B957

Rev. No	Date	Purpose	Prepared by	Checked by	Approved by

1. GENERAL

This chapter details the requirements pertaining to various drawings, documents and 3D model to be generated at various stages during the course of execution of the project by the Bidder(contractor/vendor/supplier) for activities associated with Smart Integrated engineering and digital handover. These stipulations are supplementary to following specifications (enclosed elsewhere in the contract):

S. No.	Spec. No.	Specification detail
1.	6-78-0001	Specification for quality management system requirements from bidders
2.	6-78-0002	Specification for documentation requirements from contractors
3.	6-78-0003	Specification for documentation requirements from suppliers

The Bidder shall recognize that efficient handling of drawings and documents to be prepared by him under the contract is the key to the timely completion of the plant.

The Bidder shall ensure that all drawings and documents to be submitted by him to the OWNER/CONSULTANT shall be of professional quality and conforming to the contractual requirements.

The Bidder shall submit the drawings through the defined document management system for the project for review by OWNER /CONSULTANT, and shall maintain a record of drawings submitted till date at all times. Access to document management system shall be provided by client/consultant to the successful bidder which shall be utilized by the bidder for their smart engineering activities without any deviation.

Compliance of this chapter on drawings and documents is mandatory and is non-negotiable.

A pre-defined document numbering philosophy will be provided to successful bidder which shall be adopted and implemented by bidder for documents generated for this project.

Computer aided design and drafting shall only be used. Standard, approved and well-established PC based computer programs/software packages, available in market shall only be used by the Bidder and its sub-vendors etc.

All documents, before forwarding to OWNER /CONSULTANT shall be vetted in detail by Bidder. Documents received without vetting will be returned without review. Also, any in accuracies/mistakes found will not only be rectified by the BIDDER but the BIDDER shall remain liable for bearing charges towards efforts spent by OWNER/CONSULTANT for discussing the same. Delay owing to these shall be to the account of BIDDER.

Review of the drawings/documents by OWNER/CONSULTANT would be only limited to the review of compatibility with basic designs and concepts. The review by the OWNER/CONSULTANT shall not be construed by the BIDDER as limiting any of his responsibilities and liabilities for mistakes and deviations from the requirements, specified under these specifications and drawings.

All drawings, datasheets, specification & model etc. shall be generated by the use of authoring tools specified elsewhere in the contract document. The digital handover shall be in soft native files along with associated database.

BIDDER shall furnish 3D model~~ing~~ (with complete details with respect to equipment, Piping, Civil, Structure, Electrical & Instrumentation in line with scope of work for 3D

Copyright EIL – All rights reserved

modeling) of plant with dynamic walk-through facility to check any interference, requirement of safety, operation and maintenance for getting approval from OWNER/CONSULTANT with input data. Associated data base files along with library shall also be furnished at 30%, 60% and 90% model reviews.

Each drawing submitted by the BIDDER shall be clearly marked with the name of the Owner, the unit designation, the specifications, title, the specification number and the name of the Project with revision No. and date. If standard catalogue pages are submitted the applicable items shall be indicated there in. All titles, notings, markings and writings on the drawings shall be in English. The template shall be approved by the consultant/client. All documents shall be prepared on the approved template.

All the Engineering design and specifications shall be normally prepared in MKS system excepting for Civil/Structural wherein, the SI system is in vogue based on applicable design codes. Upon receiving comments on Drawings/Documents, the BIDDER shall provide compliance report/comment resolution sheet, separately on each of the comments, document-wise, along with the subsequent submission. Comments given by OWNER/CONSULTANT shall be discussed, if required, and finalized within the agreed schedule.

The schedule of submission of Drawings/Documents shall be in accordance with project plans only. The detailed list under different category, document-wise, shall be prepared by BIDDER for review/records of OWNER/CONSULTANT.

The BIDDER shall maintain up-to-date record of drawings & document status and make regular issue of drawing/documents index **discipline wise, on monthly basis, with copies to OWNER /CONSULTANT Site &, H.O.** indicating schedule date of submission, submission date of various revisions and date of review with code of review/ approval.

2. Category of Documents and Cycle Time

The handling of documents by OWNER/CONSULTANT /BIDDER shall be as follows:

2.1 OWNER /CONSULTANT's Review/Records

A detailed document list clearly identifying review/records category against each document shall be developed. Following may please be noted for all the documents engineered by the BIDDER:

a) Review

BIDDER can proceed if OWNER/CONSULTANT's comments are not received within 10 working days of its receipt by OWNER /CONSULTANT. However, if major deviation to contract specification for any design deficiency is detected in the course of review after stipulated period, it shall be the responsibility of the Bidder to see that such deviations and deficiencies are corrected to ensure compliance to contract without any cost and time implication to Owner.

b) Records

BIDDER shall submit documents for OWNER/CONSULTANT's information and proceed with the work. OWNER/CONSULTANT comments, If any, which relates any cost and/or time implication to the owner due to inadequacies/inaccuracies may be brought to the attention of BIDDER at any stage for incorporation without any cost or time impact to owner.

The documents falling under review category shall in general, except for drawings requiring multi-disciplinary review, be returned with comments within 10 working days.

Copyright EIL – All rights reserved

Documents submitted without meeting pre-requisite requirements will be returned without review.

However, documents like equipment layout etc. where multi-disciplinary activity is involved, the BIDDER, after submission for OWNER/CONSULTANT's review, shall visit OWNER/CONSULTANT for discussion for expeditious review of documents.

In absence of visit of BIDDER'S engineering team at OWNER/CONSULTANT office, review time shall be 15 working days. The information category document will be retained for records only. It is BIDDER'S responsibility to correct the deviation, if any, to the stipulation in the bid document, without any cost or time implication to Owner.

2.2 BIDDER'S Review

BIDDER shall furnish compliance statement to OWNER /CONSULTANT's comments while submitting the next revision within 10 days from the date of release of drawings and documents by OWNER/CONSULTANT.

2.3 Control and Monitoring of documents review and submission

Drawing schedule shall indicate the following:

- Schedule/Actual submission date to owner
- Category of submission
- Receipt of comments from Owner
- Category of return status from Owner
- Issue date for Construction

This updated schedule shall be issued on fortnightly/monthly basis, as agreed, and compared with Owner's log.

Detailed listing of documents (discipline wise) which are scheduled to be submitted or re-submitted incorporating OWNER/CONSULTANT's comments shall be provided by BIDDER in the weekly meetings. Bidder shall ensure that drawings /documents are submitted as per the agreed schedule only. Bunching of documents/out of sequence submissions and consequential delay of documents and its review thereof shall be exclusively attributable to BIDDER.

2.4 Pre-Requisites from Bidder

2.4.1 At the kick-off meeting, the BIDDER must submit discipline wise list of documents and drawings index.

2.4.2 The Drawing Index (discipline wise) shall include description of drawings/ documents, category of drawings, scheduled date of submission, actual date of submission, review code received with dates. This shall be updated fortnightly/monthly, as agreed by BIDDER and copies issued to OWNER /CONSULTANT site and H.O. as well as Owner. Drawings submitted before finalization of drawing index shall be rejected.

2.4.3 BIDDER shall separately submit list of drawings/documents involving multi- disciplinary reviews, considering the OWNER /CONSULTANT departmental activities (furnished in the contract) during the kick off meeting itself. They are also highlighted in the discipline- wise document list.

Copyright EIL – All rights reserved

2.4.4 Critical and typical drawings/documents having impact on schedule and quality should only be identified for such timely reviews in Document Control Index. This shall be adopted after receipt of drawings/documents indexes from the BIDDER at the kick-off meeting with mutual understanding of the BIDDER/concerned specialist/Owner.

2.4.5 Any deviation on Record category drawings/documents and on review category drawings observed later or in execution at site during site visit/technical review by OWNER/CONSULTANT shall be taken seriously. Bidder shall rectify the same at his own cost and time.

2.4.6 BIDDER shall plan submission progressively so that no bunching takes place in any discipline.

2.4.7 Review period shall be reckoned from the "Date of Receipt" of documents/drawings at OWNER /CONSULTANT to the "Date of Receiving" the reviewed documents by the BIDDER from OWNER /CONSULTANT office. BIDDER shall monitor submission and receipt.

2.4.8 Documents/drawings received prior to holiday/week end shall be accounted as received on the following working day and the review period committed shall include only working days.

2.4.9 Quality of drawings/documents is the essence for a timely review. If major comments/deviations to the contract document are noticed, the drawing shall be returned in Code-3.

2.4.10 Sequence of submission of drawings is essential for proper review of documents and timely completion of the project and the same is to be adhered to. In case sequence is not maintained, the documents submitted shall not be reviewed by OWNER/CONSULTANT and the responsibility of timely execution of the plant shall remain with BIDDER.

2.4.11 Piping/Instrument & other engineering drawings/documents shall be issued only after the corresponding P&IDs& Process documents coming under review category are first reviewed by the concerned department in code-2 as a minimum.

2.4.12 In principle. BIDDER is not expected to revise drawings/documents already reviewed in Code-1.

a) If it is of utmost necessity to revise or add some minor details in Code-1 drawings, BIDDER shall highlight such revisions by marking "CLOUD" and providing appropriate revision nos. to such additions/alterations. BIDDER is also needed to provide a "BLOCK" in the drawing indicating reasons of such changes and to insert another "Review Block". OWNER /CONSULTANT shall put relevant code for such revisions only. Code marking given by OWNER /CONSULTANT on such revisions shall not change the category of drawing.

b) Any major change in Code-1 drawing shall call for preparation of new drawing.

2.4.13 Based on the confidence gained on BIDDER'S quality of drawings/documents already submitted, "Review Category" drawings could be retained as Information/Records and vice versa at the discretion of OWNER/CONSULTANT. This however, does not change the category of drawings.

2.4.14 Once a document is already reviewed in Code-2, subsequent submission due to non-incorporation of comments shall not be accounted for any contractual commitment of review period from OWNER /CONSULTANT. BIDDER is expected to comply with OWNER

Copyright EIL – All rights reserved

/CONSULTANT's comments in the next revision after Code-2 and is required to submit a compliance report accordingly

2.4.15 Deviation permit, submitted for seeking deviation in vendor document management system, shall be separately identified and shall not be considered as a document for timely approval/review.

2.4.16 When OWNER/CONSULTANT deploys engineers at the BIDDER'S work center following shall be satisfied:

- Review is limited to identified long delivery/schedule critical items only.
- Readiness of documents/drawings shall be ensured by the BIDDER.
- Presence of lead engineers of all disciplines of the BIDDER.

2.4.17 If OWNER/CONSULTANT highlights any necessary rectifications required in the construction at the time of Technical Review/Audit, construction executed based on record category drawings not complying with Bid requirement, BIDDER shall rectify without any impact of time and cost to Owner.

2.4.18 BIDDER shall submit designs drawings for review only after the corresponding GA/Equipment datasheets etc. have been coordinated in his office and reviewed by OWNER/CONSULTANT engineers at least in Code-2. Such OWNER/CONSULTANT reviewed drawings shall be furnished along with drawings/designs for timely review.

2.4.19 BIDDER shall open an engineering office in India for speedy document submission and to help faster review of the drawings & documents.

2.5 Approved for Construction Drawings

Drawings reviewed under Code1 & Code2 required for execution at site shall be decided by BIDDER and copies need to be sent to OWNER /CONSULTANT (RCM), BIDDER'S RCM and BPREP (site).

- "**Approved for Construction**" stamped/sticker drawings shall be issued by BIDDER for execution.

- "**Approved for Construction"** stamped/sticker shall be done separately on the reviewed print and not on the Title block.

-Without changing Revision **Number**, BIDDER to arrange adequate number of prints of documents and drawings to BIDDER'S RCM, OWNER/CONSULTANT RCM and BPREP (site) with transmittal.

- Copies of only reviewed or final documents like design calculations, design basis etc. shall be sent to OWNER /CONSULTANT site for records.

- Copy of such transmittal shall be sent to OWNER /CONSULTANT (HO) & BPREP (HO) for records.

2.6 Critical Drawing/documents shall be reviewed by Licensor during the course of Project execution, list of Licensor mandatory review document is enclosed elsewhere in the contract.

Copyright EIL – All rights reserved

2.7 Mandatory compliance to the smart engineering activities at Bidder's end

2.7.1 Plant Breakdown Structure (PBS) supplied by EIL to be adhered to. The SEED file and Plant Breakdown Structure (PBS) shall be provided by consultant to the successful bidder which shall be utilized by the bidder for their smart integrated engineering activities without any deviation.
For any deviation in this regard prior approval need to be taken by Bidder from EIL.

2.7.2 For residual engineering (process), work share to be followed. In case any new symbol is required, same shall be obtained from/ authorized by EIL.

2.7.3 All P&IDs need to be smartly developed. All the constituents of P&ID need to be intelligently mapped with database/database driven. There shall not be any graphics/symbols/texts in the smart P&IDs. There shall not be any dummy graphics/symbols/texts in main body of the P&ID.

2.7.4 3D Modeling for Piping, Equipment, Instruments & Electrical need to be database driven. Dummy graphics need to be avoided. Quality check & data connectivity shall be ensured at Bidder's end before submitting the data files/documents/3D Model to the Consultant.

2.7.5 All the applicable deliverables shall be extracted from 3D model without any manual rework done thereafter. This is to maintain the consistency between 3D model and extracted deliverables.

2.7.6 Deliverables from 3D model shall be extracted only on conforming the alignment of interfaces with client model and clash free design.

2.7.8 For consolidation of engineering data, critical attribute metadata excel file to be filled and submitted by vendor. Template will be provided during detailed engineering.

2.8 Digital handover of Engineering Information

Smart Integrated engineering shall be utilized to carry out engineering activities. Intelligent Systems shall be used for the management of P&ID, Equipment layout, 3D Model, Piping, Electrical and Instrumentation design & deliverables including P&IDs, Reports, MTO, procurement etc.

The data in each such intelligent system, including the 3D Model and Intelligent P&ID's to be submitted by the Bidder in a predefined Software version/format, as tabulated below. The same shall be submitted by the respective LSTK vendor/equipment suppliers strictly without any deviation.

Software versions/Format Requirements

The definition is in general terms containing (native (N), image (I), portable document format (D)) the formats in which Bidder shall provide electronic versions of Documents. Acceptable applications for each format type are listed in the table below.

Data/Document Types	Authoring Software*	Version

Copyright EIL – All rights reserved

2D CAD	S3D, AutoCAD	*/2018
Intelligent P&IDs	SPID	*
Instt. Index, Datasheet etc	SI	*
Electrical load list/Single line diagram/Interconnection details/Cable Schedule	SEL	*
3D Model	S3D#	*
2D Documents from the 3D model	S3D#	*
Text Documents/Reports	MS Word 2013 or as agreed with Company	*
Datasheets/Lists	MS Excel 2013 or Adobe Acrobat as agreed with Company	*
Email	Rich Text Format	
Schedules	Primavera	*
Organization Charts/diagrams	Visio 2013, Microsoft power point or as agreed with Company	
Portable Document Format Files	PDF files shall always be directly generate PDF from the authoring application. Scanned documents/Images which are converted to Adobe Acrobat format do not qualify as Portable Document Format files and shall be treated as image files for the purpose of format compliance.	

*Version shall be finalized during KOM.

In case documentation submitted is of authoring software mentioned below, the data has to be submitted comprehensively including native files, databases, catalogs etc., as detailed here.

SMART 3D#	Project DBs in oracle/sql** (version shall be compatible with latest version of SMART 3D) along with Reference project for Catalogues, Standards, customization develop for the job etc.
INTERGRAPH SMART P&ID	SPID Project Backup along with deliverables extracted from SPID (P&ID, PDS, Line list) and database in oracle/sql** (version shall be compatible with latest version of SMART PID)
AUTOCAD	DWG/DXF files
SMART Instrumentation	SPI Project Backup (DWG + Datasheets + Tags & Attributes in excel format) and database in oracle/sql** (version shall be compatible with latest version of SMART Instrumentation)

Copyright EIL – All rights reserved

SMART Electrical	SE Project Backup (DWG + Tags & Attributes in excel format) and database in oracle/sql** (version shall be compatible with latest version of SMART Electrical)

**Database (oracle/sql) and Version shall be finalized during KOM.

It is suggestive to use the defined 3D modelling platform for seamless integration and data exchange with smart authoring tools (SPID, SPI & SEL) and further downstream correlation with defined document management system for smart engineering and digital handover. However, if EPC Contractor choose to use any other 3D modelling software, they can do so but they need to ensure and demonstrate the capabilities (within 45 days after Kick off meeting) of converting their model into S3D format, fulfilling below project requirements, before starting the modelling activities.

- Following same PBS as being defined by consultant.
- 3D model capable of generating isometrics, GAD, MTO etc, shall have consistent and correlated data with other smart authoring tools of P&ID, instrumentation and electrical design.
- The converted 3D model data shall also be consolidated and correlated with data and document in client document management system and thus there should not be any lack of features/ data output in the converted model with respect to the model being made in S3D originally.
- Any other functionality as required.

Approval for initiation of modelling activities will be provided once the above-mentioned capabilities is fulfilled and successfully demonstrated to Consultant/Client. Also, when bidder is delivering the 3D model at any stage of the project, they have to convert all the files/database etc. to S3D format meeting above stated requirement. Validation and correctness of converted model shall be ensured by bidder before submitting the model to consultant/client.

No model review shall be done without submission of 3D model file/database in S3D format and subsequent acceptance by consultant/client.

2.9 Real Time Tracking of Major Shipments for BPREP Project and Data Sharing for Use on BPREP Control Tower

2.9.1 General Requirements

The Bidder (Vendor/ Contractor) (directly and/or through their transport agency) shall provide real- time tracking information for all consignments as per the following:

1. Tracking information of all shipments through all modes of transport vs. Air, Land and Sea
2. GPS tracking for all shipments exceeding INR 10 lakhs in value
3. Electronic sharing of GPS tracking data (as applicable) and consignment tracking data (through Transport Agency's Transport Management System) via REST API

Copyright EIL – All rights reserved

and on web portal of bidder or transport agency, including depiction of location of consignments on map where GPS tracking is applicable

4. Tracking details for both international and domestic shipments.

For International Shipments mandatory vessel tracking through AIS (Automatic Identification System)

2.9.2 Mandatory Tracking Information

The Bidder must provide the following information for each consignment:

1. Unique consignment identifier
2. Real-time GPS coordinates for in-transit shipments
3. Scheduled, Estimated and actual departure times from point of origin
4. Scheduled, Estimated and actual arrival times at destination
5. Current location and status updates on a daily basis (GPS Status updates shall be live)
6. Total Distance, Cumulative Actual Distance Travelled, Daily Distance Travelled to be updated on Daily basis.
7. Any deviation from planned route or schedule
8. Detailed consignment route details with GPS coordinates for key touchpoints like ports, terminals and warehouses.

2.9.3 Data Sharing Protocol

The Bidder shall:

1. Provide access credentials for their tracking platform as applicable
2. Share tracking data in real-time for GPS tracking and daily basis
3. Provide notification of any tracking system failures/ downtime or data gaps

2.9.4 Security and Confidentiality

1. All tracking data shall be treated as confidential information
2. Data transmission must use secure protocols
3. Bidder shall comply with relevant data protection regulations

3.0 Project Monitoring and Reporting for BPREP Project and Data Sharing for Use on BPREP Control Tower

3.0.1 Client is deploying a Project Monitoring System and Control Tower for the project. The bidder shall have the following obligations wrt Project Planning, Scheduling and Monitoring. This will be read in conjunction with project management clauses specified elsewhere in the Tender/MR.

3.0.2 The bidder shall submit a comprehensive monthly progress report via the PMIS, which will include the following:

1. Executive Summary: A high-level overview of the reporting period's progress, summarizing key accomplishments and major issues encountered.

2. Progress Monitoring: Progress Monitoring/ Earned Value Management (Planned vs Actual) at project and Functional Level based on underling Deliverable List/DCI, Sub-ordering/ Material Control Index (MCI), Manufacturing Milestones and actual progress against planned schedules.

3. Project Schedule: Bidder shall submit the Critical Path Method Schedule (CPM) Project Scheule in Primavera P6 or MS Project Format on a monthly basis.

Copyright EIL – All rights reserved

4. Areas of Concern: A detailed description of any issues or risks impacting project timelines, Engineering, Manufacturing, or Sub-ordering activities. The bidder must identify bottlenecks, supply chain delays, and potential risks that may affect overall project progress.
5. Engineering Status: Detailed progress reports on engineering tasks, including design, technical drawings, and any engineering-related milestones, document approval status, pending approvals, revisions, or rejections etc. Any delays or issues affecting these deliverables must be clearly reported. EIL VDMS data shall may be available to bidder for reference.
6. Sub-ordering Status (MCI): A summary of all sub-ordering activities, including key milestones, supplier performance, and delivery timelines. Any delays or issues affecting suborders must be clearly outlined.
7. Manufacturing Status: A detailed update on the manufacturing process, including the production schedule, quality checks, and any deviations from planned timelines.
8. Dispatch Status: Detailed status of items dispatched, Packing Lists, LR Details, Transporter Details, Tracking Details etc.

3.0.3 Data Integration: The bidder shall ensure that all required data, including schedules, deliverables, and KPI inputs, are entered (manual entry, predefined templates) accurately into the PMIS system. Bidder will be provided access to the PMIS System. The bidder is responsible for ensuring data integrity and timely submission.

3.0.4 Compliance with Workflows: The bidder must adhere to the defined workflows in the PMIS system for report submission, review, and approval. The bidder's reports will undergo review at multiple levels and the bidder shall address any feedback or corrections promptly.

3.0.5 Earned Value Management (EVM): The bidder is responsible for providing inputs that align with the Earned Value Management methodology, including schedule and cost data, weighted WBS, and progress updates, which contribute to the generation of project S-curves and EVM reports.

3.0.6 The reports will be submitted in PMIS predefined templates, reviewed through the PMIS workflows, and updated in the system on a monthly basis. The bidder shall ensure all data is accurate and up to date to allow for timely review and integration into the overall project progress monitoring system.

3.0.7 Failure to provide data/ info on timely basis may be considered a breach of contract.

3.0.8 Contractor shall comply with cybersecurity guidelines/advisories/acceptable use policy issued by BPCL/EIL.

3.0.9 In case, any of the systems are not deployed, or are stopped during the course of the contract; executing, reporting and monitoring of the work will continue through traditional methods, other platforms as directed by the Engineer-in-Charge.

3.0.10 Non availability of platforms will not be a reason for seeking time extension, change orders pertaining to time and/ or cost.

Copyright EIL – All rights reserved

4.0 DIGITAL QUALITY INSPECTION SYSTEM (DQIS).

D

4.0.1 System Overview

Purchaser intends to deploy a Digital Quality Inspection System for quality inspection for status monitoring, recording and storing digital copy of quality inspection records for inspections at Vendor Shops, Fabrication Yards and Construction site. All quality inspection process is expected to be integrated to DQIS. DQIS shall have provision for stagewise inspection activities for Shop Inspection. Project Progress reports (PMIS) shall also be linked to DQIS.

DQIS shall have inbuilt user help features, offline working capabilities on the mobile devices/ smart phones and Dashboards for status monitoring.

DQIS shall be accessed through browser-based interface on laptops, tablets and mobiles. A Mobile App shall also be provided for user access from smart phones (Android™ 11 or later versions and IOS).

4.0.2 Bidders Obligations:

1. Bidder shall be responsible for providing data, observations, deviations, annotations, submitting resolutions (as applicable) duly endorsed by EIL to prepopulate dropdown lists for the forms defined in DQIS in line with bidders' scope and ITP's. The bidder will be required to upload the detail inspection reports, backup documents and photograph(s) taken during inspection through EIL EPS portal for reflection in relevant forms of DQIS. Bidder may also be required to provide other information like dispatch details, URL's for consignment tracking, etc. in EPS Portal.

2. Detailed DQIS workflows shall be furnished at a later date. Bidder shall comply with the workflows defined in the DQIS broadly covering the shop inspection including raising inspection calls, conducting inspection, raising queries/ observations/ comments, submitting resolution to PMC/ MPMC/ Consultant/ Client/ comments/ issues, etc.

3. Bidder and its supervisory personnel shall actively monitor dashboards and reports generated by DQIS to track unresolved issues and compliance trends, ensuring timely compliance.

4. Bidder shall coordinate with all stakeholders as necessary for timely and effective execution of inspections of the project through DQIS.

5. Bidder shall use the DQIS training resources/manuals, etc. available online to understand and achieve proficiency in use of the system.

6. Bidder shall comply with the DQIS data security protocols and ensure that only authorized personnel access the system using approved devices.

7. Bidder shall ensure their personnel are equipped with laptops/ tablets/ smartphones (AndroidTM 11 or later) for use of the DQIS System. User/ Role based access to the system shall be provided.

8. In case the DQIS is dysfunctional or is withdrawn during the course of execution of the contract, bidder shall follow the manual paper/ email-based Quality Templates as defined in the relevant specifications or any other equivalent system based on directions of Engineer-in-Charge.

1.0 GENERAL

1.1 Scope

The specification highlights the requirements for the supply, design, installation, quality control of insulation to be applied on above ground electrically heat traced piping for Bina Petchem and Refinery Expansion Project (BPREP) of Bharat Petroleum Corporation Limited.

Based on the general layout arrangement drawing, datasheet, line schedule and technical requirement specified/ appended elsewhere in the tender, the contractor shall prepare detail insulation drawings and method statement for application & quality control for insulation which shall be reviewed/ approved by EIL/ BPCL. The contractor shall supply insulation & ancillary materials and carry out application as per approved drawings and procedures.

1.2 Reference codes and standards

The following standard shall, to the extent specified herein, form a part of this specification. Where a specific edition date is not indicated, it shall be taken that the most current edition (including addenda) in effect at the time of contractor's proposal submittal shall apply.

ASTM Standards

ASTM C591	Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation
ASTM C871	Standard test method for chemical analysis of thermal insulation materials for leachable chlorides, flourides , silicate and sodium ions.
ASTM C303	Test Method for Dimensions and Density of Preformed Block and Board−Type Thermal Insulation
ASTM D6226	Test Method for Open-Cell Content of Rigid Cellular Plastics by the Air Pycnometer
ASTM E84	Standard Test Method for Surface Burning Characteristics of Building Material
ASTM E96	Standard Test Methods for Water Vapor Transmission of Materials
ASTM C177	Standard Test Method for steady-state heat flux measurement and thermal transmission properties by means of the guarded-hot plate apparatus
ASTM C592	Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type)
ASTM C1729	Standard Specification for Aluminium Jacketing for Insulation
ASTM C167	Test Methods for Thickness and Density of Blanket or Batt Thermal Insulations

Copyright EIL – All rights reserved

ASTM C518	Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

IS Standard and Specification

IS 8183	Bonded mineral wool specification

Steel Structure Painting Council Standard

SSPC-SP-6	Steel Structure Painting Council Standard for surface preparation

1.3 Specific abbreviations

Term	Definition
MOC	Material of Construction
GA	General Arrangement
ITP	Inspection & test plan
QAP	Quality Assurance Plan
BD	Bulk density
PUF	Polyurethane Foam
MTC	Material Test Certificate

1.4 Document precedence

In the event of conflicting requirements noticed, the contractor shall notify BPCL/ PMC and obtain resolution before proceeding. The order of precedence shall be

a) This specification
b) Engineering design basis given in tender
c) Industry codes and standards
d) Application procedure/ quality plan prepared by EPC contractor

2.0 INSULATION DESIGN

2.1 Insulation system and thickness

Insulation system for the electrically heat traced piping shall be pre formed segment of PIR with an inner layer of rockwool and outer layer vapour/moisture barrier over PIR, followed by aluminium cladding as weather barrier.

The outer layer vapour barrier/ moisture barrier shall only be considered where ever the operating temperature is less than 175°C.

Contractor to ensure that the insulation system using these materials shall maintain an operating temperature as mentioned in process datasheet/ line schedule in the piping while in operation. Thickness of respective insulation shall be as per the applicable datasheet/ thickness chart/ line schedule appended elsewhere in the tender.

Generally, for all traced piping a heat container is created with aluminium foil having thickness 0.1-0.15mm applied over piping prior to installation of insulation over traced piping. The requirement of heat container shall be verified from electrical heat tracing manufacturer and same shall be considered.

Copyright EIL – All rights reserved

2.2 Extent of Insulation

Insulated piping shall have straight pipe, bends, tees and pipe-fittings completely insulated. All valves and flanged joints if any, shall be completely insulated in lines which are trace heated to maintain temperatures.
Heat traced instrumentation if any shall be insulated. The fluid containing sections of such instruments and the associated piping shall be completely insulated.

2.3 Corrosion Prevention

External surface of the piping shall have a suitable under insulation painting for the purpose of corrosion protection. The type of coating (primer & final paint) with respect to temperature and DFT shall be as per the applicable coating specification for the project.

3.0 MATERIALS

3.1 Insulation Materials

All insulation and ancillary materials shall be new, dry. Insulation materials shall be of low chloride content, chemically inert, non-sulfurous, rot proof, vermin proof, non-injurious to health and non-corrosive to steel (even if soaked in water at ambient temperatures for extended periods), shall not disintegrate, settle, change its form of composition, in a detrimental way during service conditions. Typical details/ minimum technical specification of the major insulation materials and accessories are given in this specification as a guideline.

3.2 Preformed Polyisocyanurate Foam (PIR)

The PIR rigid foam shall be prefabricated from free rise buns made from HCFC free chemicals. The material in general shall conform to ASTM classification C591 Grade-2, Type-II. The buns shall be made in continuous production and then machine cut into pipe sections using a CNC machine. Pipe section shall be of two halves for pipe dia. upto 12 inch, beyond which 3,4 or more segments limited to maximum 6 as necessary as per curvature of the surface shall be fabricated, moulded pipe sections made from chemicals in batch process is not acceptable.

Characteristics	Value	Remarks
Temperature range of use	(-) 200 to (+) 120 ^{0}C	
Bulk density (kg/m^3) ASTM-C302/ ASTM -D1622	40 min	Batch test *(Note-1)*
Closed Cell content (%) ASTM D-6226 Procedure-2	95 min	
Chloride content (ppm) ASTM C 871, Procedure 2	60 max	
pH (ASTM C 871)	6-7	
Water vapour transmission (ng/Pa-s-m) ASTM E-96 method-A at 23°C & 50% RH	5.1 max	
Compressive strength at 10% deformation (kPa), ASTM D 1621	240 min.	
Thermal conductivity of 180 days aged sample at (+)10 deg C mean temp (W/mK) , ASTM C-177	0.026 max	
Flame spread Index (ASTM E84)	25 max	Type test *(Note-2)*

Note-1: Supplier shall provide test certificate for each production Batch.

Note-2: Type test certificate no older than 2 years from date of issuance of PO shall be acceptable

Copyright EIL – All rights reserved

3.3 Rock wool

Rock wool is a fibrous insulation made from molten rock, bonded with resin or suitable binder. The term rock wool shall mean fibrous insulation wool made from natural rock and does not refer to products manufactured from slag or glass. For application over austenitic stainless steel, the material shall be zinc free and shall be inhibited with sodium silicate as per ASTM C-795.

3.3.1 The material may be used up to 550^{0}C, but shall meet the general classification of respective standards and service temperature requirements as mentioned below:

Form of Fibrous Material	Quality standard	Max service temperature
Preformed pipe sections	ASTM C547 / IS 9842	760^{0}C
Insulation blanket with wire net facing	ASTM C592 / IS 8183	649^{0}C

Rock wool shall meet following minimum properties:

Characteristics		Material type	
		Pipe sections	Blanket
Service temperature (°C)		650	650
Nominal Density (kg/m^3), in acc. with ASTM C302 (pipe) / ASTM C303 (Slab)/ASTM C167 (blankets)/IS 8183/IS 3144		140	128
Linear Shrinkage (%) at 550°C/ 24 hours as per ASTM-C-356, max.		2	2
Non fibrous shot (%) as per ASTM C-1335		15	15
Water vapor sorption (%) as per ASTM C1104, max.		5	5
Alkalinity, pH as per ASTM C-871		7-10	7-10
Leachable Chloride as per ASTM C-871, ppm, max.		10 (Note-1,2)	10 (Note-1,2)
Test for incombustibility OR fire resistivity	Incombustibility as per 8183/IS 3144	Pass	Pass
	OR Flame spread as per ASTM E84	25	25
Thermal Conductivity (W/mK), IS 3346 /ASTM C177/ASTM C-518 at mean temperature, max.	(+) 100°C	0.052	0.052
	(+) 200°C	0.070	0.068
	(+) 250°C	0.085	0.080
	(+) 300°C	0.10	0.090
Note-1: Max. 20 ppm allowed for application over carbon steel and low alloy steel Note-2: Type test certificate no older than 2 years from date of issuance of PO shall be acceptable			

3.3.2 Forms of rock wool insulation

Nominal pipe diameter	Form of Fibrous Material
Up to 6 inch	Preformed pipe section is mandatory
> 6 inch to 14 inch	Preformed pipe section is desirable
>14 inch	Insulation blanket with wire net facing

Copyright EIL – All rights reserved

3.3.3 For operating temperature up to 175°C for application over carbon steel and low alloy steel pipe, insulation blanket wherever used shall have GI metal facing on one side with hexagonal shaped (25mm) wire-woven netting (0.88 to 0.73mm dia.) stitched with tie wires (0.41mm dia.). Galvanization shall be minimum 30gsm.

3.3.4 For operating temperature 176°C and above, for application over carbon steel and low alloy steel pipe, insulation blanket wherever used shall have metal facing as per ASTM A167 type SS 304 with 25mm mesh and 0.8mm wire diameter, stitched with 0.41mm dia. tie wires.

3.3.5 For austenitic stainless steel and alloy 20 piping, irrespective of operating temperature, insulation blanket wherever used shall have metal facing as per ASTM A167 type SS 304 with 25mm mesh and 0.8mm wire diameter, stitched with 0.41mm dia. tie wires

3.4 Weather Protection Jacket (Cladding)

Unless otherwise mentioned, aluminium jacketing shall be used as weather protection over insulation up to operating temperature 550°C. Aluminium cladding shall be as per ASTM C1729, Class-A having polysurlyn lamination on inside surface and shall meet the requirements of ASTM B209 alloy 3003 H14. Cladding metal sheets (all types) shall have minimum thickness as below:

Item	Insulation O.D (mm)	Thickness (SWG)
Pipe	< 500	26
Pipe	> 500	24
Valves, flanges and foot traffic areas	-	22

3.5 Ancillary Materials

a. Securement Bands

For Insulation (Rock wool): Stainless steel type SS-304, 20 wide x 24SWG thick
For Cladding: Stainless steel of type SS-304, 12mm wide x 24 SWG thick.

b. Securement wire

For Insulation (PIR): Stainless steel type SS-304, min. 0.56mm diameter.

3.6 Joint sealant for joints of PIR insulation blocks

The joint sealant for joints between insulation blocks shall be compatible with the base insulation material and suitable for the temperature range to which it is exposed. Typical material and technical requirement for PUR/PIR insulation system is specified below.
Industry benchmark for joint sealant is Foster make 95-50. Proposed materials shall be technically equivalent and shall have proven reference for use in a temperature range and shall meet the minimum technical requirement given below:

General Characteristics	Combustibility/fire resistance	Water vapour permeance (max)
Average 82% volume solid as per ASTM D2369	Flame spread ASTM E-84 and fuel contribution negligible when used as 3.2 mm wide sealant between joints of incombustible insulation blocks	Negligible when measured across 3.2 mm wide sealant between joints of impermeable insulation blocks

Copyright EIL – All rights reserved

3.7 Joint sealant for joints of metal cladding

The technical requirement and typical material for joint sealant of metal cladding is specified below.

General Characteristics	Combustibility/ fire resistance	Water vapour permeance (max)
Average 52% volume solid as per ASTM C461	FSI (flame spread index) < 20 as per ASTM E-84, tested on a 6.3mm inorganic reinforced cement board with DFT ~2mm	0.0092 metric perms (as per ASTM F-1249 with DFT 2.8mm)

Industry benchmark for metal joint sealant is Foster make 95-44. Proposed materials shall be technically equivalent and shall have proven reference for use in a temperature range and shall meet the minimum technical requirement given above.

3.8 Vapour barrier multiplex foil of aluminium/ polyester:

The vapor barrier foil shall be applied over the PIR segments. It shall confirm to the following requirements:

Foil composition:	12 µm polyester film
	25 µm aluminum foil
	12 µm polyester film
Tensile strength Yield strength Tear resistance	100 MPa 70 N / cm 400 g / mm
Temperature range	+120°C to -60°C
Volumetric mass	1.93 kg / dm^3
Water vapour permeability in acc. with ASTM E 96, procedure E (37.8°C, 90% RH)	max. 10.10-6 g / (m^2.h.mmHg)

3.9 Vapour barrier multiplex tape of aluminium / polyester

The tape is used to seal the joints in the Vapour barrier multiplex foil of aluminium/ polyester. It shall meet the following requirements:

Foil composition	12 µm polyester film
	25 µm aluminium foil
	12 µm polyester film
Total thickness exclusive of adhesive layer	50 µm
Temperature range	+120°C to -45°C
Volumetric mass	1.93 kg / dm^3
Water vapour permeability in acc. with ASTM E 96, procedure E (37.8°C, 90% R.H.)	Max. 10.10-6 g / (m^2.h.mmHg)
Tensile strength	100 MPa
Yield strength	70 N / cm
Tear resistance	400 g / mm
Bonding strength in accordance with ASTM D 3330	19 N (tape width 25 mm)
Shearing, ASTM D 3654, procedure A	15 kPa
Tensile strength in accordance with ASTM D 3759	81 N (tape width 25 mm)

Copyright EIL – All rights reserved

4.0 APPLICATION

4.1 Surface of the piping shall be blast cleaned to a minimum SA 2.5 with required surface profile. It shall be the Contractor's responsibility to remove loosely adhering scale and dirt before applying paint and insulation.

4.2 After blast cleaned the piping shall be coated with the specified coating system. Quality of paint, application and thickness shall be as per respective painting specification applicable for the project.

4.3 The insulation shall be so designed, stored and applied such that ingress of water is prevented, leaked product must drain off and vapour should escape.

4.4 All hydrostatic tests must be done on the piping before insulating material is applied.

4.5 Any specific requirement specified by the manufacturer of the insulation for storage shall be complied by the contractor.

4.6 The requirement of heat container shall be verified from electrical heat tracing manufacturer. The heat container shall be prepared by applying Al-foil of thickness 0.1-0.15mm all the piping along with tracer prior to installation of Rockwool blankets.

4.7 The Rockwool blankets shall be applied with the joints tightly butted (10mm) with each other and secured with SS band at 200mm centres.

4.8 PIR shall be installed over the Rockwool blanket with joint sealant and finally shall be secured SS wire at 225 mm centres. The adjacent PIR segments shall be installed with their ends staggered with respect to each other by atleast one-half length of the block.

4.9 Multiplex vapour barrier shall be applied over the PIR Insulation for operating temperature up to 175°C.

4.10 The joints of the vapor barrier foil shall be overlapped by 50mm. The joints shall be sealed with a tape confirming to the specification as mentioned in clause no.3.9.

4.11 Vapour barrier shall be protected by cladding it with specified Aluminum cladding/ Stainless cladding (in case of fire safe insulation). All joints between adjacent aluminium sheets shall be staggered and grooved with a minimum overlap of 25mm, and suitably sealed with approved sealer. The longitudinal joints shall have single grooves while the circumferential joints shall have two grooves. SS bands/clips at an interval of 425mm shall be used to secure the cladding in position. Self-tapping screws shall not be used.

4.12 The cladding shall be installed such that moisture at the inside can be drained. At horizontal piping, in the middle between two supports, at the lowest point, drain holes shall be provided, min. 1 hole／6 m, dia. 10 mm and at the lowest point of vertical bends, connections etc.

4.13 Flanges, valves, shall have the same insulation thickness as the piping. The stuffing box shall be excluded from the insulation, except in the case of valves with extended spindle.

4.14 Pipe insulation systems shall start at a distance 'bolt length 30 mm.' from flanges to prevent damage to the insulation when opening that flange.

Copyright EIL – All rights reserved

4.15 All the flages, valves insulation shall be designed with removable type insulation system.

5.0 GAURANTEE & TEST CERTIFICATES

Insulation contractor shall guarantee all insulation works against the defects due to material and workmanship effecting performance for a period of eighteen months from the date of completion of total insulation works and shall repair /replace promptly, without cost, any part or parts of the material that fails within said period.

All the test certificates required as per this document shall also be furnished along with the supply of materials.

6.0 INFORMATION REQUIRED FROM CONTRACTOR

Following information shall be submitted by the contractor:

6.1 Manufacturer datasheet for Insulation and Ancillaries materials

6.2 Compliance datasheet for Insulation and Ancillaries materials

6.3 Detailed application procedure including surface preparation, painting, storage, application of Rockwool blankets, PIR and ancillaries items.

6.4 Quality assurance plan (QAP) and Inspection test Plan (ITP) of insulation materials and ancillary items from the manufacturers shall be submitted by contractor.

6.5 Quality assurance plan (QAP) and Inspection test Plan (ITP) of insulation application.

6.6 Credential of insulation applicator and CV of the insulation Inspector/supervisor.

6.7 Copies of all physical and chemical test certificates (duly endorsed by the inspection agency) for insulation and ancillaries materials.

PIPE CLASS : **A11A**
RATING : 150
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 3 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371
PRESS	20.03	20.03	18.28	16.17	14.06	11.95	9.84	8.78	7.73

SERVICE

MILD SOUR FLARE (NON NACE) - REFER NOTE 34.

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

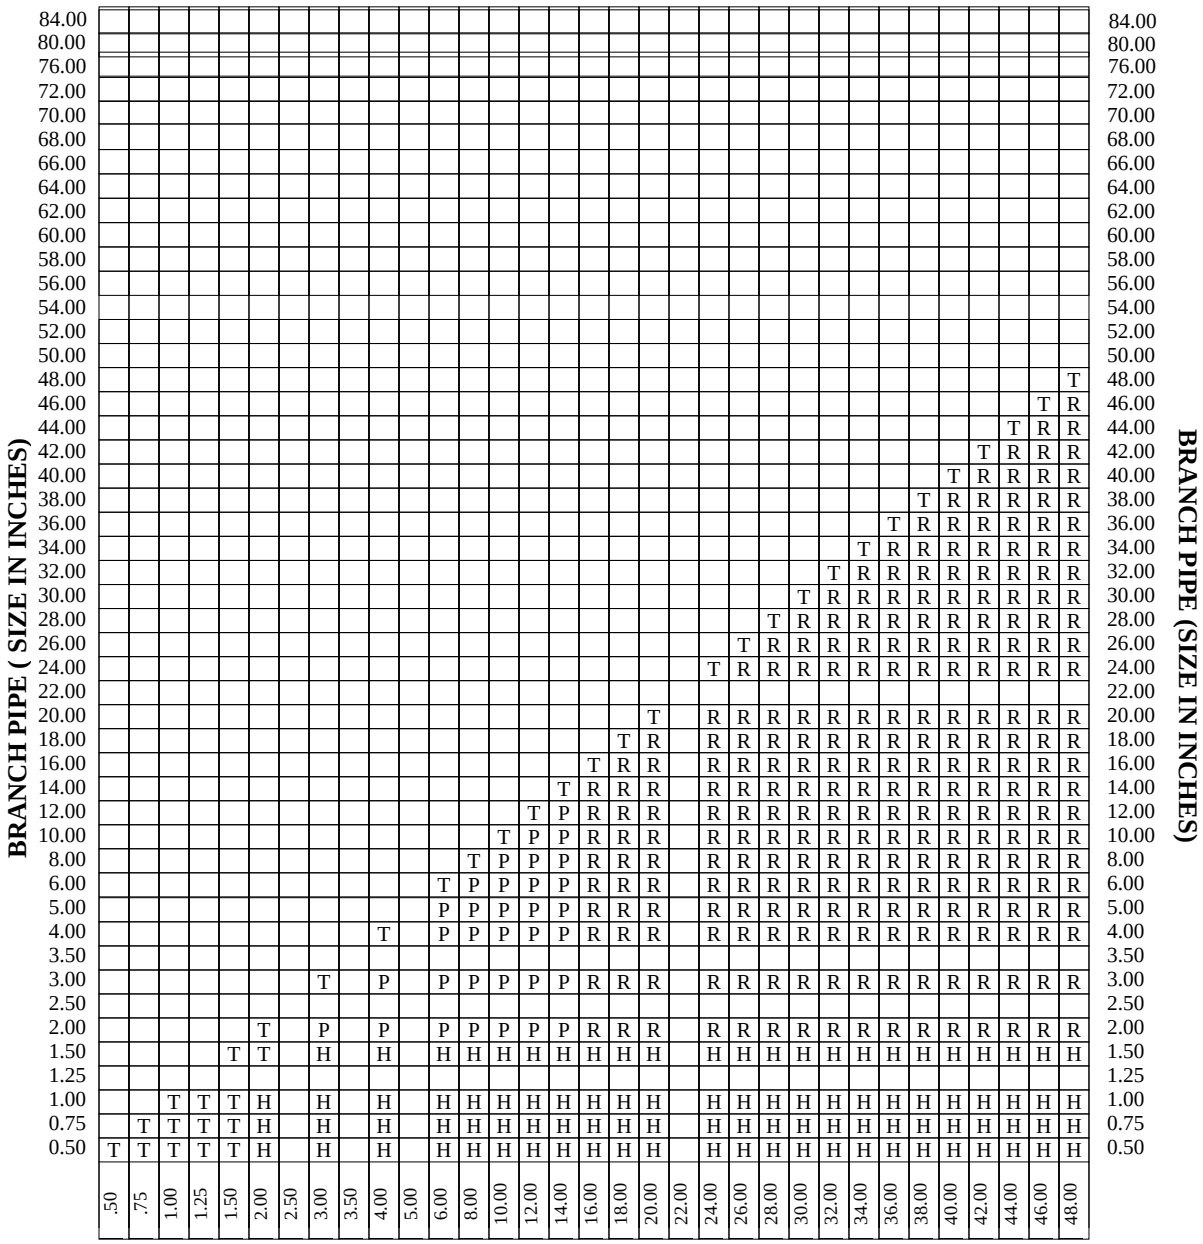
5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

34 MAXIMUM HARDNESS IN WELD JOINTS SHALL BE LIMITED TO 200 BHN.

92 GATE VALVES OF SIZE 26" AND ABOVE SHALL BE IN ACCORDANCE WITH B-16.34 AND FLANGE ENDS SHALL BE IN ACCORDANCE WITH ASME B16.47 SERIES B.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SPECIAL NOTES

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

36 THIS IS A PRESSURE BALANCED PLUG VALVES WHICH SHALL BE USED ONLY IF SPECIFIED IN P&ID.

92 GATE VALVES OF SIZE 26" AND ABOVE SHALL BE IN ACCORDANCE WITH B-16.34 AND FLANGE ENDS SHALL BE IN ACCORDANCE WITH ASME B16.47 SERIES B.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

954 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE ONLY, IF MENTIONED IN PROCESS DESIGN PACKAGE OR P&ID.

961 FOR LICENSOR SPECIFICATION LGP04 IN PPU, FOR SIZE RANGE 0.75" TO 1.5": STR-361 & FOR 2" TO 8"-STR-351 IS TO BE FOLLOWED FOR STRAINERS. SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2 FOR STRAINER SPECIFICATIONS.

962 FOR LICENSOR SPECIFICATIONS LGP06 & LGP07 IN PPU, FOR SIZE RANGE 0.75" TO 1.5": STR-366 & FOR 2" TO 12"-STR-351 IS TO BE FOLLOWED FOR STRAINERS. SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2 FOR STRAINER SPECIFICATIONS.

967 FOR PPU UNIT-THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS. BUT VALVES ARE NOT VACUUM PREPARED OR SUITABLE BY DESIGN FOR CRITICAL VACUUM AND MAY ALLOW LEAKAGE INTO THE SYSTEM.

968 FOR PPU UNIT, LINE CONDITIONS SHALL BE CHECKED FOR VACUUM. IF VACUUM CONDITIONS ARE APPLICABLE, STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1.

969 FOR PPU UNIT, LINE CONDITIONS SHALL BE CHECKED FOR VACUUM. IF VACUUM CONDITIONS ARE APPLICABLE, VALVE TO BE TESTED FOR VACUUM AS PER ASME V, SUBSECTION-A, ARTICLE 10 (HOOD METHOD) APPENDIX IX TO CHECK SUITABILITY FOR VACUUM SERVICE.

992 FOR LICENSOR SPECIFICATIONS 1C2 IN UNIVATION, FOR SIZE RANGE 0.5" TO 0.75": STR-361, FOR 1" TO 1.5"-STR-366 & FOR 2" TO 12" : STR-351 IS TO BE FOLLOWED FOR STRAINERS. REFER PPF-8 FOR STRAINER SPECIFICATIONS.

993 FOR LICENSOR SPECIFICATIONS 1C13 IN UNIVATION, FOR SIZE RANGE 0.5" TO 0.75": STR-361, FOR 1" TO 1.5"-STR-366 & FOR 2" TO 12" : STR-351 IS TO BE FOLLOWED FOR STRAINERS. REFER PPF-8 FOR STRAINER SPECIFICATIONS.

994 FOR LICENSOR SPECIFICATIONS 1C15 IN UNIVATION, FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2" TO 10" : STR-354 (20 MESH) IS TO BE FOLLOWED FOR STRAINERS. REFER PPF-8 FOR STRAINER SPECIFICATIONS.

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

T2; SLURRY CATALYST AND PRECURSOR (BASED ON LICENSOR PMS CLASS - LGP09)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.3.5 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

701 HYDROSTATIC TEST WITH WATER IS NOT PERMITTED. USE MINERAL OIL.

703 NPS 1/2 PIPING IS USED FOR MANY ALKYL LINES SO THE INTERNAL CONTAINED VOLUME IS SMALL. THESE SMALL LINES LACK THE MECHANICAL STRENGTH NECESSARY TO SUPPORT THEMSELVES ACROSS LONG SPANS (AS IN A PIPE RACK) OR TO PROVIDE PROTECTION FROM MECHANICAL DAMAGE FROM IMPACT.

704 (CONTINUED FROM NOTE 703) LONG RUNS IN THE PIPE RACKS AND PIPING THAT ARE POTENTIALLY EXPOSED TO MECHANICAL IMPACT NEED TO BE PROTECTED BY STEEL CHANNEL WITH A STRENGTH EQUAL OR GREATER THAN 4 INCH WIDTH AND WEIGHT PER FOOT OF NO LESS THAN 7.4.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

706 ONLY USE SS BODY VALVE WHEN TEMEPRATURE DESIGN IS -48°C ON T2 SERVICE.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

708 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE JOINT COMPOUND WHERE SEAL WELDING, AND COVER ALL EXPOSED THREADS WITH WELD.

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

713 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & 2" TO 3": STR-351 IS TO BE FOLLOWED.

714 FOR PRESSURE GUAGE ASSEMBLY: FOR ALKYL SERVICE, CHEMICAL ATTACHMENTS ARE TO BE USED. DIAPHRAGM IS TO BE CONSTRUCTED OF 304 STAINLESS STEEL AND WELDED TO THE TOP HOUSING. FLUSH CONNECTION IS TO BE PROVIDED. REFER TO TYPICAL SKETCH NUMBER 26 IN THE SUPPLEMENT TO PROCESS PARTS.

715 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC. WELDED VALVES ARE PREFERRED TO MINIMIZE THE NUMBER OF POTENTIAL LEAK POINTS.

719 CHECK VLV; B16.34; CLASS 150; STD WEIGHT; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; WAFER INSERT TYPE; SEATING: PTFE; SPRING: 316 SS; REQUISITIONER MUST SPECIFY CRACKING PRESSURE;FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG; TO BE USED WITH STANDARD WEIGHT OR THINNER WALL PIPE.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

713 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & 2" TO 3": STR-351 IS TO BE FOLLOWED.

714 FOR PRESSURE GUAGE ASSEMBLY: FOR ALKYL SERVICE, CHEMICAL ATTACHMENTS ARE TO BE USED. DIAPHRAGM IS TO BE CONSTRUCTED OF 304 STAINLESS STEEL AND WELDED TO THE TOP HOUSING. FLUSH CONNECTION IS TO BE PROVIDED. REFER TO TYPICAL SKETCH NUMBER 26 IN THE SUPPLEMENT TO PROCESS PARTS.

715 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC. WELDED VALVES ARE PREFERRED TO MINIMIZE THE NUMBER OF POTENTIAL LEAK POINTS.

716 CHECK VLV; ASME B16.34; CLASS 600; SCH80; BAR / FORGED: STAINLESS STEEL; ASTM A 479 OR A 182 DUAL GRADE F 316 / 316L

717 WAFER INSERT TYPE;PTFE SEAT;SS316 SPRING;REQUISITIONER MUST SPECIFY CRACKING PRESSURE; FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG;CLASS 600 CHECK-ALL WAFER INSERT VALVE MAY BE BOLTED BETWEEN CLASS 150, CLASS 300 OR CLASS 600 FLANGES;TO BE USED WITH SCHEDULE 80 OR THINNER WALL PIPE.

718 VALVE; CHECK; ASME B16.34; CLASS 600; X-STRONG; CAST; CARBON STEEL; ASTM A 216 GRADE WCB;

719 CHECK VLV; B16.34; CLASS 150; STD WEIGHT; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; WAFER INSERT TYPE; SEATING: PTFE; SPRING: 316 SS; REQUISITIONER MUST SPECIFY CRACKING PRESSURE;FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG; TO BE USED WITH STANDARD WEIGHT OR THINNER WALL PIPE.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

722 BALL VLV, B16.34; 1000 PSI; SW; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

723 END ENTRY; 316SS STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; 1 1/2; 3; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL;

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

726 FULL PORT TYPE

727 BALL VLV, ASME B16.34; 1000 PSI; SOCKET WELD END X NPTF; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; REDUCED PORT TYPE; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7, 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

778 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; ASME B16.5;

839 ASME B16.34/16.10 SHORT PATTERN

857 ASME B16.34/16.10 LONG PATTERN

906 LICENSOR PMS LGP01 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

972 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; SWING TYPE; BONNETLESS; API TRIM # 8 / 8A

973 CAST; CS; BOLTING: ASTM A 193 GR B7; 316 STAINLESS STEEL STEM; SEATING: MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; 1 1/2; 3; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL

974 THIS VALVE SHALL BE USED AS PRIMARY PREFERENCE ONLY IN SIZES 2" TO 3". FOR SIZES 0.5" TO 1.5", THIS VALVE SHALL BE USED ONLY IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE/ P&ID.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

990 RECOMMENDED BALL VALVE MANUFACTURES FOR USE IN T2(TEAL) SERVICE SHALL BE AS PER LICENSOR SPECIFICATION LSTD-3 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2).

SERVICE

CHEMICALS; VENTS (BASED ON LICENSOR PMS CLASS - L7C8F)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

40 STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1

96 VALVE TO BE TESTED FOR VACUUM AS PER ASME V, SUBSECTION-A, ARTICLE 10 (HOOD METHOD) APPENDIX IX TO CHECK SUITABILITY FOR VACUUM SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

748 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #10

753 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL.

779 THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS. VALVES ARE NOT VACUUM PREPARED OR SUITABLE BY DESIGN FOR CRITICAL VACUUM AND MAY ALLOW LEAKAGE INTO THE SYSTEM.

783 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.75" TO 1.5" : STR-419 & 2" TO 8": STR-406 IS TO BE FOLLOWED.

784 VALVE; GATE; API 602; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: WELDED; API TRIM #12 / 12A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

788 CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; FULL PORT TYPE; OS&Y; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

789 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; PISTON LIFT CHECK; SPRING LOADED; HORIZONTAL TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #10

790 CAST; FULL PORT TYPE; BOLTING: ASTM A 193 GR B8; STAINLESS STEEL STEM; SEATING: GRAPHITE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: LEVER-UPTO 4" & WEATHERPROOF GEAR-ABOVE 4".

796 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE UPTO 4" AND ALSO EXTENDED HANDLE LENGTH SHALL BE SPECIFIED.

901 LICENSOR PMS L7C8F SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

914 SHORT PATTERN

SERVICE

RESIN GRAVITY FLOW; ROTARY FEEDER VENTS (BASED ON LICENSOR PMS CLASS - L7A1)

NOTES

40 STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

311 USE FOR ONLY THERMOWELL CONNECTION.

862 ALL PIPE & JOINTS, INCLUDING EQUIPMENT CONNECTIONS & ADJACENT GAS ONLY PIPING, SHALL BE ELECTRICALLY BONDED & GROUNDED. FLANGES & COUPLINGS MUST BE ELECTRICALLY BONDED WITH 4 AWG COPPER GROUNDING CONDUCTOR. GROUNDING IS REQUIRED EVERY 200 FT(61 M). WELD A TAB TO PIPING ON EACH SIDE OF FLANGED JOINT.

885 THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS

888 PICKLED & PASSIVATED.

889 GALVANIZED AS PER ASTM A 123.

890 FOR SIZES 10" TO 36", MITER BENDS SHALL BE DESIGNED IN ACCORDANCE WITH PARAGRAPH 304.2.3 AND 304.2.4 OF ASME B31.3 PROCESS PIPING CODE - CURRENT EDITION; BEND RADIUS SHALL BE CONSIDERED IN SPECIFIED DIAMETRS AS MENTIONED IN THE PROCESS DESIGN PACKAGE / P & ID AND SCHEDULE TO BE AS PER DESIGN.

891 SILICONE RUBBER; FOOD GRADE MATERIAL (FDA APPROVED); WHITE; THICKNESS: 1/8 INCH; MAXIMUM SHORE A HARDNESS 60.
SHALL BE USED ONLY FOR PPU UNIT; DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

900 LICENSOR PMS L7A1 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

914 SHORT PATTERN

915 EPDM; WHITE; THICKNESS: 1/8 INCH; MAXIMUM SHORE A HARDNESS 60.
SHALL BE USED ONLY FOR UNIVATION SWING UNIT; DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS.

925 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP FOR PPU UNIT AND IN ACCORDANCE WITH POD-CS-PE OR PP FOR UNIVATION SWING UNIT.

983 FOR DISC BLIND ASSEMBLY DETAILS, REFER LSTD-4 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2) ALONG WITH LICENSOR SPECIFICATION L7A1.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

HYDROCARBON PROCESS, NITROGEN - CYCLIC (BASED ON LICENSOR PMS CLASS - LGP08)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

40 STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1

96 VALVE TO BE TESTED FOR VACUUM AS PER ASME V, SUBSECTION-A, ARTICLE 10 (HOOD METHOD) APPENDIX IX TO CHECK SUITABILITY FOR VACUUM SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

732 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS ENGINEER PER ASME B31.3 PARAGRAPH 301.5.4. (CONT.)

733 (CONT. FROM NOTE NO. 732) IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

755 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM;BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

759 PRESSURE PULSATING SERVICES LIKE RECIPROCATING COMPRESSOR PIPING, PIPE SUPPORT LOCATIONS MUST BE DETERMINED IN CONCERT WITH ANALOG TECHNOLOGIST TO AVOID HARMONICS DUE TO VIBRATION & WITH PIPING STRESS ANALYST TO AVOID EXCESS THERMAL STRESS/STRAIN. HOLD DOWN TYPE SUPPORTS WILL TYPICALLY BE REQUIRED.

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :A24A** Sheet 2 of 6

760 IN ORDER TO ELIMINATE THE OCCURRENCE OF POTENTIAL STRESS RISERS DETRIMENTAL TO PIPING IN CYCLIC SERVICES, EXTRA CARE MUST BE TAKEN DURING FABRICATION. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO WELDING. WHEREVER POSSIBLE, THE INSIDE SURFACE OF BUTT WELDS SHALL BE GROUND FLUSH.

761 ALL INTERNAL WELD SPLATTER AND BURRS SHALL BE REMOVED. THE GTAW WELD PROCESS SHALL BE USED FOR THE ROOT PASS OF ALL BUTT WELDS TO PROMOTE A SMOOTH INNER BORE; ROOT PENETRATION SHALL BE KEPT TO A MINIMUM.

762 ALL HOLES FOR (SET-ON STYLE) "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING, OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE; A STRAIGHT BORE OLET IS REQUIRED FOR THESE APPLICATIONS.

773 FOR PIPING SYSTEMS SUBJECT TO VIBRATION, BRACING OF PERMANENT VENTS AND DRAINS SHOULD BE CONSIDERED

775 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

779 THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS. VALVES ARE NOT VACUUM PREPARED OR SUITABLE BY DESIGN FOR CRITICAL VACUUM AND MAY ALLOW LEAKAGE INTO THE SYSTEM.

781 VALVE; BALL; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; BOLTING: ASTM A 193 GR B7; HARDENED STAINLESS STEEL STEM; SEATING: METAL; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: WEATHERPROOF GEAR

786 8-THREAD SERIES BOLTS ARE REQUIRED WHEN THE FLANGE BOLT DIAMETER IS 1 1/8 INCH OR LARGER PER ASTM A 193; THE PREFERRED INSTALLATION IS WITH THE STEM IN THE HORIZONTAL POSITION.

787 (CONT. FROM NOTE NO. 786) VALVE SHALL BE BI-DIRECTIONAL AND CAPABLE OF DEAD END SERVICE AT FULL-RATED PRESSURE. PRIOR TO INSTALLATION ASSURE THAT FLANGE GASKET FACE INCLUDING THE RETAINER RING AND BOLTING ARE SUITABLE TO PROVIDE SEALING WITH THE SELECTED GASKET.

791 VALVE; GATE; API 602; CLASS 800; BUTT WELDING X NPTF; FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: WELDED; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

826 DOUBLE FLGD; CAST; BOLTING: ASTM A 193 GR B7; GASKET: GRAPHITE OR METAL OR METAL WITH GRAPHITE; SS STEM; SEATING: METAL; SEATING RING: METAL OR METAL/GRAPHITE; CARBON STEEL DISC; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: WEATHERPROOF GEAR; ASME B16.5/B16.47 SERIES A;

845 THIS PIPE SPECIFICTION MAY BE USED FOR DESIGN CONDITIONS DOWN TO -29 DEGREE C (-20 DEGREE F) ONLY AT LOCATIONS WHERE CARBON STEEL IS NOT RESTRICTED TO A MINIMUM TEMPERATURE OF -10 DEGREE C (14 DEGREE F).

847 AT UNAVOIDABLE THREADED EQUIPMENT CONNECTIONS ONLY, SEAL WELD A MINIMUM LENGTH NIPPLE (THREADED ONE END) INTO THE THREADED CONNECTION ON EQUIPMENT. SEAL WELD SHALL COVER ALL EXPOSED THREADS. WELD A FLANGE TO THE OUTBOARD END OF THE NIPPLE. DO NOT USE JOINT COMPOUND WHERE SEAL WELDING IS PERFORMED.

849 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.75" TO 1.5": STR-370 & 0.75" TO 10": STR-351 IS TO BE FOLLOWED.

852 CAST; CARBON STEEL; ASTM A 216 GRADE WCB; FULL PORT TYPE; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM # 8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 10, GEAR LARGER SIZES

853 VALVE; GLOBE; ASME B16.34; CLASS 800; BUTT WELDING, SCHEDULE MATCH TO PIPE; FORGED; CARBON STEEL; ASTM A 105; OS&Y; BONNET: WELDED; RISING STEM; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

854 ASME B16.34/16.10 SHORT PATTERN; CAST; REDUCED PORT TYPE; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; SS STEM; SEATING: METAL; NICKEL PLATED SS316 BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: LEVER UPTO 4" & WEATHERPROOF GEAR ABOVE 4"

907 LICENSOR PMS LGP08 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

CARBON BLACK; HYDROCARBON PROCESS; ORGANIC PEROXIDE (BASED ON LICENSOR PMS CLASS - LGP41)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

730 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH

737 GROOVED METAL SS316L(UNS S31603); FLEXIBLE GRAPHITE; GROOVED FLAT PROFILE METALLIC CORE(4 MM) WITH SOFT GASKET SEALING MATERIAL ON EITHER FACE(0.50 MM EACH). LOOSE LOCATING RING, SS316L(UNS S31603); TO BE USED IF SPECIFIED IN PROCESS DESIGN PACKAGE/ P&ID: DON'T APPLY LUBRICANT OR ANTI-SEIZE COMPOUND

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

769 VALVES CAN BE USED IN APPLICATIONS EITHER WITH CHLORIDE STRESS CRACKING CONSIDERATIONS OR WITHOUT CHLORIDE STRESS CRACKING CONSIDERATIONS.

800 REQUISITIONER MUST SPECIFY CRACKING PRESSURE FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG;

804 FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

830 ASME B16.34/16.10 SHORT PATTERN; CAST; REDUCED PORT TYPE; END ENTRY; SS316 STEM; SEATING: MOLECULARLY ENHANCED PTFE; SS316 BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL

837 8-THREAD SERIES BOLTS ARE REQUIRED WHEN THE FLANGE BOLT DIAMETER IS 1 1/8 INCH OR LARGER PER ASTM A 193; THE PREFERRED INSTALLATION IS WITH THE STEM IN THE HORIZONTAL POSITION.

SERVICE

DENSE/DILUTE PHASE CONVEYING; ADDITIVE CONVEYING (BASED ON LICENSOR PMS CLASS - 7C50)

NOTES

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

324 KNIFE GATE VALVE; SPECIAL BOLTS FOR CONNECTION WITH PIPING SHOULD BE SUPPLIED BY VALVE MANUFACTURER.

344 ALL PIPE AND JOINTS, INCLUDING ADJACENT SECTIONS OF GAS ONLY PIPING, TO BE BONDED AND GROUNDED. BONDING IS NOT REQUIRED FOR CARBON BLACK OR CALCIUM CARBONATE SERVICES.

350 VICTAULIC GR. L (COUPLING GASKET) & MNF STD. BOLTING SHOULD BE FURNISHED WITH COUPLING.

351 ELBOWS ARE LIMITED TO USE IN VENT LINES AND AT THE TERMINATION OF CONVEYING LINES.

352 UNIBODY DESIGN; DO NOT SEAL WELD.

353 IN CASE TEMPERATURE IS OVER 82 DEG C, USE MIS/1.

354 DO NOT USE "IN LINE" FOR CONVEYING.

359 THIRTY (30) PIPE DIAMETERS SHOULDBE PROVIDED BET. SOLIDS INTRODUCTION POINT AND THE FIRST BEND. 20 PIPE DIA. (MIN.) SHOULD BE MAINTAINED BET. BENDS. (CONTD.)

360 ONLY VERTICAL & HORIZONTAL PIPE SHOULD BE USED; AVOID DIAGONAL SECTIONS. IF A DIAGONAL SECTION IS REQ., IT SHOULD NOT EXCEED 10 FEET IN LENGTH AND SHOULD NOT BE ANY STEEPER THAN 30 DEG. FROM HORIZONTAL.(CONTD.)

361 IDEALLY, REDUCERS INSTALLED IN THE PIPE SHOULD BE LOCATED IN A VERTICAL SECTION OF LINE AND PLACED AT LEAST 10 PIPE DIAMETERS FROM ANY BEND.

362 PRESURE TEMPERATURE LIMITATIONS OF THIS PIPING CLASS IS AS FOLLOWS:- FOR SIZE 0.5" TO 3": AT -29 DEG.C TO 177 DEG.C , PRESSURE 16 INHG VACCUUM TO 10.5 KG/CM2.

363 PRESURE TEMPERATURE LIMITATIONS OF THIS PIPING CLASS IS AS FOLLOWS:- FOR SIZE 4" TO 14": AT -29 DEG.C TO 177 DEG.C , PRESSURE 16 INHG VACCUUM TO 8.8 KG/CM2.

378 NOTES SPECIFIED IN LICENSOR SPECIFICATION 7C50 TO BE REFFERED FOR THIS CLASS.

414 VICTAULIC COUPLING IS TO BE USED. VICTAULIC GR.L (COUPLING GASKET) & MFR STD. BOLTING SHOULD BE FURNISHED WITH COUPLING. FOR TYE OF VICTAULIC COUPLING USED IN VARIOUS SIZES, REFER NOTE NO. 415

415 VICTAULIC STYLE COUPLING 77 FOR SIZE 1", STYLE 75 FOR 1.5"-8", STYLE 77 FOR 10"-14". MATERIAL SHALL BE A536 GR. 65-45-12 REF. TO MNF STD.

528 DUAL STAMP SHALL BE REQUIRED FOR ALL MATERIALS WHERE 2 GRADES OF MATERIAL ARE REQUIRED.

557 SPECIAL INTERNAL SURFACE PREPARATION (SHOT BLASTING OF PNEUMATIC COVEYING PIPING) IS ONLY REQUIRED FOR DILUTE PHASE PELLET (NOT GRANULAR) CONVEYING.

628 VALVES, GASKETS & COUPLINGS SHALL BE IN ACCORDANCE WITH THE RESPECTIVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 7C50.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

998 FOR PREFERRED AND MINIMUM ACCEPTABLE BEND RADIUS, LICENSOR SPECIFICATION 7C50 SHALL BE REFERRED.

SERVICE

RESIN CONVEYING / DILUTE PHASE / PELLETS (BASED ON LICENSOR PMS CLASS - LC52)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

351 ELBOWS ARE LIMITED TO USE IN VENT LINES AND AT THE TERMINATION OF CONVEYING LINES.

359 THIRTY (30) PIPE DIAMETERS SHOULDBE PROVIDED BET. SOLIDS INTRODUCTION POINT AND THE FIRST BEND. 20 PIPE DIA. (MIN.) SHOULD BE MAINTAINED BET. BENDS. (CONTD.)

360 ONLY VERTICAL & HORIZONTAL PIPE SHOULD BE USED; AVOID DIAGONAL SECTIONS. IF A DIAGONAL SECTION IS REQ., IT SHOULD NOT EXCEED 10 FEET IN LENGTH AND SHOULD NOT BE ANY STEEPER THAN 30 DEG. FROM HORIZONTAL.(CONTD.)

361 IDEALLY, REDUCERS INSTALLED IN THE PIPE SHOULD BE LOCATED IN A VERTICAL SECTION OF LINE AND PLACED AT LEAST 10 PIPE DIAMETERS FROM ANY BEND.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

723 END ENTRY; 316SS STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; 1 1/2; 3; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL;

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

752 THE BEND RADIUS MINIMUM TANGENT AND TOLERANCE SPECIFICATIONS SHALL BE IN ACCORDANCE WITH ENGINEERING DETAIL LSTD-2 'PNEUMATIC CONVEYING PIPE BEND DIMENSIONAL TOLERANCES' INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS VOLUME 2, SECTION 1X-2.

839 ASME B16.34/16.10 SHORT PATTERN

861 ALL FABRICATED PIPE REQUIRES INTERNAL TREATMENT. PIPE SHALL BE SHOT PEENED IN ACCORDANCE WITH PROJECT INSTRUCTIONS LSTD-1 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.

862 ALL PIPE & JOINTS, INCLUDING EQUIPMENT CONNECTIONS & ADJACENT GAS ONLY PIPING, SHALL BE ELECTRICALLY BONDED & GROUNDED. FLANGES & COUPLINGS MUST BE ELECTRICALLY BONDED WITH 4 AWG COPPER GROUNDING CONDUCTOR. GROUNDING IS REQUIRED EVERY 200 FT(61 M). WELD A TAB TO PIPING ON EACH SIDE OF FLANGED JOINT.

863 CARE SHALL BE EXERCISED DURING WELDING TO PROVIDE AS SMOOTH AS INTERIOR AS POSSIBLE. THE USE OF CONSUMABLE INSERTS IS RECOMMENDED.

868 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS.
EPDM; FOOD GRADE MATERIAL (FDA APPROVED); WHITE; THICKNESS: 1/8 INCH; MAXIMUM SHORE A HARDNESS 60; INSIDE DIAMETER (ID) OF GASKET TO MATCH STUB END ID.

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :A28K** Sheet 2 of 5

869 BEND RADIUS SHALL BE CONSIDERED IN SPECIFIED DIAMETERS AS PER P&ID AND PROCESS DESIGN PACKAGE, WHERE SCHEDULE 40S PIPE IS BUTT WELDED TO THINNER WALL PIPE OR FITTINGS,TAPER BORE THE ENDS OF THE SCHEDULE 40S TO MATCH THE ADJOINING THINNER WALL. THE APEX ANGLE OF THE TAPER BORE MUST NOT EXCEED 60 DEG.

871 ASME B16.34; CLASS 600; THREADED (NPTF); CAST; REDUCED PORT TYPE; 316 STAINLESS STEEL STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER; THREADED END PIECES SHALL BE SEAL WELDED TO BODY.

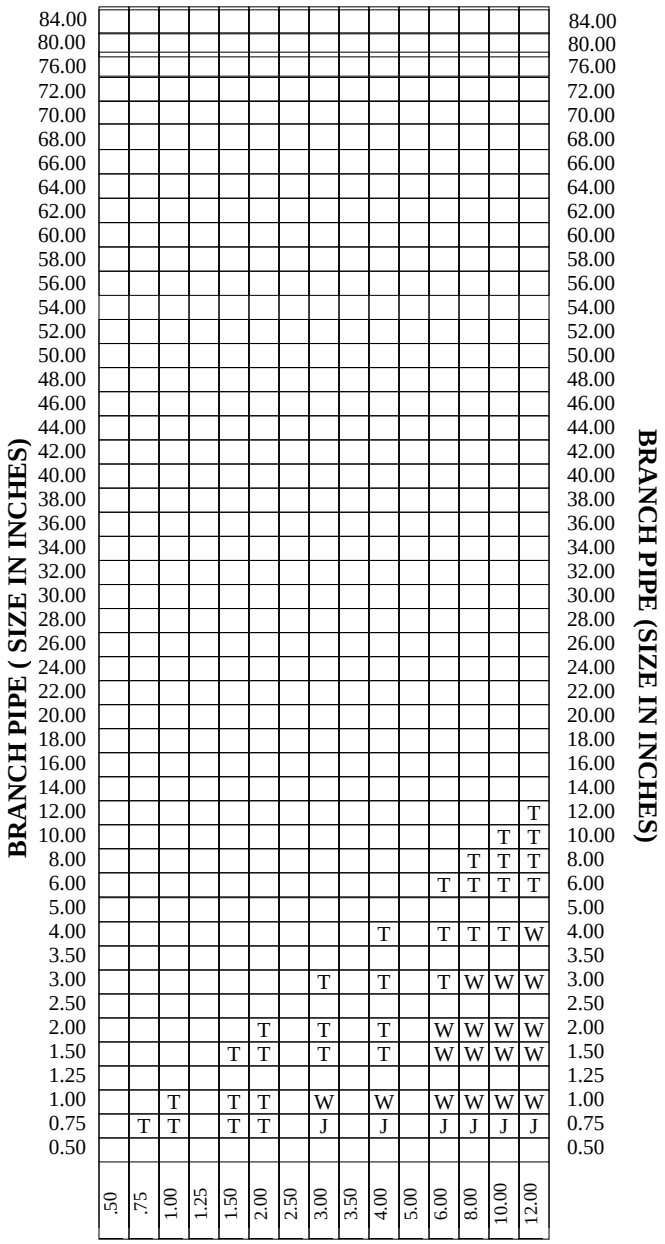
876 KNIFE GATE; RAISED FACE; TAPPED LUG; CAST; STAINLESS STEEL; WAFER STYLE; BOLTING: ASTM A 193 GR B7 W/ ASTM A 194 GR 2H FINISHED NUTS; GASKET: PTFE BODY SEAL; SEATING: PTFE; CHROME PLATED DISC; OPERATOR: HANDWHEEL; BOLT CIRCLE PER ASME B16.5 CLASS 150 DIMENSIONS; VALVE IS BI-DIRECTIONAL

888 PICKLED & PASSIVATED.

889 GALVANIZED AS PER ASTM A 123.

905 LICENSOR PMS LC52 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

913 LONG PATTERN



988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

RESIN CONVEYING GRAVITY FLOW (BASED ON LICENSOR PMS CLASS - LGP40)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

40 STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1

96 VALVE TO BE TESTED FOR VACUUM AS PER ASME V, SUBSECTION-A, ARTICLE 10 (HOOD METHOD) APPENDIX IX TO CHECK SUITABILITY FOR VACUUM SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

359 THIRTY (30) PIPE DIAMETERS SHOULDBE PROVIDED BET. SOLIDS INTRODUCTION POINT AND THE FIRST BEND. 20 PIPE DIA. (MIN.) SHOULD BE MAINTAINED BET. BENDS. (CONTD.)

360 ONLY VERTICAL & HORIZONTAL PIPE SHOULD BE USED; AVOID DIAGONAL SECTIONS. IF A DIAGONAL SECTION IS REQ., IT SHOULD NOT EXCEED 10 FEET IN LENGTH AND SHOULD NOT BE ANY STEEPER THAN 30 DEG. FROM HORIZONTAL.(CONTD.)

361 IDEALLY, REDUCERS INSTALLED IN THE PIPE SHOULD BE LOCATED IN A VERTICAL SECTION OF LINE AND PLACED AT LEAST 10 PIPE DIAMETERS FROM ANY BEND.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

724 VALVE FIRE TESTED TO API 607

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

752 THE BEND RADIUS MINIMUM TANGENT AND TOLERANCE SPECIFICATIONS SHALL BE IN ACCORDANCE WITH ENGINEERING DETAIL LSTD-2 'PNEUMATIC CONVEYING PIPE BEND DIMENSIONAL TOLERANCES' INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS VOLUME 2, SECTION 1X-2.

779 THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS. VALVES ARE NOT VACUUM PREPARED OR SUITABLE BY DESIGN FOR CRITICAL VACUUM AND MAY ALLOW LEAKAGE INTO THE SYSTEM.

862 ALL PIPE & JOINTS, INCLUDING EQUIPMENT CONNECTIONS & ADJACENT GAS ONLY PIPING, SHALL BE ELECTRICALLY BONDED & GROUNDED. FLANGES & COUPLINGS MUST BE ELECTRICALLY BONDED WITH 4 AWG COPPER GROUNDING CONDUCTOR. GROUNDING IS REQUIRED EVERY 200 FT(61 M). WELD A TAB TO PIPING ON EACH SIDE OF FLANGED JOINT.

868 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS.
EPDM; FOOD GRADE MATERIAL (FDA APPROVED); WHITE; THICKNESS: 1/8 INCH; MAXIMUM SHORE A HARDNESS 60; INSIDE DIAMETER (ID) OF GASKET TO MATCH STUB END ID.

869 BEND RADIUS SHALL BE CONSIDERED IN SPECIFIED DIAMETERS AS PER P&ID AND PROCESS DESIGN PACKAGE, WHERE SCHEDULE 40S PIPE IS BUTT WELDED TO THINNER WALL PIPE OR FITTINGS,TAPER BORE THE ENDS OF THE SCHEDULE 40S TO MATCH THE ADJOINING THINNER WALL. THE APEX ANGLE OF THE TAPER BORE MUST NOT

Location BINA, MADHYA PRADESH	**Pipe Class :A28M** Sheet 2 of 6

EXCEED 60 DEG.

888 PICKLED & PASSIVATED.

899 ASME B16.34/16.10 LONG PATTERN; FULL PORT TYPE; BOLTING: ASTM A 193 GR B8; SS316 STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL.

914 SHORT PATTERN

916 LICENSOR PMS LGP40 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

917 TAPER BORING OF THE TANGENT ENDS OF MITER BENDS WILL BE NECESSARY IF SCHEDULE 40S OR THICKER, SEE NOTE-869 FOR TAPER BORING CRITERIA.

918 ASME B16.34; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; FULL PORT TYPE; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED PTFE OR METAL OR PTFE WITH METAL; API TRIM #10; DISC: SOLID WEDGE; PACKING: PTFE; PACKING TYPE: CHEVRON; OPERATOR: HANDWHEEL.

919 FOR USAGE OF VALVES IN AREAS SUBJECTED TO CHLORIDE STRESS CRACKING CONSIDERATIONS, REQUIREMENTS SPECIFIED IN THE LICENSOR SPECIFICATION LGP40 SHALL BE CONSIDERED.

920 KNIFE GATE; TAPPED LUG OR DOUBLE FLG; CAST; WAFER STYLE; BONNETLESS; BOLTING: ASTM A 193 GR B8; SEATING: METAL; SS316 TRIM; ROUND PORT; PACKING: PTFE; BOLTED PACKING GLAND; OPERATOR: HANDWHEEL; BOLT CIRCLE PER ASME B16.5 CLASS 150 DIMENSIONS; VALVE IS UNIDIRECTIONAL.

921 USE MANUFACTURER RECOMMENDED BOLT LENGTHS IN THE CHEST AREA. THE PHRASE "TAPPED LUG OR DOUBLE FLANGE" REMAINS IN THE DESCRIPTION TO COVER THE INSTALL BASE AND VALVE RECONDITIONING.

922 VALVE; BUTTERFLY; TAPPED LUG; DUCTILE IRON; ASTM A 395; STAINLESS STEEL STEM; SEATING: EPDM; STAINLESS STEEL DISC; OPERATOR: THROTTLING LOCKING LEVER.

923 VALVE; BUTTERFLY; TAPPED LUG; DUCTILE IRON; ASTM A 395; STAINLESS STEEL STEM; SEATING: EPDM; STAINLESS STEEL DISC; OPERATOR: WEATHERPROOF GEAR.
NOTE: 8-THREAD SERIES BOLTS ARE REQUIRED WHEN THE FLANGE BOLT DIAMETER IS 1 1/8 INCH OR LARGER PER ASTM A 193.

924 BUTT WELDING X NPTF; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: WELDED; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; API TRIM #10; DISC: SOLID WEDGE; PACKING: PTFE; PACKING TYPE: CHEVRON; OPERATOR: HANDWHEEL.

958 TAPPED LUG

984 FOR DISC BLIND ASSEMBLY DETAILS, REFER LSTD-4 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2) ALONG WITH LICENSOR SPECIFICATION LGP40.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

NOTES

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

301 IF BEND TUBING IS USED FOR ELBOWS, ALL BENDS TO BE MADE WITH STANDARD TUBING BENDERS USING GOOD WORKMANSHIP. FLATTENED, KINKED OR WRINKLED BENDS ARE NOT ACCEPTABLE.

303 FITTINGS (TEES, ELBOWS, ADAPTORS, COUPLINGS) SHALL BE FLARELESS FERRULE TYPE TUBE FITTINGS (SWAGELOCK OR APPROVED EQUAL). FOR CONNECTIONS TO PIPE (NPT) AT PROCESS, USE STANDARD STAINLESS STEEL ADAPTERS. FITTINGS MATRIAL SHALL BE TYPE 316 SS DMN STD REF TO MNF STD.

306 USE NUPRO C OR CP SERIES VALVES.

365 USE WHITEY 3 PIECE BODY VALVE

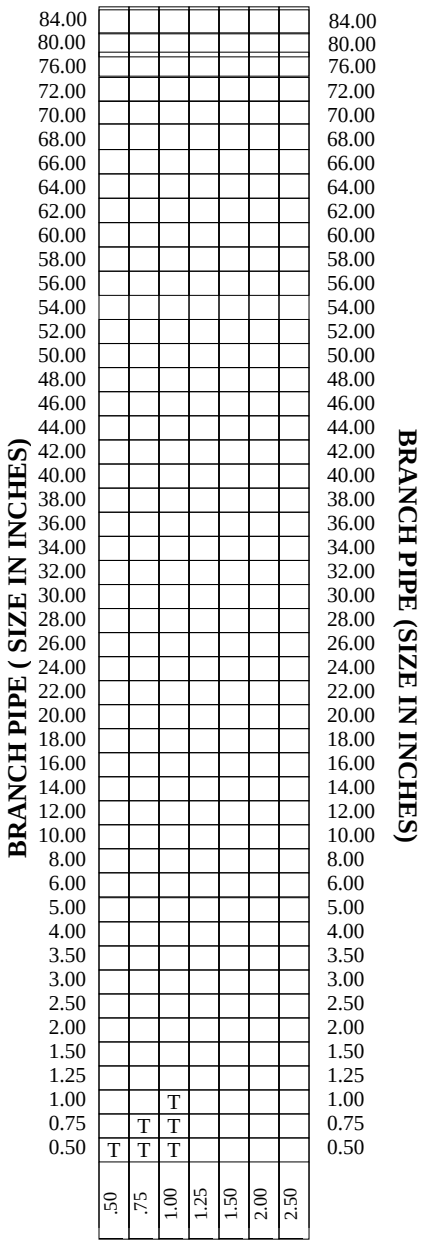
366 USE WHITEY "33" SERIES LOW TEMPERATURE MODEL OR EQUAL.

368 PRESSURE TEMPEATURE LIMITATION OF THIS PIPING CLASSIFICATIONSHALL BEAS FOLLOWS:- FOR SIZE 1/8"-3/8": AT TEMP. -45 DEGC- PRESS 175.7 KG/CM2, AT TEMP. 38 DEG C- PRESS 175.7 KG/CM2, AT TEMP 121 DEG.C- PRESS 126.5 KG/CM2.

370 PRESSURE TEMPEATURE LIMITATION OF THIS PIPING CLASSIFICATION SHALL BE AS FOLLOWS:- FOR SIZE 1/2"-1": AT TEMP. -45 DEGC- PRESS 70.30 KG/CM2, AT TEMP. 38 DEG C- PRESS 70.30 KG/CM2, AT TEMP 121 DEG.C- PRESS 70.30 KG/CM2

625 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 6G71

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW



997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

ADDITIVES (BASED ON LICENSOR PMS CLASS - 6G73)

NOTES

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

301 IF BEND TUBING IS USED FOR ELBOWS, ALL BENDS TO BE MADE WITH STANDARD TUBING BENDERS USING GOOD WORKMANSHIP. FLATTENED, KINKED OR WRINKLED BENDS ARE NOT ACCEPTABLE.

302 ONLY DEPEND UPON P&ID NOTE.

303 FITTINGS (TEES, ELBOWS, ADAPTORS, COUPLINGS) SHALL BE FLARELESS FERRULE TYPE TUBE FITTINGS (SWAGELOCK OR APPROVED EQUAL). FOR CONNECTIONS TO PIPE (NPT) AT PROCESS, USE STANDARD STAINLESS STEEL ADAPTERS. FITTINGS MATRIAL SHALL BE TYPE 316 SS DMN STD REF TO MNF STD.

304 USE "WHITEY UNION BONNET" VALVES "NB SERIES" OR EQUAL.

305 USE ONLY WHERE STRAIGHT-THROUGH BALL VALVE IS REQUIRED. PREFFERED SHUTOFF VALVE IS GL5013.

306 USE NUPRO C OR CP SERIES VALVES.

393 PRESSURE TEMPERATURE LIMITATION OF THIS PIPING CLASSIFICATION SHALL BE AS FOLLOWS:- FOR SIZE 1/8"-1/2": AT TEMP -29 DEG.C- PRESS. 196.8 KG/CM2, AT TEMP 107 DEG C-PRESS. 196.8 KG/CM2

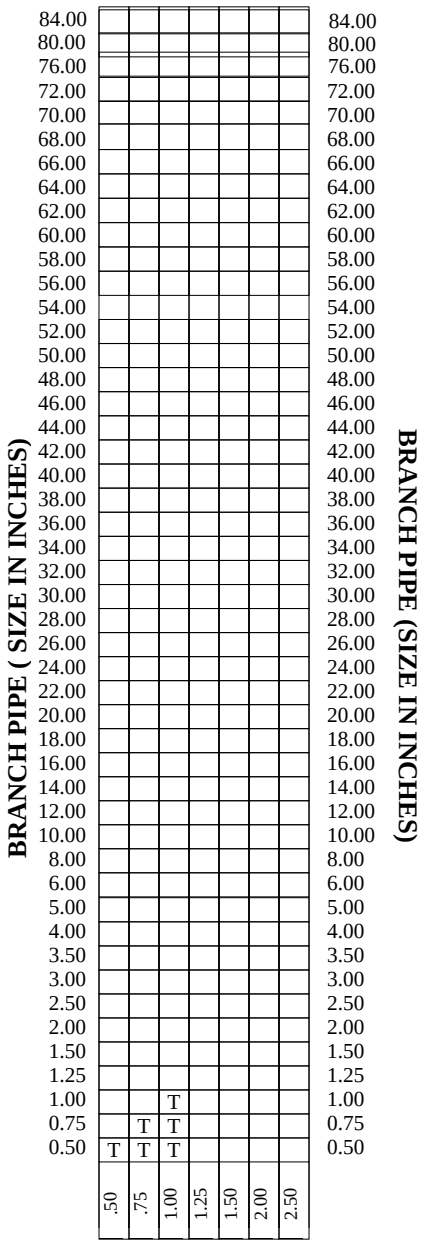
394 PRESSURE TEMPERATURE LIMITATION OF THIS PIPING CLASSIFICATION SHALL BE AS FOLLOWS:- FOR SIZE 5/8"-3/4": AT TEMP -29 DEG.C- PRESS. 105.4 KG/CM2, AT TEMP 107 DEG C-PRESS. 105.4 KG/CM2

398 ALL HYDROGEN SERVICE WELDS SHALL BE FULL PENETRATION WITH SMOOTH WELD PROFILE.

399 ALL MATERIALS SHALL BE FURNISHED IN THE SOLUTION HEAT TREATED CONDITION.

626 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 6G73

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW



997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :A40A** Sheet 1 of 6

PIPE CLASS : **A40A**
RATING : 150
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 3 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-45	38	93	149	204	260
PRESS	18.63	18.63	17.92	16.17	14.06	11.94

SERVICE

NON CORROSIVE PROCESS - FLAMMABLE / NON FLAMMABLE, NON LETHAL - BELOW -29 DEG C AND UPTO -45 DEG C. HYDROCARBONS,PROPYLENE, XYLENE, METHANOL, NH3, GAS FLARE, ETC., DRY FLARE, LIQUID DRAIN, PROPYLENE REFRIGERANT, ETHYLENE REFRIGERANT

NOTES

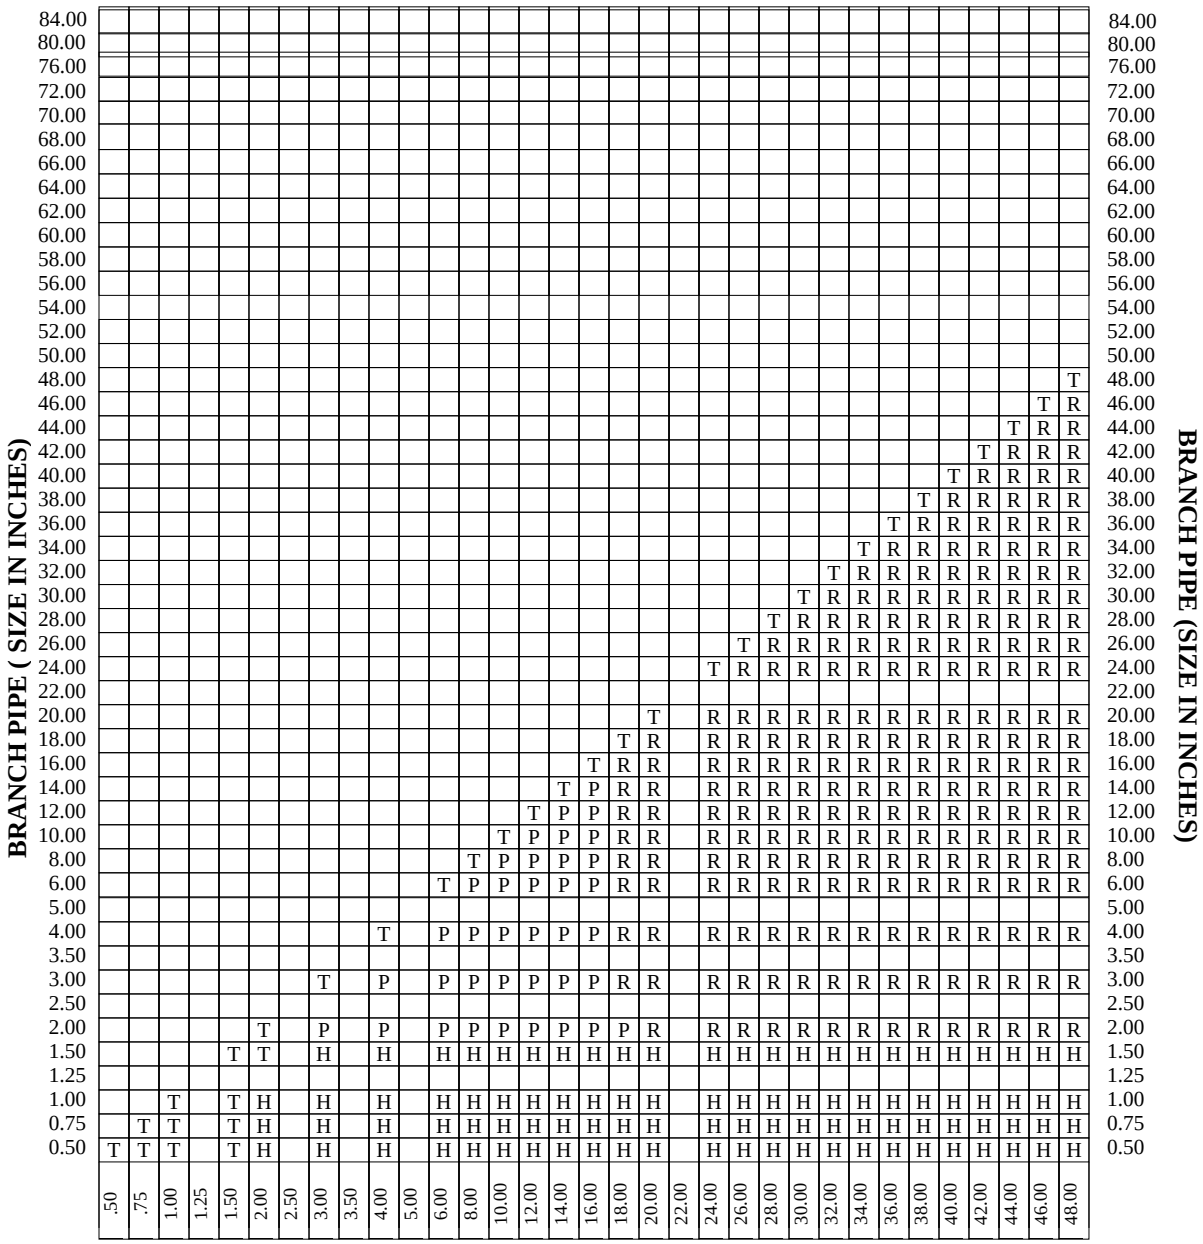
5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SPECIAL NOTES

SERVICE

HYDROCARBONS - FLARE (BASED ON LICENSOR PMS CLASS - LC62)

NOTES

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

40 STIFFENER RINGS, IF NEEDED, SHALL BE PROVIDED AS PER ASME SEC. VIII, DIV. 1

96 VALVE TO BE TESTED FOR VACUUM AS PER ASME V, SUBSECTION-A, ARTICLE 10 (HOOD METHOD) APPENDIX IX TO CHECK SUITABILITY FOR VACUUM SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

748 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #10

779 THIS SPECIFICATION IS RATED FOR NON-CRITICAL VACUUM CONDITIONS. VALVES ARE NOT VACUUM PREPARED OR SUITABLE BY DESIGN FOR CRITICAL VACUUM AND MAY ALLOW LEAKAGE INTO THE SYSTEM.

789 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; PISTON LIFT CHECK; SPRING LOADED; HORIZONTAL TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #10

816 BOLT LUBRICANT; PASTE BOLT LUBRICANT; NICKEL BASED, ANTISEIZE COMPOUND.

817 FORGED; OS&Y; RISING STEM; REDUCED PORT TYPE; EXTENDED BONNET, BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

818 CAST; FULL PORT TYPE; EXTENDED BONNET, BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 10, GEAR LARGER SIZES

820 FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; EXTENDED BONNET, BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

821 CAST; OS&Y; RISING STEM; EXTENDED BONNET, BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 6, GEAR LARGER SIZES

822 SOCKET WELD END X NPTF; FORGED; OS&Y; RISING STEM; REDUCED PORT TYPE; EXTENDED BONNET, BOLTED; BOLTING:ALLOY 20(UNS N08020)W/FINISHED NUTS; GASKET:CONFINED GRAPHITE/METAL/METAL WITH GRAPHITE;

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :A43A** Sheet 1 of 5

PIPE CLASS : **A43A**
RATING : 150
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-45	38	93	149	204
PRESS	18.63	18.63	17.92	16.17	14.06

SERVICE

DILUTED T.E.A. CATALYST, LC 2253 CATALYST (RISK OF SLURRY) AT LOW TEMPERATURE (OR RISK OF LOW TEMP) - 45°C MINIMUM , LIQUID BUTENE

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

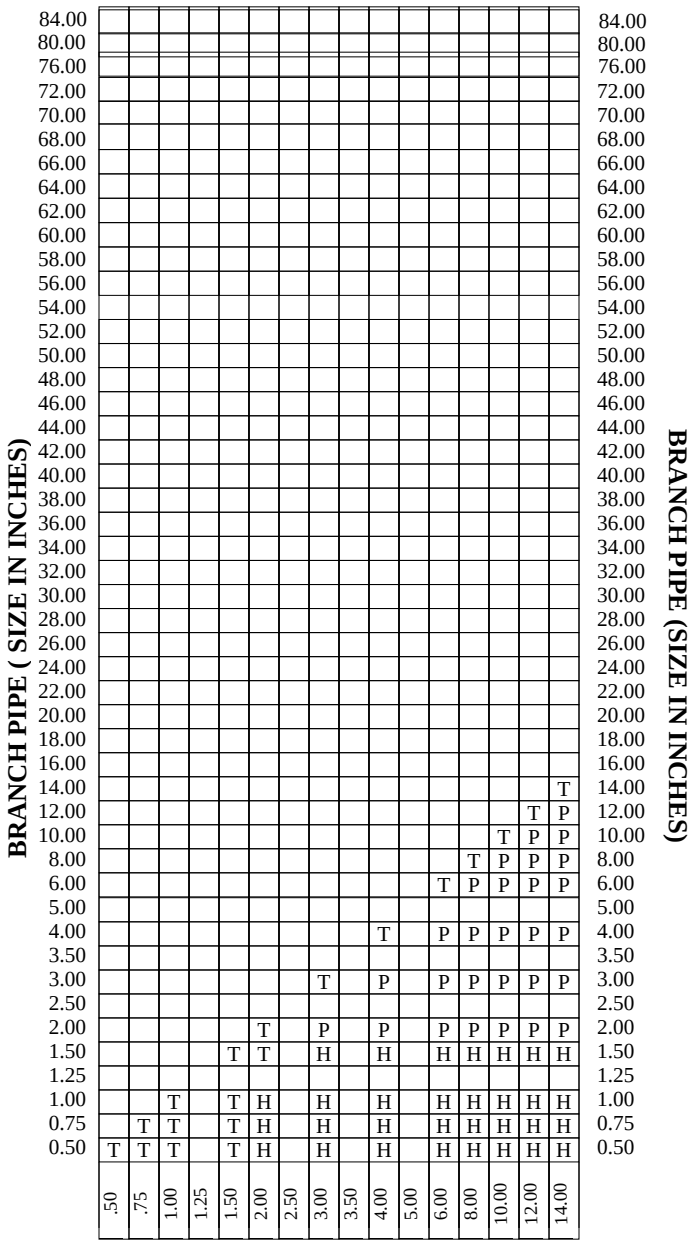
12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION).

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

180 100% RADIOGRAPHY SHALL BE DONE FOR ALL BUTT WELD JOINTS.

601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.

602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.



603 VALVES SHALL HAVE FLANGED ENDS IN ALL SIZES.

SPECIAL NOTES

ITEM	SIZE	DESCRIPTION	A.CODE
MAINTAINENCE JOINTS	ALL	FLANGED, TO BE KEPT MINIMUM	
PIPE JOINTS	1.5" & BELOW	SW COUPLING	
	2.0" & ABOVE	BUTTWELDED	
DRAINS	ON LINES <= 1.5"	REFER EILSTD 7-44-0350, DF3	
	ON LINES >= 2.0"	AS PER P&ID. OR 0.75". REFER EIL STD. 7-44-0351, D4	
VENTS	ON LINES <= 1.5"	REFER EIL STD. 7-44-0350, VF3	
	ON LINES >= 2.0"	AS PER P&ID. OR 0.75". REFER EIL STD 7-44-0351, V4	
TEMP.CONN	1.5"	FLANGED. REFER EIL STD 7-44-0353	
PRESS.CONN	0.75"	FLANGED VALVE TO SPEC AS PER EIL STD 7-44-354

SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-45	38	93	149	204
PRESS	18.63	18.63	17.92	16.17	14.06

SERVICE

HC SLURRY (POLYMER + CATALYST) AT LOW TEMPERATURE (OR RISK OF LOW TEMP) - 45°C MINIMUM, PUMPAROUND, EFFLUENT, EVAPORATION LINES

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION).

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.

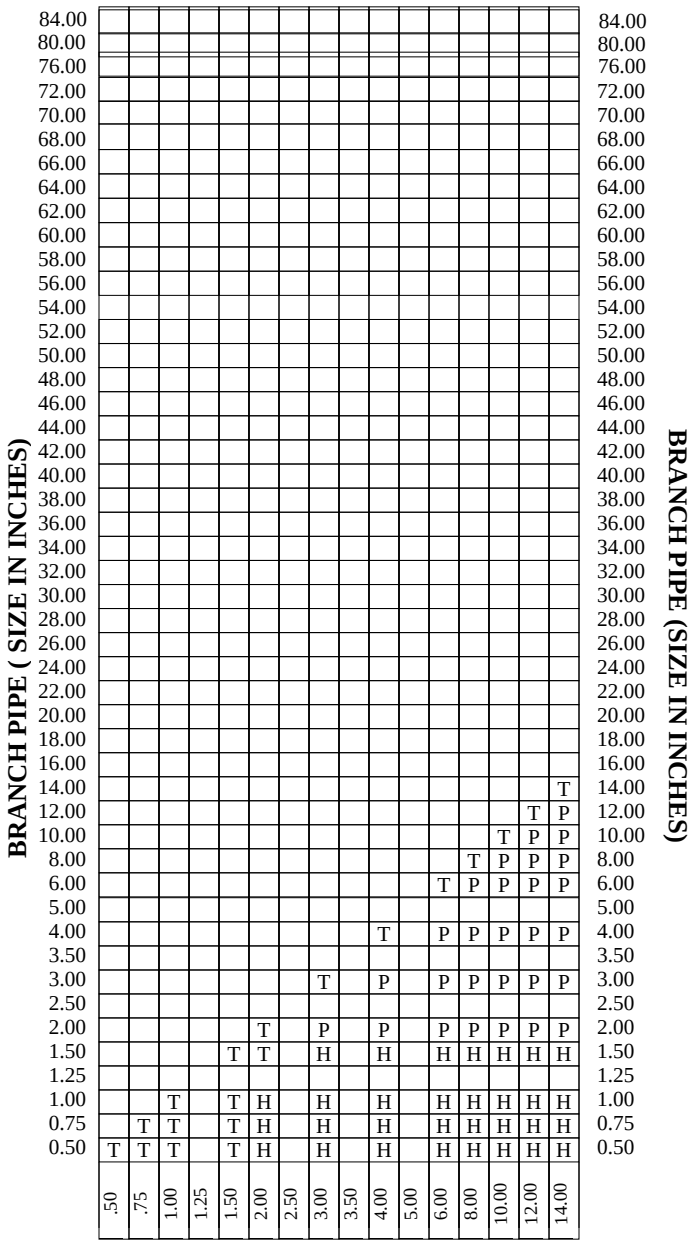
602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.

603 VALVES SHALL HAVE FLANGED ENDS IN ALL SIZES.

604 STRAIGHT PIPE RUN SHALL HAVE BREAK UP FLANGES AT EACH 3 METER.

605 PIPE BENDS SHALL HAVE FLANGED ENDS.

606 FOR VALVES USED IN POLYMER SERVICE, METAL SEAT SHALL BE USED (NO TEFLON SEAT).



608 THE SPECIAL FLANGES ARE PAD FLANGES TO EIL STD 7-12-0014.

PRESS	20.03	20.03	18.28	16.17	14.06	11.95

SERVICE

AMINE, RICH AMINE WITH FLASHING H2S

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

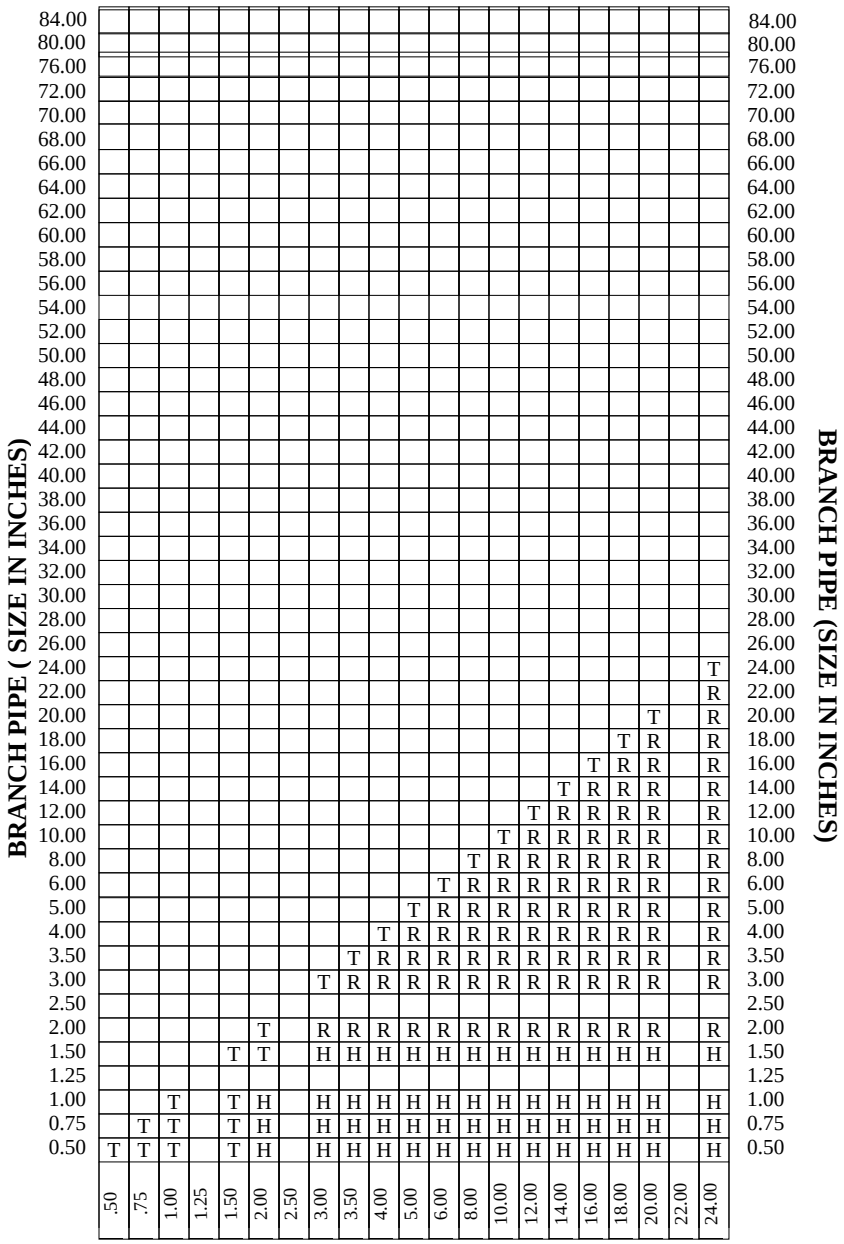
32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCHEDULE. REFER GENERAL NOTES TO PMS.

34 MAXIMUM HARDNESS IN WELD JOINTS SHALL BE LIMITED TO 200 BHN.

35 ALL TYPES OF WELDS INCLUDING GIRTH WELDS SHALL BE WET FLOURESCENT MP TESTED.

42 ALL WELDS SHALL BE STRESS RELIEVED.

93 NACE REQUIREMENT OF MR0103 SHALL BE MET.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SERVICE

ALKYLS,ADDITIVES,CHEMICALS,CHLORINATED CHEMICALS (THIS SPECIFICATION IS INTENDED FOR NEAT ALKYLS AND OTHER NEAT PYROPHORIC MATERIALS ONLY FOR 1/2 INCH AND 3/4 INCH SIZES.)
(BASED ON LICENSOR PMS CLASS - 1C17)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

302 ONLY DEPEND UPON P&ID NOTE.

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

341 PIPING SHALL PASS A SENSITIVE LEAK TEST IN ACCORDANCE WITH PPM-570 PRIOR TO INITIAL OPERATION.

345 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE THREAD DOPE WHERE SEAL WELDING AND COVER ALL EXPOSED THREADS WITH WELD.

346 SAFEGUARD AND SUPPORT NPS 0.5" PIPING IN STRUCTURAL CHANNEL MATERIAL.

612 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1C17

635 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. LONG LINES SHOULD USE SW COUPLINGS.

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

638 REFER LICENSOR SPECIFICATION FOR STR-351 FOR STRAINERS.

665 GRAFOIL FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

977 TO BE USED IN DC, TT AND OTHER CHLORINATED HYDROCARBON SERVICE

978 NOT TO BE USED FOR DC, TT OR OTHER CHLORINATED HYDROCARBON SERVICE

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

PIPE CLASS : **A81K**
RATING : 150
BASE MATERIAL : SS 304/304L
CORROSION ALLOWANCE : 0 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-40	38	93	149	204
PRESS	19.3	19.3	16.17	14.41	13.35

SERVICE

ALKYL (THIS SPECIFICATION IS INTENDED FOR NEAT ALKYLS AND OTHER NEAT PYROPHORIC MATERIALS ONLY FOR 3/4 INCH SIZES MAXIMUM.) (BASED ON LICENSOR PMS CLASS - 7C28)

NOTES

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.3.5 AND ASTM A 370.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

342 FOR ALL SOCKET WELDED BALL VALVE, ON INSTALLATION, REMOVE ALL BOLTS EXCEPT ONE AND ROTATE CENTER SECTION OF VALVE OUT OF LINE DURING SOCKET WELDING. BE CAREFUL TO AVOID DAMAGE TO OR LOSS OF PARTS.

345 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE THREAD DOPE WHERE SEAL WELDING AND COVER ALL EXPOSED THREADS WITH WELD.

377 LICENSOR REFERENCE [PPF-2] FOR REQUIREMENTS FOR PIPING IN LOW TEMPERATURE SERVICE.

422 SCREWED CAP, USE FOR INSTRUMENTATION ONLY.

528 DUAL STAMP SHALL BE REQUIRED FOR ALL MATERIALS WHERE 2 GRADES OF MATERIAL ARE REQUIRED.

586 THREE PIECE BODY AND OVAL HANDWHEEL OPERATED BALL VALVE ; USE ONLY ON P&ID NOTE.

590 DURING DESIGN ENGINEERING, ALL PROPOSED FLANGED JOINTS MUST BE EVALUATED FOR NEED. FLANGED JOINTS MUST NOT BE UTILIZED FOR EASE OF INSTALLATION SINCE THEY ARE SUBJECT TO EMISSIONS MONITORING.

627 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 7C28

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

638 REFER LICENSOR SPECIFICATION FOR STR-351 FOR STRAINERS.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

977 TO BE USED IN DC, TT AND OTHER CHLORINATED HYDROCARBON SERVICE

978 NOT TO BE USED FOR DC, TT OR OTHER CHLORINATED HYDROCARBON SERVICE

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

SOLIDS CONVEYING (BASED ON LICENSOR PMS CLASS - 1C14)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

316 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO WELDING. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLATTER SHALL BE REMOVED. (CONTD.)

317 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL B USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

318 BEND RADIUS IN SOLIDS CONVEYING SERVICE MUST BE 9-TIMES NOMINAL SIZE. COMMERCIAL ELBOW SHALL NOT BE USED. FOR BENDS PIPE MATERIAL IS ALSO ACCEPTABLE.

319 PROVIDE WELDED GROUNDING CLIPS AT FLANGED EQUIPMENT AND ON BOTH SIDES OF FLANGED JOINTS.

320 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION. DO NOT USE IN-LINE FOR CONVEYING.

328 JOINTS INCLUDING EQUIPMENT CONNECTIONS, SHALL BE ELECTRICALLY BONDED AND PIPING GROUNDED.

549 RUN AN ELECTRICAL CONTINUITY TEST EACH TIME THE PIPEWORK IS ASSEMBLED, AND AT LEAST ONCE A YEAR.

611 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1C14.

634 INSTALL PRESSURE GAUGES WITH CHEMICAL ATTACHMENT WITH 1/2" NPT MALE CONNECTION AND FILLED WITH UNINHIBITED SILICONE FLUID.

664 PTFE FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

CYCLIC PRESSURE;HYDROCARBONS (BASED ON LICENSOR PMS CLASS - 1C11)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

308 ALL PRESSURE RESISTING BUTT WELDS SHALL BE 100% RADIOGRAPHED AS PER B31.3. ALL OTHER WELDS SHALL BE LP/MP EXAMINED AS PER B31.3. WHEN SPECIFICALLY APPROVED ULTRASONIC EXAMINATION MAY BE SUBSTITUTED FOR RADIOGRAPHIC, LP/MP EXAMINATION.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

314 USE "HOERBIGER" "DEPEND A CHECK" TYPE CHECK VAVE FOR PULSATING FLOW.

329 USE FOR ONLY 3/4"X1/2" SCRD GLOBE VALVE (GLV/1) TO BE USED FOR VENTS, DRAINS AND INSTRUMENT CONNECTION.

356 AT THREADED EQUIPMENT CONNECTIONS ONLY. SEAL WELD SHALL COVER ALL THREADS.

357 BRANCH CONNECTION SHALL BE LOCATED AT POINTS WHERE THE RUN LINE IS ANCHORED.

538 FOR PISTON TYPE CHECK VALVE

547 LINES SHALL BE RESTRAINED BY USE OF RIGID ANCHORS AND FRICTION PIPE SLIDES (STAUFF CORP. OR EQUAL).

548 SEPARABLE SOCKETS SHALL BE SOCKET WELD TYPE.

576 USE FOR ONLY 3/4" X 1/2" SW GLOBE VALVE (GLV/3) TO BE USED FOR VENT, DRAINS AND INSTRUMENT CONNECTION.

584 ONE END (INLET) SW AND OTHER END (OUTLET) SCREWED

610 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1C11

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

638 REFER LICENSOR SPECIFICATION FOR STR-351 FOR STRAINERS.

663 GRAFOIL GTB OR GTK FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

PIPE CLASS : **A91A**
RATING : 150
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	0	38	50	65
PRESS	10.55	10.55	10.55	10.55

SERVICE

COOLING WATER, RAW WATER, SERVICE WATER (UNDER GROUND) CATEGORY "D"

NOTES

31 USE BUTTERFLY VALVES INSTEAD OF GATE VALVES FROM 10" ONWARDS IN WATER SERVICE AND UPTO 70 DEG C. DESIGN PRESSURE FOR BUTTERFLY VALVES IS LIMITED UPTO 10 BAR.

65 FORGINGS ARE ACCEPTABLE IN LIEU OF PLATE MATERIAL FOR BLIND FLANGES AND SPACER & BLINDS.

76 FOR PERMANENT BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300.

77 FOR SIZES > 24", SPACER & BLIND SHALL BE AS PER EIL'STD 7-44-0164.

86 BUTTERFLY VALVES FOR THE SPEC ARE PN10 RATED WITH A MAXIMUM PRESSURE OF 10.2 KG/CM2G.

107 MITRES MAY BE USED IN CATEGORY 'D' SERVICE ABOVE 14"NB. HOWEVER, USE OF ELBOWS IS PREFERRED UP TO 48" SIZE. MITRES TO BE DESIGNED AS PER ASME B31.3.

140 PIPES SHALL BE EXTERNALLY '3L PE COATED' FOR U/G SERVICE ONLY AS PER JOB SPECIFICATION

141 FITTINGS SHALL BE EXTERNALLY 'EPOXY COATED' FOR U/G SERVICE ONLY AS PER JOB SPECIFICATION.

146 USE 6 PIECES 90 DEG MITRE FOR SIZE(S) 52, 60, 62, 78, 108; 7 PIECES 90 DEG MITRE FOR SIZE(S) 56, 66, 72, 96, 100, 110, 114, 120, 142, 156; 45 DEG MITRE REQUIRES ONE PIECE LESS.

147 CALCULATION OF PIPE THICKNESSES ARE DONE CONSIDERING MAXIMUM SOIL COVER OF 2500 MM.

148 CALCULATION OF PIPE THICKNESSES ARE DONE CONSIDERING MAXIMUM SOIL COVER OF 1500 MM.

149 CALCULATION OF PIPE THICKNESSES ARE DONE CONSIDERING MAXIMUM SOIL COVER OF 1200 MM.

150 PROVIDE BUOYANCY BLOCK.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

152 MITERS SHALL NOT BE FIELD FABRICATED FOR SIZES 108", 110", 114", 120", 142" & 156", AS THICKNESS OF IS-3589 PIPE CONSIDERED IN THESE SIZES ARE NOT ADEQUATE FOR MITER FABRICATION.

155 GASKET SHALL CONFIRM TO ALL THE TESTING REQUIREMENTS OF BS 7531 AND THICKNESS TOLERANCES SHALL BE AS PER TOLERANCES FOR 2 MM THICKNESS SPECIFIED IN BS 7531 .

156 MINIMUM SOIL COVER FROM TOP OF PIPE SHALL BE 600 MM FOR SIZES UPTO 24", 800 MM FOR SIZES 26" TO 44", 1000 MM FOR SIZES 46", 48" & 52", 1200 MM FOR SIZES 56" AND 1500 MM FOR SIZES 60", 62", 66", 72" & 78".

BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	0	38	50	65
PRESS	18.9	18.9	18.9	18.9

SERVICE

FIRE WATER-FRESH WATER (ABOVE GROUND)

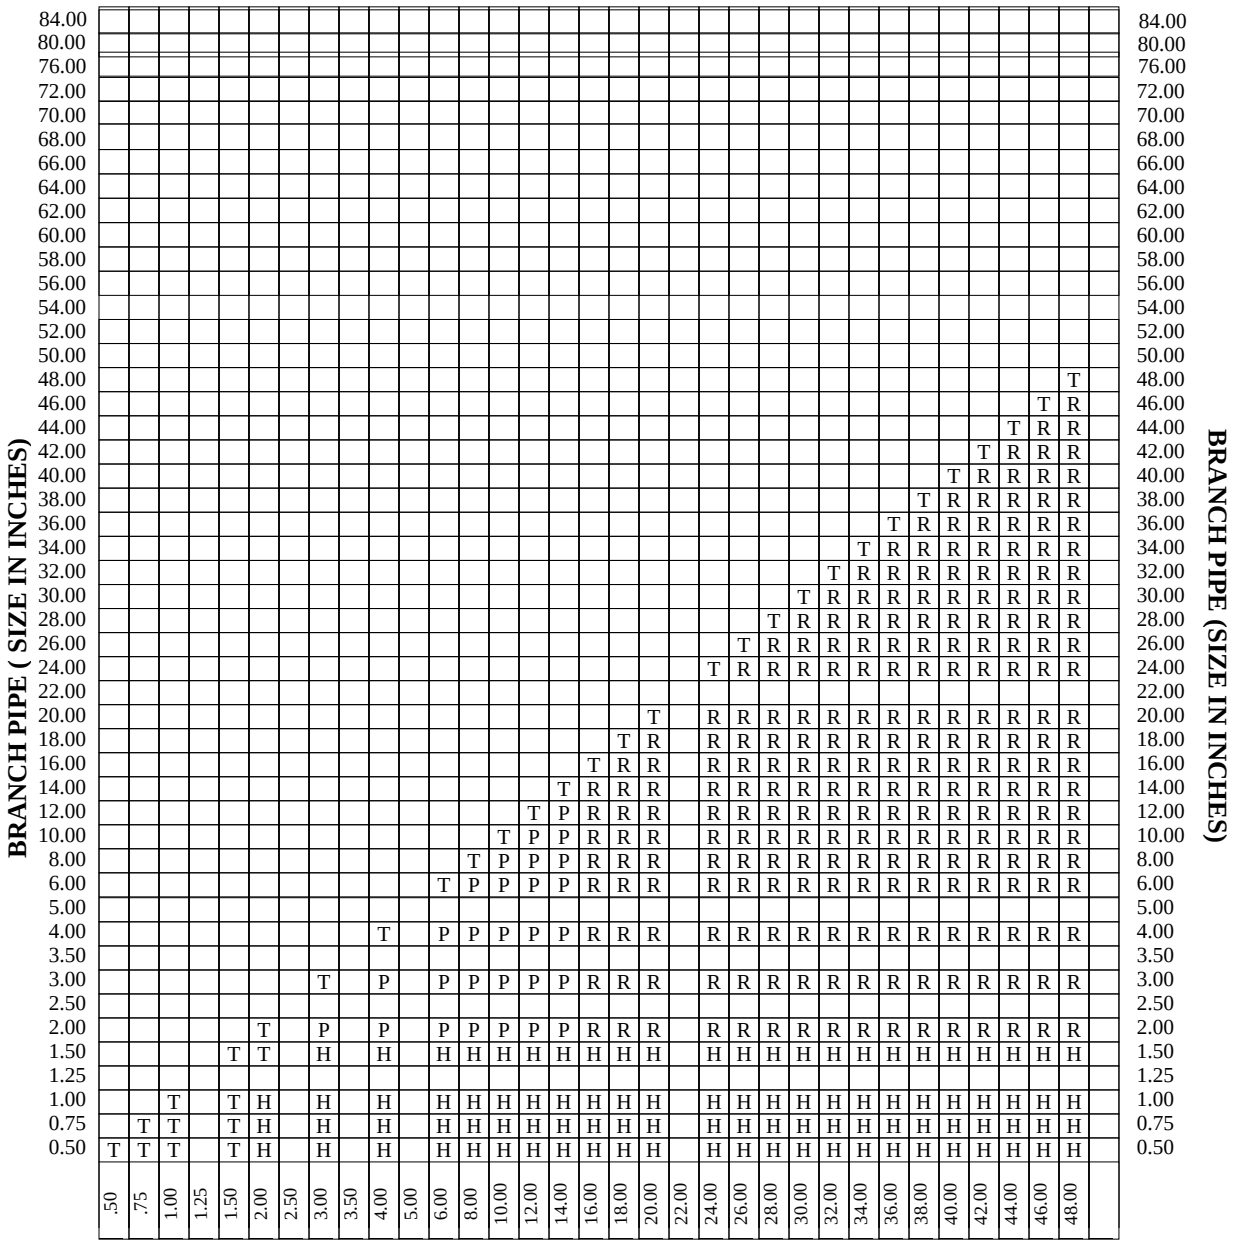
NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

65 FORGINGS ARE ACCEPTABLE IN LIEU OF PLATE MATERIAL FOR BLIND FLANGES AND SPACER & BLINDS.

88 10% OF THE BUTT WELD JOINTS SHALL BE RADIOGRAPHED. HOWEVER, 50% OF THESE BUTT WELD JOINTS SHALL BE FIELD WELD JOINTS.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SPECIAL NOTES

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

65 FORGINGS ARE ACCEPTABLE IN LIEU OF PLATE MATERIAL FOR BLIND FLANGES AND SPACER & BLINDS.

140 PIPES SHALL BE EXTERNALLY '3L PE COATED' FOR U/G SERVICE ONLY AS PER JOB SPECIFICATION

141 FITTINGS SHALL BE EXTERNALLY 'EPOXY COATED' FOR U/G SERVICE ONLY AS PER JOB SPECIFICATION.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

157 MINIMUM SOIL COVER FROM TOP OF PIPE SHALL BE 600 MM FOR SIZES UPTO 24" AND 800 MM FOR SIZES 26" TO 36".

192 GATE VALVES OF SIZE 26" AND ABOVE SHALL BE IN ACCORDANCE WITH B-16.34 AND FLANGE ENDS SHALL BE IN ACCORDANCE WITH ASME B16.47 SERIES B.

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :A9A** Sheet 1 of 8

PIPE CLASS : **A9A**
RATING : 150
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 3 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371
PRESS	20.03	20.03	18.28	16.17	14.06	11.95	9.84	8.78	7.73

SERVICE

MILD TO MODERATE CORROSIVE PROCESS SERVICES - FLAMMABLE / NON FLAMMABLE & NON LETHAL - HVGO,VGO,RCO,SLOP,VR,VGO,CAUSTIC (NO STRESS RELIEF ZONE), BENZENE, CGC AREA CBD, DEBUTANIZER AREA CBD, PGH AREA CBD, QUENCH WATER DRAIN, QUENCH OIL BLOW DOWN, AROMATIC CLOSED DRAIN, CLOSED SOLVENT DRAIN.

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCHEDULE. REFER GENERAL NOTES TO PMS.

92 GATE VALVES OF SIZE 26" AND ABOVE SHALL BE IN ACCORDANCE WITH B-16.34 AND FLANGE ENDS SHALL BE IN ACCORDANCE WITH ASME B16.47 SERIES B.

115 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [425 DEG. C & 4.2 KG/ CM2 G] SUBJECT TO MINIMUM OF 20 MM THICKNESS.

134 PIPE THICKNESS HAS BEEN CALCULATED ON ACTUAL LINE CONDITION [4.20 KG/CM2 @ 425 DEG.C] SUBJECTED TO MIN. OF 80% OF THE CLASS CONDITIONS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

PIPE CLASS : **B1A**
RATING : 300
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371	399	427
PRESS	52.02	52.02	47.8	46.05	44.64	42.53	40.07	38.66	37.26	35.5	28.82

SERVICE

NON CORROSIVE PROCESS - FLAMMABLE / NON FLAMMABLE, NON LETHAL - HYDROCARBONS, AROMATICS, AMMONIA, SWEET GAS, FLUSHING OIL AND OTHER UTILITIES -MP CONDENSATE, INSTRUMENT AIR(OFFSITES), PLANT AIR, NITROGEN, AMMONIA GAS, NITROGEN-HIGH TEMPERATURE ETC. ABOVE CLASS 'A1A'.

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

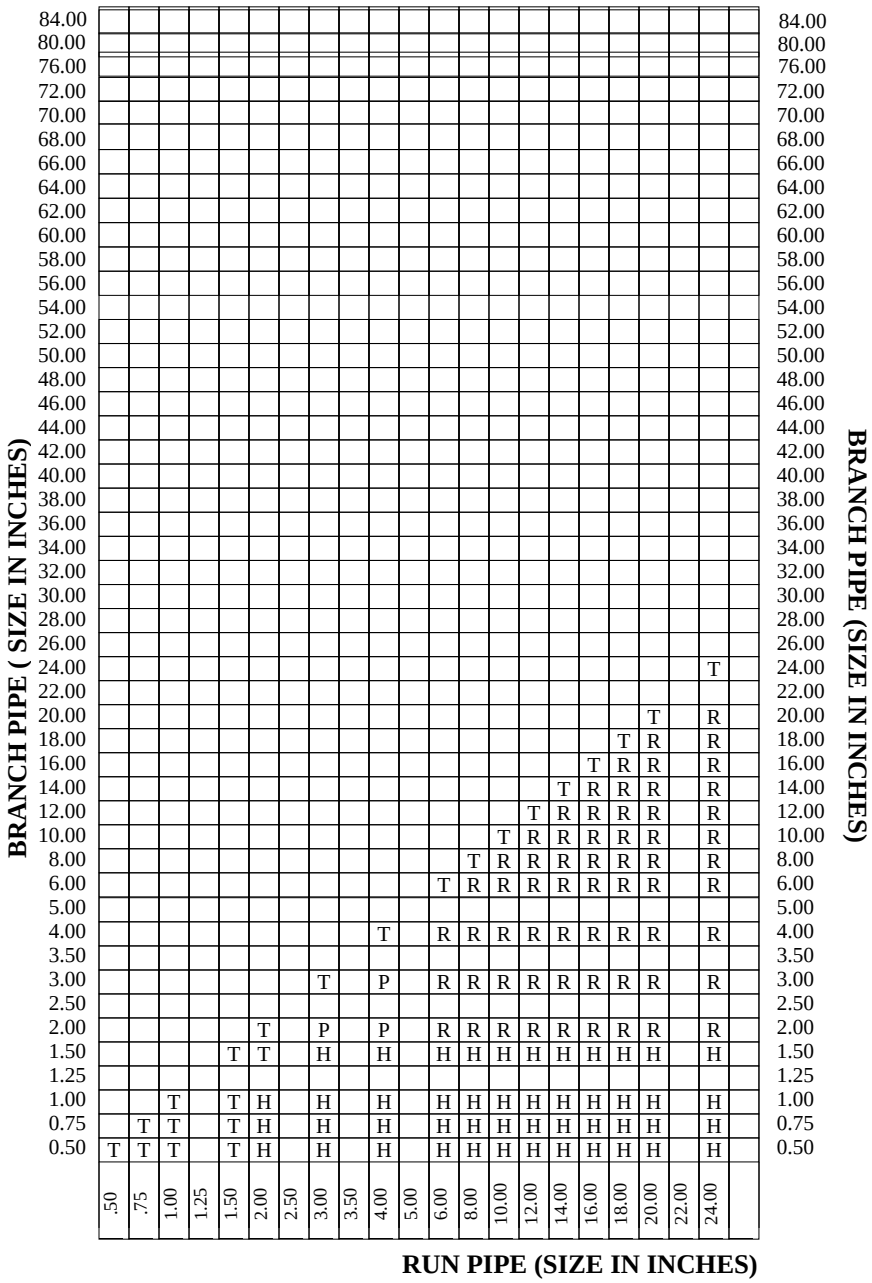
32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

963 FOR LICENSOR SPECIFICATIONS LGP18 & LGP26 IN PPU, FOR SIZE RANGE 0.75" TO 1.5": STR-366 & FOR 2" TO 10"-STR-354 IS TO BE FOLLOWED FOR STRAINERS. SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2 FOR STRAINER SPECIFICATIONS.

992 FOR LICENSOR SPECIFICATIONS 1C2 IN UNIVATION, FOR SIZE RANGE 0.5" TO 0.75": STR-361, FOR 1" TO 1.5"-STR-366 & FOR 2" TO 12" : STR-351 IS TO BE FOLLOWED FOR STRAINERS. REFER PPF-8 FOR STRAINER SPECIFICATIONS.

995 FOR LICENSOR SPECIFICATIONS 1E3 & 1E21 IN UNIVATION, FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2" TO 10" : STR-354 IS TO BE FOLLOWED FOR STRAINERS. REFER PPF-8 FOR STRAINER SPECIFICATIONS.



997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

PURE PROCESS LIQUID, VAPOUR AND GAS OR MILD CORROSIVE HYDROCARBON - FLAMMABLE/ NON FLAMMABLE & NON LETHAL HYDROCARBONS, CHEMICAL, LUBE OIL, SEAL OIL, CORROSION INHIBITOR, METHANOL INJECTION, DMDS INJECTION ETC.

NOTES

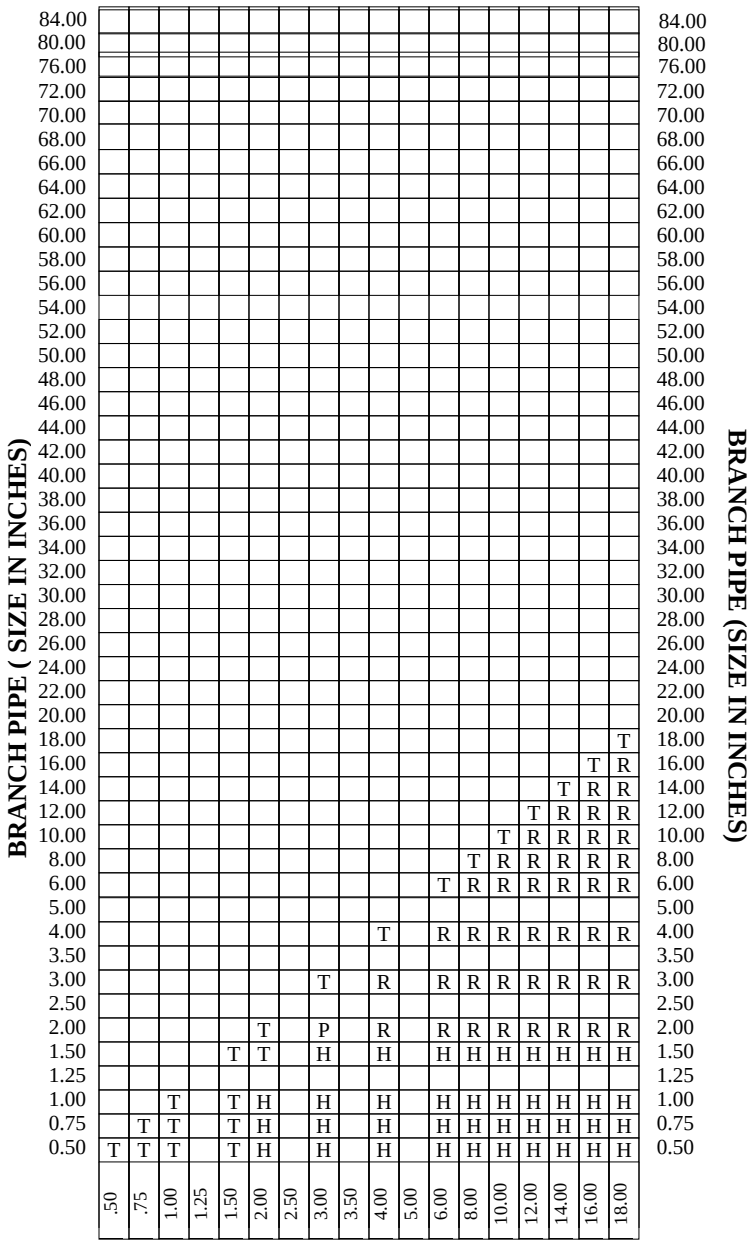
5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

51 DESIGN PRESSURE AT -29 DEG.C. AND 38 DEG.C. FOR THIS PRESSURE HAS BEEN REDUCED FROM 50.62 KG/CM2G TO 50.50 KG/CM2G TO OPTIMISE THE THICKNESS FOR 6" SIZE.

74 STRESS RUPTURE TEST AS DETAILED IN ASTM A453 SHALL BE CARRIED OUT FOR ALL ASTM A453 GR.660A BOLTING MATERIALS.

105 FOR INSULATED FLANGED JOINTS BEYOND 427 DEG.C. IN THIS CLASS, USE HOT DIP GALVANISED A453 GR.660 CL.A



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

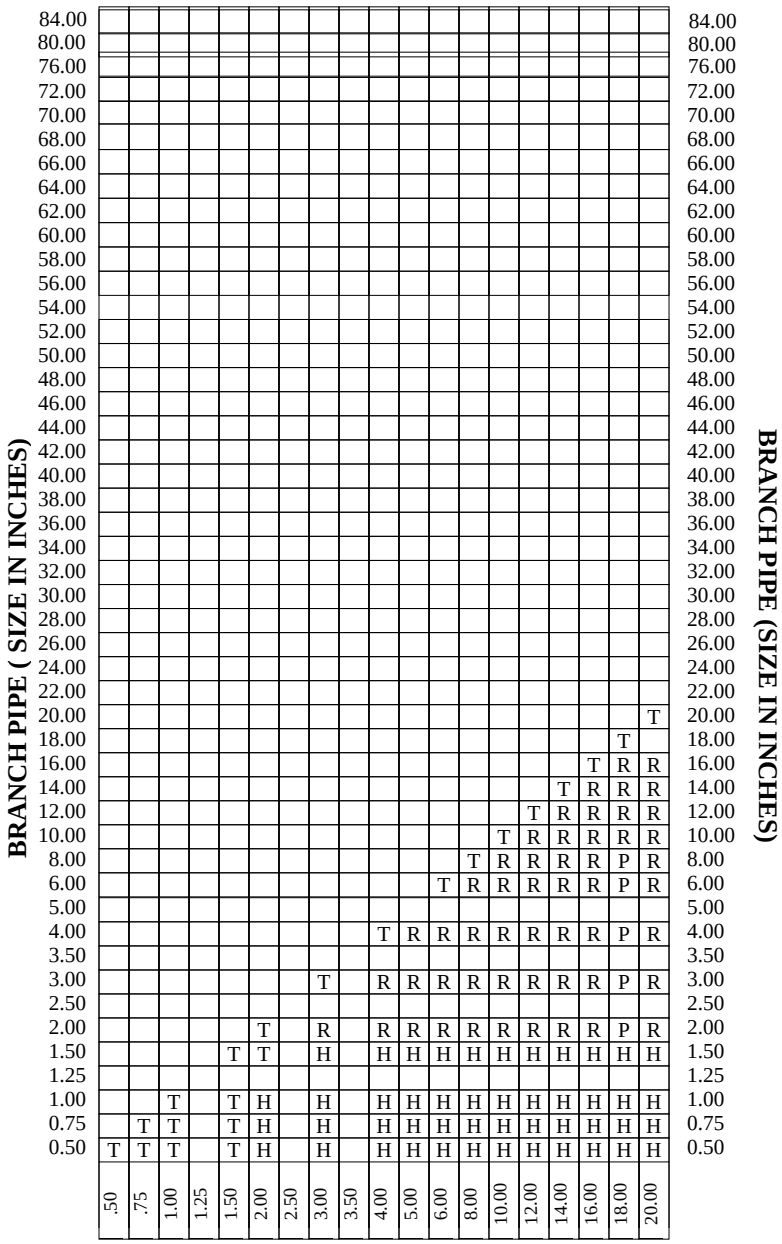
8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

13 USE NORMALIZED AND TEMPERED MATERIAL ONLY.

14 RADIOGRAPHY SHALL BE PERFORMED AFTER HEAT TREATMENT.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016



159 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [540 DEG. C & 3.5 KG/ CM2 G] SUBJECT TO MIN. OF 80% OF THE CLASS CONDITIONS.

SERVICE

T2; SLURRY CATALYST AND PRECURSOR (BASED ON LICENSOR PMS CLASS - LGP27)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

346 SAFEGUARD AND SUPPORT NPS 0.5" PIPING IN STRUCTURAL CHANNEL MATERIAL.

701 HYDROSTATIC TEST WITH WATER IS NOT PERMITTED. USE MINERAL OIL.

703 NPS 1/2 PIPING IS USED FOR MANY ALKYL LINES SO THE INTERNAL CONTAINED VOLUME IS SMALL. THESE SMALL LINES LACK THE MECHANICAL STRENGTH NECESSARY TO SUPPORT THEMSELVES ACROSS LONG SPANS (AS IN A PIPE RACK) OR TO PROVIDE PROTECTION FROM MECHANICAL DAMAGE FROM IMPACT.

704 (CONTINUED FROM NOTE 703) LONG RUNS IN THE PIPE RACKS AND PIPING THAT ARE POTENTIALLY EXPOSED TO MECHANICAL IMPACT NEED TO BE PROTECTED BY STEEL CHANNEL WITH A STRENGTH EQUAL OR GREATER THAN 4 INCH WIDTH AND WEIGHT PER FOOT OF NO LESS THAN 7.4.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

708 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE JOINT COMPOUND WHERE SEAL WELDING, AND COVER ALL EXPOSED THREADS WITH WELD.

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

714 FOR PRESSURE GUAGE ASSEMBLY: FOR ALKYL SERVICE, CHEMICAL ATTACHMENTS ARE TO BE USED. DIAPHRAGM IS TO BE CONSTRUCTED OF 304 STAINLESS STEEL AND WELDED TO THE TOP HOUSING. FLUSH CONNECTION IS TO BE PROVIDED. REFER TO TYPICAL SKETCH NUMBER 26 IN THE SUPPLEMENT TO PROCESS PARTS.

715 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC. WELDED VALVES ARE PREFERRED TO MINIMIZE THE NUMBER OF POTENTIAL LEAK POINTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

722 BALL VLV, B16.34; 1000 PSI; SW; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

727 BALL VLV, ASME B16.34; 1000 PSI; SOCKET WELD END X NPTF; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; REDUCED PORT TYPE; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7, 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

729 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS

PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2": STR-354 IS TO BE FOLLOWED

730 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

829 CAST; XS;WAFER INSERT TYPE; PTFE SEAT;SS316 SPRING; REQUISITIONER MUST SPECIFY CRACKING PRESSURE; FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG; CLASS 600 CHECK-ALL WAFER INSERT VALVE MAY BE BOLTED BETWEEN CLASS 150/ CLASS 300/ CLASS 600 FLANGES;TO BE USED WITH XS OR THINNER WALL PIPE

830 ASME B16.34/16.10 SHORT PATTERN; CAST; REDUCED PORT TYPE; END ENTRY; SS316 STEM; SEATING: MOLECULARLY ENHANCED PTFE; SS316 BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL

831 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A

911 LICENSOR PMS LGP27 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

990 RECOMMENDED BALL VALVE MANUFACTURES FOR USE IN T2(TEAL) SERVICE SHALL BE AS PER LICENSOR SPECIFICATION LSTD-3 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2).

PRESS	52	52	40.1	26.7	13.4

SERVICE

T2; SLURRY CATALYST AND PRECURSOR (BASED ON LICENSOR PMS CLASS - LGP16)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

701 HYDROSTATIC TEST WITH WATER IS NOT PERMITTED. USE MINERAL OIL.

703 NPS 1/2 PIPING IS USED FOR MANY ALKYL LINES SO THE INTERNAL CONTAINED VOLUME IS SMALL. THESE SMALL LINES LACK THE MECHANICAL STRENGTH NECESSARY TO SUPPORT THEMSELVES ACROSS LONG SPANS (AS IN A PIPE RACK) OR TO PROVIDE PROTECTION FROM MECHANICAL DAMAGE FROM IMPACT.

704 (CONTINUED FROM NOTE 703) LONG RUNS IN THE PIPE RACKS AND PIPING THAT ARE POTENTIALLY EXPOSED TO MECHANICAL IMPACT NEED TO BE PROTECTED BY STEEL CHANNEL WITH A STRENGTH EQUAL OR GREATER THAN 4 INCH WIDTH AND WEIGHT PER FOOT OF NO LESS THAN 7.4.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

708 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE JOINT COMPOUND WHERE SEAL WELDING, AND COVER ALL EXPOSED THREADS WITH WELD.

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

711 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES. NOMINAL 5,000 PSI SEATING STRESS.

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

714 FOR PRESSURE GUAGE ASSEMBLY: FOR ALKYL SERVICE, CHEMICAL ATTACHMENTS ARE TO BE USED. DIAPHRAGM IS TO BE CONSTRUCTED OF 304 STAINLESS STEEL AND WELDED TO THE TOP HOUSING. FLUSH CONNECTION IS TO BE PROVIDED. REFER TO TYPICAL SKETCH NUMBER 26 IN THE SUPPLEMENT TO PROCESS PARTS.

715 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC. WELDED VALVES ARE PREFERRED TO MINIMIZE THE NUMBER OF POTENTIAL LEAK POINTS.

717 WAFER INSERT TYPE;PTFE SEAT;SS316 SPRING;REQUISITIONER MUST SPECIFY CRACKING PRESSURE; FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG;CLASS 600 CHECK-ALL WAFER INSERT VALVE MAY BE BOLTED BETWEEN CLASS 150, CLASS 300 OR CLASS 600 FLANGES;TO BE USED WITH SCHEDULE 80 OR THINNER WALL PIPE.

718 VALVE; CHECK; ASME B16.34; CLASS 600; X-STRONG; CAST; CARBON STEEL; ASTM A 216 GRADE WCB;

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

722 BALL VLV, B16.34; 1000 PSI; SW; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

723 END ENTRY; 316SS STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; 1 1/2; 3; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL;

Location BINA, MADHYA PRADESH	**Pipe Class :B21A** Sheet 2 of 6

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

727 BALL VLV, ASME B16.34; 1000 PSI; SOCKET WELD END X NPTF; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; REDUCED PORT TYPE; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7, 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

729 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2": STR-354 IS TO BE FOLLOWED

730 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH

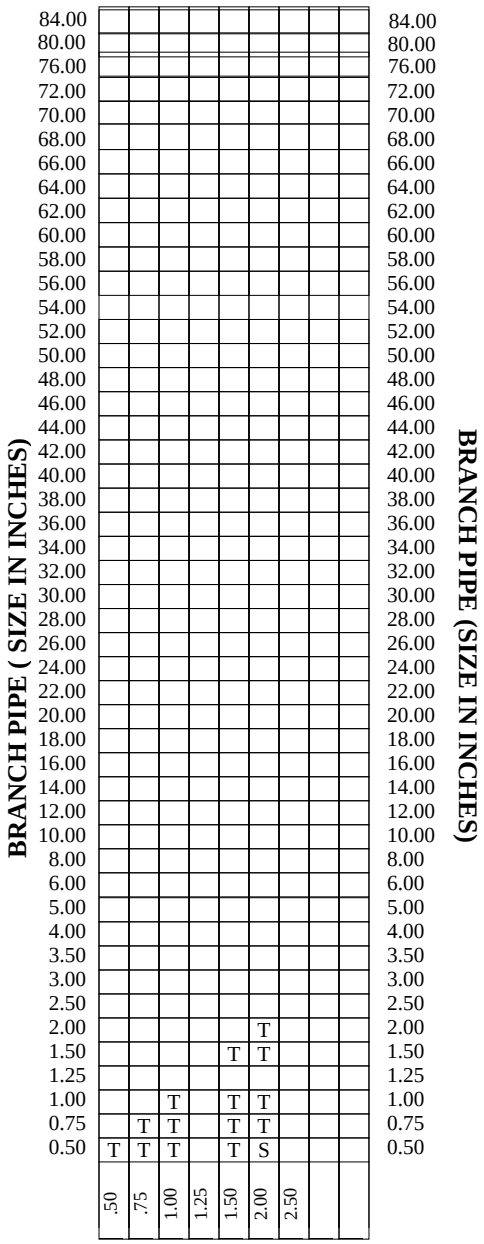
731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

831 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A

909 LICENSOR PMS LGP16 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

975 THIS VALVE SHALL BE USED AS PRIMARY PREFERENCE ONLY IN SIZES 0.5" TO 1". FOR SIZE 1.5", THIS VALVE SHALL BE USED ONLY IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE/ P&ID.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).



990 RECOMMENDED BALL VALVE MANUFACTURES FOR USE IN T2(TEAL) SERVICE SHALL BE AS PER LICENSOR SPECIFICATION LSTD-3 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2).

SERVICE

HYDROCARBON PROCESS, NITROGEN - CYCLIC (BASED ON LICENSOR PMS CLASS - LGP21)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

732 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS
ENGINEER PER ASME B31.3 PARAGRAPH 301.5.4. (CONT.)

733 (CONT. FROM NOTE NO. 732) IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

753 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL.

755 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM;BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

760 IN ORDER TO ELIMINATE THE OCCURRENCE OF POTENTIAL STRESS RISERS DETRIMENTAL TO PIPING IN CYCLIC SERVICES, EXTRA CARE MUST BE TAKEN DURING FABRICATION. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO WELDING. WHEREVER POSSIBLE, THE INSIDE SURFACE OF BUTT WELDS SHALL BE GROUND FLUSH.

761 ALL INTERNAL WELD SPLATTER AND BURRS SHALL BE REMOVED. THE GTAW WELD PROCESS SHALL BE USED FOR THE ROOT PASS OF ALL BUTT WELDS TO PROMOTE A SMOOTH INNER BORE; ROOT PENETRATION SHALL BE KEPT TO A MINIMUM.

762 ALL HOLES FOR (SET-ON STYLE) "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING, OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE; A STRAIGHT BORE OLET IS REQUIRED FOR THESE APPLICATIONS.

774 FLANGED; CAST; CARBON STEEL;RISING STEM; OS&Y; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET:

CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 4, GEAR LARGER SIZES;

775 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

776 FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; OS&Y; BONNET: BOLTED; RISING STEM; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES;

806 PIPING SUPPORT LOCATION MUST BE DETERMINED IN CONCERT WITH THE ANALOG TECHNOLOGIST TO AVOID HARMONICS DUE TO VIBRATION AND THE STRESS ANALYST TO AVOID EXCESSIVE THERMAL STRESSES / STRAINS. 'HOLD DOWN' TYPE SUPPORTS WILL TYPICALLY BE REQUIRED.

815 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.
FOR SIZE RANGE 3/4" TO 1" : STR-366 IS TO BE FOLLOWED

856 CAST; TOP ENTRY; EXTENDED BONNET, BOLTED; BOLTING:ASTM A 193 GR B7;GASKET:GRAPHITE/METAL/METAL WITH GRAPHITE; SS316 STEM & BALL; GRAPHITE SEATING; FLEXIBLE GRAPHITE PACKING;(STEM SEALS OR PACKING); EXTERNAL BALL STOP(INTERNAL WELD) TO BE SUPPLIED; OPERATOR: LEVER UPTO 4" & WEATHERPROOF GEAR ABOVE 4"

857 ASME B16.34/16.10 LONG PATTERN

858 VALVE; GATE; API 602; CLASS 800; PLAIN ENDX NPTF; FORGED; CARBON STEEL; ASTM A 105; EXTENDED BODY; OS&Y; RISING STEM; REDUCED PORT TYPE;BONNET: WELDED; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

910 LICENSOR PMS LGP21 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

PRODUCT CONVEYING (CYCLIC SERVICE); PRODUCT DISCHARGE (CYCLIC SERVICE) (BASED ON LICENSOR PMS CLASS - LPZ18)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

319 PROVIDE WELDED GROUNDING CLIPS AT FLANGED EQUIPMENT AND ON BOTH SIDES OF FLANGED JOINTS.

549 RUN AN ELECTRICAL CONTINUITY TEST EACH TIME THE PIPEWORK IS ASSEMBLED, AND AT LEAST ONCE A YEAR.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

732 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS ENGINEER PER ASME B31.3 PARAGRAPH 301.5.4. (CONT.)

733 (CONT. FROM NOTE NO. 732) IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED

734 PIPE BETWEEN THE REACTOR AND THE PRODUCT CHAMBER TO BE SUBJECTED TO FATIGUE ANALYSIS IN ADDITION TO THERMAL ANALYSIS TO DETERMINE IF A THICKNESS ABOVE THAT LISTED FOR PRESSURE IS REQUIRED.

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

736 EXERCISE SPECIAL CARE DURING FABRICATION TO MINIMIZE OBSTRUCTIONS TO FLOW. REMOVE MILL SCALE FROM PIPE ENDS BEFORE WELDING. GTAW SHALL BE USED FOR THE ROOT PASS OF ALL WELDS. ROOT PENETRATION SHALL BE KEPT AT A MINIMUM..

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

740 THIS SERVICE REQUIRES A TWO-STEP LEAK TEST. THE FIRST STEP IS A 'SENSITIVE' LEAK TEST. THIS IS FOLLOWED BY A HYDROSTATIC OR PNEUMATIC TEST AS SPECIFIED.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :B27A** Sheet 2 of 7

752 THE BEND RADIUS MINIMUM TANGENT AND TOLERANCE SPECIFICATIONS SHALL BE IN ACCORDANCE WITH ENGINEERING DETAIL LSTD-2 'PNEUMATIC CONVEYING PIPE BEND DIMENSIONAL TOLERANCES' INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS VOLUME 2, SECTION 1X-2.

754 FIRE WATER SPRAY PROTECTION SHALL BE PROVIDED FOR IN-LINE NON-FIRE TESTED VALVES

755 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM;BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

773 FOR PIPING SYSTEMS SUBJECT TO VIBRATION, BRACING OF PERMANENT VENTS AND DRAINS SHOULD BE CONSIDERED

774 FLANGED; CAST; CARBON STEEL;RISING STEM; OS&Y; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 4, GEAR LARGER SIZES;

775 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

776 FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; OS&Y; BONNET: BOLTED; RISING STEM; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES;

777 VALVE; CHECK; ASME B16.34; CLASS 300; RAISED FACE; FLANGED; FORGED; CARBON STEEL; ASTM A 105; PISTONLIFT CHECK; SPRING LOADED; COVER: BOLTED; HORIZONTAL TYPE; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; SPRING: STAINLESS STEEL;

778 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; ASME B16.5;

780 VALVE; BALL; CLASS 300; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; BOLTING: ASTM A 193 GR B7; STAINLESS STEEL STEM; SEATING: METAL; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: LEVER;

781 VALVE; BALL; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; BOLTING: ASTM A 193 GR B7; HARDENED STAINLESS STEEL STEM; SEATING: METAL; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: WEATHERPROOF GEAR

782 VALVE; BALL; CLASS 300; RAISED FACE; FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; TRUNNION MOUNTED; BOLTING: ASTM A 193 GR B7; HARDENED STAINLESS STEEL STEM; SEATING: METAL; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: WEATHERPROOF GEAR;

785 DOUBLE FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; BOLTING: ASTM A 193 GR B7; GASKET: GRAPHITE OR METAL OR METAL WITH GRAPHITE; STAINLESS STEEL STEM; SEATING: METAL; SEATING RING: METAL OR METAL/GRAPHITE; CARBON STEEL DISC; PACKING: FLEXIBLE GRAPHITE; OPERATOR: WEATHERPROOF GEAR; ASME B16.5;

786 8-THREAD SERIES BOLTS ARE REQUIRED WHEN THE FLANGE BOLT DIAMETER IS 1 1/8 INCH OR LARGER PER ASTM A 193; THE PREFERRED INSTALLATION IS WITH THE STEM IN THE HORIZONTAL POSITION.

787 (CONT. FROM NOTE NO. 786) VALVE SHALL BE BI-DIRECTIONAL AND CAPABLE OF DEAD END SERVICE AT FULL-RATED PRESSURE. PRIOR TO INSTALLATION ASSURE THAT FLANGE GASKET FACE INCLUDING THE RETAINER RING AND BOLTING ARE SUITABLE TO PROVIDE SEALING WITH THE SELECTED GASKET.

791 VALVE; GATE; API 602; CLASS 800; BUTT WELDING X NPTF; FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: WELDED; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

926 LICENSOR PMS LPZ18 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

955 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE ONLY, IF MENTIONED IN PROCESS DESIGN PACKAGE OR P&ID.

956 1000 PSI; BUTT WELDING X NPTF; X-STRONG; CAST; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; GASKET: GRAPHITE/METAL/METAL WITH GRAPHITE; 17-4PH SS STEM; SEATING:METAL WITH GRAPHITE; COATED SS316 BALL; PACKING: FLEXIBLE GRAPHITE;(STEM SEALS OR PACKING); OPERATOR:LEVER; PREPARED FOR GAS PHASE PE/PP SERVICE

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

730 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

754 FIRE WATER SPRAY PROTECTION SHALL BE PROVIDED FOR IN-LINE NON-FIRE TESTED VALVES

755 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM;BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

774 FLANGED; CAST; CARBON STEEL;RISING STEM; OS&Y; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 4, GEAR LARGER SIZES;

776 FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; OS&Y; BONNET: BOLTED; RISING STEM; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES;

827 PIPING SYSTEMS CONSTRUCTED TO THIS SPECIFICATION TO CONSIST OF FABRICATED PIPE SPOOLS THAT ARE PRE-TESTED BY MEANS OF CLASS C - HYDROSTATIC TESTING AT THE MAXIMUM ALLOWABLE TEST PRESSURE THEN CLEANED / DRIED PRIOR TO INSTALLATION AND FINAL INSTALLED SYSTEM CLASS DH - PNEUMATIC TEST.

828 EXERCISE SPECIAL CARE DURING FABRICATION TO MINIMIZE OBSTRUCTIONS TO FLOW. GRIND ALL ACCESSIBLE WELDS FLUSH WITH THE ID AND REMOVE ALL INTERNAL WELD SPLATTER. USE THE GTAW PROCESS OR CONSUMABLE INSERTS FOR THE ROOT PASS OF ALL WELDS THAT CANNOT BE ACCESSED FOR GRINDING

831 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A

858 VALVE; GATE; API 602; CLASS 800; PLAIN ENDX NPTF; FORGED; CARBON STEEL; ASTM A 105; EXTENDED BODY; OS&Y; RISING STEM; REDUCED PORT TYPE;BONNET: WELDED; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

928 3-PLY CORRUGATED; SS316(UNS S31600); METAL GASKET WITH CORRUGATED METAL FILLER (CORE); 1/8 INCH THICK (NOMINAL); PITCH OF CORRUGATIONS: 3/16 INCH; JACKET MATERIAL: 0.019 INCH THICK; FILLER (CORE): 1/32 INCH THICK; WITH CENTERING TABS(CONT.)

929 (CONTINUED FROM NOTE-926) BOTH SIDES OF 3-PLY GASKET TO BE FURNISHED WITH ONE LAYER OF 0.015" THICK FLEXIBLE GRAPHITE ADHESIVE BACKED TAPE; TAPE SHALL PROVIDE COMPLETE COVERAGE OF THE CONTACT AREA OF THE INSTALLED GASKET WITH A MIN. NUMBER OF JOINTS HAVING AN OVERLAP NOT EXCEEDING 1/16 INCH(CONT.)

930 (CONTINUED FROM NOTE-927) FOR DIMENSIONS AND INSTALLATION, SEE LPPM-21 (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2); DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS.

932 VALVE; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; OS&Y; BONNET: WELDED; RISING STEM; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL.

933 VALVE; CHECK; RAISED FACE; TAPPED LUG OR DOUBLE FLG; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; DUAL-PLATE WAFER-LUG STYLE; API TRIM #8 / 8A; CARBON STEEL DISC; SPRING: INCONEL; ASME B16.5 / B16.47 SERIES A.

934 1000 PSI; CAST; REDUCED PORT TYPE; 3- PIECE BODY; BOLTING: ASTM A 193 GR B7; GASKET: GRAPHITE OR METAL OR METAL WITH GRAPHITE; 17-4 PH STAINLESS STEEL STEM; SEATING: METAL WITH GRAPHITE; COATED 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: LEVER.

935 VALVE; BALL; ASME B16.34 / 16.10 SHORT PATTERN; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; REDUCED PORT TYPE; BOLTING: ASTM A 193 GR B7; 17-4PH STAINLESS STEEL STEM; SEATING: PEEK; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: LEVER.

936 VALVE; BALL; API 6D / ISO 14313; CAST; FULL PORT TYPE; TRUNNION MOUNTED; BOLTING: ASTM A 193 GR B7; 316 STAINLESS STEEL STEM; SEATING: PEEK; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); LUBRICANT / DRAIN FITTING; OPERATOR: WEATHERPROOF GEAR.

937 VALVE; BALL; 1000 PSI; SOCKET WELD END X NPTF; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; FULL PORT TYPE; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; 316 STAINLESS STEEL STEM; SEATING: PEEK; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER.

941 LICENSOR PMS LGP24 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

989 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2"-10": STR-354 IS TO BE FOLLOWED

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

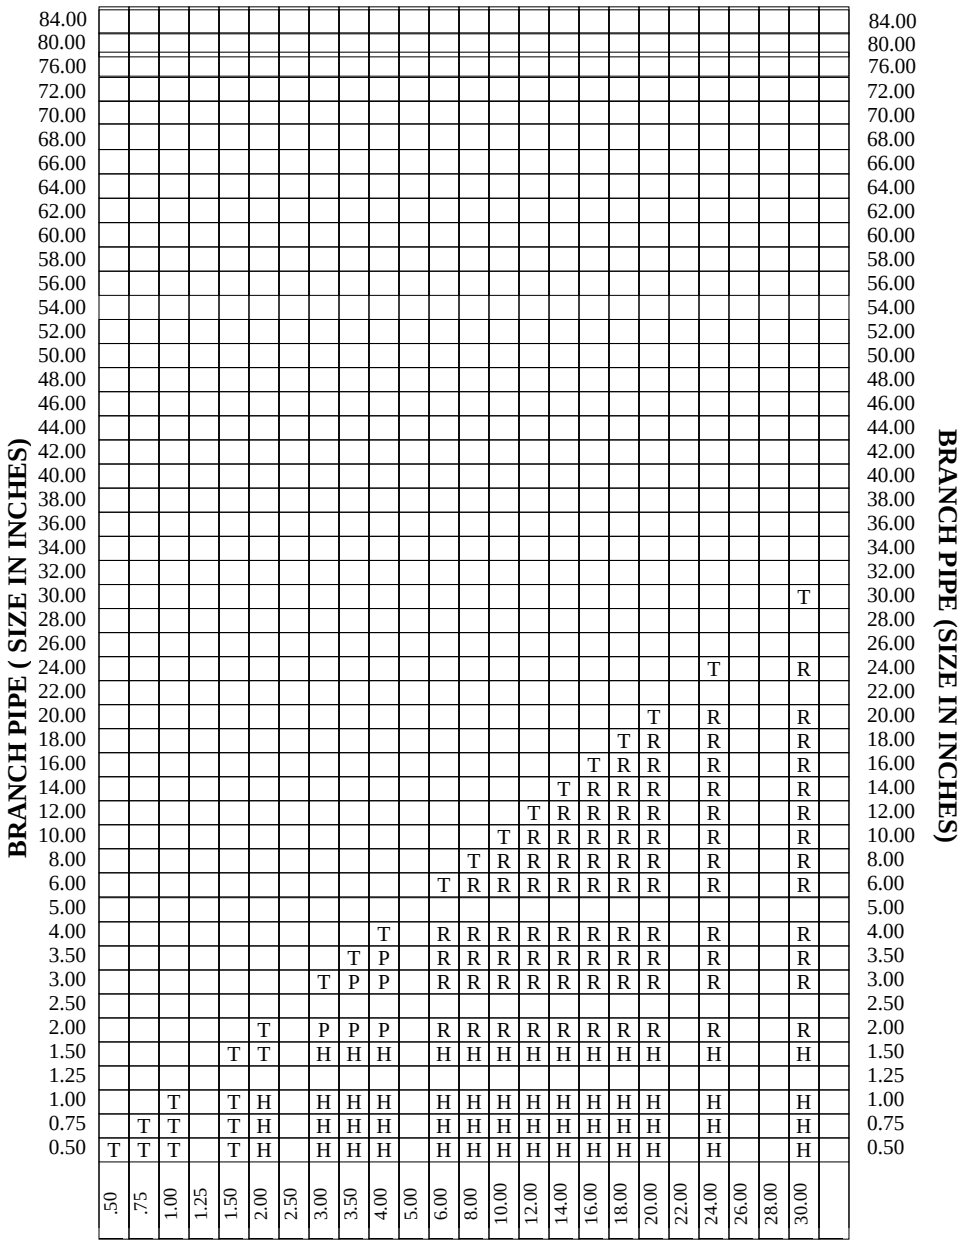
8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

9 CARBON CONTENT SHALL NOT EXCEED 0.25% FOR ALL PIPES,FITTINGS FLANGES ETC. THAT MAY REQUIRE WELDING. MOREOVER,FOR FLANGES THE SULPHUR AND PHOSPHOROUS SHALL ALSO BE LIMITED TO 0.05% EACH.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

133 PIPE THICKNESS HAS BEEN CALCULATED ON ACTUAL LINE CONDITION [22 KG/CM2 @ 350 DEG.C] SUBJECTED TO MIN. OF 80% OF THE CLASS CONDITIONS.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :B41A** Sheet 1 of 6

PIPE CLASS : **B41A**
RATING : 300
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371	399	427
PRESS	52.02	52.02	47.8	46.05	44.64	42.53	40.07	38.66	37.26	35.5	28.82

SERVICE

CLEAN HYDROCARBONS VAPOR/LIQUID OFF GAS
N-HEXANE/C6, BUTENE VAPOR, NITROGEN , LIQUID BUTENE

NOTES

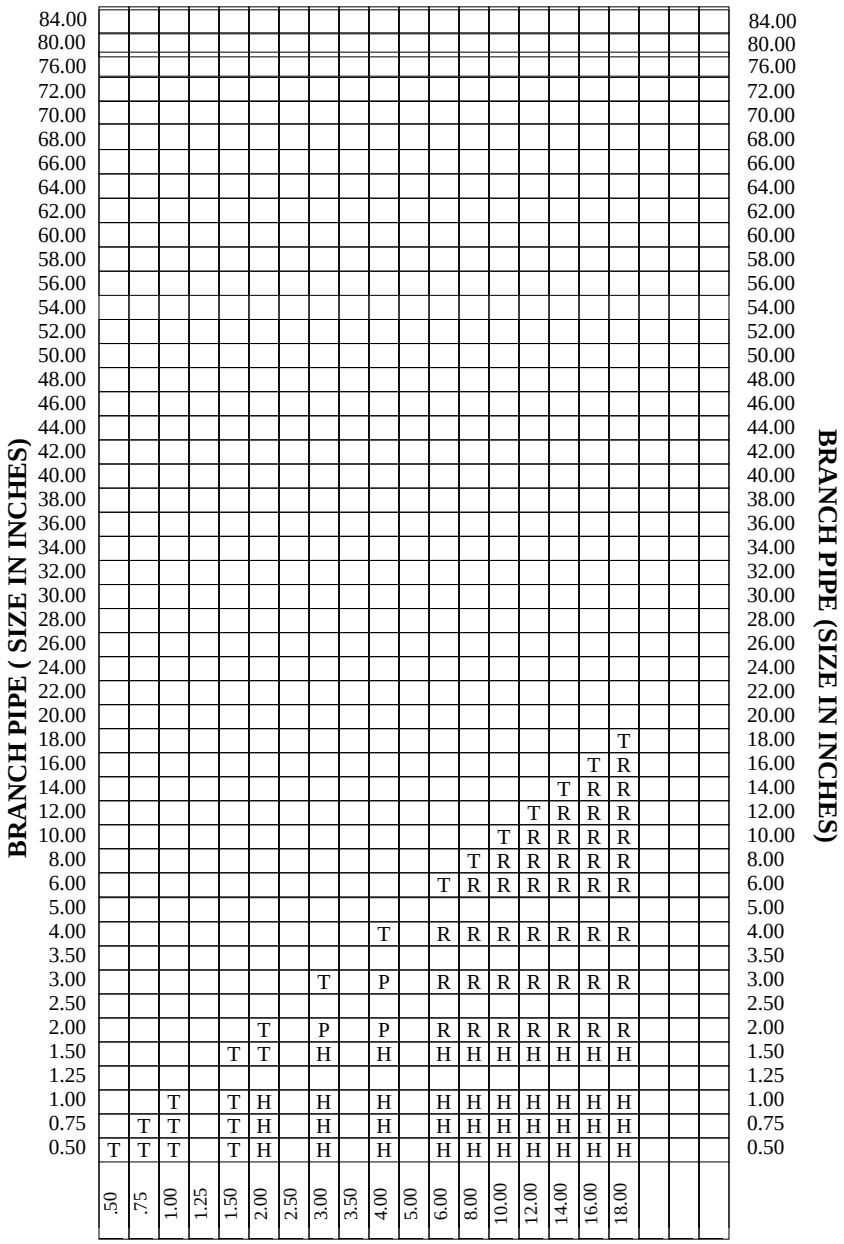
3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.



602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.

SPECIAL NOTES

PIPE CLASS : **B41K**
RATING : 300
BASE MATERIAL : SS 304
CORROSION ALLOWANCE : 0 MM
SPECIAL REQUIREMENT : CRYOGENIC SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-196	38	93	120
PRESS	50.5	50.5	42.18	40.14

SERVICE

MILD TO MODERATE CORROSIVE PROCESSES & HYDROCARBONS BELOW MINUS 45 DEG C- FLAMMABLE, TOXIC/ NON TOXIC BUT NON LETHAL-LOW TEMPERATURE HYDROCARBON, COLD FLARE, LIQUID DRAIN.

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

51 DESIGN PRESSURE AT -29 DEG.C. AND 38 DEG.C. FOR THIS PRESSURE HAS BEEN REDUCED FROM 50.62 KG/CM2G TO 50.50 KG/CM2G TO OPTIMISE THE THICKNESS FOR 6" SIZE.

113 PIPE THICKNESS HAS BEEN CALCULATED ON ACTUAL LINE CONDITION [38.5 KG/CM2 @ 200 DEG.C] SUBJECTED TO MIN. OF 80% OF THE CLASS CONDITIONS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SERVICE

HYDROCARBONS-LIQUID / VAPOR; LOW TEMPERATURE AND HIGH TEMPERATURE (BASED ON LICENSOR PMS CLASSES - LGP45 & L6E57)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

724 VALVE FIRE TESTED TO API 607

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

737 GROOVED METAL SS316L(UNS S31603); FLEXIBLE GRAPHITE; GROOVED FLAT PROFILE METALLIC CORE(4 MM) WITH SOFT GASKET SEALING MATERIAL ON EITHER FACE(0.50 MM EACH). LOOSE LOCATING RING, SS316L(UNS S31603); TO BE USED IF SPECIFIED IN PROCESS DESIGN PACKAGE/ P&ID: DON'T APPLY LUBRICANT OR ANTI-SEIZE COMPOUND

741 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.75" : STR-419 & 1" TO 12": STR-409 IS TO BE FOLLOWED.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

744 FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

745 CAST; FULL PORT TYPE; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 4, GEAR LARGER SIZES

746 CAST; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES

747 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; SWING TYPE; BONNETLESS; API TRIM # 12 / 12A

748 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH

GRAPHITE; API TRIM #10

749 VALVE; CHECK; API 594; TAPPED LUG OR DOUBLE FLG; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; DUAL-PLATE WAFER-LUG STYLE; 316 STAINLESS STEEL STEM; API TRIM #10; 316 STAINLESS STEEL DISC; SPRING: INCONEL-X; ASME B16.5/B16.47 SERIES A

750 BUTT WELDING X NPTF; STAINLESS STEEL; ASTM A 182 GR F 316L; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: WELDED; API TRIM #12/12A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

751 CAST; REDUCED PORT TYPE; TOP ENTRY; EXTENDED BONNET, BOLTING: ASTM A193 GR B8; GASKET: GRAPHITE/METAL/METAL WITH GRAPHITE; 316 STAINLESS STEEL STEM & BALL; SEATING: GRAPHITE; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); EXTERNAL BALL STOP (INTERNAL WELD) TO BE SUPPLIED; OPERATOR: LEVER

753 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL.

888 PICKLED & PASSIVATED.

895 SHALL BE USED ONLY FOR LICENSOR SPECIFICATION LGP45

897 THIS VALVE SHALL BE USED AS PRIMARY PREFERENCE ONLY IN SIZES 8" TO 12" FOR LICENSOR SPECIFICATION L6E57. FOR LICENSOR SPECIFICATON LGP45 AND FOR SIZES 4" TO 6" IN L6E57, THIS VALVE SHALL BE USED ONLY IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE/ P&ID.

898 FOR USAGE OF VALVES IN AREAS SUBJECTED TO CHLORIDE STRESS CRACKING CONSIDERATIONS, REQUIREMENTS SPECIFIED IN THE LICENSOR SPECIFICATION LGP45 SHALL BE CONSIDERED.

899 ASME B16.34/16.10 LONG PATTERN; FULL PORT TYPE; BOLTING: ASTM A 193 GR B8; SS316 STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL.

912 LICENSOR PMS LGP45 & L6E57 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

970 SHALL BE USED ONLY FOR LICENSOR SPECIFICATION L6E57.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

HYDROCARBONS:LOW TEMPERATURE & HIGH TEMPERATURE (BASED ON LICENSOR PMS CLASS - 6E57)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION).

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

329 USE FOR ONLY 3/4"X1/2" SCRD GLOBE VALVE (GLV/1) TO BE USED FOR VENTS, DRAINS AND INSTRUMENT CONNECTION.

422 SCREWED CAP, USE FOR INSTRUMENTATION ONLY.

539 A THREADED OLET IS REQUIRED TO INSTALL THIS VALVE. SEAL WELD AT THE OLET; FOLLOW VALVE MANUFACTURER'S GUIDELINES.

576 USE FOR ONLY 3/4" X 1/2" SW GLOBE VALVE (GLV/3) TO BE USED FOR VENT, DRAINS AND INSTRUMENT CONNECTION.

623 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 6E57

657 REFER LICENSOR SPECIFICATION FOR STR-409 FOR STRAINERS.

658 REFER LICENSOR SPECIFICATION FOR STR-419 FOR STRAINERS.

663 GRAFOIL GTB OR GTK FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

48 FOR INSULATED FLANGED JOINTS BEYOND 427 DEG.C. IN THIS CLASS, USE A453 GR.660 CL.A

74 STRESS RUPTURE TEST AS DETAILED IN ASTM A453 SHALL BE CARRIED OUT FOR ALL ASTM A453 GR.660A BOLTING MATERIALS.

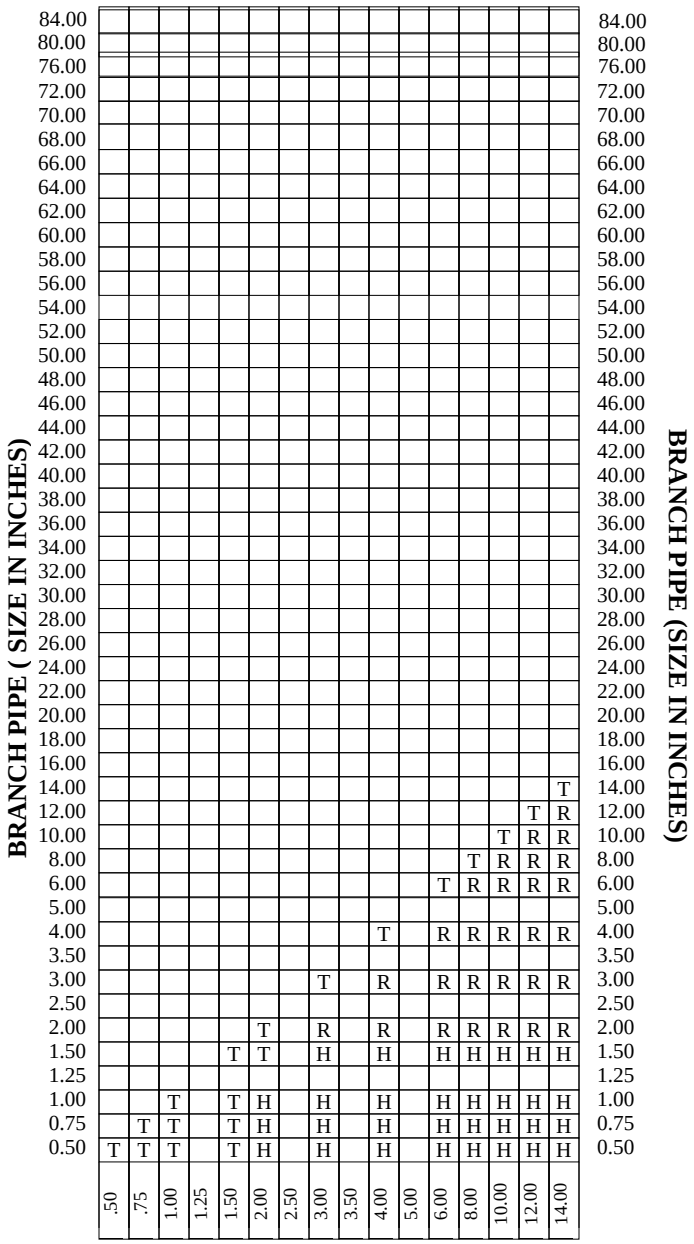
151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

180 100% RADIOGRAPHY SHALL BE DONE FOR ALL BUTT WELD JOINTS.

601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.

602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.

603 VALVES SHALL HAVE FLANGED ENDS IN ALL SIZES.



659 ONLY PIPING IS STAINLESS STEEL, VALVES REMAIN IDENTICAL TO PIPING CLASS B44A.

SPECIAL NOTES

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :B45A** Sheet 1 of 5

PIPE CLASS : **B45A**
RATING : 300
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371	399	427
PRESS	52.02	52.02	47.8	46.05	44.64	42.53	40.07	38.66	37.26	35.5	28.82

SERVICE

HC SLURRY (POLYMER + CATALYST):- PUMPAROUND, EFFLUENT, EVAPORATION LINES

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.

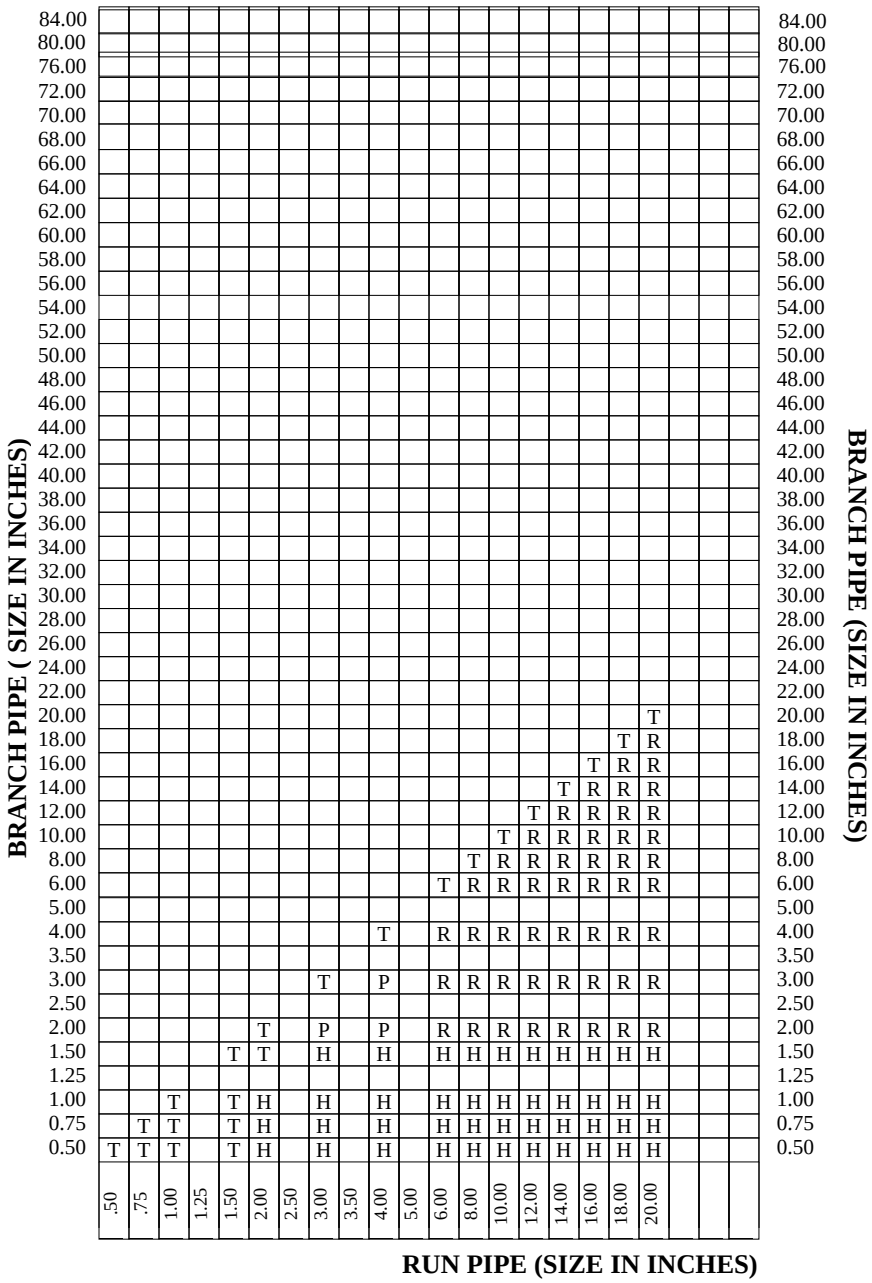
602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.

603 VALVES SHALL HAVE FLANGED ENDS IN ALL SIZES.

604 STRAIGHT PIPE RUN SHALL HAVE BREAK UP FLANGES AT EACH 3 METER.

605 PIPE BENDS SHALL HAVE FLANGED ENDS.

606 FOR VALVES USED IN POLYMER SERVICE, METAL SEAT SHALL BE USED (NO TEFLON SEAT).



608 THE SPECIAL FLANGES ARE PAD FLANGES TO EIL STD 7-12-0014.

SERVICE

SPENT CATALYST, HC SLURRY

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

48 FOR INSULATED FLANGED JOINTS BEYOND 427 DEG.C. IN THIS CLASS, USE A453 GR.660 CL.A

74 STRESS RUPTURE TEST AS DETAILED IN ASTM A453 SHALL BE CARRIED OUT FOR ALL ASTM A453 GR.660A BOLTING MATERIALS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

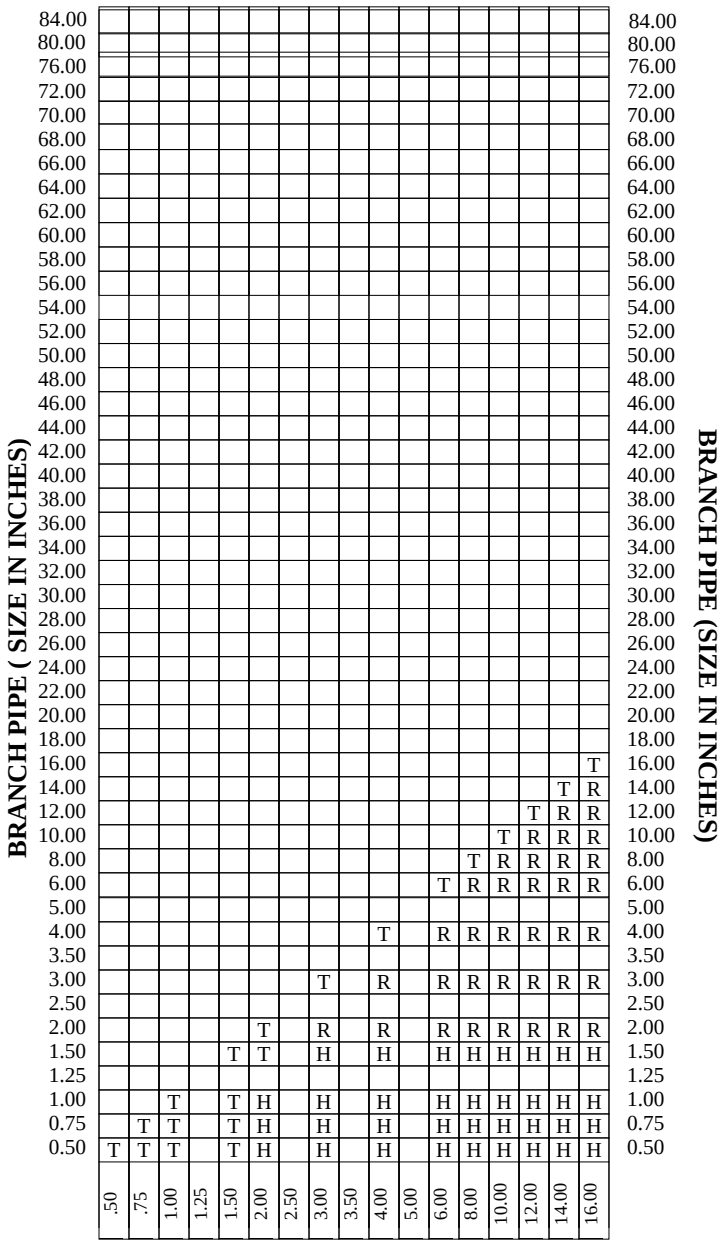
601 FOR BALL VALVES USED,STEM SEALS SHALL BE CAPABLE OF BEING TIGHTENED WHILE UNDER PRESSURE.

602 BALL VALVES USED SHALL BE FULL PORT TYPE AND SHALL HAVE FLANGED ENDS IN ALL SIZES.

603 VALVES SHALL HAVE FLANGED ENDS IN ALL SIZES.

606 FOR VALVES USED IN POLYMER SERVICE, METAL SEAT SHALL BE USED (NO TEFLON SEAT).

608 THE SPECIAL FLANGES ARE PAD FLANGES TO EIL STD 7-12-0014.



660 ONLY PIPING IS STAINLESS STEEL, VALVES REMAIN IDENTICAL TO PIPING CLASS B45A.

SERVICE

PRODUCT DISCHARGE (BASED ON LICENSOR PMS CLASS - LGP44)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

319 PROVIDE WELDED GROUNDING CLIPS AT FLANGED EQUIPMENT AND ON BOTH SIDES OF FLANGED JOINTS.

549 RUN AN ELECTRICAL CONTINUITY TEST EACH TIME THE PIPEWORK IS ASSEMBLED, AND AT LEAST ONCE A YEAR.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

732 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS
ENGINEER PER ASME B31.3 PARAGRAPH 301.5.4. (CONT.)

733 (CONT. FROM NOTE NO. 732) IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED

734 PIPE BETWEEN THE REACTOR AND THE PRODUCT CHAMBER TO BE SUBJECTED TO FATIGUE ANALYSIS IN ADDITION TO THERMAL ANALYSIS TO DETERMINE IF A THICKNESS ABOVE THAT LISTED FOR PRESSURE IS REQUIRED.

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

772 BUTT WELDING X NPTF; STAINLESS STEEL; ASTM A 182 GR F 316L; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: WELDED; API TRIM #10; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

773 FOR PIPING SYSTEMS SUBJECT TO VIBRATION, BRACING OF PERMANENT VENTS AND DRAINS SHOULD BE

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :B46K** Sheet 2 of 5

CONSIDERED

886 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL WELD SPLATTER SHALL BE REMOVED. GTAW SHALL BE USED FOR THE ROOT PASS OF ALL WELDS.(CONT.)

887 (CONT. FROM NOTE NO.886) ROOT PENETRATION SHALL BE KEPT AT A MINIMUM. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE-CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

888 PICKLED & PASSIVATED.

899 ASME B16.34/16.10 LONG PATTERN; FULL PORT TYPE; BOLTING: ASTM A 193 GR B8; SS316 STEM & BALL; SEATING: MOLECULARLY ENHANCED PTFE; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL.

942 LICENSOR PMS LGP44 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

944 FOR BRANCH OUTLET CONNECTIONS BETWEEN 45 AND 90 DEGREES, FABRICATE FROM PIPE USING ¿SET IN¿ CONSTRUCTION [SEE ASME B31.3 FIGURE 328.5.4D (2) OR (4)]. CHECK THE BRANCH OUTLET CONNECTION IN ACCORDANCE WITH ASME B31.3 AREA REPLACEMENT RULES.

945 USE HEAVIER PIPE WHEN REINFORCEMENT IS REQUIRED TO AVOID THE USE OF A REINFORCING PAD. ALL FILLET WELDS MUST BE SMOOTH IN CONTOUR AS WELL, BLEND GROUND IF NECESSARY.

946 VALVES ON THIS SPECIFICATION SHALL MEET THE REQUIREMENTS OF THE APPLICABLE INDUSTRY STANDARDS LISTED.
ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

947 FOR USAGE OF VALVES IN AREAS SUBJECTED TO CHLORIDE STRESS CRACKING CONSIDERATIONS, REQUIREMENTS SPECIFIED IN THE LICENSOR SPECIFICATION LGP44 SHALL BE CONSIDERED.

949 CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; FULL PORT TYPE; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; SEATING: INTEGRAL; 316 STAINLESS STEEL TRIM; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL.

950 CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; SEATING: INTEGRAL; 316 STAINLESS STEEL TRIM; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL.

951 1000 PSI; CAST; 3-PIECE BODY; BOLTING:ASTM A193 GR B7 W/ASTM A194 GR 2H FINISHED NUTS; REINFORCED OR MOLECULARLY ENHANCED PTFE SEATING; SS316 BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); OPERATOR: LEVER; WELD-IN BODY CAPS SHALL BE ASTM A82 GR F316L, A479 TYPE 316L OR A351 GR CF3M.

955 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE ONLY, IF MENTIONED IN PROCESS DESIGN PACKAGE OR P&ID.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

HYDROCARBONS, HP NITROGEN, RECOVERED GAS (BASED ON LICENSOR PMS CLASS - 2E63 & 2E18).

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION).

123 PIPING WITH THICKNESS>12.7 SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

501 SOFT SEATED CHECK VALVE. USE WHEREVER POSSIBLE. METAL SEATED CHECK VALVE (CK 1113A) SHOULD BE USED WHEN THERE IS NO ALTERNATIVE.

502 FOR 2" & ABOVE " BLOCK AND BLEED" SERVICE, USE GA 902C FOR NORMAL NON-HAZARDOUS SERVICE AND GA 1602 FOR CRITICAL BLOCK AND BLEED SERVICE.

621 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 2E63

657 REFER LICENSOR SPECIFICATION FOR STR-409 FOR STRAINERS.

667 PTFE FILLER; CONDREN STYLE 913 OR EQUAL.

670 NOT TO BE USED BELOW -29 DEGREE CELSIUS.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

979 FOR 2" AND ABOVE "BLOCK AND BLEED" SERVICE FOR NORMAL NON-HAZARDOUS SERVICE

980 FOR 2" AND ABOVE "BLOCK AND BLEED" SERVICE FOR CRITICAL BLOCK AND BLEED SERVICE.

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

CONVEYING SOLIDS (BASED ON LICENSOR PMS CLASS - 2E65)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION).

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

318 BEND RADIUS IN SOLIDS CONVEYING SERVICE MUST BE 9-TIMES NOMINAL SIZE. COMMERCIAL ELBOW SHALL NOT BE USED. FOR BENDS PIPE MATERIAL IS ALSO ACCEPTABLE.

354 DO NOT USE "IN LINE" FOR CONVEYING.

558 INSTALL PLUGGED VENT APPROXIMATELY EVERY FIFTY (50) FEET ON TOP OF HORIZONTAL RUNS.

622 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 2E65

667 PTFE FILLER; CONDREN STYLE 913 OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

PIPE CLASS : **B4A**
RATING : 300
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-45	38	93	120	149	204
PRESS	48.86	48.86	46.4	45.72	44.99	43.23

SERVICE

NON CORROSIVE PROCESS, FLAMMABLE / NON FLAMMABLE, NON LETHAL(BELOW -29 DEG C AND UPTO -45 DEG C) HYDROCARBONS, XYLENE,PROPYLENE,LPG, METHANOL, NH3, GAS FLARE, ETC.

NOTES

1 NDT REQUIREMENTS AS PER EIL STANDARD 6-44-0016.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

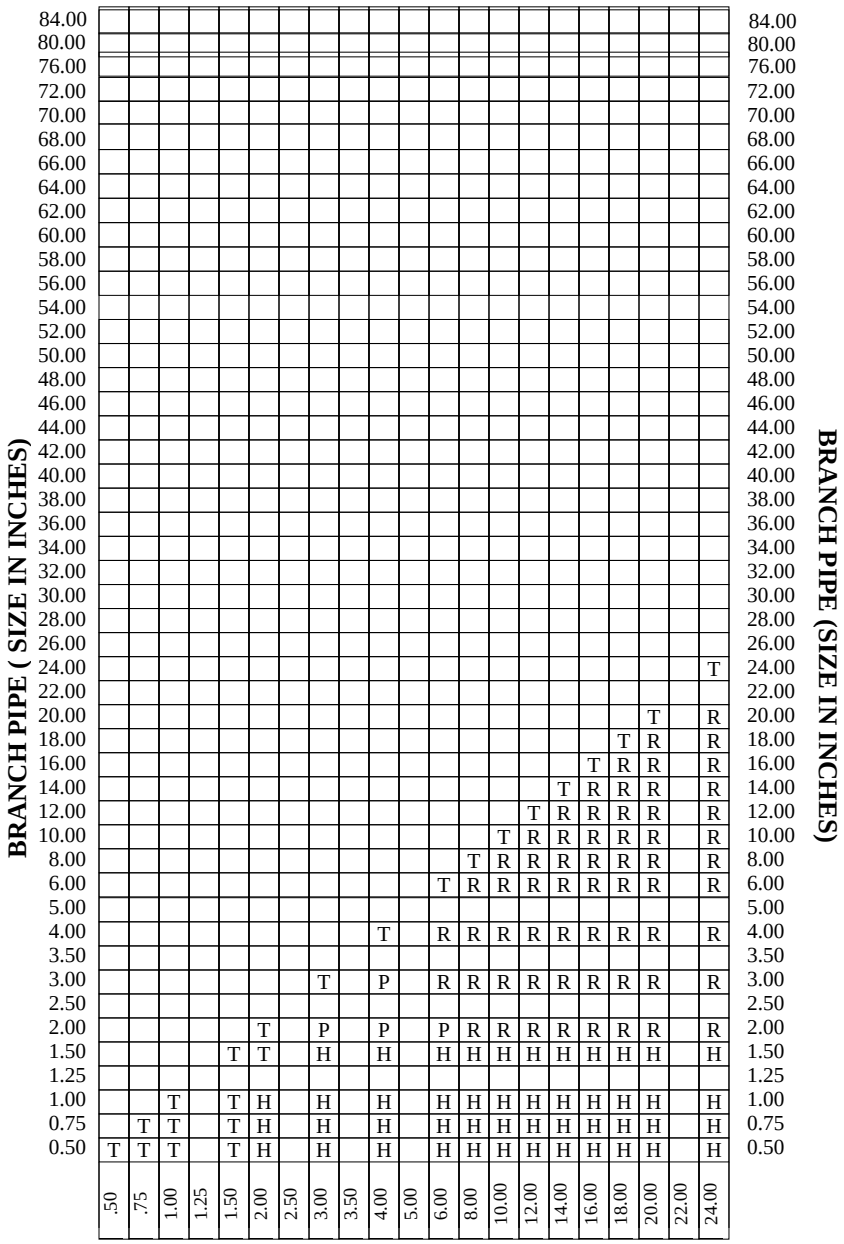
7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCHEDULE. REFER GENERAL NOTES TO PMS.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016



966 FOR LICENSOR SPECIFICATION LGP58 IN PPU, FOR SIZE RANGE 0.75" TO 1.5": STR-366 IS TO BE FOLLOWED FOR STRAINERS. SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2 FOR STRAINER SPECIFICATIONS.

PRESS	52.02	52.02	47.8	46.05	44.64	43.66

SERVICE

HYDROGEN (FEED & PRODUCT)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.

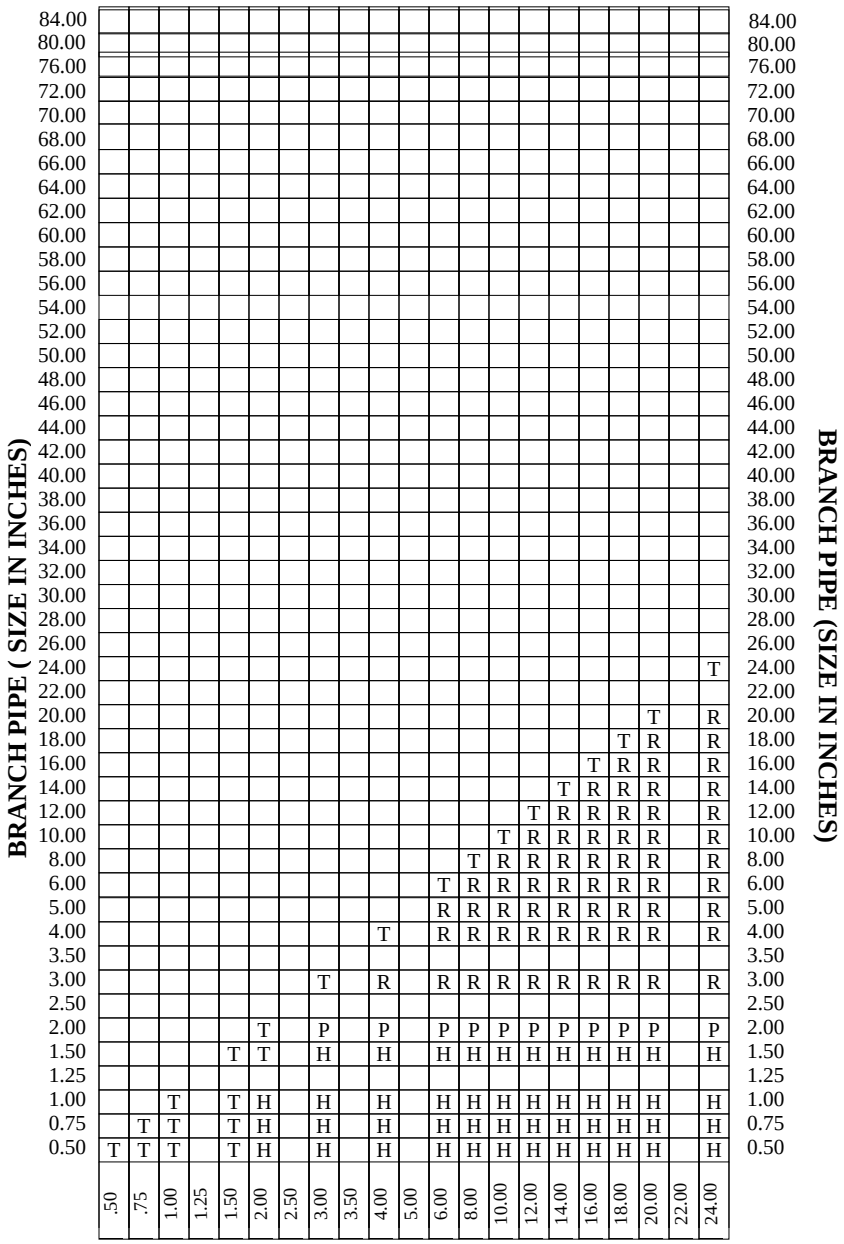
151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

201 100% RADIOGRAPHY TO BE DONE FOR ALL BUTT WELDS.

202 ALL REQUIREMENTS OF ASME B31.12 SHALL BE MET.

203 BODY/BONNET/COVER JOINTS & STUFFING BOX OF ALL VALVES SHALL HAVE LOW EMISSION. ONE VALVE PER METALLURGY, PER RATING, PER SIZE SHALL BE HELIUM LEAK TESTED AS PER ASME SEC.V, SUBSECTION A,ARTICLE 10(DETECTOR PROBE TECHNIQUE), APPENDIX IV AT A MIN OF 25% OF THE ALLOWABLE (RATED) COLD WORKING PRESSURE.

597 FOR LINES WITH DESIGN TEMPERATURE EXCEEDING 230 DEG. C., PARTIAL PRESSURE OF H2 SHALL NOT EXCEED API RP 941 LIMITS.



598 ALL WELDS IN LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C SHALL BE STRESS RELIEVED.

SERVICE

HYDROGEN (BASED ON LICENSOR PMS CLASS - LGP57)

NOTES

15 FOR LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C, POST WELD HEAT TREATMENT IS REQUIRED FOR ALL WELD JOINTS IRRESPECTIVE OF THICKNESS.

16 DESIGN TEMPERATURE FOR THIS CLASS CAN BE HIGHER THAN 230 DEG. C, PROVIDED THE MATERIAL IS SUITABLE FOR HYDROGEN PARTIAL PRESSURE AND MAXIMUM OPERATING TEMPERATURE OF THE SERVICE AS PER NELSON CURVE API RP 941.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

600 USE ONLY FOR INSTRUMENTATION CONNECTION.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

832 SHUT-OFF SERVICE; 6000 PSI; SPECIAL UNION ENDS; OUTSIDE SCREW; RISING STEM; RISING HANDWHEEL; BONNET: THREADED; STEM: 316 STAINLESS STEEL GUIDE ASSEMBLY: COPPER NICKEL WITH VESPEL DISC; SEAT: MONEL; PACKING: BUNA-N; BODY O-RING: BUNA-N WITH PTFE BACK UP RING; SEAT O-RING: BUNA-N

833 PREPARED FOR GAS PHASE PP SERVICE

834 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 380-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS.

835 VALVE; CHECK; UNIBODY; SPRING LOADED AXIALLY OPENING DISC; 6000 PSI; SPECIAL UNION ENDS; BODY: ASTM B150 ALUMINUM BRONZE; SEAT / DISC: 304 STAINLESS STEEL; SEAT O-RING: BUNA-N; DISC O-RING: BUNA-N

836 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 123-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS.

840 USE FOR VENTS AND DRAINS WITH CPV- 'O-SEAL' BLANK FITTING FIGURE NUMBER 104R WITH O-RING.

841 VALVE; GLOBE; NEEDLE SERVICE; 6000 PSI; SPECIAL UNION ENDS; OUTSIDE SCREW; RISING STEM; RISING HANDWHEEL; BONNET: THREADED; STEM: 316 STAINLESS STEEL GUIDE ASSEMBLY: COPPER NICKEL WITH VESPEL DISC; SEAT: MONEL; PACKING: BUNA-N; BODY O-RING: BUNA-N WITH PTFE BACK UP RING; SEAT O-RING: BUNA-N;

842 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 480-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS. (CONT.)

843 (CONT. FROM NOTE NO. 842) VALVE IS TO BE PURCHASED WITH UNION NUT, APPROPRIATE TAIL PIECE FOR TUBING CONNECTION AND O-RING. CONSULT MANUFACTURERS CATALOG FOR APPROPRIATE TAILPIECE FIGURE NUMBER.

939 LICENSOR PMS LGP57 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

957 WITH FLEXITE SUPER (MICA / GRAPHITE) GASKET AND STAINLESS STEEL RETAINER.

959 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.

SERVICE

HYDROGEN AND HYDROGEN BEARING HYDROCARBONS
- FLAMMABLE, TOXIC/NON-TOXIC BUT NON-LETHAL.

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

15 FOR LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C, POST WELD HEAT TREATMENT IS REQUIRED FOR ALL WELD JOINTS IRRESPECTIVE OF THICKNESS.

16 DESIGN TEMPERATURE FOR THIS CLASS CAN BE HIGHER THAN 230 DEG. C, PROVIDED THE CARBON STEEL MATERIAL IS SUITABLE FOR HYDROGEN PARTIAL PRESSURE AND MAXIMUM OPERATING TEMPERATURE AS PER NELSON CURVE API RP 941.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.

SERVICE

ALKYLS,ADDITIVES & CHLORINATED CHEMICALS (THIS SPECIFICATION IS INTENDED FOR NEAT ALKYLS AND OTHER NEAT PYROPHORIC MATERIALS ONLY FOR 1/2 INCH AND 3/4 INCH SIZES.) (BASED ON LICENSOR PMS CLASS - 1E20)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

341 PIPING SHALL PASS A SENSITIVE LEAK TEST IN ACCORDANCE WITH PPM-570 PRIOR TO INITIAL OPERATION.

345 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE THREAD DOPE WHERE SEAL WELDING AND COVER ALL EXPOSED THREADS WITH WELD.

346 SAFEGUARD AND SUPPORT NPS 0.5" PIPING IN STRUCTURAL CHANNEL MATERIAL.

422 SCREWED CAP, USE FOR INSTRUMENTATION ONLY.

614 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E20

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

639 REFER LICENSOR SPECIFICATION FOR STR-354 FOR STRAINERS.

665 GRAFOIL FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

977 TO BE USED IN DC, TT AND OTHER CHLORINATED HYDROCARBON SERVICE

978 NOT TO BE USED FOR DC, TT OR OTHER CHLORINATED HYDROCARBON SERVICE

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

COVEYING SOILDS (BASED ON LICENSOR PMS CLASS - 1E23)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

318 BEND RADIUS IN SOLIDS CONVEYING SERVICE MUST BE 9-TIMES NOMINAL SIZE. COMMERCIAL ELBOW SHALL NOT BE USED. FOR BENDS PIPE MATERIAL IS ALSO ACCEPTABLE.

319 PROVIDE WELDED GROUNDING CLIPS AT FLANGED EQUIPMENT AND ON BOTH SIDES OF FLANGED JOINTS.

320 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION. DO NOT USE IN-LINE FOR CONVEYING.

328 JOINTS INCLUDING EQUIPMENT CONNECTIONS, SHALL BE ELECTRICALLY BONDED AND PIPING GROUNDED.

354 DO NOT USE "IN LINE" FOR CONVEYING.

549 RUN AN ELECTRICAL CONTINUITY TEST EACH TIME THE PIPEWORK IS ASSEMBLED, AND AT LEAST ONCE A YEAR.

558 INSTALL PLUGGED VENT APPROXIMATELY EVERY FIFTY (50) FEET ON TOP OF HORIZONTAL RUNS.

616 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E23

664 PTFE FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

CYCLE GAS (BASED ON LICENSOR PMS CLASS - 1E22)

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 20.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

123 PIPING WITH THICKNESS>12.7 SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

340 USE FOR VENTAND DRAIN CONNECTION WHERE VALVE IS NORMALLY CLOSED(SW INLET AND SCRD OUTLET) .

347 USE FOR INSTRUMENT CONNECTION WHERE VALVE IS NORMALLY OPEN (SW INLET AND SCRD OUTLET) .

374 ONLY USE DEPEND ON P&ID NOTE.

386 316 SS 3-PLY CORRUGATED GASKET SIMILAR TO LAMONS STYLE 340, MELRATH 1900, FLEXITALLIC 129 OR EQUAL, 1/8" THK (NOMINAL). CORRUGATED-JACKETED METAL GASKET WITH CORRUGATED METAL FILLER (CORE). PITCH OF CORRUGATIONS- 3/16"; JACKET MATERIAL-0.019" THK; FILLER MATERIAL-1/32" THK (CONTD)

387 DESIGN SEATING STRESS (Y) = 6500 PSIG AND GASKET FACTOR (M) = 3.5. GASKET TO BE FITTED WITH CENTERING TABS. BOTH SIDES OF 3-PLY CORRUGATED GASKET TO BE FURNISHED (FROM THE MANUFACTURER) WITH ONE LAYER OF 0.015" THICK GRAFTECH, INC. GRAFOIL GRADE GTH (DO NOT SUBSTITUTE) ADHESIVE-BACKED TAPE. (CONTD.)

388 TAPE SHALL PROVIDE COMPLETE COVERAGE OF THE CONTACT AREA OF THE INSTALLED GASKET WITH A MIN NUMBER OF JOINTS HAVING AN OVERLAP NOT EXCEEDING 1/16". TAPE SHALL BE INSTALLED IN ACCORDANCE WITH RECOMMENDATIONS OF GRAFTECH, INC. TECH BULLETIN G-202.

588 FOR HDPE UNIT (LICENSOR : CP CHEM) THE MINIMUM CLASS TEMPERATURE SHALL BE READ AS -10 DEG C IN PLACE OF -29 DEG C.

615 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E22

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

639 REFER LICENSOR SPECIFICATION FOR STR-354 FOR STRAINERS.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

976 USE WHEN TEMPERATURE IS MORE THAN 176 DEG.C

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

REACTOR PRODUCT DISCHARGE-PRODUCT CONVEYING (BASED ON LICENSOR PMS CLASS - 1E64)

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 20.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

308 ALL PRESSURE RESISTING BUTT WELDS SHALL BE 100% RADIOGRAPHED AS PER B31.3. ALL OTHER WELDS SHALL BE LP/MP EXAMINED AS PER B31.3. WHEN SPECIFICALLY APPROVED ULTRASONIC EXAMINATION MAY BE SUBSTITUTED FOR RADIOGRAPHIC, LP/MP EXAMINATION.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

318 BEND RADIUS IN SOLIDS CONVEYING SERVICE MUST BE 9-TIMES NOMINAL SIZE. COMMERCIAL ELBOW SHALL NOT BE USED. FOR BENDS PIPE MATERIAL IS ALSO ACCEPTABLE.

319 PROVIDE WELDED GROUNDING CLIPS AT FLANGED EQUIPMENT AND ON BOTH SIDES OF FLANGED JOINTS.

340 USE FOR VENTAND DRAIN CONNECTION WHERE VALVE IS NORMALLY CLOSED(SW INLET AND SCRD OUTLET) .

347 USE FOR INSTRUMENT CONNECTION WHERE VALVE IS NORMALLY OPEN (SW INLET AND SCRD OUTLET) .

548 SEPARABLE SOCKETS SHALL BE SOCKET WELD TYPE.

549 RUN AN ELECTRICAL CONTINUITY TEST EACH TIME THE PIPEWORK IS ASSEMBLED, AND AT LEAST ONCE A YEAR.

559 DO NOT USE REDUCING FLANGES.

566 SOFT SEATED, SPRING LOADED AXIALLY OPENING DISC CHECK VALVE.

617 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E64

644 FOR BRANCHES BETWEEN 45 AND 90 DEGREES, FABRICATE FROM PIPE USING SET-IN CONSTRUCTION (NOT SET ON) AS PER B31.3 AND USE HEAVIER PIPE WHEN REINFORCEMENT IS INDICATED TO AVOID THE USE OF REINFORCING PADS. ALL WELDS SHOULD BE GROUND TO CREATE A SMOOTH TRANSITION.

645 IF GREATER THAN 7000 THERMAL DISPLACEMENT CYCLES ARE EXPECTED OVER THE SERVICE LIFE, A PIPE FLEXIBILITY ANALYSIS IS REQUIRED TO VERIFY THAT THE EXPECTED STRESSES ARE BELOW 80% OF THE ALLOWABLE STRESSES. OTHERWISE THE PIPING SHOULD BE CONSTRUCTED TO ASME B31.3 SEVERE CYCLIC SERVICE REQUIREMENTS.

646 PIPE BETWEEN THE REACTOR AND THE PRODUCT CHAMBER TO BE SUBJECTED TO FATIGUE ANALYSIS IN ADDITION TO THERMAL ANALYSIS TO DETERMINE IF A THICKNESS ABOVE THAT LISTED FOR PRESSURE IS REQUIRED.

666 PTFE FILLER; FLEXITALLIC STYLE CGI OR EQUAL.

PRESS	52.02	52.02	47.45	46.05	44.64	42.18

SERVICE

CYCLIC PRESSURE, HYDROCARBONS, HP NITROGEN (BASED ON LICENSOR PMS CLASS - 1E18)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

308 ALL PRESSURE RESISTING BUTT WELDS SHALL BE 100% RADIOGRAPHED AS PER B31.3. ALL OTHER WELDS SHALL BE LP/MP EXAMINED AS PER B31.3. WHEN SPECIFICALLY APPROVED ULTRASONIC EXAMINATION MAY BE SUBSTITUTED FOR RADIOGRAPHIC, LP/MP EXAMINATION.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

329 USE FOR ONLY 3/4"X1/2" SCRD GLOBE VALVE (GLV/1) TO BE USED FOR VENTS, DRAINS AND INSTRUMENT CONNECTION.

356 AT THREADED EQUIPMENT CONNECTIONS ONLY. SEAL WELD SHALL COVER ALL THREADS.

357 BRANCH CONNECTION SHALL BE LOCATED AT POINTS WHERE THE RUN LINE IS ANCHORED.

538 FOR PISTON TYPE CHECK VALVE

547 LINES SHALL BE RESTRAINED BY USE OF RIGID ANCHORS AND FRICTION PIPE SLIDES (STAUFF CORP. OR EQUAL).

548 SEPARABLE SOCKETS SHALL BE SOCKET WELD TYPE.

576 USE FOR ONLY 3/4" X 1/2" SW GLOBE VALVE (GLV/3) TO BE USED FOR VENT, DRAINS AND INSTRUMENT CONNECTION.

613 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E18

637 REFER LICENSOR SPECIFICATION FOR STR-366 FOR STRAINERS.

663 GRAFOIL GTB OR GTK FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

CORROSION ALLOWANCE : 0.75 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	165
PRESS	47.45	47.45	45.34

SERVICE

CYCLE GAS (BASED ON LICENSOR PMS CLASS - 1E87)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

123 PIPING WITH THICKNESS>12.7 SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

308 ALL PRESSURE RESISTING BUTT WELDS SHALL BE 100% RADIOGRAPHED AS PER B31.3. ALL OTHER WELDS SHALL BE LP/MP EXAMINED AS PER B31.3. WHEN SPECIFICALLY APPROVED ULTRASONIC EXAMINATION MAY BE SUBSTITUTED FOR RADIOGRAPHIC, LP/MP EXAMINATION.

309 SPECIAL CARE SHALL BE EXERCISED DURING FABRICATION OF PIPING TO MINIMIZE OBSTRUCTIONS TO FLOW. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO ASSEMBLY OF SW JOINTS. WHEREVER POSSIBLE, INSIDE OF WELDS SHALL BE GROUND FLUSH. ALL INTERNAL SPLLATER SHALL BE REMOVED. (CONTD.)

310 ALL WELDS INACCESSIBLE FOR GRINDING, THE FIRST PASS SHALL BE MADE BY THE GTAW PROCESS OR CONSUMABLE INSERTS SHALL BE USED. ALL HOLES FOR "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE. REMOVE ALL BURRS LEFT AFTER CUTTING.

311 USE FOR ONLY THERMOWELL CONNECTION.

320 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION. DO NOT USE IN-LINE FOR CONVEYING.

340 USE FOR VENTAND DRAIN CONNECTION WHERE VALVE IS NORMALLY CLOSED(SW INLET AND SCRD OUTLET) .

347 USE FOR INSTRUMENT CONNECTION WHERE VALVE IS NORMALLY OPEN (SW INLET AND SCRD OUTLET) .

396 316 STAINLESS STEEL 3-PLY CORRUGATED GASKET SIMILAR TO LAMONS STYLE 340, MELRATH 1900, FLEXITALLIC 129 OR EQUAL. CORRUGATED JACKETED METAL GASKET WITH CORRUGATED METAL FILLER (CORE). PITCH OF CORRUGATIONS TO BE 3/16"; JACKET MATERIAL TO BE 0.019" THICK, FILLER MATERIAL TO BE 1/32" THICK.(CONTD.)

397 DESIGN SEATING STRESS (Y)= 6500 PSIG AND GASKET FACTOR (M)= 3.5. BOTH THE SIDES OF 3-PLY CORRUGATED GASKET TO BE FURNISHED WITH ONE LAYER OF 0.015" THICK GRAFOIL GRADE GTH (DONT SUBSTITUTE) ADHESIVE BACKED TAPE(CONT.).

400 TAPE SHALL PROVIDE COMPLETE COVERAGE OF THE CONTACT AREA OF THE INSTALLED GASKET WITH MINIMUM NO. OF JOINTS HAVING AN OVERLAP NOT EXCEEDING 1/16". TAPE SHALL BE INSTALLED IN ACCORDANCE WITH RECOMMENDATIONS OF GRAFTECH, INC. TECH BULLETIN G-202.

422 SCREWED CAP, USE FOR INSTRUMENTATION ONLY.

587 4-WAY BALL VALVE

618 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1E87

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

Location BINA, MADHYA PRADESH	**Pipe Class :B92K** Sheet 1 of 5

PIPE CLASS : **B92K**
RATING : 300
BASE MATERIAL : SS 304
CORROSION ALLOWANCE : 0 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204
PRESS	50.5	50.5	42.18	37.96	34.8

SERVICE

LUBE OIL, SEAL OIL, CORROSION INHIBITOR, METHANOL INJECTION, DMDS INJECTION.

NOTES

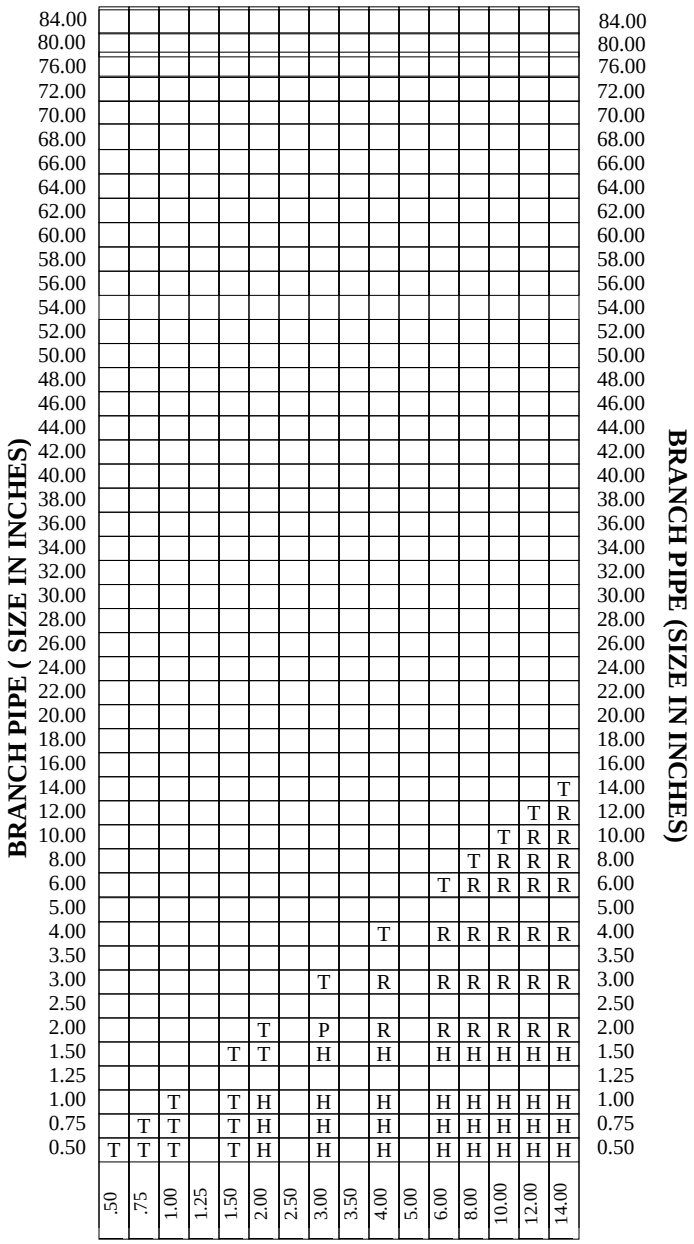
5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

51 DESIGN PRESSURE AT -29 DEG.C. AND 38 DEG.C. FOR THIS PRESSURE HAS BEEN REDUCED FROM 50.62 KG/CM2G TO 50.50 KG/CM2G TO OPTIMISE THE THICKNESS FOR 6" SIZE.

74 STRESS RUPTURE TEST AS DETAILED IN ASTM A453 SHALL BE CARRIED OUT FOR ALL ASTM A453 GR.660A BOLTING MATERIALS.

105 FOR INSULATED FLANGED JOINTS BEYOND 427 DEG.C. IN THIS CLASS, USE HOT DIP GALVANISED A453 GR.660 CL.A



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :B9A** Sheet 1 of 7

PIPE CLASS : **B9A**
RATING : 300
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 3 MM
SPECIAL REQUIREMENT :

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	260	316	343	371	399	427
PRESS	52.02	52.02	47.8	46.05	44.64	42.53	40.07	38.66	37.26	35.5	28.82

SERVICE

MILD TO MODERATE CORROSIVE PROCESS LIQUID, VAPOUR & GAS, FLAMMABLE/NON FLAMMABLE & NON LETHAL - HVGO,SLOP,
DISTILLATE, RCO, DIESEL, KEROSENE,LVGO, VBTAR, TCTAR, ETC. HYDROCARBON,QUENCH OIL, PROCESS WATER, FUEL OIL

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

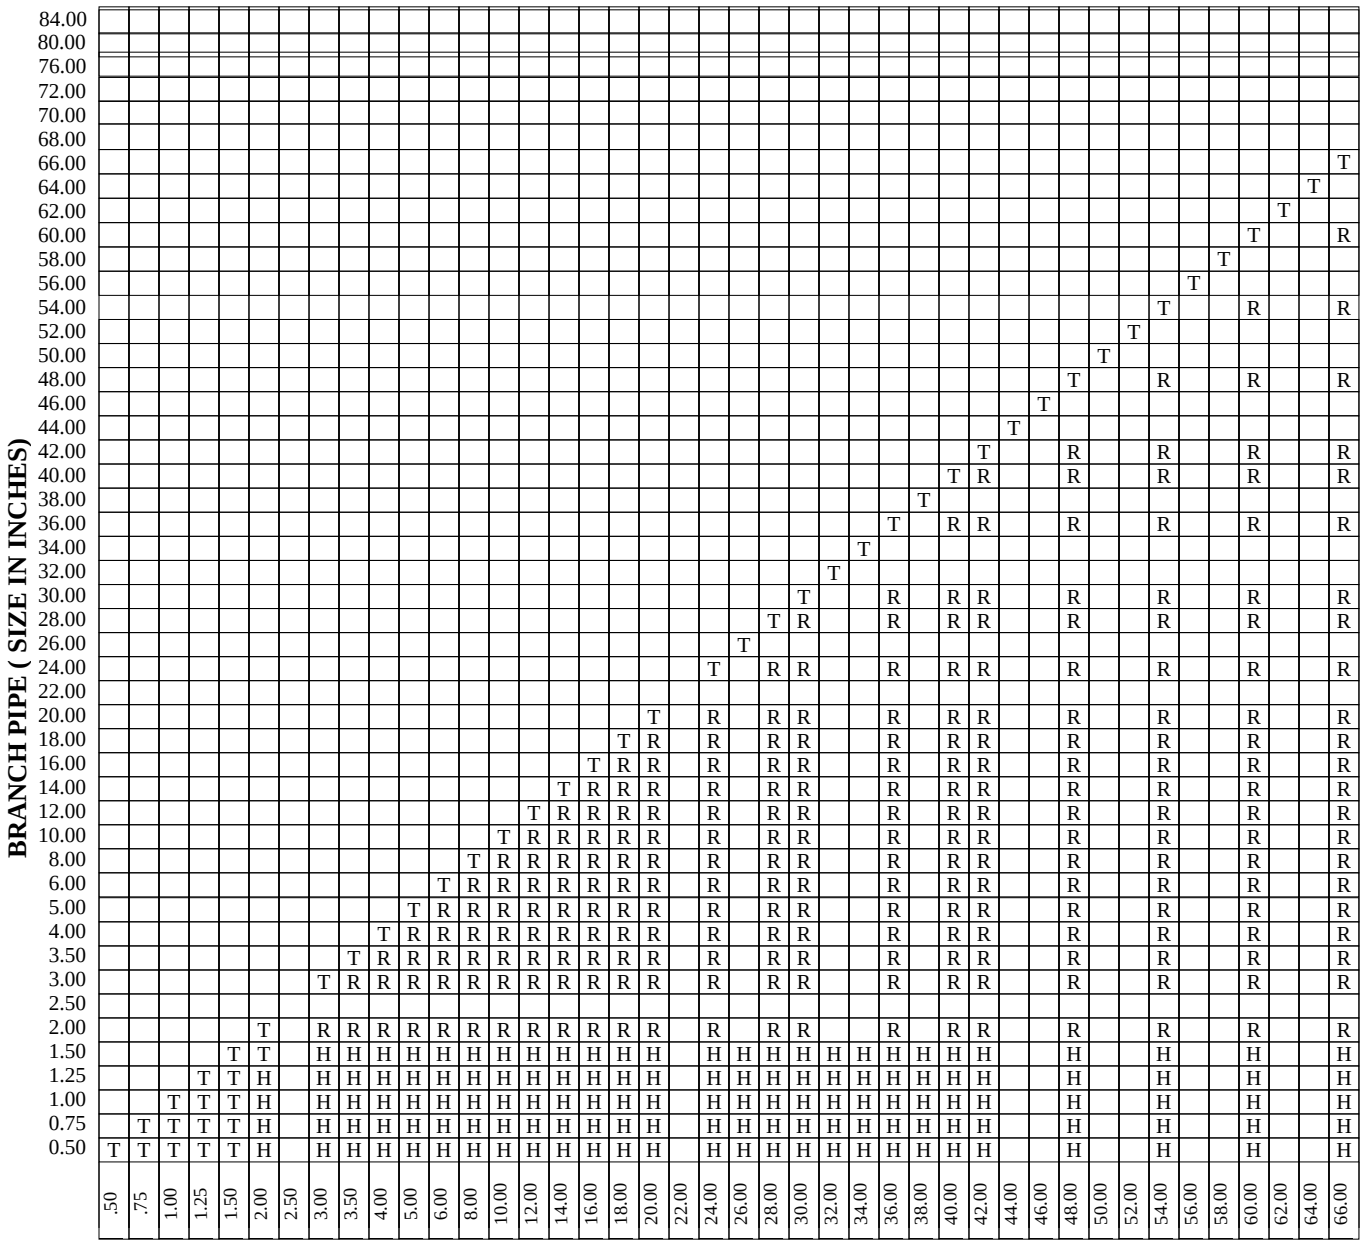
26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCHEDULE. REFER GENERAL NOTES TO PMS.

113 PIPE THICKNESS HAS BEEN CALCULATED ON ACTUAL LINE CONDITION [38.5 KG/CM2 @ 200 DEG.C] SUBJECTED TO MIN. OF 80% OF THE CLASS CONDITIONS.

114 PIPE THICKNESS HAS BEEN CALCULATED BASED ON THE LINE CONDITION 26 KG/CM2 @ 225 DEG.C

132 PIPE THICKNESS HAS BEEN CALCULATED BASED ON ACTUAL LINE CONDITION [38.5 KG/CM2 @ 200 DEG.C]



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

346 SAFEGUARD AND SUPPORT NPS 0.5" PIPING IN STRUCTURAL CHANNEL MATERIAL.

703 NPS 1/2 PIPING IS USED FOR MANY ALKYL LINES SO THE INTERNAL CONTAINED VOLUME IS SMALL. THESE SMALL LINES LACK THE MECHANICAL STRENGTH NECESSARY TO SUPPORT THEMSELVES ACROSS LONG SPANS (AS IN A PIPE RACK) OR TO PROVIDE PROTECTION FROM MECHANICAL DAMAGE FROM IMPACT.

704 (CONTINUED FROM NOTE 703) LONG RUNS IN THE PIPE RACKS AND PIPING THAT ARE POTENTIALLY EXPOSED TO MECHANICAL IMPACT NEED TO BE PROTECTED BY STEEL CHANNEL WITH A STRENGTH EQUAL OR GREATER THAN 4 INCH WIDTH AND WEIGHT PER FOOT OF NO LESS THAN 7.4.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

708 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE JOINT COMPOUND WHERE SEAL WELDING, AND COVER ALL EXPOSED THREADS WITH WELD.

709 FLANGES SHOULD BE USED ONLY AT EQUIPMENT OR VALVES. FOR LONG LINES USE SOCKET WELDING COUPLINGS (TO JOIN PIPE) FOR NPS 1/2 TO 1-1/2, BUTT WELD FOR NPS 2" AND ABOVE.

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

714 FOR PRESSURE GUAGE ASSEMBLY: FOR ALKYL SERVICE, CHEMICAL ATTACHMENTS ARE TO BE USED. DIAPHRAGM IS TO BE CONSTRUCTED OF 304 STAINLESS STEEL AND WELDED TO THE TOP HOUSING. FLUSH CONNECTION IS TO BE PROVIDED. REFER TO TYPICAL SKETCH NUMBER 26 IN THE SUPPLEMENT TO PROCESS PARTS.

715 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC. WELDED VALVES ARE PREFERRED TO MINIMIZE THE NUMBER OF POTENTIAL LEAK POINTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

722 BALL VLV, B16.34; 1000 PSI; SW; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7; 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

724 VALVE FIRE TESTED TO API 607

725 REDUCED PORT TYPE

727 BALL VLV, ASME B16.34; 1000 PSI; SOCKET WELD END X NPTF; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; REDUCED PORT TYPE; 3-PIECE BODY; BOLTING: ASTM A 193 GR B7, 316 SS STEM; SEATING: REINFORCED OR MOLECULARLY ENHANCED PTFE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; OPERATOR: LEVER

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

729 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2. FOR SIZE RANGE 0.5" TO 1.5": STR-366 & FOR 2": STR-354 IS TO BE FOLLOWED

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :D20K** Sheet 2 of 5

730 USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH

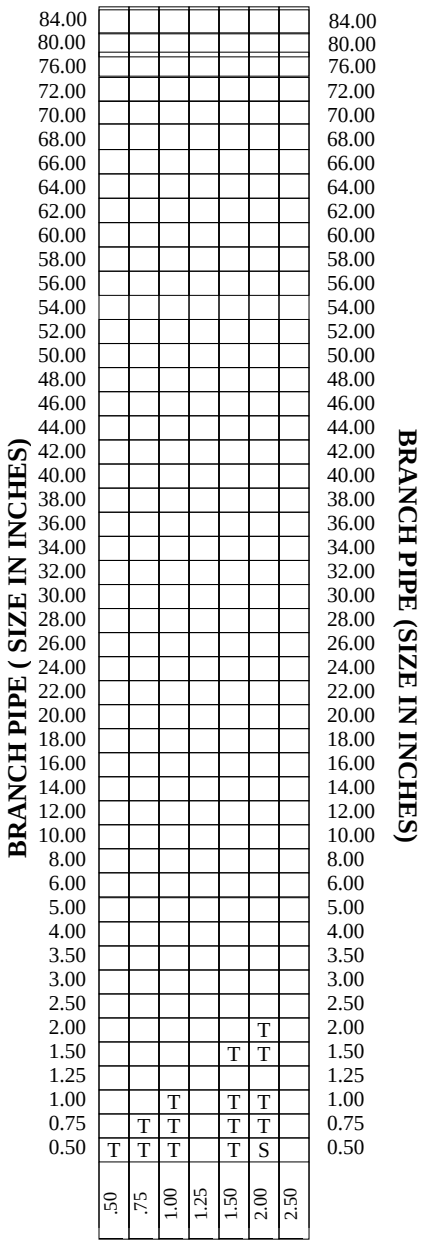
731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

829 CAST; XS;WAFER INSERT TYPE; PTFE SEAT;SS316 SPRING; REQUISITIONER MUST SPECIFY CRACKING PRESSURE; FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG; CLASS 600 CHECK-ALL WAFER INSERT VALVE MAY BE BOLTED BETWEEN CLASS 150/ CLASS 300/ CLASS 600 FLANGES;TO BE USED WITH XS OR THINNER WALL PIPE

830 ASME B16.34/16.10 SHORT PATTERN; CAST; REDUCED PORT TYPE; END ENTRY; SS316 STEM; SEATING: MOLECULARLY ENHANCED PTFE; SS316 BALL; PACKING: FLEXIBLE GRAPHITE-PTFE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER; SELF-RELIEVING SEATS ONLY; DO NOT DRILL BALL

831 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; CARBON STEEL; ASTM A 105; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A

902 LICENSOR PMS L7E28 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.



988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

185 VERMICULITE FILLER OR AMORPHOUS POLYSILIC ACID FIBRES WITH TALC FILLER.

234 GASKET SHALL BE SPIRAL WOUND TYPE.

236 ALL ALLOY UNS N06600 MATERIAL SHALL BE SUPPLIED IN ANNEALED CONDITION.

238 EACH CASTING SHALL MEET THE HYDROSTATIC TEST REQUIREMENTS OF ASTM SPECIFICATION A 703.

240 NO ELASTOMERIC COMPONENTS SHALL BE ALLOWED IN THE VALVES.

SERVICE

HYDROCARBONS, HP NITROGEN (BASED ON LICENSOR PMS CLASS - L7G7)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

721 THIS VALVE REQUIRES DISASSEMBLY PRIOR TO WELDING TO AVOID DAMAGE TO SEATS AND SEALS;

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

744 FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

746 CAST; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES

747 VALVE; CHECK; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; SWING TYPE; BONNETLESS; API TRIM # 12 / 12A

748 VALVE; CHECK; ASME B16.34; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; SWING TYPE; COVER: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #10

768 VALVES ARE TO BE USED IN APPLICATIONS SUBJECT TO CHLORIDE STRESS CRACKING CONSIDERATIONS

771 CAST; STAINLESS STEEL; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ALLOY 20 (UNS N08020) W/ FINISHED NUTS; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM # 10; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES

801 BOLT LUBRICANT SHALL BE APPLIED TO ENTIRE LENGTH OF FASTENER THREADS.
PASTE BOLT LUBRICANT; ZIRCONIUM DIOXIDE AND SULPHUR FREE OIL.

803 CAST; FULL PORT TYPE; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #5 / 5A; DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES

804 FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #12 / 12A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL

805 ASME B16.34/16.10 LONG PATTERN; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; FULL PORT TYPE; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: GRAPHITE OR METAL OR METAL WITH GRAPHITE; SEATING: METAL; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: LEVER

SERVICE

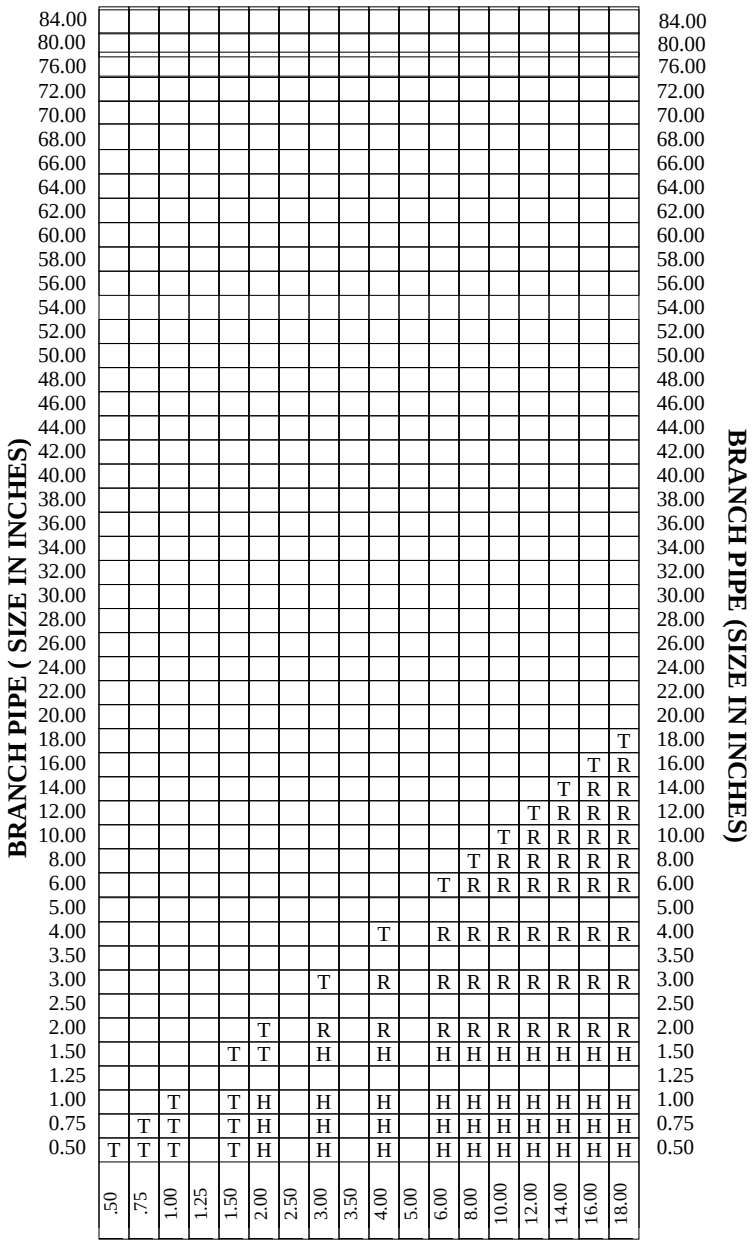
CORROSIVE LIQUID, VAPOUR AND GAS - FLAMMABLE/NON FLAMMABLE, TOXIC/NON TOXIC BUT NON LETHAL, HYDROGENATION,
PYROLYSIS GAS, SECOND STAGE REACTOR

NOTES

49 ITEMS SHALL BE SUPPLIED IN A STABILISED HEAT TREATED CONDITION. STABILISING HEAT TREATMENT SHALL BE CARRIED OUT SUBSEQUENT TO THE NORMAL SOLUTION ANNEALING. SOAKING TEMPERATURE AND HOLDING TIME FOR STABILISING HEAT TREATMENT SHALL BE 900 DEG C AND 4 HOURS RESPECTIVELY.

74 STRESS RUPTURE TEST AS DETAILED IN ASTM A453 SHALL BE CARRIED OUT FOR ALL ASTM A453 GR.660A BOLTING MATERIALS.

125 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [270 DEG. C & 50.40 KG/ CM2 G] SUBJECT TO MINIMUM OF 80% CLASS RATING.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

SPECIAL NOTES

SERVICE

CYCLE GAS; CYCLIC SERVICE; NITROGEN; (BASED ON LICENSOR PMS CLASS - LPZ04)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

732 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS
ENGINEER PER ASME B31.3 PARAGRAPH 301.5.4. (CONT.)

733 (CONT. FROM NOTE NO. 732) IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

737 GROOVED METAL SS316L(UNS S31603); FLEXIBLE GRAPHITE; GROOVED FLAT PROFILE METALLIC CORE(4 MM) WITH SOFT GASKET SEALING MATERIAL ON EITHER FACE(0.50 MM EACH). LOOSE LOCATING RING, SS316L(UNS S31603); TO BE USED IF SPECIFIED IN PROCESS DESIGN PACKAGE/ P&ID: DON'T APPLY LUBRICANT OR ANTI-SEIZE COMPOUND

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

754 FIRE WATER SPRAY PROTECTION SHALL BE PROVIDED FOR IN-LINE NON-FIRE TESTED VALVES

755 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM;BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

760 IN ORDER TO ELIMINATE THE OCCURRENCE OF POTENTIAL STRESS RISERS DETRIMENTAL TO PIPING IN CYCLIC SERVICES, EXTRA CARE MUST BE TAKEN DURING FABRICATION. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO WELDING. WHEREVER POSSIBLE, THE INSIDE SURFACE OF BUTT WELDS SHALL BE GROUND FLUSH.

Copyright EIL- All rights reserved

Client :BPCL	**Dept./Sect. :** 16/43
Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :D28A** Sheet 2 of 6

761 ALL INTERNAL WELD SPLATTER AND BURRS SHALL BE REMOVED. THE GTAW WELD PROCESS SHALL BE USED FOR THE ROOT PASS OF ALL BUTT WELDS TO PROMOTE A SMOOTH INNER BORE; ROOT PENETRATION SHALL BE KEPT TO A MINIMUM.

762 ALL HOLES FOR (SET-ON STYLE) "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING, OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE; A STRAIGHT BORE OLET IS REQUIRED FOR THESE APPLICATIONS.

775 FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

776 FLANGED; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; OS&Y; BONNET: BOLTED; RISING STEM; BOLTING: ASTM A 193 GR B7; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM #8 / 8A; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES;

786 8-THREAD SERIES BOLTS ARE REQUIRED WHEN THE FLANGE BOLT DIAMETER IS 1 1/8 INCH OR LARGER PER ASTM A 193; THE PREFERRED INSTALLATION IS WITH THE STEM IN THE HORIZONTAL POSITION.

787 (CONT. FROM NOTE NO. 786) VALVE SHALL BE BI-DIRECTIONAL AND CAPABLE OF DEAD END SERVICE AT FULL-RATED PRESSURE. PRIOR TO INSTALLATION ASSURE THAT FLANGE GASKET FACE INCLUDING THE RETAINER RING AND BOLTING ARE SUITABLE TO PROVIDE SEALING WITH THE SELECTED GASKET.

791 VALVE; GATE; API 602; CLASS 800; BUTT WELDING X NPTF; FORGED; CARBON STEEL; ASTM A 105; OS&Y; RISING STEM; BONNET: WELDED; EXTENDED BODY INTEGRALLY REINFORCED (BRANCH) END; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL;

800 REQUISITIONER MUST SPECIFY CRACKING PRESSURE FURNISH WITH APPROVED RIVETED-ON EXTERNAL IDENTIFICATION TAG;

806 PIPING SUPPORT LOCATION MUST BE DETERMINED IN CONCERT WITH THE ANALOG TECHNOLOGIST TO AVOID HARMONICS DUE TO VIBRATION AND THE STRESS ANALYST TO AVOID EXCESSIVE THERMAL STRESSES / STRAINS. 'HOLD DOWN' TYPE SUPPORTS WILL TYPICALLY BE REQUIRED.

815 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.
FOR SIZE RANGE 3/4" TO 1" : STR-366 IS TO BE FOLLOWED

824 ASME B16.34/16.10 LONG PATTERN; CAST; CARBON STEEL;BOLTING: ASTM A 193 GR B7; HARDENED STAINLESS STEEL STEM; SEATING: GRAPHITE; 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; OPERATOR: LEVER; VALVES NPS 1 1/2 AND SMALLER WILL BE BI-DIRECTIONAL, NPS 2 AND LARGER WILL BE UNI-DIRECTIONAL.

825 ASME B16.34/16.10 LONG PATTERN; CAST; CARBON STEEL; TRUNNION MOUNTED; BOLTING: ASTM A 193 GR B7; HARDENED STAINLESS STEEL STEM; SEATING: METAL; NICKEL ALLOY OVERLAY 316 STAINLESS STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: WEATHERPROOF GEAR;

826 DOUBLE FLGD; CAST; BOLTING: ASTM A 193 GR B7; GASKET: GRAPHITE OR METAL OR METAL WITH GRAPHITE; SS STEM; SEATING: METAL; SEATING RING: METAL OR METAL/GRAPHITE; CARBON STEEL DISC; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); OPERATOR: WEATHERPROOF GEAR; ASME B16.5/B16.47 SERIES A;

931 LICENSOR PMS LPZ04 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

933 VALVE; CHECK; RAISED FACE; TAPPED LUG OR DOUBLE FLG; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; DUAL-PLATE WAFER-LUG STYLE; API TRIM #8 / 8A; CARBON STEEL DISC; SPRING: INCONEL; ASME B16.5 / B16.47 SERIES A.

938 X-STRONG; CAST; CARBON STEEL; ASTM A 216 GRADE WCB; WAFER INSERT TYPE; API TRIM #1; SPRING: INCONEL-X; CLASS 600 CHECK-ALL VALVES MAY BE BOLTED BETWEEN CLASS 150, CLASS 300 OR CLASS 600 FLANGES; TO BE USED WITH X-STRONG OR THINNER WALL PIPE.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

STEAM (IBR), STEAM CONDENSATE(IBR), BOILER FEED WATER (IBR), HP STEAM(IBR), HP CONDENSATE (IBR).

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

9 CARBON CONTENT SHALL NOT EXCEED 0.25% FOR ALL PIPES,FITTINGS FLANGES ETC. THAT MAY REQUIRE WELDING. MOREOVER,FOR FLANGES THE SULPHUR AND PHOSPHOROUS SHALL ALSO BE LIMITED TO 0.05% EACH.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

117 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [420 DEG. C & 46.0 KG/ CM2 G] SUBJECT TO MINIMUM OF 80% CLASS RATING.

118 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [420 DEG. C & 46.0 KG/ CM2 G] SUBJECT TO MINIMUM 20 MM THICKNESS.

119 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [420 DEG. C & 46.0 KG/ CM2 G].

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.

123 PIPING WITH THICKNESS>12.7 SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

201 100% RADIOGRAPHY TO BE DONE FOR ALL BUTT WELDS.

202 ALL REQUIREMENTS OF ASME B31.12 SHALL BE MET.

203 BODY/BONNET/COVER JOINTS & STUFFING BOX OF ALL VALVES SHALL HAVE LOW EMISSION. ONE VALVE PER METALLURGY, PER RATING, PER SIZE SHALL BE HELIUM LEAK TESTED AS PER ASME SEC.V, SUBSECTION A,ARTICLE 10(DETECTOR PROBE TECHNIQUE), APPENDIX IV AT A MIN OF 25% OF THE ALLOWABLE (RATED) COLD WORKING PRESSURE.

311 USE FOR ONLY THERMOWELL CONNECTION.

597 FOR LINES WITH DESIGN TEMPERATURE EXCEEDING 230 DEG. C., PARTIAL PRESSURE OF H2 SHALL NOT EXCEED API RP 941 LIMITS.

598 ALL WELDS IN LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C SHALL BE STRESS RELIEVED.

619 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1G4/1G4A

647 USE PTFE COATED STUD BOLTS AND NUTS FOR 1G4A.

648 UNION TYPE COUPLING WITH BUNA-N O-RING SEAL: CPV "O-SEAL" OR EQUIVALENT, TO BE USED FOR FULL COUPLING AND REDUCING COUPLING

649 UNION TYPE COUPLING IS PREFERRED, BUT FLANGES MAY BE USED TO MATCH EQUIPMENT NOZZLE.

650 USE CPV GLOBE VALVE FOR VENT AND DRAINS WITH A CPV "O-SEAL" CAP.

651 USE CPV NEEDLE VALVE FOR INSTRUMENT CONNECTION.

652 USE COUPLING & VALVE FROM " COMBINATION PUMP VALVE COMPANY" (CPV) MANUFACTURER

661 USE VITON-A O-RINGS WHERE HIGHER TEMPERTATURE RATING IS REQUIRED (ABOVE 107 DEG C) BUT DO NOT USE AT LOWER TEMPERATURES THAN -15 DEG C.

664 PTFE FILLER; FLEXITALLIC STYLE CG OR EQUAL.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

PIPE CLASS : **D41K**
RATING : 600
BASE MATERIAL : SS 304
CORROSION ALLOWANCE : 0 MM
SPECIAL REQUIREMENT : CRYOGENIC SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-196	38	93	120
PRESS	101.24	101.24	84.36	80.12

SERVICE

MILD TO MODERATE CORROSIVE PROCESSES & HYDROCARBONS BELOW MINUS 45 DEG C

- FLAMMABLE, TOXIC/ NON TOXIC BUT NON LETHAL

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

126 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [65 DEG. C & 64.5 KG/ CM2 G] SUBJECT TO MINIMUM OF 80% CLASS RATING.

127 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [65 DEG. C & 64.5 KG/ CM2 G] SUBJECT TO MINIMUM OF 20 MM.

PRESS	98.4	98.4	87.2	78.7	72.06

SERVICE

HYDROCARBONS, HP NITROGEN, CYCLIC PRESSURE (BASED ON LICENSOR PMS CLASS L6G5)

NOTES

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

735 ALL ACCESSORY GAUGES, INSTRUMENTS, ETC., SHALL BE REMOTE MOUNTED AND CONNECTED TO VALVE AT THE HEADER BY TUBING OR INTEGRAL CAPILLARY SYSTEM.

738 ALL WELDS SHALL BE 100% VISUALLY EXAMINED. ALL GROOVE AND CIRCUMFERENTIAL BUTT WELDS SHALL BE 100% EXAMINED BY RADIOGRAPHIC OR ULTRASONIC METHOD. (CONT.)

739 (CONT. FROM NOTE NO. 738) ALL SOCKET WELDS, BRANCH CONNECTIONS AND STRUCTURAL ATTACHMENT WELDS THAT ARE NOT EXAMINED BY RADIOGRAPHIC OR ULTRASONIC SHALL BE EXAMINED BY LIQUID PENETRANT OR MAGNETIC PARTICLE.
ACCEPTANCE CRITERIA IS PER ASME B31.3, NORMAL FLUID SERVICE.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

756 PIPING SYSTEMS USING THIS SPECIFICATION MAY BE SUBJECT TO VIBRATION. DESIGN AND SUPPORT OF THESE PIPING SYSTEMS SHOULD BE REVIEWED BY A STRESS ENGINEER AS PER ASME B31.3 PARAGRAPH 301.5.4.

757 IF THE NUMBER OF THERMAL DISPLACEMENT CYCLES EXCEEDS 7000 IN THE EXPECTED LIFE OF THE PIPING SYSTEM, THEN FURTHER FLEXIBILITY ANALYSIS IS REQUIRED TO DETERMINE IF SEVERE CYCLIC SERVICE CRITERIA PER ASME B31.3 MUST BE UTILIZED.

758 VALVE; GATE; API 602; CLASS 800; BUTT WELDING; SCHEDULE MATCH TO PIPE; FORGED; STAINLESS STEEL; ASTM A182 GR F316L OR DUAL GRADE F316/316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET:WELDED; API TRIM #12/12A; DISC: SOLID WEDGE; PACKING:FLEXIBLE GRAPHITE; PACKING TYPE:DIE FORMED; OPERATOR:HANDWHEEL

759 PRESSURE PULSATING SERVICES LIKE RECIPROCATING COMPRESSOR PIPING, PIPE SUPPORT LOCATIONS MUST BE DETERMINED IN CONCERT WITH ANALOG TECHNOLOGIST TO AVOID HARMONICS DUE TO VIBRATION & WITH PIPING STRESS ANALYST TO AVOID EXCESS THERMAL STRESS/STRAIN. HOLD DOWN TYPE SUPPORTS WILL TYPICALLY BE REQUIRED.

760 IN ORDER TO ELIMINATE THE OCCURRENCE OF POTENTIAL STRESS RISERS DETRIMENTAL TO PIPING IN CYCLIC SERVICES, EXTRA CARE MUST BE TAKEN DURING FABRICATION. MILL SCALE SHALL BE REMOVED FROM PIPE ENDS PRIOR TO WELDING. WHEREVER POSSIBLE, THE INSIDE SURFACE OF BUTT WELDS SHALL BE GROUND FLUSH.

761 ALL INTERNAL WELD SPLATTER AND BURRS SHALL BE REMOVED. THE GTAW WELD PROCESS SHALL BE USED FOR THE ROOT PASS OF ALL BUTT WELDS TO PROMOTE A SMOOTH INNER BORE; ROOT PENETRATION SHALL BE KEPT TO A MINIMUM.

762 ALL HOLES FOR (SET-ON STYLE) "OLETS" OR SIMILAR FITTINGS SHALL BE MACHINE CUT BY DRILLING, SAWING, OR BORING AFTER THE FITTINGS HAVE BEEN WELDED IN PLACE; A STRAIGHT BORE OLET IS REQUIRED FOR THESE APPLICATIONS.

765 CAST; FULL PORT TYPE; OS&Y; RISING STEM; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE; API TRIM # 10; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES

766 VALVE; GLOBE; ASME B16.34; CLASS 800; BUTT WELDING; SCHEDULE MATCH TO PIPE; FORGED; STAINLESS STEEL;

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :D4A** Sheet 1 of 6

PIPE CLASS : **D4A**
RATING : 600
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-45	38	93	120	149	204
PRESS	98.07	98.07	92.79	91.27	89.64	86.47

SERVICE

NON CORROSIVE PROCESS,FLAMMABLE / NON FLAMMABLE, NON LETHAL(BELOW -29 DEG C AND UPTO -45 DEG C) HYDROCARBONS,PROPYLENE, XYLENE, METHANOL, NH3, GAS FLARE, ETHYLENE, COMONOMER (1-BUTENE / 1-HEXENE), VENT TO FLARE, RECOVERED GAS, RECOVERED LIQUID ETC.

NOTES

1 NDT REQUIREMENTS AS PER EIL STANDARD 6-44-0016.

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

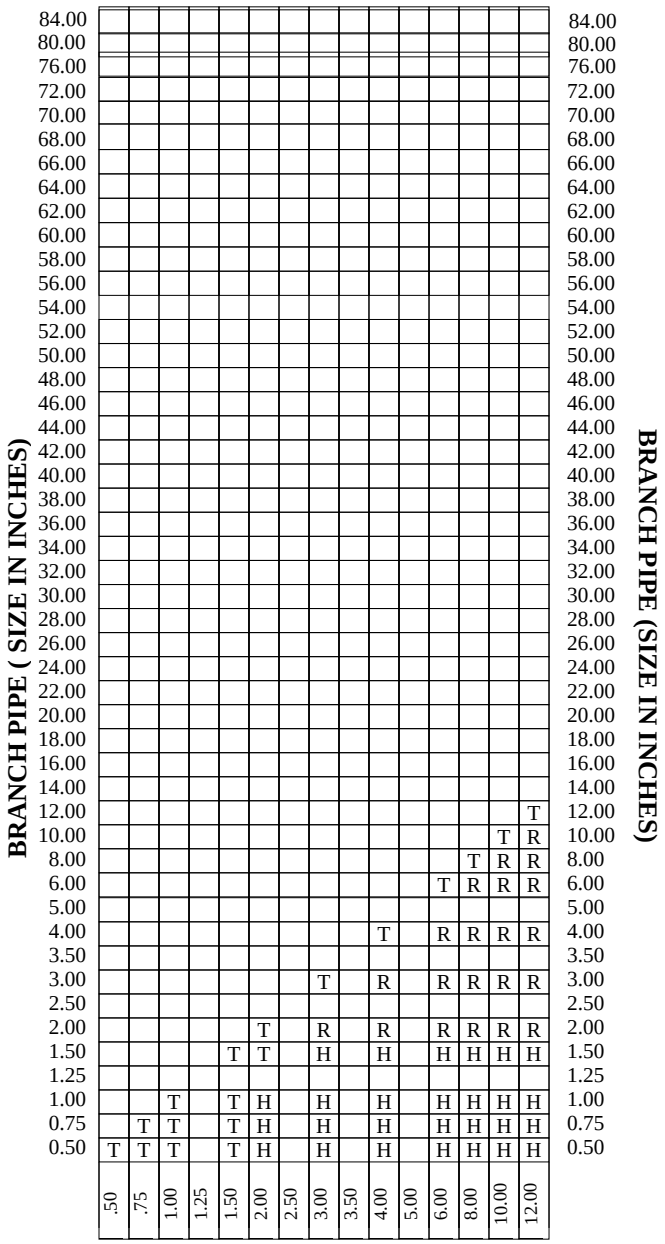
7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCHEDULE. REFER GENERAL NOTES TO PMS.

964 FOR LICENSOR SPECIFICATION LGP30 IN PPU, FOR SIZE RANGE 0.75" TO 1.5": STR-366 IS TO BE FOLLOWED FOR STRAINERS. SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2 FOR STRAINER SPECIFICATIONS.



997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

HYDROGEN (BASED ON LICENSOR PMS CLASS - LPZ17)

NOTES

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

28 VALVE STEM ORIENTATION SHALL BE MAINTAINED AT OR ABOVE 45 DEGREE ABOVE THE HORIZONTAL POSITION IN LIQUID CRYOGENIC SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

743 THIS VALVE SHALL NOT BE USED IN APPLICATIONS WHERE CHLORIDE STRESS CRACKING IS A CONSIDERATION

763 IN ADDITION TO THOSE TESTS REQUIRED IN ACCORDANCE WITH ASME B31.3, PIPING IN THIS SPECIFICATION MAY BE SUBJECTED TO A SENSITIVE LEAK TEST

764 BOLT LUBRICANT; PASTE BOLT LUBRICANT; 60% MOLYBDENUM DISULFIDE PLUS OTHER SOLIDS SUCH AS: DOW CORNING MOLYKOTE GN

773 FOR PIPING SYSTEMS SUBJECT TO VIBRATION, BRACING OF PERMANENT VENTS AND DRAINS SHOULD BE CONSIDERED

792 VALVE; GATE; API 602; CLASS 800; SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; BELLOWS TYPE; BONNET: WELDED; API TRIM #8 / 8A; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; BELLOWS: FORMED MULTI-LAYER 321 STAINLESS STEEL; OPERATOR: HANDWHEEL; FOR LOW EMISSION SERVICE

793 VALVE; GATE; API 600; CLASS 600; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; BELLOWS TYPE; FULL PORT TYPE; OS&Y; BONNET: BOLTED AND SEAL WELDED; BOLTING: ASTM A 193 GR B8; GASKET: METAL; API TRIM #16; (CONT.)

794 (CONT. FROM NOTE NO. 793) DISC: FLEXIBLE WEDGE; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; BELLOWS: FORMED MULTI-LAYER 321 STAINLESS STEEL; OPERATOR: HANDWHEEL TO NPS 3, GEAR LARGER SIZES; FOR LOW EMISSION SERVICE;

795 SOCKET WELDING; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; BELLOWS TYPE; OS&Y; BONNET: WELDED; API TRIM #8 /8A; HARD FACED DISC; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; BELLOWS: FORMED MULTI-LAYER 321 STAINLESS STEEL; OPERATOR: HANDWHEEL; FOR LOW EMISSION SERVICE

797 VALVE; GLOBE; ASME B16.34; CLASS 600; RAISED FACE; FLANGED; CAST; STAINLESS STEEL; ASTM A 351 GR CF8M; BELLOWS TYPE; OS&Y; BONNET: BOLTED; BOLTING: ASTM A 193 GR B8; GASKET: CONFINED GRAPHITE OR METAL OR METAL WITH GRAPHITE (CONT.)

798 (CONT. FROM NOTE NO.797) API TRIM #12 / 12A; HARD FACED DISC; PACKING: FLEXIBLE GRAPHITE; PACKING TYPE: DIE FORMED; BELLOWS: FORMED MULTI-LAYER 321 STAINLESS STEEL; OPERATOR: HANDWHEEL TO NPS 3, GEAR

SERVICE

HYDROGEN (BASED ON LICENSOR PMS CLASS - LGP31)

NOTES

15 FOR LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C, POST WELD HEAT TREATMENT IS REQUIRED FOR ALL WELD JOINTS IRRESPECTIVE OF THICKNESS.

16 DESIGN TEMPERATURE FOR THIS CLASS CAN BE HIGHER THAN 230 DEG. C, PROVIDED THE MATERIAL IS SUITABLE FOR HYDROGEN PARTIAL PRESSURE AND MAXIMUM OPERATING TEMPERATURE OF THE SERVICE AS PER NELSON CURVE API RP 941.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

600 USE ONLY FOR INSTRUMENTATION CONNECTION.

705 TAPPED LUG WAFER CHECK VALVES TO BE USED.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

815 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.
FOR SIZE RANGE 3/4" TO 1" : STR-366 IS TO BE FOLLOWED

832 SHUT-OFF SERVICE; 6000 PSI; SPECIAL UNION ENDS; OUTSIDE SCREW; RISING STEM; RISING HANDWHEEL; BONNET: THREADED; STEM: 316 STAINLESS STEEL GUIDE ASSEMBLY: COPPER NICKEL WITH VESPEL DISC; SEAT: MONEL; PACKING: BUNA-N; BODY O-RING: BUNA-N WITH PTFE BACK UP RING; SEAT O-RING: BUNA-N

833 PREPARED FOR GAS PHASE PP SERVICE

834 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 380-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS.

835 VALVE; CHECK; UNIBODY; SPRING LOADED AXIALLY OPENING DISC; 6000 PSI; SPECIAL UNION ENDS; BODY: ASTM B150 ALUMINUM BRONZE; SEAT / DISC: 304 STAINLESS STEEL; SEAT O-RING: BUNA-N; DISC O-RING: BUNA-N

836 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 123-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS.

840 USE FOR VENTS AND DRAINS WITH CPV- 'O-SEAL' BLANK FITTING FIGURE NUMBER 104R WITH O-RING.

841 VALVE; GLOBE; NEEDLE SERVICE; 6000 PSI; SPECIAL UNION ENDS; OUTSIDE SCREW; RISING STEM; RISING HANDWHEEL; BONNET: THREADED; STEM: 316 STAINLESS STEEL GUIDE ASSEMBLY: COPPER NICKEL WITH VESPEL DISC; SEAT: MONEL; PACKING: BUNA-N; BODY O-RING: BUNA-N WITH PTFE BACK UP RING; SEAT O-RING: BUNA-N;

842 APPROVED MANUFACTURING IS CPV MANUFACTURING, INC. -FIGURE NUMBER 480-M; VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES FIGURE NUMBER 51R AND O-RINGS. (CONT.)

843 (CONT. FROM NOTE NO. 842) VALVE IS TO BE PURCHASED WITH UNION NUT, APPROPRIATE TAIL PIECE FOR TUBING CONNECTION AND O-RING. CONSULT MANUFACTURERS CATALOG FOR APPROPRIATE TAILPIECE FIGURE NUMBER.

948 LICENSOR PMS LGP31 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS

PIPE CLASS : **D5A**
RATING : 600
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT : HYDROGEN SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-29	38	93	149	204	230
PRESS	104.05	104.05	95.6	92.09	88.92	86.96

SERVICE

HYDROGEN AND HYDROGEN BEARING HYDROCARBONS
- FLAMMABLE & NON-LETHAL.

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

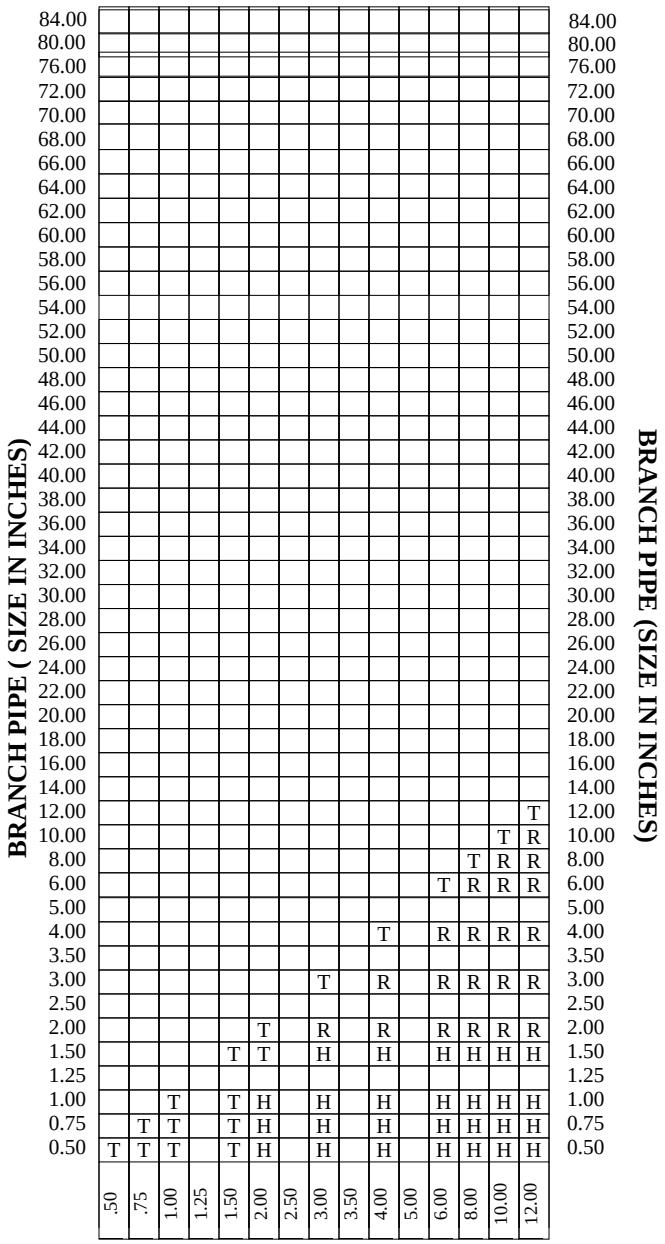
15 FOR LINES WITH DESIGN TEMPERATURE GREATER THAN 204 DEG. C, POST WELD HEAT TREATMENT IS REQUIRED FOR ALL WELD JOINTS IRRESPECTIVE OF THICKNESS.

16 DESIGN TEMPERATURE FOR THIS CLASS CAN BE HIGHER THAN 230 DEG. C, PROVIDED THE MATERIAL IS SUITABLE FOR HYDROGEN PARTIAL PRESSURE AND MAXIMUM OPERATING TEMPERATURE OF THE SERVICE AS PER NELSON CURVE API RP 941.

17 FOR HYDROGEN SERVICE, CARBON STEEL PIPING MATERIALS WITH WALL THICKNESS 3/8 INCH AND OVER SHALL BE NORMALISED.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

62 ANY MEDIUM CONTAINING HYDROGEN GAS WITH A PARTIAL PRESSURE OF 100 PSI & ABOVE SHALL BE CONSIDERED AS HYDROGEN SERVICE.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

PIPE CLASS : **D81K**
RATING : 600
BASE MATERIAL : SS 304/304L
CORROSION ALLOWANCE : 0 MM
SPECIAL REQUIREMENT : LOW TEMPERATURE SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	-40	38	66	93	110	149
PRESS	101.24	101.24	92.8	84.37	81.69	75.57

SERVICE

ALKYL, PRODIGYTM BMC CATALYST, MODIFIER D (BASED ON LICENSOR PMS CLASSES - 7E28 & 7G28).

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.35 AND ASTM A 370.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

311 USE FOR ONLY THERMOWELL CONNECTION.

345 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE THREAD DOPE WHERE SEAL WELDING AND COVER ALL EXPOSED THREADS WITH WELD.

377 LICENSOR REFERENCE [PPF-2] FOR REQUIREMENTS FOR PIPING IN LOW TEMPERATURE SERVICE.

528 DUAL STAMP SHALL BE REQUIRED FOR ALL MATERIALS WHERE 2 GRADES OF MATERIAL ARE REQUIRED.

560 ALL WETTED ROOT BEAD SURFACES AND ADJACENT AREAS, SHALL BE 100% INSPECTED BY VISUAL EXAMINTION AND PROVEN TO BE FREE OF ANY INTERNAL WELD BEAD PROTRUSION (FLUSH WITH I.D.) AND FREE OF ANY CREVICE OR ROUNDED TYPE DISCONTINUITY.

561 GTAW SHALL BE USED FOR THE ROOT PASS OF ALL BUTT WELDS ON NPS 1 AND SMALLER. ROOT PENETRATION SHALL BE KEPT AT A MINIMUM.

629 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 7E28

658 REFER LICENSOR SPECIFICATION FOR STR-419 FOR STRAINERS.

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

981 TO BE USED IN CHLORINATED HYDROCARBON SERVICE

982 DO NOT USE IN CHLORINATED HYDROCARBON SERVICE

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

Project :MPMC & EPCM-1 FOR BPREP	
Location BINA, MADHYA PRADESH	**Pipe Class :F22A** Sheet 1 of 4

PIPE CLASS : **F22A**
RATING : 1500
BASE MATERIAL : CARBON STEEL
CORROSION ALLOWANCE : 1.5 MM
SPECIAL REQUIREMENT : IBR SERVICE

TEMPERATURE (Deg. C) AND PRESSURE (Kg/Sq. cm g) RATINGS

TEMP	0	38	93	149	204	260	316	343	371	399	427
PRESS	260.49	260.49	238.66	229.88	222.85	211.95	199.65	192.97	186.64	178.21	144.46

SERVICE

STEAM, CONDENSATE, BOILER BLOWDOWN, FEEDWATER DISCHARGE AND CHEMICAL FEED TO BOILER ((AS PER ASME SEC-I)

NOTES

8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

9 CARBON CONTENT SHALL NOT EXCEED 0.25% FOR ALL PIPES,FITTINGS FLANGES ETC. THAT MAY REQUIRE WELDING. MOREOVER,FOR FLANGES THE SULPHUR AND PHOSPHOROUS SHALL ALSO BE LIMITED TO 0.05% EACH.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

90 INST. CONNECTIONS LIKE ORIFICE TAPS ETC SHALL BE PROVIDED WITH DOUBLE ISOLATION VALVES.

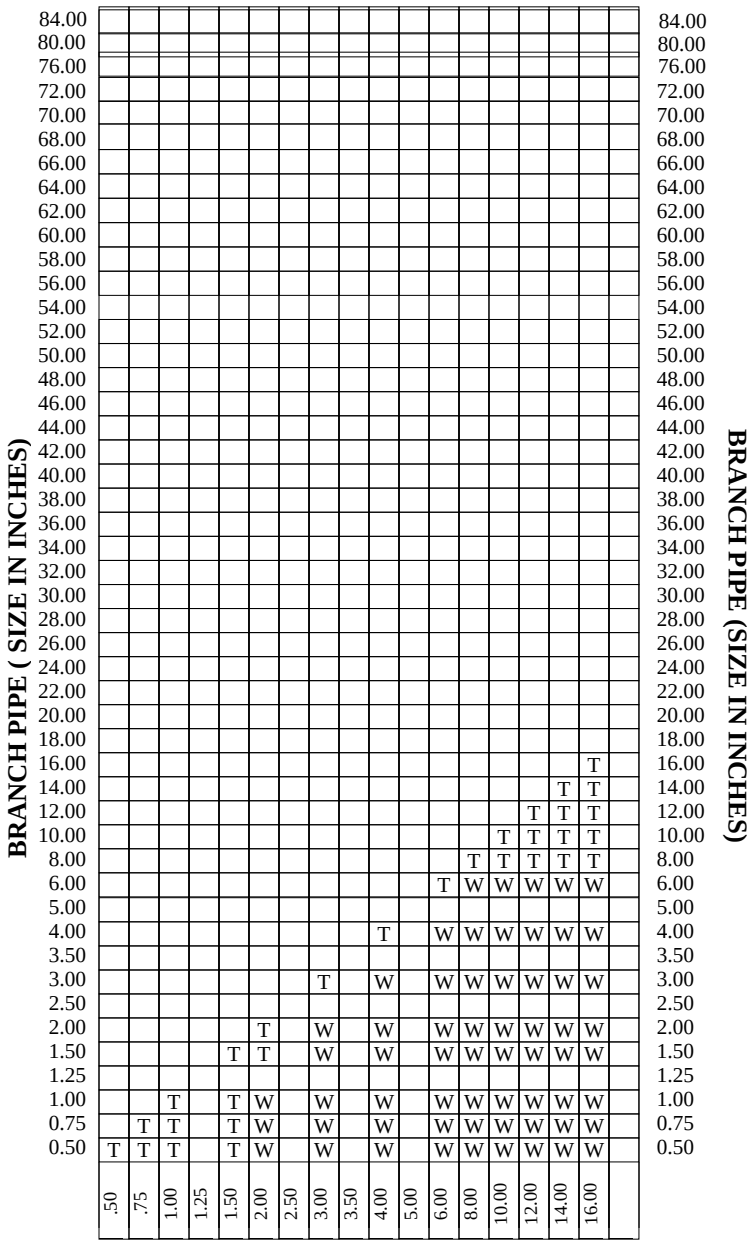
108 PIPING WITH THICKNESS>12.7MM SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3(EDITION 2012).

122 FOR INSTRUMENTATION USE ONLY.

131 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [170 DEG. C & 207 KG/ CM2 G].

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

253 UPON PROLONGED EXPOSURE TO TEMPERATURE ABOVE 412 DEG C,THE CARBIDE PHASE OF CARBON STEEL MAY BE CONVERTED TO GRAPHITE. VALUES INDICATED IN PRESSURE/TEMPERATURE CHART AT 427 DEG C ARE PER ASME B 31.1, TABLE A-1 AND MAY BE USED WITH EXTREME CAUTION ON A CASE TO CASE BASIS, BUT IN NO CASE EXCEED IT.



279 ALL THE PIPING COMPONENTS SHALL BE AS PER ASME SEC-I/ASME B 31.1

SERVICE

CARBON MONOXIDE, REACTION KILL (BASED ON LICENSOR PMS CLASS - LGP36)

NOTES

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

720 1 INCH AND UNDER SHALL HAVE ROUND OR OVAL HANDWHEEL. USE IN INSULATED SERVICE REQUIRES EXTENDED HANDLE; SPECIFY EXTENDED HANDLE LENGTH;

725 REDUCED PORT TYPE

726 FULL PORT TYPE

728 VALVE TO BE USED FOR VENT AND DRAIN PURPOSE

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

844 FOR STRAINER SPECIFICATIONS SEE LPPF-8 INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION IX-2.
FOR SIZE RANGE - 1/2" TO 1" : STR-373 IS TO BE FOLLOWED

846 BOLTING: ASTM A 193 GR B7; GASKET: METAL BODY SEAL; 4130 STEEL STEM; SEATING: METAL; SEATING OVERLAY: HARD NICKEL ALLOY; BALL OVERLAY: HARD NICKEL ALLOY / TUNGSTEN CARBIDE; 4130 STEEL BALL; PACKING: FLEXIBLE GRAPHITE; (STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR: LEVER:

848 BUBBLE TIGHT SHUT-OFF; SEAT INSERTS: MECHANICALLY ENERGIZED;

850 BAR/FORGED; ASTM A696 GR.C OR ASTM A105; BOLTING:ASTM A193 GR B7; GASKET:METAL BODY SEAL; 4130 STEEL STEM; SEATING:METAL; SEATING OVERLAY:HARD NICKEL ALLOY; BALL OVERLAY:HARD NICKEL ALLOY/TUNGSTEN CARBIDE; 4130 STEEL BALL; PACKING:FLEXIBLE GRAPHITE;(STEM SEALS OR PACKING); OPERATOR:WEATHERPROOF GEAR

851 BUBBLE TIGHT SHUT-OFF;

855 BOLTING:ASTM A193 GR B7; SW END X NPTF; GASKET:METAL BODY SEAL; 4130 STEEL STEM & BALL; SEATING:METAL; SEATING OVERLAY:HARD NICKEL ALLOY; BALL OVERLAY: HARD NICKEL ALLOY/TUNGSTEN CARBIDE; PACKING:FLEXIBLE GRAPHITE;(STEM SEALS OR PACKING); LIVE LOADED INCONEL BELLEVILLE WASHERS; OPERATOR:LEVER

857 ASME B16.34/16.10 LONG PATTERN

943 LICENSOR PMS LGP36 SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

SERVICE

STEAM AND BOILER FEED WATER (IBR), CONDENSATE (IBR)

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 25.00 MM.

8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

9 CARBON CONTENT SHALL NOT EXCEED 0.25% FOR ALL PIPES,FITTINGS FLANGES ETC. THAT MAY REQUIRE WELDING. MOREOVER,FOR FLANGES THE SULPHUR AND PHOSPHOROUS SHALL ALSO BE LIMITED TO 0.05% EACH.

26 SEPARATE PMS CLASS SHALL BE SELECTED FOR PIPES WITH THICKNESS > 12.7MM WHERE IMPACT TESTING IS REQUIRED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

90 INST. CONNECTIONS LIKE ORIFICE TAPS ETC SHALL BE PROVIDED WITH DOUBLE ISOLATION VALVES.

131 PIPE WALL THICKNESS IS CALCULATED BASED ON ACTUAL LINE DESIGN CONDITION [170 DEG. C & 207 KG/ CM2 G].

145 Y-TYPE GLOBE VALVE.

PRESS	196.85	196.85	196.85	196.85	196.85

SERVICE

KILL GAS (BASED ON LICENSOR PMS CLASS - 1K6)

NOTES

3 USE PIPE OF CLASS 22 INSTEAD OF CLASS 12 IF PIPE THICKNESS EXCEEDS 20.00 MM.

90 INST. CONNECTIONS LIKE ORIFICE TAPS ETC SHALL BE PROVIDED WITH DOUBLE ISOLATION VALVES.

103 SPECIAL GLOBE VALVE/ CHECK VALVES, IF CALLED OUT IN P&ID SHALL BE USED.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

341 PIPING SHALL PASS A SENSITIVE LEAK TEST IN ACCORDANCE WITH PPM-570 PRIOR TO INITIAL OPERATION.

342 FOR ALL SOCKET WELDED BALL VALVE, ON INSTALLATION, REMOVE ALL BOLTS EXCEPT ONE AND ROTATE CENTER SECTION OF VALVE OUT OF LINE DURING SOCKET WELDING. BE CAREFUL TO AVOID DAMAGE TO OR LOSS OF PARTS.

374 ONLY USE DEPEND ON P&ID NOTE.

383 UNION TYPE COUPLING IS PREFERRED, BUT FLANGES MAY BE USED TO MATCH EQUIPMENT NOZZLE.

384 USE FOR VENT AND DRAINS WITH A CPV "O-SEAL" CAP.

385 USE CPV NEEDLE VALVE FOR INSTRUMENT CONNECTION.

390 DO NOT USE FOR HYDROGEN SERVICE.

391 USE FOR T2 INJECTION/ N2 SERVICE. DO NOT USE FOR HYDROGEN SERVICE.

392 SEAL WELD THE SCREWED END AFTER ASSEMBLY; DO NOT USE ANY THREAD DOPE. ALL EXPOSED THREADS MUST BE COVERED BY THE WELD.

620 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1K6

652 USE COUPLING & VALVE FROM " COMBINATION PUMP VALVE COMPANY" (CPV) MANUFACTURER

653 UNION TYPE COUPLING WITHVITON O-RING SEAL: CPV "O-SEAL" OR EQUIVALENT, TO BE USED FOR FULL COUPLING AND REDUCING COUPLING

654 CPV ¿O-SEAL¿ CARBON STEEL TAIL PIECES, CARBON STEEL UNION NUTS AND O-RINGS SHALL BE PURCHASED WITH EACH VALVE.

655 SPECIFY THE O-RING MATERIAL WHEN PURCHASING CPV MANUFACTURING, INC. COMPONENTS. BUNA-N MATERIAL TO BE IN ACCORDANCE WITH MILITARY SPECIFICATION MIL-P-25732 SUITABLE FOR USE FROM -40°C (-40°F) TO 135°C (275°F).

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

MODIFIER C (BASED ON LICENSOR PMS CLASS - 7K6)

NOTES

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

382 UNION TYPE COUPLING WITH BUNA-N O-RING SEAL: CPV "O-SEAL" OR EQUIVALENT, TO BE USED FOR FULL COUPLING AND REDUCING COUPLING. ENDS TO BE SOCKET WELDING FOR SIZES 0.5" TO 1" AND BUTT WELDING FOR SIZES 1.5" TO 2".

383 UNION TYPE COUPLING IS PREFERRED, BUT FLANGES MAY BE USED TO MATCH EQUIPMENT NOZZLE.

384 USE FOR VENT AND DRAINS WITH A CPV "O-SEAL" CAP.

385 USE CPV NEEDLE VALVE FOR INSTRUMENT CONNECTION.

410 VALVE SHALL BE PURCHASED WITH SW TAIL PIECES & UNION NUTS AND O-RING.

412 USE VALVE FROM " COMBINATION PUMP VALVE COMPANY" (CPV) MANUFACTURER.

528 DUAL STAMP SHALL BE REQUIRED FOR ALL MATERIALS WHERE 2 GRADES OF MATERIAL ARE REQUIRED.

630 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 7K6

655 SPECIFY THE O-RING MATERIAL WHEN PURCHASING CPV MANUFACTURING, INC. COMPONENTS. BUNA-N MATERIAL TO BE IN ACCORDANCE WITH MILITARY SPECIFICATION MIL-P-25732 SUITABLE FOR USE FROM -40°C (-40°F) TO 135°C (275°F).

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

SERVICE

HYDROGEN; KILL GAS (BASED ON LICENSOR PMS CLASS - L7K6D)

NOTES

11 IMPACT TESTING REQUIRED FOR ALL WELDED ITEMS. VALUES SHALL BE AS PER ASME B31.3 TABLE 323.3.5 AND ASTM A 370.

12 VALVES SHALL HAVE EXTENDED BONNET AS PER BS 6364(NON COLD BOX APPLICATION) / BS EN ISO 28921-1.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

707 PIPING ON THIS SPECIFICATION SHALL BE CLEANED OR OTHERWISE PREPARED FOR SERVICE IN ACCORDANCE WITH POD-CS-PP (INCLUDED IN THE SUPPLEMENT TO PROCESS PARTS, VOLUME 2, SECTION X).

710 TO BE USED IF IDENTIFIED IN THE PROCESS DESIGN PACKAGE

712 MANUFACTURERS SUGGESTED MAXIMUM TEMPERATURE FOR COATING IS 260 DEG C IN CASE OF BOLTS & NUTS.

731 DO NOT APPLY ANY LUBRICANTS OR ANTI-SEIZE COMPOUNDS TO FACE OF GASKETS OR FLANGE FACES.

742 ALL TERMINAL VALVES SHALL BE SUITABLY STOPPLED USING AN APPROPRIATE CLOSURE COMPONENT, I.E. PLUG, BLIND FLANGE, ETC.

832 SHUT-OFF SERVICE; 6000 PSI; SPECIAL UNION ENDS; OUTSIDE SCREW; RISING STEM; RISING HANDWHEEL; BONNET: THREADED; STEM: 316 STAINLESS STEEL GUIDE ASSEMBLY: COPPER NICKEL WITH VESPEL DISC; SEAT: MONEL; PACKING: BUNA-N; BODY O-RING: BUNA-N WITH PTFE BACK UP RING; SEAT O-RING: BUNA-N

835 VALVE; CHECK; UNIBODY; SPRING LOADED AXIALLY OPENING DISC; 6000 PSI; SPECIAL UNION ENDS; BODY: ASTM B150 ALUMINUM BRONZE; SEAT / DISC: 304 STAINLESS STEEL; SEAT O-RING: BUNA-N; DISC O-RING: BUNA-N

877 USE FLANGES ONLY AT FLANGED EQUIPMENT CONNECTIONS AND OTHER FLANGED COMPONENTS.

879 VALVE; GATE; API 602; CLASS 1500; FORGED; STAINLESS STEEL; ASTM A 182 GR F 316L; OS&Y; RISING STEM; REDUCED PORT TYPE; BONNET: WELDED; API TRIM #10; DISC: SOLID WEDGE; PACKING: FLEXIBLE GRAPHITE; OPERATOR: HANDWHEEL.

880 RECOMMENDED VENDOR IS CPV MANUFACTURING, INC.
VALVE IS TO BE PURCHASED WITH UNION NUTS, APPROPRIATE TAIL PIECES AND O-RINGS.

881 USE FOR VENTS AND DRAINS WITH A CPV- "O-SEAL" BLANK FITTING.

883 ENDS TO BE SOCKET WELDING FOR 0.75" TO 1" & BUTT WELDING FOR 1.5" TO 2"; STAINLESS STEEL; SPECIAL UNION TYPE; O-SEAL: BUNA-N; 6000 PSI O-RING FITTING AS MANUFACTURED BY CPV MANUFACTURING, INC., SEE MANUFACTURER'S CATALOG FOR FITTING DESCRIPTIONS, DIMENSIONS AND ORDERING INFORMATION.

884 SPECIFY THE BUNA-N O-RING MATERIAL WHEN PURCHASING FITTINGS. BUNA-N MATERIAL TO BE IN ACCORDANCE WITH USA MILITARY SPECIFICATION MIL-P-25731. AND SUITABLE FOR USE FROM -40 C (140 F) TO 135 C (275 F). ALL FITTINGS AND MATERIALS TO BE SUITABLE FOR PRESSURE/ TEMPERATURE RATINGS OF THIS SPECIFICATION.

904 LICENSOR PMS L7K6D SHALL GOVERN FOR ANY ADDITIONAL COMPONENTS/ VALVES SPECIFIED IN PROCESS DESIGN PACKAGE/ P&IDS, VENTS & DRAINS AND INSTRUMENT CONNECTION.

988 PTFE COATED BOLTS & NUTS SHALL NOT BE USED BEYOND TEMPERATURE 260 DEG C(500 DEG F).

991 UNION TYPE COUPLING WITH BUNA-N O-RING SEAL: CPV "O-SEAL" OR EQUIVALENT, SHALL BE CONSIDERED AS PRIMARY PREFERENCE FOR USAGE IN PLACE OF FULL COUPLING AND REDUCING COUPLING.

SERVICE

ALKYLS,ADDITIVES,CHEMICALS,CHLORINATED CHEMICALS (THIS SPECIFICATION IS INTENDED FOR NEAT ALKYLS AND OTHER NEAT PYROPHORIC MATERIALS ONLY FOR 1/2 INCH AND 3/4 INCH SIZES.) (BASED ON LICENSOR PMS CLASS - 1K8)

NOTES

5 FOR PERMANENT 'T' TYPE BW STRAINERS,REFER EIL'STD 7-44-0303 & 7-44-0304; AND FOR TEMPORARY STRAINERS,REFER EIL'STD 7-44-0300; FOR SPACER AND BLIND REFER EIL'STD 7-44-0162.

7 FOR RESTRICTION ON USE OF BALL,PLUG & BUTTERFLY VALVES,REFER GENERAL NOTES.

123 PIPING WITH THICKNESS>12.7 SHALL BE IMPACT TESTED BASED ON DESIGN CONDITIONS AS PER ASME B31.3

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

302 ONLY DEPEND UPON P&ID NOTE.

307 SCREWED TYPE PLUG WITH HEXAGONAL HEAD SHALL BE USED ONLY FOR THE OUTLET SIDE OF VENT AND DRAIN VALVES.

311 USE FOR ONLY THERMOWELL CONNECTION.

312 USE FOR VENT, DRAIN AND INSTRUMENT CONNECTION.

341 PIPING SHALL PASS A SENSITIVE LEAK TEST IN ACCORDANCE WITH PPM-570 PRIOR TO INITIAL OPERATION.

345 ANY UNAVOIDABLE THREADED JOINT CONNECTIONS SHALL BE SEAL WELDED. DO NOT USE THREAD DOPE WHERE SEAL WELDING AND COVER ALL EXPOSED THREADS WITH WELD.

346 SAFEGUARD AND SUPPORT NPS 0.5" PIPING IN STRUCTURAL CHANNEL MATERIAL.

422 SCREWED CAP, USE FOR INSTRUMENTATION ONLY.

632 VALVES SHALL BE IN ACCORDANCE WITH THE VALVE DETAILS SPECIFIED IN LICENSOR PMS CLASS 1K8

896 WHEREVER THERE IS A DIFFERENCE IN PIPE THICKNESS/COMPONENT DESIGN FROM LICENSOR PMS, SAME SHALL BE RAISED TO LICENSOR/PMC FOR REVIEW

997 PMS FOR LLDPE/HDPE SWING UNIT SHALL BE READ IN CONJUCTION WITH LICENSOR PMS

NOTES

8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

14 RADIOGRAPHY SHALL BE PERFORMED AFTER HEAT TREATMENT.

30 ALL COMPONENTS SHALL HAVE A MINIMUM HARDNESS OF 190-250 BHN. MINIMUM HARDNESS OF ALL WELDS, INCLUDING FIELD WELDS AFTER HEAT TREATMENT SHALL BE 190-250 BHN.

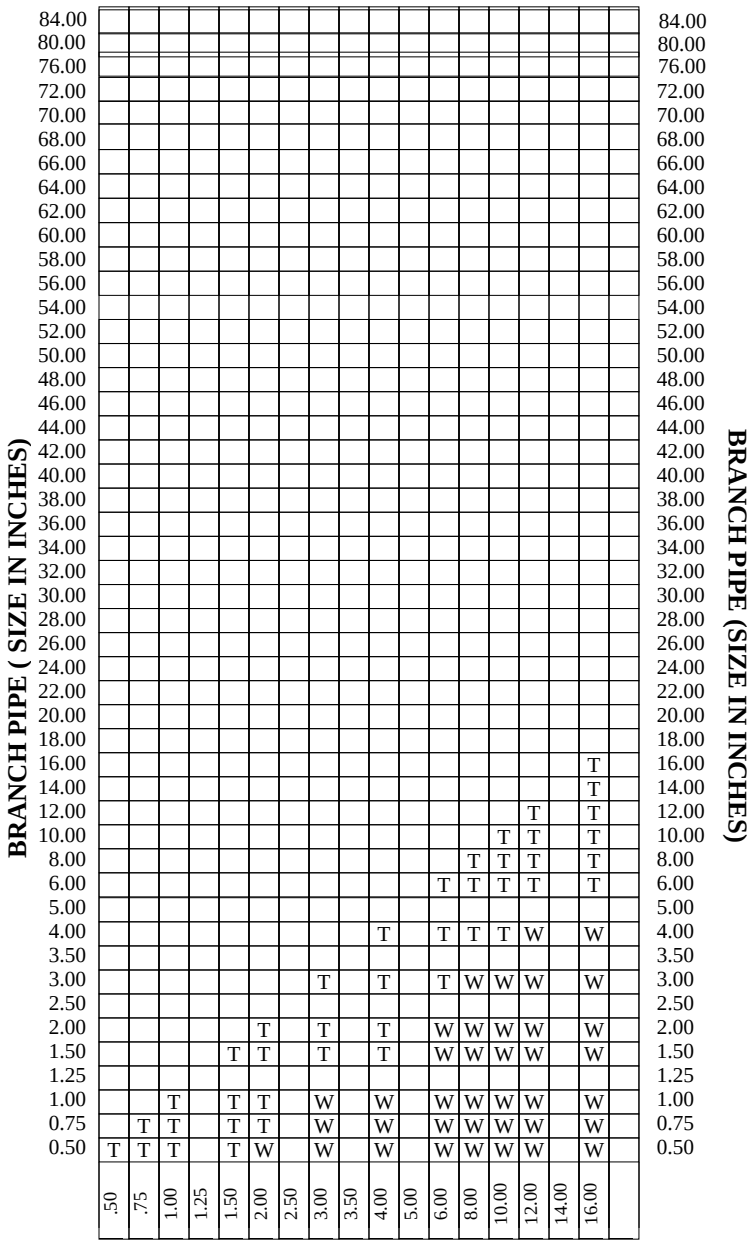
85 ALL WELDED FITTINGS SHALL BE NORMALIZED AND TEMPERED.

136 PIPE THICKNESS HAS BEEN CALCULATED BASED ON ACTUAL LINE CONDITION [128.7 KG/CM2 @ 540 DEG.C]

137 THICKNESS SPECIFIED IS ON HOLD.

145 Y-TYPE GLOBE VALVE.

151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016



279 ALL THE PIPING COMPONENTS SHALL BE AS PER ASME SEC-I/ASME B 31.1

SERVICE

SUPER HIGH PRESSURE STEAM (IBR)

NOTES

8 ALL PIPES,FITTINGS,VALVES,FLANGES,TRAPS AND STRAINERS SHALL BE TESTED AND TEST CERTIFICATE IN FORM III A FOR PIPE AND FORM III C FOR OTHERS SHALL BE REQD. DULY COUNTERSIGNED BY IBR AUTHORITY OR ITS APPROVED REPRESENTATIVE.

14 RADIOGRAPHY SHALL BE PERFORMED AFTER HEAT TREATMENT.

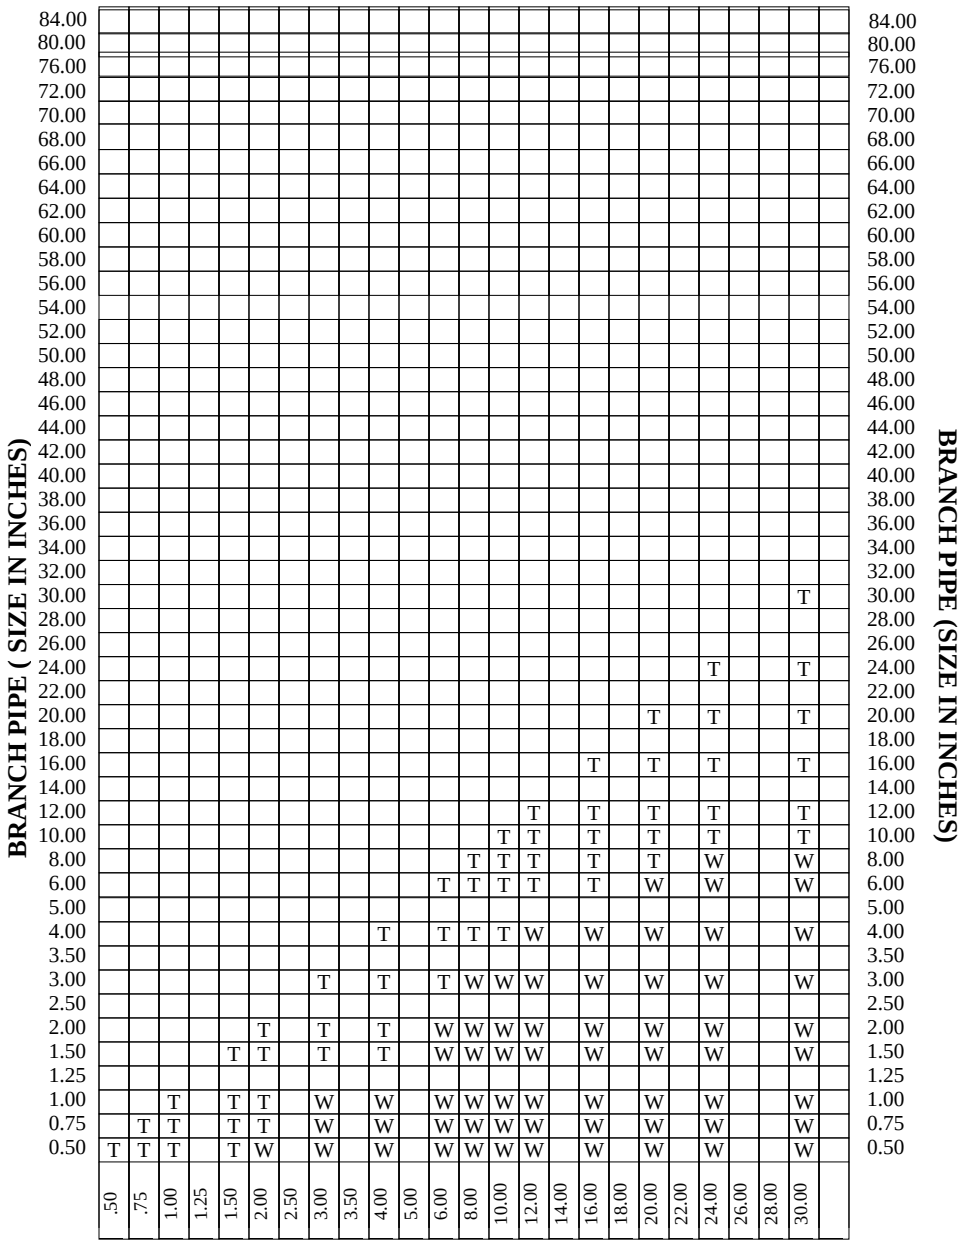
30 ALL COMPONENTS SHALL HAVE A MINIMUM HARDNESS OF 190-250 BHN. MINIMUM HARDNESS OF ALL WELDS, INCLUDING FIELD WELDS AFTER HEAT TREATMENT SHALL BE 190-250 BHN.

32 CORROSION ALLOWANCE HAS BEEN ADJUSTED TO SELECT OPTIMUM SCH. REFER GENERAL NOTES TO PMS.

85 ALL WELDED FITTINGS SHALL BE NORMALIZED AND TEMPERED.

135 PIPE THICKNESS HAS BEEN CALCULATED BASED ON ACTUAL LINE CONDITION [130 KG/CM2 @ 540 DEG.C]

145 Y-TYPE GLOBE VALVE.



151 NDT REQUIREMENTS AS PER JOB SPECIFICATION B957-6-44-0016

1.0 SCOPE

1.1 This specification (PMS) covers the various piping classes for Process and utility Piping.

1.2 Deviations from this specification may be necessary to conform to specific job requirements.

1.3 PMS for PPU and LLDPE/HDPE Swing unit shall be read in conjuction with Licensor PMS.

1.4 PMS for PPU has been prepared for the preferred component listed in Licensor PMS. If any special piping components are listed in the Process design package or P&ID, corresponding Licensor class shall be followed for reference.

2.0 REFERRED CODES & STANDARDS

2.1 All Piping shall be designed in accordance with the Process Piping Code, ASME B31.3. A particular edition (indicated in Design Basis), once selected shall be followed throughout the job.

2.2 Editions and addenda (if any) of referred Codes and Standards shall be as per the Job Engineering Design Basis (Piping).

2.3 For the sake of brevity, the initials of the society to which the codes are referred to may be omitted in the specification. For example; B16.5 is a code referring to ASME; A106 is a standard referring to ASTM.

3.0 MATERIAL SPECIFICATIONS

3.1 Individual piping Class has been generally designed to cover a set of services operating within pressure-temperature combination as per ASME B16.5 / B16.34 or part of it.

3.2 The PMS shall be strictly adhered to in the design, requisitioning, purchasing, fabrication and testing of the piping system. However, deviations of material may occur due to design conditions and/or availability. All substitutions must be duly approved.

3.3 Piping components as per “MNF STD” or “Unlisted components as per B31.3” shall be designed and qualified as per clause 304.7.2 for unlisted components.

3.4 For Valves, material requirements specified in Annexure “D’ of API 600 shall be followed.

3.5 Where trim nos. have been specified, the same shall be as per API 600.

3.6 In cases where 'D/t' ratio exceeds 100, components shall be treated as unlisted components and designed according to B31.3. ‘D’ is outer dia. and ‘t’ is nominal thickness for all other components except branches where 't' is minimum thickness as per purchase specification.

3.7 Unless mentioned otherwise, pipe thicknesses in the specs are for above ground piping.

4.0 CLASS DESIGNATION CODE

The class designation shall consist of not more than three components made up of a letter, number & letter; e.g.B1A.

4.1 The first letter indicates pressure rating.

A	150 Class	D	600 Class	G	2500 Class
B	300 Class	E	900 Class	J	125/150 Class
C	400 Class	F	1500 Class	K	UNCLASSIFIED

Copyright EIL – All rights reserved

4.2 The middle number indicates difference in the specifications within the same rating and material as enlisted in the Table attached.

4.3 The third letter indicates type of material.

A	Carbon
B	Carbon Moly. (This material is not recommended)
C	1.0 % Cr., 0.5 % Moly. (This material is not recommended)
D	1.25 % Cr., 0.5 % Moly.
E	2.25 % Cr., 1.0 % Moly.
F	5.0 % Cr., 0.5 % Moly.
G	9.0 % Cr., 1.0 % Moly.
H	3.5 % Ni.
I	
J	Nickel / Titanum
K	Stainless steel type 304, 304H, 304L.
L	Aluminium
M	Stabilised stainless steel type 321, 347 and Stainless steel type 316, 316H.
N	316L
P	Monel / Alloy 20
Q	Hastalloy / Inconel / Incoloy
R	Lead
S	PVC & FRP, PP / FRP, PVDF / FRP
T	Cast Iron / Silicon Iron
U	
V	Duplex Stainless Steel
W	Cupro-Nickel
Y	Lined steel (Rubber Lined, Teflon Lined, Cement lined etc).
Z	HDPE / PDVF / Teflon / PVC

5.0 PIPES

5.1 Pipe dimension shall be in accordance with ASME B36.10, IS:1239 & IS:3589 for wrought steel and wrought iron pipe; to B36.10 / B36.19 for stainless steel pipe and respective ASTM Standard for non-ferrous and non- metallic pipes.

5.2 Pipe made by acid-bessemer process shall not be acceptable, steel pipe shall be made by open hearth, electric furnace or basic Oxygen process.

5.3 All pipe threads shall conform to ASME B1.20.1 except where otherwise noted.

5.4 Pipe thicknesses not covered in different classes of this specification shall be calculated to meet specific job requirement based on actual max. design condition to economise on thickness. However, in such cases the thickness shall be calculated at not less than 80% of class rating unless defined otherwise in the Job Engineering Design Basis (Piping).

5.5 Maximum of 10% of Corrosion Allowance may be adjusted to optimize on pipe schedule. However, if CA is suffixed by 'minimum', this downward adjustment shall not be used.

5.6 Non-standard pipe sizes 1¼", 2½", 3½", 5" and 22" shall not be treated as a part of this specification unless these sizes are separately called out.

6.0 FLANGES

6.1 Flanges shall be in accordance with the following codes, except where otherwise noted:

Copyright EIL – All rights reserved

Upto 24" (150# -1500#)	ASME B16.5
Upto 12" , 2500#	ASME B16.5
Above 24"	ASME B16.47 SERIES 'B' / AWWA / EIL' STD.

Flanges to ASME B16.47 SERIES 'A' or any other standard (e.g. DIN, GOST, JIS etc.) may be specified to mate with equipment or valve flanges with the corresponding bolting.

6.2 Finish of steel flange faces shall be as follows:

Stock Finish	:	1000 µin AARH max.
Serrated Finish / 125 AARH / Smooth finish	:	Serrations with 125-250µin AARH
63 AARH	:	32 TO 63 µin AARH

6.3 Brinnel hardness for RTJ groove shall be atleast 20 BHN more than that of corresponding gasket as specified.

6.4 Fig.8 Fl and SPCR & BLN shall be as per B16.48 upto 24" (150-1500#) & upto 12" for 2500#. For other sizes, refer EIL Std 7-44-0162.

7.0 FITTINGS

7.1 Forged steel SW and threaded fittings shall be in accordance with ASME B16.11, unless otherwise specified. For items not covered under B16.11, reference may be made to BS 3799 or appropriate MSS-SP-Std.

7.2 BW Fittings shall be in accordance with ASME B16.9, unless otherwise specified.

7.3 Dimensions of steel BW fittings for sizes not covered in ASME B16.9 shall conform to MSS-SP-48.

7.4 Usage of unions shall be restricted to utilities only.

8.0 BENDS, MITRES AND REDUCERS FABRICATED FROM PIPE

8.1 Mitres and Reducers fabricated from Pipe may be used if specified in particular Piping Class. Mitres require higher thickness than corresponding Pipe / Elbow to hold the same pressure (Refer ASME B31.3).

9.0 GASKETS

9.1 Non-metallic gaskets shall conform to B16.21 (corresponding to B16.5) upto 24", and B16.21 (corresponding to B16.47B) beyond 24", unless otherwise specified.

9.2 Spiral wound gaskets (SP.WND or SPWD) and Ring Joint gaskets shall conform to B16.20.

9.3 Inner rings shall be provided for all Spiral Wound Gaskets. For spiral wound gaskets, material of Inner Compression ring shall be same as Spiral Strip material.

10.0 BOLTING

10.1 All bolts shall conform to B18.2.1, nuts to be B18.2.2. Reference shall also be made to B16.5 for studs.

10.2 Threads shall be to coarse Thread Series, B1.1, having Class 2A allowances for bolts and studs, and Class 2B tolerance for nuts.

Copyright EIL – All rights reserved

10.3 Nuts for Bolts and Studs shall be the American Standard Hexagon Heavy Series.

10.4 When specified as "GALV.", the studs, M/C bolts and nuts shall be 'hot dip zinc coated' in accordance with requirements of 'class C' of `ASTM A 153'. As an alternative, electrogalvanizing as per IS 1573, 'Service Grade Number 2' is also acceptable. However, for bolting where "HDG" has been specified, only 'hot dip zinc coating' in accordance with requirements of 'class C' of `ASTM A 153' is acceptable.

11.0 THREADS

11.1 Threads for threaded Pipes, Fittings, Flanges and Valves shall be in accordance with B1.20.1 taper threads, unless otherwise specified.

11.2 Upto 204 deg.C, threaded joints shall be made with 1" width PTFE joining tape.

11.3 Above 204 deg.C, threaded joints shall be seal welded with a full strength fillet weld.

11.4 All threaded joints irrespective of pressure and temperature on lines carrying toxic fluid shall be seal welded with a full strength fillet weld.

12.0 VALVES

12.1 Face to Face / End to End dimension of valves shall conform to B16.10 to the extent covered. For valves not covered in B16.10, reference shall be made to BS EN 558-1 for PN Designated Flanged valves, BS EN 558-2 for Class designated Flanged valves and BS EN 12627 for Butt Welding end valves and / or the manufacturer's drawings.

12.2 Flange / weld ends of the valve shall be as per the corresponding Flange / Fitting ends of the piping class, unless otherwise specified.

12.3 Pressure-temperature rating for flanged and butt welding end valves shall be as per ASME B16.34 except for ball, plug & butterfly valves. For these valves refer TABLE FOR PRESSURE-TEMP RATING FOR BALL, PLUG AND BUTTERFLY VALVES. Wall thickness of valve body at different locations should not be less than as calculated as per B16.34.

12.4 Unless called-out specifically, valves shall be as per the following Standards:

Valve	Size	Rating	Des. Std.	Testing Std.
Gate	1/2"- 1-1/2"	800 / 1500	'API 602/ ISO 15761'	API-598
Globe / Check	-do-	800 / 1500	'API 602/ ISO 15761'	API-598
Gate	2"-24"	150 / 300 / 600	'API 600/ ISO 10434'	API-598
Gate	26"-42"	150 / 300	B-16.34	'API 598'/ 'BS EN 12266-1'
Globe	2"-16"	150	BS-1873	'BS EN 12266-1'
Globe	2"-12"	300/600	BS-1873	-do-
Check	2"-24"	-do-	BS-1868	-do-
Gate/ Globe/Check	2"-8"	900 / 1500 / 2500	B-16.34 (Refer 12.6 also)	'API 598' / 'BS EN 12266-1'

Copyright EIL – All rights reserved

Ball	1/2"-16"	150 / 300 / 600	'BS EN ISO 17292' / 'API 6D'	'BS EN 12266-1' / 'API-598'

Diaphram	ALL	-	BS-5156	'BS EN 12266-1'
Bronze			RELEVANT IS STD.	RELEVANT IS STD.
Cast Iron			RELEVANT IS STD.	RELEVANT IS STD.

12.5 If not covered in 12.3, the valve shall be as per B16.34 / relevant MSS-SP Standard.

12.6 For details of the valves specifications, refer specifications 6-44-0006. Features not covered by 6-44-0006 and the relevant code shall be to the manufacturer's standard.

12.7 Unless otherwise specifically called for, upto 600# rating, 2" and larger size steel Gate, Globe & Check valves in Hydrocarbon and utility service shall have bolted bonnets. Pressure-seal bonnets or covers shall be used for Classes 900# and above to minimize bonnet leakage. However, valves with Pr-seal Bonnet shall have wall thickness & stem diameter as per API-600, (if required). Welded bonnets or screwed & seal welded bonnets are acceptable for sizes lower than 2" for Classes 900# & above.

12.8 In TEAL service, only licensor recommended vendors shall be considered for supply of valves.

13.0 For Non-Destructive Testing (NDT) specification , refer EIL' STD B957-6-44-0016.

14.0 For Welding specifications, refer EIL specs. 'Welding Specification for fabrication of piping(6-77-0001 & B957-999-06-41-WSP-0001)' & 'Welding charts for piping classes (B957-999-06-41-WSC-0001)'.

15.0 For 'Caustic Soda service graph' refer sheet 20 of 20.

1.0 SCOPE

1.1 This specification (PMS) covers the various piping classes for Process and utility Piping.

1.2 Deviations from this specification may be necessary to conform to specific job requirements.

1.3 PMS for PPU and LLDPE/HDPE Swing unit shall be read in conjuction with Licensor PMS.

1.4 PMS for PPU has been prepared for the preferred component listed in Licensor PMS. If any special piping components are listed in the Process design package or P&ID, corresponding Licensor class shall be followed for reference.

2.0 REFERRED CODES & STANDARDS

2.1 All Piping shall be designed in accordance with the Process Piping Code, ASME B31.3. A particular edition (indicated in Design Basis), once selected shall be followed throughout the job.

2.2 Editions and addenda (if any) of referred Codes and Standards shall be as per the Job Engineering Design Basis (Piping).

2.3 For the sake of brevity, the initials of the society to which the codes are referred to may be omitted in the specification. For example; B16.5 is a code referring to ASME; A106 is a standard referring to ASTM.

3.0 MATERIAL SPECIFICATIONS

3.1 Individual piping Class has been generally designed to cover a set of services operating within pressure-temperature combination as per ASME B16.5 / B16.34 or part of it.

3.2 The PMS shall be strictly adhered to in the design, requisitioning, purchasing, fabrication and testing of the piping system. However, deviations of material may occur due to design conditions and/or availability. All substitutions must be duly approved.

3.3 Piping components as per “MNF STD” or “Unlisted components as per B31.3” shall be designed and qualified as per clause 304.7.2 for unlisted components.

3.4 For Valves, material requirements specified in Annexure “D’ of API 600 shall be followed.

3.5 Where trim nos. have been specified, the same shall be as per API 600.

3.6 In cases where 'D/t' ratio exceeds 100, components shall be treated as unlisted components and designed according to B31.3. ‘D’ is outer dia. and ‘t’ is nominal thickness for all other components except branches where 't' is minimum thickness as per purchase specification.

3.7 Unless mentioned otherwise, pipe thicknesses in the specs are for above ground piping.

4.0 CLASS DESIGNATION CODE

The class designation shall consist of not more than three components made up of a letter, number & letter; e.g.B1A.

4.1 The first letter indicates pressure rating.

A	150 Class	D	600 Class	G	2500 Class
B	300 Class	E	900 Class	J	125/150 Class
C	400 Class	F	1500 Class	K	UNCLASSIFIED

Copyright EIL – All rights reserved

4.2 The middle number indicates difference in the specifications within the same rating and material as enlisted in the Table attached.

4.3 The third letter indicates type of material.

A	Carbon
B	Carbon Moly. (This material is not recommended)
C	1.0 % Cr., 0.5 % Moly. (This material is not recommended)
D	1.25 % Cr., 0.5 % Moly.
E	2.25 % Cr., 1.0 % Moly.
F	5.0 % Cr., 0.5 % Moly.
G	9.0 % Cr., 1.0 % Moly.
H	3.5 % Ni.
I	
J	Nickel / Titanum
K	Stainless steel type 304, 304H, 304L.
L	Aluminium
M	Stabilised stainless steel type 321, 347 and Stainless steel type 316, 316H.
N	316L
P	Monel / Alloy 20
Q	Hastalloy / Inconel / Incoloy
R	Lead
S	PVC & FRP, PP / FRP, PVDF / FRP
T	Cast Iron / Silicon Iron
U	
V	Duplex Stainless Steel
W	Cupro-Nickel
Y	Lined steel (Rubber Lined, Teflon Lined, Cement lined etc).
Z	HDPE / PDVF / Teflon / PVC

5.0 PIPES

5.1 Pipe dimension shall be in accordance with ASME B36.10, IS:1239 & IS:3589 for wrought steel and wrought iron pipe; to B36.10 / B36.19 for stainless steel pipe and respective ASTM Standard for non-ferrous and non- metallic pipes.

5.2 Pipe made by acid-bessemer process shall not be acceptable, steel pipe shall be made by open hearth, electric furnace or basic Oxygen process.

5.3 All pipe threads shall conform to ASME B1.20.1 except where otherwise noted.

5.4 Pipe thicknesses not covered in different classes of this specification shall be calculated to meet specific job requirement based on actual max. design condition to economise on thickness. However, in such cases the thickness shall be calculated at not less than 80% of class rating unless defined otherwise in the Job Engineering Design Basis (Piping).

5.5 Maximum of 10% of Corrosion Allowance may be adjusted to optimize on pipe schedule. However, if CA is suffixed by 'minimum', this downward adjustment shall not be used.

5.6 Non-standard pipe sizes 1¼", 2½", 3½", 5" and 22" shall not be treated as a part of this specification unless these sizes are separately called out.

6.0 FLANGES

6.1 Flanges shall be in accordance with the following codes, except where otherwise noted:

Copyright EIL – All rights reserved

Upto 24" (150# -1500#)	ASME B16.5
Upto 12" , 2500#	ASME B16.5
Above 24"	ASME B16.47 SERIES 'B' / AWWA / EIL' STD.

Flanges to ASME B16.47 SERIES 'A' or any other standard (e.g. DIN, GOST, JIS etc.) may be specified to mate with equipment or valve flanges with the corresponding bolting.

6.2 Finish of steel flange faces shall be as follows:

Stock Finish	:	1000 µin AARH max.
Serrated Finish / 125 AARH / Smooth finish	:	Serrations with 125-250µin AARH
63 AARH	:	32 TO 63 µin AARH

6.3 Brinnel hardness for RTJ groove shall be atleast 20 BHN more than that of corresponding gasket as specified.

6.4 Fig.8 Fl and SPCR & BLN shall be as per B16.48 upto 24" (150-1500#) & upto 12" for 2500#. For other sizes, refer EIL Std 7-44-0162.

7.0 FITTINGS

7.1 Forged steel SW and threaded fittings shall be in accordance with ASME B16.11, unless otherwise specified. For items not covered under B16.11, reference may be made to BS 3799 or appropriate MSS-SP-Std.

7.2 BW Fittings shall be in accordance with ASME B16.9, unless otherwise specified.

7.3 Dimensions of steel BW fittings for sizes not covered in ASME B16.9 shall conform to MSS-SP-48.

7.4 Usage of unions shall be restricted to utilities only.

8.0 BENDS, MITRES AND REDUCERS FABRICATED FROM PIPE

8.1 Mitres and Reducers fabricated from Pipe may be used if specified in particular Piping Class. Mitres require higher thickness than corresponding Pipe / Elbow to hold the same pressure (Refer ASME B31.3).

9.0 GASKETS

9.1 Non-metallic gaskets shall conform to B16.21 (corresponding to B16.5) upto 24", and B16.21 (corresponding to B16.47B) beyond 24", unless otherwise specified.

9.2 Spiral wound gaskets (SP.WND or SPWD) and Ring Joint gaskets shall conform to B16.20.

9.3 Inner rings shall be provided for all Spiral Wound Gaskets. For spiral wound gaskets, material of Inner Compression ring shall be same as Spiral Strip material.

10.0 BOLTING

10.1 All bolts shall conform to B18.2.1, nuts to be B18.2.2. Reference shall also be made to B16.5 for studs.

10.2 Threads shall be to coarse Thread Series, B1.1, having Class 2A allowances for bolts and studs, and Class 2B tolerance for nuts.

Copyright EIL – All rights reserved

10.3 Nuts for Bolts and Studs shall be the American Standard Hexagon Heavy Series.

10.4 When specified as "GALV.", the studs, M/C bolts and nuts shall be 'hot dip zinc coated' in accordance with requirements of 'class C' of `ASTM A 153'. As an alternative, electrogalvanizing as per IS 1573, 'Service Grade Number 2' is also acceptable. However, for bolting where "HDG" has been specified, only 'hot dip zinc coating' in accordance with requirements of 'class C' of `ASTM A 153' is acceptable.

11.0 THREADS

11.1 Threads for threaded Pipes, Fittings, Flanges and Valves shall be in accordance with B1.20.1 taper threads, unless otherwise specified.

11.2 Upto 204 deg.C, threaded joints shall be made with 1" width PTFE joining tape.

11.3 Above 204 deg.C, threaded joints shall be seal welded with a full strength fillet weld.

11.4 All threaded joints irrespective of pressure and temperature on lines carrying toxic fluid shall be seal welded with a full strength fillet weld.

12.0 VALVES

12.1 Face to Face / End to End dimension of valves shall conform to B16.10 to the extent covered. For valves not covered in B16.10, reference shall be made to BS EN 558-1 for PN Designated Flanged valves, BS EN 558-2 for Class designated Flanged valves and BS EN 12627 for Butt Welding end valves and / or the manufacturer's drawings.

12.2 Flange / weld ends of the valve shall be as per the corresponding Flange / Fitting ends of the piping class, unless otherwise specified.

12.3 Pressure-temperature rating for flanged and butt welding end valves shall be as per ASME B16.34 except for ball, plug & butterfly valves. For these valves refer TABLE FOR PRESSURE-TEMP RATING FOR BALL, PLUG AND BUTTERFLY VALVES. Wall thickness of valve body at different locations should not be less than as calculated as per B16.34.

12.4 Unless called-out specifically, valves shall be as per the following Standards:

Valve	Size	Rating	Des. Std.	Testing Std.
Gate	1/2"- 1-1/2"	800 / 1500	'API 602/ ISO 15761'	API-598
Globe / Check	-do-	800 / 1500	'API 602/ ISO 15761'	API-598
Gate	2"-24"	150 / 300 / 600	'API 600/ ISO 10434'	API-598
Gate	26"-42"	150 / 300	B-16.34	'API 598'/ 'BS EN 12266-1'
Globe	2"-16"	150	BS-1873	'BS EN 12266-1'
Globe	2"-12"	300/600	BS-1873	-do-
Check	2"-24"	-do-	BS-1868	-do-
Gate/ Globe/Check	2"-8"	900 / 1500 / 2500	B-16.34 (Refer 12.6 also)	'API 598' / 'BS EN 12266-1'

Copyright EIL – All rights reserved

Ball	1/2"-16"	150 / 300 / 600	'BS EN ISO 17292' / 'API 6D'	'BS EN 12266-1' / 'API-598'
Ball	1/2"-8"	900/ 1500	API 6D	API-598
Plug	1/2"-12"	All	'API-599' /'BS 5353'	'API-598' / 'BS EN 12266-1'
Btrfly	3" & above	All	'API-609' / 'BS EN 593' / 'AWWA C504'	'API-598' /' BS EN 12266-1'/ 'AWWA'
Diaphram	ALL	-	BS-5156	'BS EN 12266-1'
Bronze			RELEVANT IS STD.	RELEVANT IS STD.
Cast Iron			RELEVANT IS STD.	RELEVANT IS STD.

12.5 If not covered in 12.3, the valve shall be as per B16.34 / relevant MSS-SP Standard.

12.6 For details of the valves specifications, refer specifications 6-44-0006. Features not covered by 6-44-0006 and the relevant code shall be to the manufacturer's standard.

12.7 Unless otherwise specifically called for, upto 600# rating, 2" and larger size steel Gate, Globe & Check valves in Hydrocarbon and utility service shall have bolted bonnets. Pressure-seal bonnets or covers shall be used for Classes 900# and above to minimize bonnet leakage. However, valves with Pr-seal Bonnet shall have wall thickness & stem diameter as per API-600, (if required). Welded bonnets or screwed & seal welded bonnets are acceptable for sizes lower than 2" for Classes 900# & above.

12.8 In TEAL service, only licensor recommended vendors shall be considered for supply of valves.

13.0 For Non-Destructive Testing (NDT) specification , refer EIL' STD B957-6-44-0016.

14.0 For Welding specifications, refer EIL specs. 'Welding Specification for fabrication of piping(6-77-0001 & B957-999-06-41-WSP-0001)' & 'Welding charts for piping classes (B957-999-06-41-WSC-0001)'.

15.0 For 'Caustic Soda service graph' refer sheet 20 of 20.

1.0 GENERAL

1.1 Scope

This specification covers the general requirements for non destructive examination of shop & field fabricated piping.

1.2 Related Codes & Engineering Standards

Referred codes / standards are as follows. Latest editions of the Codes/Standards referred to shall be followed.

a) ASME Boiler & Pressure Vessel Codes, Section V & VIII (Div.1) including addenda.

b) ASME B31.3

c) ASME B16.5

d) ASME B16.34

e) Job Piping Material Specification, B957-6-44-0005

f) Welding Specification Charts for Piping Classes, B957-999-06-41-WSC-0001

g) Standard Specification for Fabrication & Erection of Piping 6-44-0012

h) ASTM E10

i) Welding Specification for Fabrication of Piping, 6-77-0001 & B957-999-06-41-WSP-0001

j) Design Guide for Radiography Requirements, 8-77-0010

k) Indian Boiler Regulations (IBR)

2.0 VISUAL EXAMINATION

2.1 Weld shall be visually inspected wherever accessible in accordance with the following requirements:

a)	Internal misalignment	1.5 mm or less
b)	Cracks or lack of fusion	not permitted
c)	Incomplete penetration	Depth shall not exceed the lesser of 0.8mm or 0.2 times thickness of thinner component joined by butt-weld. The total length of such imperfections shall not exceed 38 mm in any 150 mm of weld length.
d)	Surface porosity and exposed slag inclusions (For nom. wall thickness 4.7 mm and less)	not permitted

Copyright EIL – All rights reserved

e)	Concave root surface (Suck up)	For single sided welded joints, concavity of the root surface shall not reduce the total thickness of joint, including reinforcement, to less than the thickness of the thinner of the components being joined.
f)	Weld ripples irregularities	2.5 mm or less.
g)	Lack of uniformity in bead width	2.5 mm or less.
h)	Lack of uniformity of leg length	2.5 mm or less.
i)	Unevenness of bead	2.0 mm or less.
j)	Weld undercutting	0.8 mm or 1/4 thickness of thinner components joined by butt weld, whichever is less. (shall be smooth finished)
k)	Overlap	1.5 mm or less
l)	Bead deflection	2.5 mm or less

m) External weld reinforcement and internal weld protrusion (when backing rings are not used) shall be fused with and shall merge smoothly into the component surfaces. The height of the lesser projection of external weld reinforcement or internal weld protrusion from the adjacent base material surface shall not exceed the following limits:

Wall thickness of thinner component joined by butt weld (mm)	Weld reinforcement or internal weld protrusion (mm) max
6.4 and under	1.6
Over 6.4 -12.7	3.2
Over 12.7 -25.4	4.0
Over 25.4	4.8

n) Throat thickness of fillet welds:

Nominal thickness of the thinner component x 0.7 or more.

o) Flattening

Flattening of a bend, as measured by difference between the nominal outside diameter and minimum or maximum diameter at any cross section shall not exceed 5 % of the nominal outside diameter of pipe.

p) Reduction of wall thickness

Reduction of wall thickness of a bend, as measured by difference between the nominal thickness and minimum thickness shall not exceed 10 % of the nominal wall thickness of pipe.

Copyright EIL – All rights reserved

2.2 Welds having any of imperfections which exceed the limitations specified in various clauses of 2.1 shall be repaired by welding, grinding or overlaying etc. Number of times of repair welding for the same weld, however shall conform to applicable notes to Table 1- Note 6(b)b.5.

3.0 NON DESTRUCTIVE EXAMINATION

3.1 The type and extent of weld examination shall be in accordance with Table-1. All visual and supplementary methods of girth weld examination shall be in accordance with ASME B31.3 & the requirements of this standard specification.

3.2 Welds between dissimilar materials shall be examined by method & to the extent required for the material having the more stringent examination.

Copyright EIL – All rights reserved

REMARKS FOR ABOVE TABLE :

1. MITRES & FABRICATED REDUCERS ARE PERMITTED ONLY IF SPECIFIED IN PMS.

Copyright EIL – All rights reserved

Applicable Notes to Table-1

1. Branch welds shall consist of the welds between the pipe & reinforcing element (if any), nozzles & reinforcing element and the pipe & nozzle under the reinforcing element. Reinforcing element to be interpreted as pads, saddles, weldolets, sockolets etc.

2. Seal welds of threaded joints shall be given the same examination as socket welds.

3. Unless specifically stated, all materials shall be for "Non-IBR" service.

4. Magnetic Particle & the Liquid Penetrant method of examination shall be in accordance with Section V of the ASME Boiler and Pressure Vessel Code, Article VII and VI respectively. The entire area of the accessible finished weld surface shall be examined. Selected root runs, subject to a maximum of 10%, before finished weld, may also be examined, at the discretion of the engineer-in-charge.

   a) Wherever MP / LP testing is specified, either MP or LP test may be used. But wherever only MP test is specified, LP method of examination may be used only if MP examination is impracticable in the field as concurred by EIL site-in charge.

   b) "Random 5%" of Liquid Penetrant / Magnetic Particle test shall mean testing, by applicable test, one weld for each twenty welds or less made by the same welding procedure. "Random 10%" shall mean testing, by applicable test, one weld for each ten welds or less made by the same welding procedure. Similarly "Random 20%" shall mean testing, by applicable test, one weld for each five welds or less made by the same welding procedure. The welds to be examined in each designated lot shall include the work product of each welder or welding operator whose welds are part of the lot.

   c) When Liquid Penetrant examination is specified, the surface shall be free of peened discontinuities.

   d) Inspection shall be performed in the welds excluding those for which Radiography has been done.

   e) Girth weld, branch weld, attachment weld & socket weld of 3-1/2% Ni steel shall be Liquid Penetrant tested only when welded with austenitic material where MP test has been specified.

5. Radiography (Note-14,15):

   a) "Random 5%, 10% or 20% Radiography" shall mean examining not less than one from each 20 welds or less in case of "Random 5% Radiography", not less than one from each 10 welds or less in case of "Random 10% Radiography", not less than one from each five welds or less in case of "Random 20% Radiography" made by the same welding procedure. The welds to be examined in each designated lot shall include the work product of each welder or welding operator whose welds are part of the lot. Irrespective of percentage, no. of welds to be radiographed shall be minimum 1. However first two welds made by each welder shall also be radiographed in case of "Random Radiography". Welds selected for examination shall not include flange welds and shall be radiographed for their entire length. However, where it is impossible or impracticable to examine the entire weld length of field welds for either random or 100% Radiography, and if the same impossibility is agreeable to EIL site-in- charge, then a single 120 deg. exposure of the weld length may be given a Magnetic Particle test or Liquid Penetrant test.

Copyright EIL – All rights reserved

However in such cases for ferro-magnetic materials, only MP test shall be acceptable for classes higher than 600#.

b) In-process examination shall not be substituted for any required radiographic examination.

c) Number of radiographs per one circumferential weld shall be as per ASME Sec.V Articles 2 and 22.

6. When radiography or other non destructive inspection is specified, acceptance criteria for repairs or defects shall be as follows:

a) In case of 100% examination, any unacceptable weld shall be repaired and reinspected.

b) If required random examination reveals a defect requiring repair, then:

b.1 Two additional examinations of same type shall be made of the same kind of item (if welded joint, then by the same welding procedure and same welder or welding operator).

b.2 If the group of items examined as required by b.1 above is acceptable, the items requiring repair shall be repaired or replaced and reexamined as required and all items represented by this additional examination shall be accepted.

b.3 If any of the items examined as required by b.1 above reveals a defect requiring repair, two further comparable items shall be examined for each defective item found by examination.

b.4 If all the items examined as required by b.3 are acceptable, the items requiring repair shall be repaired or replaced and reexamined as required, and all items represented by this further examination shall be accepted.

b.5 Number of times repair welding could be done for the same weld before acceptance shall be as follows:

Material	**No. of times repair welding is allowed**
C.S. upto 300 #	3 or less
C.S. above 300 #	2 or less
Killed steel	2 or less
Low alloy steel	2 or less
Austenitic S.S.	2 or less
3.5 Ni steel	2 or less
Al & Al base alloy	2 or less
Cu & Cu base alloy	2 or less
Others	2 or less

Copyright EIL – All rights reserved

b.6 Welds not found acceptable for allowed number of times of repair as per b.5 above shall be replaced and reexamined.

b.7 If any of the items examined as required by b.4 above reveals a defect requiring repair, all items represented by these examinations shall be either:

- repaired or replaced and reexamined as required.
- fully examined and repaired or replaced as necessary, and reexamined as necessary.

7. Hardness Test:

a) Hardness test shall be in accordance with ASTM specification E10. Hardness tests of the heat affected zone shall be made at a point as near as practicable to the edge of the weld. One test per weld shall be performed.

b) Hardness test where specifically called out in Table-1 of this specification or in PMS, shall be carried out irrespective of thickness and to the extent (%age) as mentioned therein.

c) All welds which are given heat treatment shall be hardness tested. Hardness test shall be performed after final heat treatment.

d) A minimum of 10% of welds, hot bends, and hot formed components in each furnace heat treated batch and 100% of those which are locally heat treated shall be hardness tested.

e) Hardness test requirement not covered in this specification shall be as per Engineering Specifications.

f) The hardness limit applies to the weld and heat affected zone. Following hardness values shall be maintained unless otherwise mentioned in Job specification :

Base Metal Group	**Hardness (BHN/RC)**
CS	200 BHN Max.
Cr Upto 2%	225BHN max.
Cr 2.25%-10%	241BHN max.
18/8 SS (NACE)	RC22 max.
9CR-1MO-V	190 BHN (min.)-250 BHN (max.)

g) In case hardness values are mentioned in both Welding Specification Charts for Piping Classes, (B957-999-06-41-WSC-0001) & table given in Note-7(f), the lower of the two values shall be applicable.

8. For IBR service lines, following IBR requirements shall apply in addition to the notes 4, 5, 6, 7, 12 and Table 1. In case of conflict between above notes and these requirements, the more stringent ones shall apply. IBR piping shall be erected of IBR inspector approved material and

Copyright EIL – All rights reserved

construction procedure. Erected piping shall be hydrotested, inspected and approved by IBR inspector.

a) Piping over 102 mm (4") bore:

10% of welds made by each welder on a pipeline with a minimum of two welds per welder, selected at random, shall be subjected to Radiography.

b) Piping 102 mm (4") bore and under, but not less than 38 mm (1-1/2") bore:

Two percent of welds made by each welder on a pipeline with a minimum of one weld per welder, selected at random, shall be subjected to Radiography or may be cut for visual examination and tests.

c) Piping less than 38 mm (1.5") bore:

Special tests are not normally required but 2% of welds by each welder on a pipe line may be cut out from the pipeline for the visual examination and bend tests.

d) Retests:

If any test specimen is unsatisfactory, two further weld specimens for retests shall be selected from the production welds and subjected to tests. In the event of failure of any retest specimens, the production welds carried out by this welder subsequent to the previous test shall be given special consideration.

9. For fabricated fittings LP test shall be done on the final pass of welding only, in addition to visual examination.

10. For mitres and fabricated reducers, LP / MP test shall be done on root pass in addition to Radiography applicable to circumferential joint of respective piping class.

11. For branch connections, LP/MP test shall be done on root pass and final pass.

12. 10% of the butt weld joints shall be radiographed, however, 50% of these butt weld joints shall be field weld joints.

13. For lined specs, testing (MP/LP/Radiography etc.) shall be performed before lining.

14. Digital/Close Proximity Radiography are also acceptable along with Conventional Radiography with prior approval of Owner/Engineer-in-charge. The same shall be performed in accordance with Welding Specification for Fabrication of Piping.

15. In place of Radiography, Automated Ultrasonic Testing (AUT) as per Welding specification for Fabrication of Piping is also acceptable subject to prior approval of Owner/Engineer-in-charge.

16. LP test is to be performed for Austenitic stainless steel, regardless of MP test specified.

17. For all fluid services, surfaces where attachment welds have been removed shall be visually examined and shall show no evidence of cracking, lack of fusion, or surface porosity.

Where temporary attachments are made on P-No. 4, P-No. 5A, P-No. 5B, and P-No. l5E materials, the surfaces shall also be examined by the MP/ LP methods.

18. All joints including butt weld joints for A16A, A61A, A62A, B16A and D16A and any other NACE classes shall be wet fluorescent magnetic particle tested. Percentage of wet fluorescent

Copyright EIL – All rights reserved

magnetic particle testing of butt weld joints shall be 100% and this testing shall be in addition to radiography.

1.0 INTRODUCTION

Bharat Petroleum Corporation Limited (BPCL), Bina Refinery (BR) has embarked on Petrochemical Diversification Plan and as a part of further expansion of Petrochemical portfolio, it is intended to set up world scale Ethylene Cracker & Associated Units and Ethylene and Propylene based Petrochemical units for its diversification to Petrochemicals along with expansion of its refinery capacity to about 11 MMTPA.

1.1 Scope

Intent of this specification is to outline the minimum technical requirements for insulation of HP, MP and LP steam lines. Based on standards and specifications, appended in the tender, the contractor shall select appropriate insulation materials, develop insulation drawings, application procedures, quality control procedures, supply and install insulation meeting specified technical requirements

Aspects for HSE for execution of the job shall be separately addressed by the contractor meeting requirements of health, safety and environment practices of BPCL.

1.2 Reference Codes and Standards

Following standards shall form part of this specification.

ASTM A167	Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip
ASTM B209	Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate
ASTM C165	Measuring Compressive Properties of Thermal Insulations
ASTM C177	Standard Test Method for steady-state heat flux measurement and thermal transmission properties by means of the guarded-hot plate apparatus
ASTM C203	Standard Test Methods for Breaking Load and Flexural Properties of Block-Type Thermal Insulation
ASTM C302	Test Method for Dimensions and Density of Preformed Pipe-Covering-Type Thermal Insulation
ASTM C303	Test Method for Dimensions and Density of Preformed Block and Board−Type Thermal Insulation
ASTM C356	Standard Test Method for Linear Shrinkage of Preformed High-Temperature Thermal Insulation Subjected to Soaking Heat
ASTM C421	Standard Test Method for Tumbling Friability of Preformed Block-Type and Preformed Pipe-Covering-Type Thermal Insulation
ASTM C446	Standard Test Method for Breaking Load and Calculated Modulus of Rupture of Preformed Insulation for Pipes
ASTM C474	Standard Test Methods for Joint Treatment Materials for Gypsum Board Construction
ASTM C533	Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation
ASTM C591	Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation
ASTM C871	Standard test method for chemical analysis of thermal insulation materials for leachable chlorides, fluorides , silicate and sodium ions.
ASTM C1616	Standard Test Method for Determining the Moisture Content of Organic and Inorganic Insulation Materials by Weight
ASTM C1729	Standard Specification for Aluminum Jacketing for Insulation
ASTM D412	Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers—Tension

Copyright EIL – All rights reserved

ASTM D903	Standard Test Method for Peel or Stripping Strength of Adhesive Bonds
ASTM D1000	Standard Test Methods for Pressure-Sensitive Adhesive-Coated Tapes Used for Electrical and Electronic Applications
ASTM D1475	Standard Test Method for Density of Liquid Coatings, Inks, and Related Products
ASTM D1621	Standard Test Method for Compressive Properties of Rigid Cellular Plastics
ASTM D1644	Standard Test Methods for Nonvolatile Content of Varnishes
ASTM D2240	Standard Test Method for Rubber Property—Durometer Hardness
ASTM D3960	Standard Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings
ASTM D6226	Standard Test Method for Open Cell Content of Rigid Cellular Plastics
ASTM E84	Standard Test Method for Surface Burning Characteristics of Building Material
ASTM E96	Standard Test Methods for Water Vapor Transmission of Materials
ASTM F1249	Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor
SSPC-SP-6	Steel Structure Painting Council Standard for surface preparation
IS 5688	Methods of test for preformed block-type and pipe covering type thermal insulation
IS 9428	Preformed Calcium Silicate Insulation (for temperature up to 950°C

1.3 Specific abbreviations

Term	Definition
ASTM	American Society for Testing and Materials
API	American Petroleum Institute
BPCL	Bharat Petroleum Corporation Limited
CNC	Computer Numerical Control
EIL	Engineers India Limited
HCFC	Hydrochlorofluorocarbons
HSE	Health and Safety Executive
HP	High Pressure
IS	Indian Standard
ITP	Inspection & Test Plan
LP	Low Pressure
MOC	Material of Construction
MP	Medium Pressure
MSDS	Material Safety Data Sheet
PET	Polyethylene terephthalate
PIR	Rigid Polyisocyanurate
PMC	Project Management Consultant
QAP	Quality Assurance Plan
SSPC	Society for Protective Coatings
VOC	Volatile organic content

2.0 CONFLICTS & DIFFERENCES

2.1 In case of difference arises between Project Specifications and Codes & Standards, the following order of precedence shall be considered:

a) EIL Job specification for insulation system of HP, MP & LP steam lines (B957-999-06-43-IL02)
b) Applicable International Codes and Standards
c) Proven references of design of Utility boilers in similar service
d) Approved drawings, documents prepared by contractor

Copyright EIL – All rights reserved

e) BPCL HSE Management Systems and Standards, BPCL Codes and Standards
f) International Oil & Gas Industry Codes, Standards, and Recommended practices (all where specified in above or, where none of the above is applicable, as proposed by Contractor and approved by Company).

2.2 In the event of an inconsistency, conflict, or discrepancy between any of the standards, specifications and regulatory requirements noted herein, the most stringent and safest requirement applicable to the project will prevail. Contractor shall be responsible to provide its own interpretation of the most stringent requirement; in writing; for EIL/BPCL review and approval before proceeding with procurement / application of insulation. Any technical deviation shall be sought by the contractor only through the concession request format, however, EIL/BPCL decision shall be final.

2.3 Documentation dates

Requirements of certificates / test reports, if any that specifies a time period in this specification, bid due date shall be referred for determining the validity of such certificate / test report.

3.0 INSULATION DESIGN

HP, MP and LP steam line insulation system shall consist of multilayer insulation applied with joint sealants, protected from moisture/ water vapor ingress by multiplex foil / Butyl wrap and covered with metal cladding.

3.1. Insulation system and thickness

Steam line insulation system, materials selection and thickness shall be as per line list/ P&IDs.

3.2. Extent of insulation

a) Instrument lead lines, branch lines, instrument connections etc. shall be insulated up to a length of at least four (4) times the insulation thickness or 300mm whichever is greater. Insulation system same as the main piping shall be applied to the extensions.

b) Valves and fittings shall be insulated with appropriate insulation compatible and equivalent to the insulation as that of adjoining piping.

c) All flanged joints shall be insulated with removable box insulation compatible and equivalent to the insulation as that of adjoining piping.

d) Items like bonnet of valves above the packing glands, display like nameplates, stampings, inspection code etc. shall be specially designed and insulated so that the display is not covered by insulation.

3.3. Painting under insulation

Pipeline shall be protected from corrosion by providing appropriate painting under insulation as per EIL specification for painting B957-000-06-42-PLS-01 attached elsewhere in the tender.

4.0 MATERIALS & ACCESSORIES

All materials used for insulation shall be freshly procured. Material shall be supplied, dry, shall be non-sulfurous, rot proof, vermin proof, non-injurious to health and non-corrosive to steel, shall not disintegrate, settle, change its form of composition, in a detrimental way during service. Typical details/ minimum technical requirement of the major insulation materials and accessories are given in this specification.

4.1. Rock wool

Copyright EIL – All rights reserved

Rock wool is a fibrous insulation made from molten rock, bonded with resin or suitable binder. The term rock wool shall mean fibrous insulation wool made from natural rock and does not refer to products manufactured from slag or glass. For application over austenitic stainless steel, the material shall be zinc free and shall be inhibited with sodium silicate as per ASTM C-795.

4.1.1 The material may be used up to 550^0C, but shall meet the general classification of respective standards and service temperature requirements as mentioned below:

Form of Fibrous Material	Quality standard	Max service temperature
Preformed pipe sections	ASTM C547 / IS 9842	760^0C
Insulation blanket with wire net facing	ASTM C592 / IS 8183	649^0C
Resin bonded mattress (max 2% resin)	ASTM C612/ IS 8183	760^0C

Rock wool shall meet following minimum properties:

Characteristics		Material type	
		Pipe sections	Blanket
Service temperature (°C)		650	650
Nominal Density (kg/m^3), in acc. with ASTM C302 (pipe)/ ASTM C303 (Slab)/ASTM C167 (blankets)/IS 8183/		140	128
Linear Shrinkage (%) at 550°C/ 24 hours as per ASTM- C-356, max.		2	2
Non fibrous shot (%) as per ASTM C-1335 / 3144, max		15	15
Water vapor sorption (%) as per ASTM C1104, max.		5	5
Compressive strength at 10% deformation (kPa) as per ASTM C165, min.		-	-
Alkalinity, pH as per ASTM C-871		7-10	7-10
Leachable Chloride as per ASTM C-871, ppm, max.		10 (Note-1,2)	10 (Note-1,2)
Test for incombustibility OR fire resistivity	Incombustibility as per 8183/IS 3144	Pass	Pass
	OR Flame spread as per ASTM E84	25	25
Thermal Conductivity (W/mK), IS 3346 /ASTM C177/ASTM C-518 at mean temperature, max.	(+) 100°C	0.052	0.052
	(+) 200°C	0.070	0.068
	(+) 250°C	0.085	0.080
	(+) 300°C	0.10	0.090
Note-1: Max. 20 ppm allowed for application over carbon steel and low alloy steel *Note-2: The type test certificate shall not be older than 2 years*			

4.2. Aerogel

Flexible aerogel insulation is a composite of an amorphous silica-based aerogel, a fibrous carrying media, or reinforcements, or a combination thereof, that allow the construct to be

Copyright EIL – All rights reserved

flexible. The material shall be in accordance with ASTM C1728 Type-III, Gr.1A. The material shall have following general properties:

Characteristics		Value	Remarks
Temperature range (°C)		24 to 649	
Density (kg/m^3) ASTM C303, min		160	Note-1
Compressive Strength (kPa), min, at 10% deformation (ASTM C165)		20.7	
Linear shrinkage at maximum exposure temperature for 24h , max, % (ASTM C356) in length & width		2	
Water absorption, max, % by weight		8	
Water vapour sorption, by weight, max %, (ASTM C1104/C1104M)		5	
Flame spread index (ASTM E84), max Smoke developed index (ASTM E84), max		5 10	Note-2
Thermal conductivity (W/mK) at mean temperature (°C) (ASTM C177)	(+) 24 °C, max	0.021	
	(+) 149 °C, max	0.025	
	(+) 204 °C, max	0.029	
	(+) 260 °C, max	0.032	
	(+) 371 °C, max	0.043	
Note-1: Batch test - Supplier shall provide test certificate for each production Batch *Note-2: Type test - Supplier shall provide Type test certificate no older than 2 years*			

4.3. Calcium Silicate

Calcium silicate pipe sections shall be supplied in the form of either in the form of molded pipe sections or block cut into required shape/ pipe sections using a CNC machine, shall conform to general classification of IS 9428 (950 grade) or ASTM equivalent C533 TYPE II, shall be suitable for continuous service up to 927°C. Material shall conform to the general classifications of respective ASTM / IS code and meet the following minimum properties

Properties		Values	Remarks
Density (kg/m^3) as per ASTM C302/303 / IS 5688		240-350	Batch test *(Note-1)*
Linear shrinkage at 927^{0}C for 24hrs, (%) max, IS 5688 / ASTM C-356		2	
Moisture content, weight %, max., ASTM C1616		20	
Water absorption, volume (%) as per ASTM C533, max.		3	
Compressive strength (of dry sample) at 5% deformation, kPa,min	ASTM C165 OR	688	
	IS 5688	415	
Heat resistance after exposure to 927^{0}C for 24hrs, as per IS 5688	(%) loss in weight, max	15	
	Compressive strength at 10% deformation, kPa, min	345	
Flexural strength min. (kPa) as per ASTM C203/C446		344	
Mass loss by tumbling, max, % after first 10 minutes, ASTM C421		20	
Leachable Chloride as per ASTM C871, ppm, max		50	
Alkalinity, pH as per ASTM C-871		6-10.5	
Thermal conductivity (W/mK) max. at mean temperature as per IS 9490 / ASTM C-177 (Note-1,2)	(+) 204 ^{0}C	0.088	Type test *(Note-2)*
	(+) 316 ^{0}C	0.097	
	(+) 427 ^{0}C	0.105	
	(+) 538 ^{0}C	0.111	

Copyright EIL – All rights reserved

Note-1: The type test certificate shall not be older than 2 years
Note-2: For thermal conductivity determination for pipe / curved segment, a representative flat slab may be used for performing the tests.

4.4. Preformed Polyisocyanurate Rigid Foam (PIR)

PIR rigid foam shall be performed into free rise buns made from HCFC free chemicals and then cut into required shape/ pipe sections using a CNC machine. Material shall be chemically inert, moisture free, rot and vermin proof not disintegrate, settle, change its form or composition in a detrimental way while in service. PIR rigid foam shall conform to general classification of ASTM C591 Grade-2 Type-II and meet the following specification:

Characteristics		Value	Remarks
Bulk density (kg/m^3), ASTM-C302/ ASTM -D1622		40	Batch test *(Note-1)*
Closed Cell content (%), ASTM D-6226 Procedure-2,min		95	
Chloride content (ppm) ASTM C 871, Procedure 2, max		60	
pH (ASTM C 871)		6-7	
Water vapour transmission (ng/Pa-s-m), ASTM E-96 method-A at 23°C & 50% RH, max.		5.1	
Compressive strength at 10% deformation (kPa), ASTM D 1621, min.		240	
Flame spread Index (ASTM E84), max.		25	Type test *(Note-2)*
Thermal conductivity of 180 days aged sample at mean temp (W/mK) ASTM C-177, max.	(+)10 deg C	0.026	
	(-) 20 deg C	0.027	

Note-1: Supplier shall provide test certificate for each production batch
Note-2: The type test certificate shall not be older than 2 years

4.5. In situ PUR

The PUR insulation shall be closed cell, low density (installed density min 60 kg/m3), two component polyurethane rigid foam system (slow rise expansion), consisting of one component MDI (Di-phenyl methane-4,4'di-isocyanate) and one component of a polyol blend for polyurethane (PUR) rigid spray/pour-foam for injection and in situ foaming and manufactured without the use of blowing agents that contain CFC's or HCFC's. Material shall be chemically inert, moisture free, rot and vermin proof not disintegrate, settle, change its form or composition in a detrimental way while in service. Material used in similar cryogenic service shall only be considered. The Polyurethane foam in general shall meet the following requirements:

Characteristics		Value	Remarks
Bulk density (kg/m^3), ASTM -D1622 min.		60	Batch test *(Note-1)*
Closed Cell content (%), ASTM D-6226 Procedure-2, max		95	
Chloride content (ppm) ASTM C 871, Procedure 2, max		60	
pH (ASTM C 871)		5.5-7	
Water vapour transmission (ng/Pa-s-m), ASTM E-96 method-A at 23°C & 50% RH, max.		5.5	
Water absorption (%), ASTM D2842, max.		2	
Compressive strength at 10% deformation (kPa) at 23°C, ASTM D 1621, min.		200	
Tensile strength (kPa) at 23°C, ASTM D 1623, min.		320	
Flame spread Index (ASTM E84), max.		25	Type test *(Note-2)*
Thermal conductivity of 180 days aged sample at mean temp (W/mK) ASTM	(+)24 deg C	0.030	
	(+)10 deg C	0.029	

Copyright EIL – All rights reserved

Characteristics		Value	Remarks
C-177, max.	(-) 46 deg C	0.029	

Note-1: Supplier shall provide test certificate for each production batch
Note-2: Type test certificate no older than 2 years

4.6. Multiplex Foil

Multiplex laminated foil (~50-micron thickness) consisting of one aluminium foil (25µ) sandwiched between two 12µ polyester films). Materials shall have following characteristics:

Characteristics	Values
Service temperature range (°C)	-60 to 120
Volumetric mass (kg/dm^3)	1.93
Tensile Strength, MPa	100
Yield Strength, N/cm	70
Tear resistance, g/mm	400
Water Vapour Permeability, ASTM E96 Procedure E (Metric perms)	0.0007

4.7. Sealing tape for multiplex foil

Sealing tape shall be a three-layer laminated foil (~50-micron thickness) made of aluminium & polyester (25µ aluminum foil sandwiched between two 12µ polyester films. Material shall have following properties.

Characteristics	Values
Total thickness exclusive of adhesive layer	50 µm
Temperature range	+120°C to -45°C
Volumetric mass	1.93 kg / dm³
Water vapour permeability in acc. with ASTM E 96, procedure E (37.8°C, 90% R.H.)	Max. 10.10-6 g / (m².h.mmHg)

4.8. Polymeric membrane barrier

The polymeric membrane is a self-adhesive heavy-duty laminate and is comprised of elastomeric modified butyl rubber (1.2mm) with PET (12µm) /AL (25µm) /PET (12µm) foil backing. The membrane shall be able to produce a vapor tight, weather resistant cover over the insulation. The material shall be supplied in the form of rolls with thickness 1.2-1.3mm. The material shall meet the following properties as minimum.

Characteristics		Values
Service temperature range (°C)		-60 to 120
Tensile strength (N/cm), Min., ASTM D1000		55
Elongation at break (%), ASTM D412		40
Puncture resistance (N), Min. ASTM E154		350
Peeling Strength, N/cm, min, ASTM D903		20
Surface Burning Characteristic, ASTM E84	Flame Spread Index	15
	Smoke Developed	25
Water Vapour Permeability, ASTM E96 Procedure E (Metric perms)		0.00

4.9. Joints Sealant for PIR Insulation

The joint sealant for joints between insulation blocks shall be compatible with the base insulation material and suitable for the temperature range to which it is exposed. Typical material and technical requirement for PIR insulation system is specified below. Proposed materials shall be technically equivalent and shall have proven reference for use in a temperature range and shall meet the minimum technical requirement given below

Copyright EIL – All rights reserved

General Characteristics	Combustibility/ fire resistance	Water vapour permeance (max)
Average 82% volume solid as per ASTM D2369	Flame spread and fuel contribution negligible when used as 3.2 mm wide sealant between joints of incombustible insulation blocks	Negligible when measured across 3.2 mm wide sealant between joints of impermeable insulation blocks

4.10. Adhesive for Calcium silicate Insulation

Sodium silicate-based adhesive is a high-temperature resistance adhesive forms bonds by evaporation of water, which is used to bond calcium silicate. The total soluble silicate (% wt.) in adhesive shall be minimum 38 and matter insoluble in water shall be maximum 0.2 wt%. The sodium silicate-based adhesive in a dry state is soluble in water and therefore should be suitably protected if used in an application where moisture can be encountered.

Characteristics		Values
Service temperature range (°C)		10 to 538
Density (kg/l), ASTM D1475		1.44-1.68
Non-volatile content (wt. %), ASTM D1644		54-70
Volatile organic content (VOC), (g/l) ASTM D3960		0
Hardness (Shore-C), Min. ASTM D2240		65
Resistance to Cracking, ASTM C474		No cracking
Leachable chloride (ppm), ASTM C871		<60
pH, ASTM C871		11-12
Surface Burning Characteristic, ASTM E84	Flame Spread Index	0
	Smoke Developed	0

4.11. Joint sealant for joints of metal cladding

The technical requirement and typical material for joint sealant of metal cladding is specified below. Proposed materials shall be technically equivalent and shall have proven reference for use in a temperature range and shall meet the minimum technical requirement given below

General Characteristics	Combustibility/ fire resistance	Water vapour permeance (max)
Average 52% volume solid as per ASTM C461	FSI (flame spread index) $\leq$ 20 as per ASTM E-84, tested on a 6.3mm inorganic reinforced cement board with DFT ~2mm	0.0092 metric perms (as per ASTM F-1249 with DFT 2.8mm)

4.12. Outer Cladding

a) Unless otherwise mentioned, aluminium jacketing shall be used as weather protection cladding up to temperature 550 deg C. Aluminium cladding shall be as per ASTM C1729, Class-A having polysurlyn lamination on inside surface and shall meet the requirements of ASTM B209 alloy 3003 H14.

b) For temperature above 550 deg C and/ or for fire safe insulation (for all temperature range) cladding shall be stainless steel or aluminized steel as per ASTM A167 / A240 type 304 or aluminized steel as per ASTM A463, type 2, coating designation T2-100, with polysurlyn lamination on inside surface. Equivalent IS code shall be acceptable for the metal sheet.

Cladding metal sheets shall have minimum thickness as below:

Item	Insulation O.D (mm)	Thickness (SWG)

Copyright EIL – All rights reserved

Pipe	< 500	26
Pipe	> 500	24
Valves, flanges and foot traffic areas	-	22

Note : Cladding thickness indicated above is excluding polysurlyn lamination thickness.

4.13. Banding

Band to secure last layer of PIR insulation materials shall be stainless steel to ASTM A-167 304. For aluminium cladding, aluminium band (Aluminium 99.5, temper H14) in accordance with ASTM B-209M shall be used. The band shall be 20 mm width x 24 SWG.

5.0 APPLICATION

5.1 General

The insulation system needs to be installed in dry condition. The contractor shall be responsible for developing a detailed application procedure specific to the lining system and materials concerning for different area. Minimum technical requirements specific to some typical applications are given in this specification as a guideline and information. The detail insulation application procedure shall be approved by EIL/BPCL prior to startup of work.

5.2 Surface preparation and painting under insulation

Surface of the piping shall have suitable painting for prevention of corrosion under insulation. Quality of paint, necessary surface preparation, coating application and thickness shall be as per painting specification appended elsewhere in the tender.

5.3 Storage

a) Materials shall be stored in appropriate manner meeting specific handling and storage conditions as per respective manufacturer's recommendation.
b) Insulation materials must be stored under covered shed and protected against any damage, from delivery to finish cladding.
c) Insulation material slabs and sections shall be stored on a flat surface in a horizontal position. Insulation material shall never be stacked directly on the ground.
d) Insulation materials for SS piping shall be identified and stored properly. Sample test of these insulation materials shall be carried out at NABL laboratory by contractor. Sample selection to be carried out at site by EIL/BPCL at site.

5.4 Application of insulation blocks

a) PIR and calcium silicate shall be installed from prefabricated pipe sections only.
b) Calcium silicate pipe sections shall be installed to the pipe dry. Longitudinal and circumferential joints shall be glued with calcium silicate-based adhesive.
c) Subsequent layers of calcium silicate shall be placed one above another with adhesive/adhesive tape as appropriate. All longitudinal and circumferential joints are glued to adjoining sections.
d) Apply multiplex foil over the after 2nd layer and final layer of calcium silicate insulation. The foil shall be cut to size correctly and shall be installed with dots of adhesive at the surface, tightly stretched and without air inclusions. The joint shall be sealed with multiplex tape of aluminum/polyester.
e) Outer layer PIR (75mm) fabricated into pipe sections shall be installed dry over Calcium Silicate. Both longitudinal and circumferential joints shall be staggered, glued with PIR sealant.
f) PIR insulation shall be secured with SS band (SS304)
g) Apply polymeric membrane over the PIR insulation with min. 50mm overlap followed by metal cladding.

Copyright EIL – All rights reserved

h) Insulation shall terminate near flanges at a gap to allow opening/ closing of bolts. For fittings, the insulation shall be completed by applying cut segments of the same insulation sections used for pipes.

i) Removable covers shall be provided over all flanges and valves. Loose fill mineral wool backed up by slab insulation of thickness equal to that an adjacent pipe shall be applied. Stainless steel covers over the valves and flanges shall be fitted with quick release clips.

5.5 Application of in-situ PUR/PUF

The PUR (polyurethane foam) over the pipe may be applied by spray method OR by injection. Insulation process (irrespective of spray applied or injection method) must allow visual inspection of the PUR surface for the entire length of the pipe before it goes for cladding. The insulation thickness for bends shall be same as main pipe. No negative tolerance (-0/+3mm) permitted for the PUR insulation thickness of pipe and bends. Cutback at the pipe ends and bend ends for PUR insulation shall be minimum 150mm for both sides. Insulated pipe spools after PUR application, shall be 100% visually inspected for voids, blow holes etc. Physical defects / voids, if any found in PUR, shall be rejected or repaired before cladding.

5.6 Application of Aluminium cladding

a) Al cladding with one side poly-surlyn laminate shall be supplied in sheets. The sheets shall be rolled to outer diameter keeping the poly-surlyn laminated face inside.

b) The rolled sheets shall be wrapped over the outermost insulation layer after the application of polymeric membrane. The cladding shall have overlapped at least 50mm in both longitudinal and circumferential directions. Cladding shall be secured in position by means of Al- band at interval of 400mm.

c) All longitudinal and circumferential joints of metal sheeting shall be sealed with suitable approved non-hardening elastomeric mastic sealer.

d) The cladding shall be installed such that entrapped moisture, if any at the time of installation can be drained. At horizontal piping, in the middle between two supports, at the lowest point, drain holes shall be provided, min.1 hole / 6 m, dia. 10 mm.

5.7 Protection of partially completed job

Each day's work shall be planned properly so finish with insulation and cladding. Ongoing jobs shall be protected from rain water by tarpaulins cover.

6.0 HSE REQUIREMENT

The contractor responsible for the refractory installation shall be fully conversant and meet the HSE requirements of BPCL.The contractor shall strictly adhere to safety instructions and MSDS requirements of the insulation material/ ancillary products and application. The contractor shall provide adequate personnel protection and safety gears like hand gloves, masks, spectacles etc. as necessary for compliance to MSDS safety requirements to the workmen on the job.

7.0 DOCUMENTS REQUIRED FROM CONTRACTOR

POST ORDER STAGE THE CONTRACTOR SHALL SUBMIT

a) Manufacturer's datasheet for the insulation and ancillaries materials.

b) Manufacturer's compliance datasheet for insulation and ancillaries material.

Copyright EIL – All rights reserved

c) Quality control plan for insulation material supply and application

d) Inspection Test plan for insulation material supply and application

e) Test certificate of insulation & ancillary materials duly endorsed by inspection agency

f) Insulation details drawing

g) Method statement for insulation application procedure including HSE requirement.

h) Proven references for supply of insulation material used under similar condition

i) Credential of insulation designer/applicator agencies

j) List of engineers/ supervisors along with their qualification and experiences of personnel to be deputed by the insulation applicator for insulation installation on demand.

1.0 GENERAL

1.1 The Specification given below provides Scope of Work and Job Specifications for Digital Technology Solutions. The same shall be read in conjunction with the Licensor's process package, Scope of Work and Job Specifications for other functions and depts. provided elsewhere in the tender document. Bidder shall provision, implement, support, utilize the digital solutions (as applicable) as per requirements of process package, engineering design basis, standards, specifications and drawings enclosed with this bid package.

1.2 **Location of field equipment & accessories:** The field equipment and accessories for digital solutions covered in this document shall be deployed during construction phase. The same shall be uninstalled and removed before feed cut-in i.e. from the hazardous area. In existing refinery areas, where work is to be conducted in hazardous area, IS Mobile Phones and Active RFID/BLE devices shall be suitable for respective hazardous area.

Bidder shall ensure that Bidders and their subcontractor's personnel having ordinary (Safe Area use) mobile devices and/or Active RFID/BLE Cards do not enter the units of existing BPCL Plants, as those are electrically hazardous areas.

2.0 SCOPE OF WORK/SUPPLY

S. No.	DESCRIPTION	Scope of Supply/Work	
		Bidder	Purchaser
2.1	**Scope of Supply/Work:** For Digital Solutions in Bidders Scope- Design, Engineering including residual engineering, detail engineering, procurement, supply, implementation and operations including all hardware and software of all systems preparation of engineering drawings and documents, review of vendor drawings, manpower support, coordination with Clients other Contractors/Vendors etc. Scope of Work also includes providing support and utilizing (Note-1) Digital Solutions deployed by Client or their contractors/vendors. All the digital solutions shall be operational only for the project duration and shall be decommissioned and removed at the end of the construction/during commissioning period, or as instructed by Engineer-In charge.		
2.1.1	Control Tower/ Common Data Environment (CT/CDE) – Provisioning and Implementation.		Yes
2.1.2	Control Tower/ Common Data Environment (CT/CDE) – Support.	Yes	
2.1.3	Project Management Information System (PMIS) – Provisioning and Implementation.		Yes

Copyrights EIL – All rights reserved

2.1.4	Project Management Information System (PMIS) – Support.	Yes	
2.1.5	4D Monitoring Solution – Provisioning and Implementation.		Yes
2.1.6	4D Monitoring Solution – Support (Note 2)	Yes	
2.1.7	Digital Quality Inspection System (DQIS) – Provisioning and Implementation.		Yes
2.1.8	Digital Quality Inspection System (DQIS) – Support.	Yes	
2.1.9	Camera based- Digital Safety Management System (DSMS-CAMERA) – Provisioning and Implementation.		Yes
2.1.10	Camera based- Digital Safety Management System (DSMS-CAMERA) – Support.	Yes	
2.1.11	App Based Digital Safety Management System (DSMS-APP) – Provisioning and Implementation.		Yes
2.1.12	App Based Digital Safety Management System (DSMS-APP) – Support.	Yes	
2.1.13	Automated Manpower Productivity System (MANPS) – Provisioning and Implementation		Yes
2.1.14	Automated Manpower Productivity System (MANPS) – Support.	Yes	
2.1.15	Warehouse management system (WMS) – Provisioning and Implementation. (Note-3)	Yes	
2.1.16	Warehouse management system (WMS) - Integration with Purchaser's CT/CDE.		Yes
2.1.17	Transport Management System (TMS) – Provisioning and Implementation.	Yes	
2.1.18	Transport Management System (TMS) - Integration with Purchaser's CT/CDE.		Yes
2.1.19	Spool Management System – Provisioning and Implementation *(Where Spool Fabrication at site is in Bidder's Scope)*	Yes	
2.1.20	Welding Management System- Provisioning and Implementation. *(Where Piping Welding Works at site are in Bidder's Scope)*	Yes	
2.1.21	Cabling Management System- Provisioning and Implementation *(Where Cabling Works at site are in Bidder's Scope)*	Yes	

Copyrights EIL – All rights reserved

2.1.22	Providing Mobile Devices (Tablets /Smart Phones) to Bidders concerned personnel, for use of DQIS, DSMS-APP, CT/CDE and other digital solutions.	Yes	
2.2	Coordination		
2.2.1	Coordination with • Purchaser • Owner Management Consultant (OMC) • MPMC (Managing PMC) • PMC/EPCM • Purchaser's Master System Integrator (MSI) for CT/CDE, PMIS, 4D Monitoring, DQIS, DSMS-Camera, DSMS-APP and MANPS. • Purchaser's Hardware Service Provider (HSP) for DSMS-CAMERA and MANPS. • Sub-vendors of Digital Solutions Implemented by Bidder.	Yes	
2.3	Training		
2.3.1	Training for Spool Management System, Welding Management System and Cable Management System for purchaser's personnel, bidder's own personnel and sub-contractor's personnel.	Yes	
2.4	Operations, Support and Maintenance		
2.4.1	Operations Support and Maintenance Services for Spool Management System, Welding Management System and Cable Management System.	Yes	
2.5	Cyber Security Requirements		
2.5.1	Cybersecurity Compliance as per BPCL's Cybersecurity guidelines for Spool Management System, Welding Management System and Cable Management System.	Yes	
2.6	Watch and Ward/Safekeeping of Digital Technology Solutions Devices	Yes	
2.6.1	Responsibility for safekeeping of Digital Technology Solutions devices deployed by Purchaser viz. DSMS-CAMERA - Camera, routers, Network/ Edge devices, Server, NVR, workstation PCs etc. and MANPS-RFID/BLE Cards, Readers, Network/ Edge devices inside Bidders B/L or Work Area.	Yes	

Notes:

1. **Support-** Support consists of aid in implementation of the digital solution on ground:
    a. Providing information for the checklists/ KPI's

Copyrights EIL – All rights reserved

b. Providing Data for self/ sub-contractors in a timely manner

c. Distributing/ setting up of active RFID/BLE Tags/ sensors from the purchaser's implementation partner.

d. Providing Power Supply/ Installation Supports, as applicable, for respective digital solutions.

e. Use the functionality of the digital solution/ tools for the intended purpose.

f. Coordination with purchaser's digital implementation partners

2. Where 3D Modelling is in bidder's scope.
3. Where Warehouse is in bidder's scope.
4. In case of non-functionality of any of the digital solution planned by Purchaser, bidder shall report for each use case in other forms as instructed by Engineer-in-Charge
5. Bidder shall ensure that smartphones deployed are not misused for taking unauthorized photos and videos. Person found doing so may be handed over to the security team for further action.
6. One or more solution may not be applicable based on nature of job / tender conditions / scope of work.
7. OMC/MPMC/PMC/EPCM are having responsibility of project progress monitoring. These consultants will be actively engaged with the bidder for successful utilisation of the digital solutions
8. In case devices deployed by Purchaser as per point 2.6.1 are damaged by contractor, recovery shall be made from their running bills for actual cost incurred by BPCL plus admin charges in line with GCC.

3.0 JOB SPECIFICATIONS

3.1 CONTROL TOWER/ COMMON DATA ENVIRONMENT & PROJECT MANAGEMENT INFORMATION SYSTEM (PMIS)

3.1.1 System Overview

3.1.1.1 Purchaser intends to deploy a Control Tower/CDE and PMIS System for Project Planning, Scheduling and Monitoring, Project Cost Control, Workflows between Client, MPMC, PMCs, EPCs and EPCMs Contractors; Report Generation and 4D Project Monitoring, etc. The entire reporting including Planning Package, Project Schedules, DPR, WPR, MPR etc is expected to be executed online through the above systems.

3.1.1.2 The systems deployed by Purchaser shall be broadly in alignment with the relevant specs for Project Planning, Scheduling, Monitoring And Control System for this Contract (Encl. elsewhere in the tender) and bidder's obligations shall be read in context and in alignment with the same.

3.1.2 Bidders Obligations

3.1.2.1 Bidder shall support implementation of CT-CDE and PMIS (deployed by the Purchaser) by providing data/ update for the KPIs for self and sub-contractors through APIs/ Excel templates/ Manual Data Entry etc. in the PMIS System. Data shall be provided by bidder through excel templates or manual entry or online forms etc which will be specified and provided by purchaser.

3.1.2.2 Bidder shall be provided 1-2 No. User Id's to access the PMIS System for providing input.

Copyrights EIL – All rights reserved

3.1.2.3 As a minimum bidder shall provide data for KPIs in CT-CDE as per Annexure-1-KPI List.

3.1.2.4 Bidder shall be responsible for complying with the workflows as defined in the PMIS.

3.1.2.5 Bidder shall nominate representatives to attend mandatory PMIS training sessions and achieve proficiency in use of the same.

3.1.2.6 Bidder shall provide URL's for Viewing Physical Location on Critical Equipment, Long Lead Items (LLI's) interfaced from Transport Management Solutions of Vendors/Contractors.

3.1.2.7 Bidder shall be required to prepare schedule either in primavera or MSP and submit the same through PMIS System MPMC/PMC for approval and subsequent monitoring. Bidder will also have to carry out schedule updation on regular basis. Scheduling platform, frequency of schedule updation (daily/ weekly/ fortnightly / monthly), mechanism of schedule updation either in primavera/MSP or PMIS platform or primavera/MSP export excel file upload etc, schedule weightages, schedule formats etc will be informed to successful bidder. Bidder may also have to revise schedule to take care of emergent activities or crashing / fast tracking of schedule to overcome delays. Bidder will have to comply these requirements or any other requirement for success of scheduling tools deployed by Purchaser.

3.1.2.8 Reporting of Daily Progress, Weekly Progress, Monthly Progress covering Executive Summary, Areas of concern, problems and hold ups, resource deployment, project risks etc will be carried out through excel or manual entry or templates or online forms etc which will be provided by purchaser.

3.1.2.9 PMIS shall have provision of maintaining DCI, procurement status, manufacturing status, site construction works status. Bidder to provide needful information for these index/status/report. Format for input shall be informed to successful bidder.

3.1.2.10 Bidder shall provide relevant information for project cost status such as cost commitment, cost expenditure, expected cash flow etc in the prescribed formats specified by Purchaser.

3.1.2.11 Bidder to also refer and comply to "PROCEDURE FOR SMART INTEGRATED ENGG., DIGITAL HANDOVER OF DRAWING/DOCUMENT/ 3D MODEL AND DIGITAL INTERVENTION BY BIDDER".

3.1.2.12 The Bidder is responsible for ensuring data integrity and timely submission. Failure to provide data/ info on timely basis may be considered a breach of contract.

3.2 4D MONITORING

3.2.1 4D Monitoring Platform will be provisioned and implemented by purchaser. The solution will integrate the schedule and actual progress data and 3D Models for rendering the 4D model. It will implement visualization of work at different stages of Procurement and Construction w.r.t. the schedule. The 4D rendering will highlight items, color code items and work done during any specified period.

3.2.2 Wherever 3D Modelling is in Bidder's scope, bidder shall support and utilize 4D Monitoring Platform deployed by Purchaser by using Navisworks (.nwd) files from 3D models and Schedule and Actual progress data from PMIS/ P6 EPPM or MS Projects for the unit.

3.2.3 Bidder has to prepare schedule in such a manner that activities/ tasks can be mapped to 3D model elements.

Copyrights EIL – All rights reserved

3.2.4 4D Monitoring will be progressively detailed from L1 to approx. L4 Level (Work Package) as 3D Model Matures and the project moves from Engineering to Commissioning Phase. Update Frequency will be Monthly. Bidder shall provide inputs accordingly.

3.3 DIGITAL QUALITY INSPECTION SYSTEM (DQIS).

3.3.1 System Overview

3.3.1.1 Purchaser intends to deploy a Digital Quality Inspection System for quality inspection for status monitoring, recording and storing digital copy of quality inspection records for inspections at Vendor Shops and Fabrication Yards and Construction site .All quality inspection process is expected to be conducted through DQIS. DQIS shall have provision for stagewise inspection activities for Shop Inspection ,Civil, Structural, Piping, Mechanical, Equipment Erection, Electrical, Instrumentation, Pre-commissioning and commissioning works and shall align with the job specifications and ITPs for respective activities provided elsewhere in the tender documents. Project Progress reports (PMIS) shall also be linked to DQIS.

3.3.1.2 DQIS shall have inbuilt user help features, offline working capabilities on the mobile devices/ smart phones and Dashboards for status monitoring.

3.3.1.3 DQIS shall maintain detailed immutable audit trails for each inspection, ensuring transparency and traceability. This helps in tracking any changes made during the inspection process.

3.3.1.4 DQIS shall be accessed through browser-based interface on laptops, tablets and mobiles. A Mobile App shall also be provided for user access from smart phones (Android™ 11 or later versions and IOS).

3.3.2 Bidders Obligations:

3.3.2.1 Bidder shall be responsible for capturing/entering data, observations, and deviations, annotations, submitting resolutions (as applicable) ,providing info to prepopulate dropdown lists for the forms defined in DQIS and in line with bidders' scope and ITP's and obtaining the approval on DQIS report from relevant inspector. In-built cameras of tablets and smart phones will be utilized for capturing images during inspection. The images can be of the detail inspection reports, backup documents and photograph(s), if any, taken by inspector during inspection..

3.3.2.2 Bidder shall comply with the workflows defined in the DQIS broadly covering the shop inspection and entire site inspection process including raising inspection calls, conducting inspection, raising queries/ observations/ problems/ comments, submitting resolution to PMC/ MPMC/ Client observations/ comments/ issues etc.

3.3.2.3 Bidder and its supervisory personnel shall actively monitor dashboards and reports generated by DQIS to track unresolved issues and compliance trends, ensuring timely compliance.

3.3.2.4 Bidder shall coordinate with all stakeholders as necessary for timely and effective execution of inspections of the project through DQIS.

3.3.2.5 Bidder shall nominate representatives to attend mandatory DQIS training sessions and achieve system proficiency within one month of deployment.

Copyrights EIL – All rights reserved

3.3.2.6 Bidder shall comply with the DQIS data security protocols and ensure that only authorized personnel access the system using approved devices.

3.3.2.7 Bidder shall ensure their personnel including sub-contractors and vendors are equipped with laptops/ tablets/ smartphones (AndroidTM 11 or later) for use of the DQIS System. User/ Role based access to the system shall be provided. For Refinery revamps contracts, intrinsically safe smartphones are to be deployed.

3.3.2.8 Bidder shall follow the manual paper/ email-based Quality Templates as defined in the relevant specs and directions of Engineer-in-Charge in case the DQIS is dysfunctional or is withdrawn during the course of execution of the contract.

3.4 CAMERA BASED DIGITAL SAFETY MANAGEMENT SYSTEM (DSMS-CAMERA)

3.4.1 Solution Overview

3.4.1.1 Purchaser intends to deploy a Camera based Digital Safety Management System with AI video analytics for the BPREP Project. DSMS Camera shall have feature to detect and report different types of safety violations/ incidents by AI based video analytics in real-time like PPE (Helmet, Safety Jacket, Safety Shoe) non-compliance detection, Intrusion in restricted zones detection, Absence of barricades/ safety railing, Unsafe working at height etc. The system shall also have workflows for reporting and resolving the detected safety violations.

3.4.1.2 Purchasers other Vendors shall be deploying multiple devices like wireless cameras, routers, field network, network switches, cables, network devices, servers/ edge devices, Network Video Recorder etc throughout the project area. A number of devices shall be deployed in the Bidders work areas including laydown and fabrication yards.

3.4.2 Bidders Obligations

3.4.2.1 BIDDER shall coordinate with all stakeholders (MPMC, PMC, Purchasers Other Vendor) to facilitate timely and seamless installation, operation, maintenance and decommissioning of the entire DSMS-CAMERA Solution within Bidders work area including relocation of devices as per project progress during execution of the project.

3.4.2.2 Bidder shall coordinate their site works with purchaser's DSMS Camera Solution Provider. Bidder shall support DSMS camera solution provider to facilitate hindrance free camera view

3.4.2.3 The System will have feature to automatically report the safety violations observed to the bidder/ bidder's vendor/ sub-contractor HSE personnel with observation (text and photo/ video and other details. Bidder shall address and resolve reported violations within 48 hours by submitting detailed proof of resolution through the DSMS-CAMERA. This may include textual descriptions of corrective actions, updated photographs, demonstrating rectification measures, and additional comments if required. Rejected resolutions shall be readdressed promptly as per feedback provided within the system.

3.4.2.4 Bidder shall depute safety officers to identify the contractor against each violation where multiple contractors are deployed in a working area.

3.4.2.5 Purchaser's vendor will also deploy TV screens for monitoring of safety using live view cameras, safety videos. If instructed by the Engineer-In-Charge bidder shall deploy

Copyrights EIL – All rights reserved

dedicated safety officer for monitoring of the cameras, observe any violation and inform other safety officers deployed at site to immediately take corrective action.

3.4.2.6 Bidder shall actively monitor DSMS-Camera dashboards and reports generated by DSMS-CAMERA to track unresolved issues and compliance trends, ensuring timely compliance.

3.4.2.7 Bidder shall comply with the DSMS-CAMERA data security protocols and ensure that only authorized personnel access the system using approved devices.

3.4.2.8 Bidder shall nominate representatives to attend mandatory DSMS-CAMERA training sessions and achieve system proficiency within one month of deployment.

3.4.2.9 Bidder shall be responsible for safekeeping of DSMS-CAMERA devices and TV screens deployed by Purchaser's Vendors in the Bidders Unit/ Work area.

3.5 APP BASED DIGITAL SAFETY MANAGEMENT SYSTEM (DSMS-APP)

3.5.1 Solution Overview

3.5.1.1 A web application and Mobile App based Digital Safety Management System (DSMS-APP) hosted in Meity empanelled cloud data centre, will be provisioned and implemented by purchaser. The application will have feature to report different types of safety violations, incidents e.g. PPE non-compliance, unsafe working at height, absence of fence/ barricade in required areas, intrusion in restricted zones, proximity to heavy/ dangerous machinery, fire/smoke etc. in real-time from Smart phones (Android™). Safety violation reporting will include capture of violations/ non-compliance observed by BPCL, EIL, Bidder with photo(s), short (upto ten second) video from the field.

3.5.1.2 The application will have feature to report the safety violation observed to the bidder/ bidder's vendor/ sub-contractor HSE personnel with observation (text and photo/ video) along with corresponding contract name, type and category of violation, date, time etc. It shall also have feature for concerned contractor's/ sub-contractor's HSE personnel to submit resolution against the violation with Text plus Photo(s), short (upto ten second) video. The application will have feature to accept/ reject & return Contractor's/ sub-contractor's Resolution against the violation.

3.5.2 Bidders Obligations

3.5.2.1 Bidder shall support implementing DSMS-APP by providing consent by their employees and vendors'/ sub-contractors' employees and utilizing the application. Bidder shall ensure that each and every safety violation/ incident observed and reported through the DSMS-APP in their work unit are looked into, corrective actions are taken and resolution is submitted.

3.5.2.2 Bidder shall ensure all their own and vendors/ sub-contractors designated HSE personnel at field are equipped with smartphones (Android™ 11 or later) to use the DSMS-APP.

3.5.2.3 Bidder shall nominate representatives to attend mandatory DSMS-APP training sessions and achieve system proficiency within one month of deployment.

3.5.2.4 Bidder shall facilitate full compliance with the use of DSMS-APP for safety violation reporting, good observations reporting, resolution tracking, and emergency notifications.

Copyrights EIL – All rights reserved

3.5.2.5 Bidder shall follow the manual paper/ email based HSE compliance system as defined in the HSE Specs and directions of Engineer-in-Charge in case the DSMS-APP is dysfunctional or is withdrawn during the course of execution of the contract.

3.5.2.6 Bidder shall ensure that all safety violations, incidents, and near-miss events observed on-site are reported through the DSMS-APP timely. Each report shall include accurate details, relevant photos, short videos (10 seconds max), and annotations to highlight the specific safety issue.

3.5.2.7 Bidder shall address and resolve reported violations within 48 hours by submitting detailed proof of resolution through the DSMS-APP. This includes textual descriptions of corrective actions, updated photographs, or short videos demonstrating rectification measures, and additional comments if required. Rejected resolutions shall be readdressed promptly as per feedback provided within the system.

3.5.2.8 Bidder shall actively monitor dashboards and reports generated by DSMS-APP to track unresolved issues and compliance trends, ensuring timely compliance.

3.5.2.9 Bidder shall utilize DSMS-APP to raise real-time alerts in emergencies requiring immediate action, providing accurate location data for response teams.

3.5.2.10 Bidder shall comply with the DSMS-APP data security protocols and ensure that only authorized personnel access the system using approved devices.

3.5.2.11 Bidder shall ensure their personnel including sub-contractors and vendors are equipped with laptops/ tablets/ smartphones (AndroidTM 11 or later) for use of the DSMS-APP. User/ Role based access to the system shall be provided. For Refinery revamps contracts, intrinsically safe smartphones are to be deployed.

3.6 AUTOMATED MANPOWER PRODUCTIVITY SYSTEM (MANPS)

3.6.1 Solution Overview

3.6.1.1 Automated web-based Manpower Productivity System (Active RFID/ BLE based), hosted in MeitY empanelled cloud data centre, will be provisioned and implemented by purchaser. The digital solution will be used for tracking of deployment/ mobilization of manpower including attendance/ variance in total mobilization, labour composition vs plan (skilled, semi-skilled, unskilled), average daily working hours, location tracking etc.

Active RFID/ BLE cards may be an addition to contractor's entry gate pass.

3.6.2 Bidders Obligations

3.6.2.1 Bidder shall support implementing MANPS by their employees and vendors'/ sub-contractors' employees and by utilizing the application.

3.6.2.2 Bidder shall furnish accurate details of all workers, name, gender, Photo ID Card No., skill levels (skilled, semi-skilled, unskilled), and vendor/ sub-contractor specific details, to the MANPS system at least four working days prior to mobilization.

Bidder shall consider Active RFID/ BLE cards equivalent to gate pass.

3.6.2.3 Bidder shall provide monthly projections of worker mobilization and demobilization for the next two months to ensure smooth operations.

Copyrights EIL – All rights reserved

3.6.2.4 Bidder shall ensure that all bidder's, and bidder's vendors', sub-contractors' personnel/ workers wear the Active RFID/ BLE cards while inside the BPREP Project Area.

3.6.2.5 Bidder shall nominate representatives responsible for managing worker data, verifying card issuance, collecting cards and returning, changing of card battery, and addressing any system-related queries.

3.6.2.6 Bidder shall nominate representatives to attend mandatory MANPS training sessions and achieve proficiency in use of the same.

3.6.2.7 Bidder shall provide distribution of workers based on work allocation in the MANPS package.

3.6.2.8 Bidder shall use MANPS to track worker attendance, deployment and location, ensuring compliance with authorized areas and reporting and taking corrective actions for any unauthorized access detected by the system.

3.6.2.9 Bidder shall promptly update the MANPS system with details of demobilized workers and return their RFID/BLE cards daily to the MANPS solution provider as per process requirements. In case card is not returned, bidder will have to bear the actual cost of card incurred by BPCL plus admin charges in line with GCC.

3.6.2.10 Bidder shall report any lost or damaged RFID/BLE cards through the MANPS system and bear the cost of replacements (actual cost of card incurred by BPCL plus admin charges in line with GCC), as applicable. Also, the case of non-submission of the RFID/ BLE cards / lost RFID/ BLE cards shall require the contractor to lodge complaint at the local Police Thana and submit a copy of the same to BPCL Security.

3.6.2.11 Bidder shall utilize the dashboards and reports generated by MANPS for monitoring worker attendance, deployment w.r.t. skill level, location tracking, ensuring alignment with project requirements.

3.6.2.12 Bidder shall ensure all workers comply with the MANPS usage protocols.

3.6.2.13 Bidder shall obtain and maintain explicit consent from all their/ their vendors/ sub-contractor personnel/ workers for the collection, use, and processing of their data within the MANPS system, with compliance with relevant data protection regulations and project guidelines.

3.6.2.14 Bidder shall coordinate with the MANPS solution provider to ensure smooth integration of worker data into the MANPS system, flag any system-related issues promptly, and provide general cooperation for effective system operation.

3.6.2.15 Bidder shall coordinate their site works with purchaser's MANPS Solution Provider.

3.6.2.16 Bidder shall be responsible for watch and ward/safekeeping of devices deployed by MANPS Solution Provider within or near the B/L or contractors work area.

3.7 WAREHOUSE MANAGEMENT SYSTEM (WMS)

3.7.1 Bidder shall deploy Warehouse Management System and provide APIs/ Manual Data Entry (as necessary) for sharing information with purchaser's CT-CDE to facilitate a live view of the material availability in bidder's warehouse.

Copyrights EIL – All rights reserved

3.7.2 Bidder shall provide all assistance and guidance to Purchasers CT/CDE Vendor to integrate the WMS with CT/CDE and ensure uninterrupted and seamless data exchange throughout the contract period.

3.7.2.1 Bidder shall provide login credentials to Purchaser, MPMC and PMC/ EPCM to provide access to their WMS in case the bidder WMS is not able to integrate with Purchaser CT/ CDE or CT/ CDE is dysfunctional during the course of execution of the contract. Bidder may also have to provide manual entry in CT-CDE related to WMS in case of integration failure.

3.8 TRANSPORT MANAGEMENT SYSTEM (TMS)

3.8.1 Bidder shall deploy URL's for Viewing Physical Location on Key Materials, Long Lead Items (LLI's), ODC equipment etc. interfaced from Transport Management Solutions of Bidder's Vendor's (TMS shall be by bidder's OEMs/ Transporters)

3.8.2 Bidder shall provide all assistance and guidance to Purchasers CT/CDE Vendor to integrate the TMS with CT/CDE and ensure uninterrupted and seamless data exchange throughout the contract period.

3.8.3 Bidder to also refer and comply to "PROCEDURE FOR SMART INTEGRATED ENGG., DIGITAL HANDOVER OF DRAWING/DOCUMENT/ 3D MODEL AND DIGITAL INTERVENTION BY BIDDER".

3.9 SPOOL MANAGEMENT SYSTEM

3.9.1 Bidder shall deploy and use Piping Spool Management System to reduce construction errors and delay during identifying, tracing and installing piping spools. The objective of the system shall be as under.

(i) Productivity and trackability improvement

(ii) Job tracking and availability of real time data capture

(iii) Better inventory control

(iv) Reducing the errors and associated cost in sending incorrect spools to site for installation

3.9.2 Methodology and controls: The general guidelines for piping spool management are stated below

(i) The Spool Tracing System shall work in alignment with DQIS where records for Piping Spool Fabrication, Erection , Alignment and Piping Quality Control (NDT Records, LHS etc) are maintained.

(ii) A unique numbering system for pipe-spools shall be developed. The system shall incorporate unit designation/ number, line number and spool sequence number as a minimum. The spool number shall be hard-punched on the pipe spool at conspicuous location.

(iii) All fabricated / completed spools shall be marked and identified using conventional multi-line bar code stickers which shall have information pertaining to spool number

Copyrights EIL – All rights reserved

as well as traceable correlation to other parameters recorded in a database. Printed bar code stickers shall be properly fixed on to the pipe spools.

(iv) The barcode stickers fixed on spools shall be readable with the help of bar code readers and shall show a unique bar code serial number upon reading. The bar code shall be co-relatable to the spool number of the pipe.

(v) Apart from the above, spools shall be affixed with suitable RFID (Radio Frequency Identification) tags which can be read through a RFID scanner. The RFID system shall have search and Id capability and shall be co-relatable to spool number in the database

(vi) All Hardware, software, consumables, labour and supervision required for implementing the spool management system shall be provided by contractor at no extra cost. Contractor shall develop a detailed procedure incorporating the above suggested elements and submit the same to Engineer In-charge for approval before implementation.

3.9.3 Bidder shall provide direct access to 3 Nos. Users of PMC and 2 Nos. Users of Purchaser to the Spool Management System during the contract duration. Bidder shall also arrange training session to PMC and Purchaser personnel on using the system.

3.10 WELDING MANAGEMENT SYSTEM

3.10.1 Welding Management System shall assist in monitoring, tracking and recording of all Pining Welding Works to enable efficient management of piping welding activities. The solution shall work in sync with the Spool Management System deployed by the Bidder.

3.10.2 This digital solution consolidates the relevant piping drawings, PQR (Welding Procedure Qualification Record), and track data of number and quality of piping joints and productivity of welding team etc.

3.10.3 The Welding Management System deployed by the Bidder shall have the following broad functionalities:

(i) Marking of pipe spools
(ii) Joint numbering, field jointing identification including incorporation of revisions
(iii) Welding Workload, front analysis and balance work identification.
(iv) WPS/PQR (welding procedure specification, procedure Qualification Record)
(v) Welder performance reports
(vi) Welder list vis-a vis WPS.
(vii) Line History sheet for weld joints, flanged joints, traceability record
(viii) Hydrotest reports/ NDT Clearance (as applicable)
(ix) Line wise/ Area wise / loop wise final completion report
(x) Material appropriation/ traceability report
(xi) Manpower & consumable estimation for fit-up, welding, NDT etc.
(xii) Reallocation of fabricated spools etc.
(xiii) Re sequencing of welding joints
(xiv) Reports for Welding Progress Monitoring.

Copyrights EIL – All rights reserved

3.11 CABLING MANAGEMENT SYSTEM

3.11.1.1 Bidder shall deploy a digital solution to consolidate the relevant cable schedules with detail of type and length, daily upload the progress on the system, generates cabling progress report

3.11.1.2 The Cabling Management System shall have functionalities for managing the entire site cabling works. The system shall identify the cable schedules with drum schedules, keep record of total length of cables in each drum as supplied, balance cable remaining after cutting of cables from the drum. The system shall also display the total length of each type of cables available at site.

3.12 COMMON SYSTEM FEATURES & FUNCTIONALITIES

3.12.1 BPCL cyber security guidelines as Circular IS24-25.1 and IS24-25.2 (attached) are to be followed for the integrated Digital Solutions under bidder's scope (Spool Management System, Welding Management System and Cabling Management System). Bidder shall also comply to the BPCL Cybersecurity Checklist (attached), BPCL Security Checklist for Cloud/ Third-party solutions (attached) and BPCL Security conditions in tender for purchasing Commercial software (attached).

3.12.2 Software applications, including 3rd Party applications, with valid licenses & support should only be deployed. Any liability arising out of any software non-compliance would strictly lie with the bidder.

3.12.3 Bidder is responsible for complete system architecture, setup and maintenance of all system software components including Operating System, Database Server, Security devices etc, as needed for robust performance and as per system performance standards in the SLA.

3.12.4 For all solutions providing file upload scenarios, following functionalities to be ensured:

(i) File upload should verify the file types. Only required file-types to be accepted by the application.

(ii) While uploading, files need to be scanned against malware. Solution should allow only clean files to be uploaded.

3.12.5 For APIs, following minimum security controls should be included: -

(i) Strong Authentication

(ii) Encryption

(iii) Rate limiting

3.12.6 All web-based applications/ dashboards etc. shall have feature of session auto-log out in case of idling of user by 10 min.

3.12.7 **PROVEN TRACK RECORD**

3.12.7.1 The digital solutions under bidder's scope (Spool Management System, Welding Management System and Cabling Management System) shall have been supplied or provided as managed solution (either cloud hosted or on premise) by bidder/ bidder's

Copyrights EIL – All rights reserved

respective digital solution provider either by themselves or with support from any OEM(s), and each of the solutions shall have completed a period of minimum six (6) months after go-live.

3.12.8 In case bidder proposes to provide the digital solutions Spool Management System, Welding Management System and Cabling Management System through OEM(s)/ solution provider(s), following shall apply:

(i) Bidder shall furnish Manufacturer Authorization Certificate and Logistic Support letter from OEM(s)/ digital solution provider(s) of Spool Management System, Welding Management System and Cabling Management System confirming the following. The letter must be signed by OEM(s)/ digital solution provider(s) corporate level signatory on company letter head.

"The OEM(s)/ digital solution provider(s) assumes complete responsibility for their involvement with the bidder in all phases of work during the contract period like system engineering, cloud hosting, User Acceptance Test, Go-live, operation, maintenance, decommissioning and exit management."

3.12.9 **MANPOWER DEPLOYMENT**

3.12.9.1 Bidder shall deploy necessary manpower at the BPCL BR site dedicated for operation and maintenance and to provide support and assistance to users of Spool Management System, Welding Management System and Cabling Management System . The persons shall have minimum 2 years of experience in IT support. Bidder shall also be responsible for deploying additional personnel as per project exigencies.

4.0 ADHERENCE TO STANDARDS

4.1 QUALITY, SAFETY, DOCUMENTATION AND CYBERSECURITY

4.1.1 The bidder shall comply with the mentioned standards for the execution of the work as mentioned in the following clauses.:

(i) Quality Management System: Bidder shall comply to EIL Standard Specification for Quality Management System, 6-78-0001.

(ii) Documentation Requirements: Bidder shall comply to EIL Standard Specification for Documentation Requirements for Contractors 6-78-0002 and from Suppliers, 6-78-0003.

(iii) HSE Management and Safety Measures for Electrical Installations: Bidder shall comply to EIL Standard Specification for Health, Safety and Environment, 6-82-0001 and Safety Measures for Electrical Installations during Construction, 7-51-0332.

(iv) Cybersecurity Requirements: Bidder shall comply to BPCL's Cybersecurity requirements as per Circular. IS24-25.1, IS24-25.2 (attached), BPCL Security Checklist for Cloud/ Third-party solutions (attached) and BPCL Security conditions in tender for purchasing Commercial software (attached).

5.0 INTEGRATED ACCEPTANCE TEST (SAT)

Copyrights EIL – All rights reserved

5.1 GENERAL

5.1.1 Bidder/ bidder's respective digital solution provider for Spool Management System, Welding Management System and Cabling Management System shall demonstrate the functional requirements of the respective digital solution to BPCL and EIL for acceptance.

5.1.2 Bidder shall furnish the SAT Procedure for Spool Management System, Welding Management System and Cabling Management System for BPCL/ EIL review prior to offering the respective digital solution for SAT.

6.0 LIST OF ATTACHMENTS

(i) EIL Standard Specification for Quality Management System, 6-78-0001

(ii) EIL Standard Specification for Documentation Requirements from Contractors, 6-78-0002.

(iii) EIL Standard Specification for Documentation Requirements from Suppliers, 6-78-0003.

(iv) EIL Standard Specification for Health, Safety and Environment, 6-82-0001

(v) EIL Standard Specification for Safety Measures for Electrical Installations during Construction, 7-51-0332

(vi) BPCL Cybersecurity requirements as per Circular. IS24-25.1

(vii) BPCL Cybersecurity requirements as per Circular. IS24-25.2

(viii) BPCL IT Security Compliance Check List

(ix) BPCL Security Checklist for Cloud/ Third-party solutions

(x) BPCL Security conditions in tender for purchasing Commercial software

(xi) KPI List

Copyrights EIL – All rights reserved

KPI List for BPREP Control Tower for Package Contracts

Sr. No.	Category	KPI	Description	Frequency
1	Overview	Forecast commissioning date	Estimated date when the project/unit is expected to be operational	Fortnightly
2		Number of days to production start	Remaining days until production is scheduled to begin/Commissioning	Daily
3		Mechanical completion date	Remaining days to mechanical completion	Fortnightly
4	Progress	Progress S-curve	Progress S curve plan vs actual	Fortnightly
5		Work progress percentage	Percentage completion of actual versus planned progress	Fortnightly
6		Milestones achieved	Number of milestones completed on time versus planned milestones	Weekly
7		Critical path progress	Progress of tasks on the critical path and impact on project timelines	Fortnightly
8		Sub-critical path progress	Progress of tasks on the sub-critical path and impact on project timelines	Fortnightly
9		Schedule adherence rate	Percentage of tasks completed on time	As updated
10		Area of concern	Roadblocks with achieving the milestone	As updated
11	Cost	Cost s-curve	Cost S curve plan vs actual	Quaterly
12		Total cost	Total project expenditure and comparison of planned vs actual	Quaterly
13		Committed cost	Committed cost planned vs actual	Quaterly
14		Cost over run vs DFR	Savings or over run vs DFR estimate	Quaterly
15		Procurement cost	Total cost of procurement activities	Monthly
16		Procurement budget plan vs actual	Comparison of planned versus actual procurement expenditures	Monthly
17		Tendering cost	Contract tender cost	Monthly
18		Tendering budget plan vs actual	Comparison of planned versus actual tendering expenditures	Monthly
19	Procurement	Upcoming tenders	Number and status of upcoming tenders	Weekly
20		Live tenders	Number and status of current tenders	Weekly
21		RFP to PO timelines	Time taken from request for proposal (RFP) to Purchase Order (PO)	As updated
22		Change orders	Number and impact of change orders	Weekly
23		Payables status and aging	Status and aging of payables	Weekly
24		Equipment procurement plan vs actual	Percentage equipment procured against the plan	Weekly
25		Major critical equipment procurement status (LLI plus few non LLI)	Detailed plan status, including steps such as bidding, datasheet review, PR, and bid submission	Weekly

KPI List for BPREP Control Tower for Package Contracts

Sr. No.	Category	KPI	Description	Frequency
26		Bulk material status	Status of Material Procuement Categorywise	Weekly
27		Construction quantity release status	Categorywise Status of Release of Construction Qty.	Weekly
28		Contractor award plan vs actual	Percentage contractors awarded against the plan Contractors are the MEI, civil and structural and so on	Weekly
29		Contractor award detailed status	Comparison of the planned status, including stages like bid submission and contract finalization	Weekly
30	Engineering	Detailed engineering for each package	Status of Detailed Engineering (DE)	Weekly
31		BDEP status	Status of Basic Design Engineering Package (BDEP)	Weekly
32		FEED status	Status of Front-End Engineering Design (FEED)	Weekly
33		Number of datasheets received vs planned	Datasheets received compared to the planned number in the BDEP	Weekly
34		Drawing status	Current state of drawing approvals and completions	Weekly
35	Construction	Structural steel fabrication	Comparison of planned versus actual structural steel fabrication	Fortnightly
36		Piping fabrication	Comparison of planned versus piping fabrication	Fortnightly
37		Critical equipment delivery plan vs actual	Timeliness of delivery of critical equipment	Fortnightly
38		Equipment construction progress overview	Percentage equipment construction completed vs plan	Fortnightly
39		Equipment-wise construction progress	Actual progress of equipment construction post delivery at site	Fortnightly
40		Civil works completion	Measures the planned versus actual progress of civil construction works	Fortnightly
41		Structural assembly progress	Compares planned to actual progress in structural assembly	Fortnightly
42		Piping installation progress	Monitors the planned versus actual progress of piping installations	Fortnightly
43		Electrical installation status	Tracks the progress of electrical installations compared to the plan	Fortnightly
44		Insulation and cladding completion	Compares planned versus actual completion of insulation and cladding work	Fortnightly
45		Fireproofing application progress	Measures the actual progress of fireproofing applications against the planned schedule	Fortnightly

KPI List for BPREP Control Tower for Package Contracts

Sr. No.	Category	KPI	Description	Frequency
46		LSTK/Package contract progress statistics	Progress Statistics at the Contract and and Functional Levels for each Contarct	Fortnightly
47	Manpower Productivity	Manpower attendance	Tracking of manpower attendance with entry and exit times, and total working hours	Daily
48		Entry and exit time	Average manpower entry and exit times at the site	Daily
49		Contractor-wise manpower deployed	Number of manpower per contractor	Daily
50		Working hours	Total working hours of manpower based on attendance records	Daily
51		Supervisor and manpower turnover rate	Frequency of supervisor and manpower turnover	Fortnightly
52		Gang ratio: skilled vs unskilled	Ratio of skilled to unskilled manpower in the workforce	Daily
53		Contractor manpower productivity comparison	Comparison of contractor manpower productivity from best to worst performing	Weekly
54		Manpower downtime	Percentage of time manpower is not productive	Daily
55	Equipment Productivity	Number of critical equipment at site	Tracking of critical equipment at site	Daily
56		Critical equipment downtime	Downtime of critical equipment and its impact on the project	Daily
57		Equipment utilization rate	Percentage of time equipment is operational versus idle	Daily
58	Safety	Total Manhours Worked	Category wise and Total Manhours Worked	Daily
59		LTA Free Manhours	Category wise and Overll LTA Free Manhours	Monthly
60		Frequency Rate	Frequency Rate	Monthly
61		Severity Rate	Severity Rate	Monthly
62		No of Tool Box Talks Conducted	Category wise and Overll No of Tool Box Talks Conducted	Monthly
63		No. of Near Misses	Category Wise No. of Near Misses and Trends	Monthly
64		No. of Incidents	Category Wise No. of Incidents and Trends	Monthly
65		No. of NCR's/OSA	Instances of non-compliance with requirements or Safety Violations	Monthly
66		No. of non compliance/ safety violation detected by DSMS	Category wis e and Overall No. of non compliance/ safety violation detected by DSMS	Daily
67		No. of violations not resolved	Category wis e and Overall No. Vioations not resolved	Daily
68	Planning and Scheduling	Daily task completion rate - contractor comparison	Tracks the percentage of planned daily tasks completed	Daily
69	Quality	Overall status	Total inspections done vs total passed vs total defects area specific	Daily
70		Contractor Quality Assurance	Site Quality Check	

KPI List for BPREP Control Tower for Package Contracts

Sr. No.	Category	KPI	Description	Frequency
71		Supplier quality Assurance	Measures the quality of materials and equipment supplied by vendors	Daily
72		Number of non-conformance reports (NCRs)	Total no. and percentge of NCRs issued from inspections	Daily
73		Corrective action closure rate	Percentage of corrective actions closed out effectively	Daily
74		Failure rate of inspected items	rate at which inspected items fail quality criteria	Daily
75		Best and worst performing contractor	Contractor with minimum inspection failure and contractor with the maximum test failure	Daily
76		Field quality issues	Monitors the number of quality issues across each types	Daily
77	Warehouse and Management	Material and equipment availability status	Monitors the percentage of required materials that are available in the warehouse when needed	Daily
78		Criticial equipment availability status	Measures the availability of high-priority or critical materials required for project milestones	Daily
79		Order delay incidents	Tracks the number of delays in material orders and shipments	Daily
80	Transport Management	Risk of delay	Percentage of equipment at the risk of delay in delivery	Daily
81		Distance travelled vs total distance	For critical equipment: percentage distance covered	Daily
82		Touch points of the journey	Assesses adherence to planned schedules at critical touchpoints, such as ports, terminals, and warehouse	Daily
83	Commissioning	Piping loop hydro-testing status	MC, NDT, HT Status	Daily
84		System completion outlook	Format 1, 2 and 3 Status	Daily
85		Summary of system handing over status	Format 4	Daily

3 DESIGN PHILOSOPHY / CRITERIA - GENERAL

3.1 FIRE WATER SYSTEM

The various details regarding systems design, type of storage, material of construction etc. shall be covered in the fire protection design basis. Refer Section 4.0

4 FIRE PROTECTION SYSTEM

4.1 GENERAL

This specification described below gives minimum design and functional requirements for active fire protection system. The Active Fire Protection system shall be conceived to operate both in prevention and fighting mode, depending on the relevant actions selected, either manual or automatic.

The firefighting shall be based on the following fighting agents.

- Fire Water (Fresh Water)
- Foam
- Clean Agent System
- DCP/CO_2

4.2 DESIGN PHILOSOPHY

4.2.1 GENERAL

Sl. No	EIL PHILOSOPHY
1.	The Fire protection facilities shall be designed by extending the existing fire water network of refinery to cover the new facilities envisaged under BPREP Project. Existing Fire Water system adequacy shall be checked for catering to fire water demand of proposed facilities in combination with existing facilities.
2.	Process units, storages, utilities etc. shall be fully covered by hydrants and Monitors system with isolation valves as per OISD-116 / PNGRB (whichever is more stringent shall be followed), design requirements, safe engineering practices and process licensor's requirements & client specific requirements.
3.	Fire Protection facilities shall be designed to fight two major fire scenarios simultaneously anywhere in the complex.
4.	Roof Sinking case for external floating roof tanks shall be considered as per OISD-116 / PNGRB standards.
5.	New Hydrocarbon storage tanks shall be protected with water spray, fixed foam

Copyright EIL – All rights reserved

Sl. No	EIL PHILOSOPHY
	system (as per client requirements) and automatic actuated rim seal protection for external floating roof tanks storing class-A petroleum as per OISD / PNGRB standards (hollow metallic tube type).
6.	Dyke area/spill fire protection as per OISD-STD-116/PNGRB standards.
7.	Fire fighting system for transformers shall be as per Electrical Design Basis.
8.	Computer room, Console room, Rack room, Engg. Room, UPS room, Battery room, etc. of process control room / SRR shall be protected by clean agent system as per OISD, PNGRB & NFPA-2001.
9.	For process plants, OISD/PNGRB requirement and licensor's recommendations shall be followed.
10.	Mounded bullets shall be protected with water spray system as per OISD-STD-150.
11.	Fire protection facilities will be based on following: ➢ Monitoring and Alarm by alerting, locating fire and operating advise ➢ Detection of fire and toxic gas ➢ Action by water/ foam/ CO_2/ Clean agent/ DCP ➢ Communication system (As per Electrical EDB) ➢ Portable Fire Fighting equipment ➢ Mobile Fire Fighting equipment ➢ First Aid Fire Fighting equipment
12.	DWST storage tanks shall be protected with fixed water spray system and N_2 Snuffing system as per OISD-STD-236 / OISD-STD-194, as applicable.
13.	DWST storage tanks shall be protected with High Expansion Foam Generator system as per OISD-STD-236 / OISD-STD-194, if applicable.

4.2.2 DESIGN CRITERIA FOR VARIOUS FACILITIES IN PROCESS UNIT HANDLING HYDROCARBON

S. No	DESCRIPTION	EIL PHILOSOPHY
1.	Water Application Rate for process unit (General) for spray system	As per OISD-116/PNGRB

Copyright EIL – All rights reserved

S. No	DESCRIPTION	EIL PHILOSOPHY
	➢ Pumps handling petroleum products Class 'A' under pipe racks ➢ Pumps handling products above auto-ignition temperature under pipe racks.	Water spray system as per OISD-116 / PNGRB & process licensor's requirement.
	➢ Vessel: Un-insulated of capacity over 50 m^3 and containing class A or B flammable liquid. ➢ Un-insulated Flare KOD having any capacity ➢ Vessel inaccessible to Fire Tender/mobile equipment, fire hydrant.	Water spray system as per OISD-116 / PNGRB & process licensor's requirement.
	➢ Air Fin Coolers for Hydrocarbon services located above Pipe rack /Elevated location	Water spray system as per OISD-116 / PNGRB.
	➢ Columns and Reactors of height more than 45 m	Water spray system as per OISD-116 /PNGRB & process licensor's requirement.
	➢ Water application rate for protected equipment with deluge system	Refer OISD-116 / PNGRB
	➢ Compressor (Hydrogen / Hydrocarbon)	Water Spray system as per OISD-116 / PNGRB.
	➢ Wet Risers	Elevated platforms/ Tall towers.
	➢ Landing Valves	On technological structures/Building Stairs.
2.	Hose Reels	With each landing valves & at 40 m distance along pipe rack within unit (If internal fire water header required).

Copyright EIL – All rights reserved

S. No	DESCRIPTION	EIL PHILOSOPHY
		Pump slab areas & exchanger slabs.
3.	First Aid Equipment	As per OISD / PNGRB standards.
4.	Water Monitors and Hydrants	As per OISD / PNGRB standards & additionally hydrant at 30m distance along pipe rack (If internal fire water header required).
5.	High-volume long-range variable flow Water Monitor/Water cum Foam Monitor (Manual/Remote Operated)	As per OISD-116 / PNGRB (boosting arrangement shall be provided if adequate pressure is not available) Elevated HVLRM shall be provided to protect column more than 30 m height. MOV of Remote operated HVLRM shall be accessible from Grade. Manual / Remote operated HVLRM (Aqua & Jet type) shall be provided & shall be BIS Approved/ UL listed or FM/VDS approved. HVLRM panel shall be as per electrical hazardous area classification.
6.	TEAL Handling area	Automatic DCP flooding system as per NFPA 17.
7.	Peroxide building & Peroxide preparation area.	Water Mist system as per NFPA 750.

4.2.3 DESIGN CRITERIA FOR VARIOUS FACILITIES IN OFFSITE FACILITIES

S. No	DESCRIPTION	EIL PHILOSOPHY
1.	Flammable Storage Tanks	
	➢ Fixed Water Spray system ▪ Floating roof or Fixed roof tanks storing Class A petroleum storage. ▪ Floating roof tanks of dia. larger than 30 m	As per OISD-116 / PNGRB

Copyright EIL – All rights reserved

S. No	DESCRIPTION	EIL PHILOSOPHY
	storing class B petroleum storage. ▪ Fixed roof tanks of dia. larger than 20 m storing class B petroleum storage	
	➢ Semi-fixed foam system ▪ Floating roof tanks storing Class 'A' and 'B' petroleum products ▪ Fixed roof tanks storing Class 'A' and 'B' petroleum products. ▪ Fixed roof tanks storing class 'C' petroleum products of dia. larger than 40 m. ➢ Semi Fixed Foam System should not be provided for fixed roof tanks operating at more than 0.6 psi pressure and where the tanks are nitrogen or other inert gas blanketed. ➢ In fixed roof tanks storing high-viscosity liquids in temperature above 93.3°C (200°F), fixed foam system should not be provided.	As per OISD-116 / PNGRB
	➢ External Floating roof tanks containing Class 'A' hydrocarbon.	Automatic actuated rim seal fire detection and Extinguishing system. (Rim seal fire protection system shall be installed as per OISD-116, Clause No. 4.2.3)
2.	DWST storage tanks.	Automatic water spray system, High Expansion Foam Generator and N_2 Snuffing system as per OISD-STD-194/OISD-STD-236, if applicable
3.	Loading/Unloading Gantries and Hydrocarbon Compressor area.	Automatic deluge system as per OISD-116 / PNGRB

Copyright EIL – All rights reserved

S. No	DESCRIPTION	EIL PHILOSOPHY
4.	Transformers (rating more than 10 MVA & above)	Asper Electrical DesignBasis
5.	➢ Buildings & Other Miscellaneous Structures	As per PNGRB & OISD
	➢ Process building/ structure	Landing valves
	➢ Multi storied buildings at first floor and above at sub-stations with cellars	Landing valves & Hose Reel
	➢ First Aid Equipment's	As per OISD / PNGRB standards
	➢ Process Control room/SRR	Clean agent system as per NFPA-2001 and Portable extinguishers as per OISD-116 / PNGRB
	➢ Detection & Actuation	As per OISD-116 & PNGRB (Refer electrical & instrumentation specification)
6.	Lab Building	▪ Portable Clean agent fire extinguishers. ▪ Sprinkler System as per NFPA-13. ▪ Portable fire extinguishers as per OISD Std. / PNGRB Regulations. ▪ Fire protection as per OISD-STD-211.
7.	Polymer Warehouse	▪ Sprinkler System (In rack Sprinkler with ESFR nozzle) as per NFPA-13. ▪ Portable fire extinguishers as per

Copyright EIL – All rights reserved

S. No	DESCRIPTION	EIL PHILOSOPHY
		OISD Std. / PNGRB Regulations. ▪ Internal Hydrants System.
8.	Equipment (Acoustic enclosure-based compressor/ Turbine etc.).	▪ CO_2 flooding system as per NFPA - 12.

4.3 FIRE WATER HYDRANT SYSTEM

4.3.1 NETWORK SIZING

S. No	EIL PHILOSOPHY
1.	The Fire water network shall be designed by extending fire water network to cover the new facilities envisaged under BPREP Project. Only the ring main for the new facilities shall be extended by taking tapping from the existing network and hydraulics of that section will be checked. If required, capacity of complex fire water system (storage / pumps) shall be increased based upon the revised fire water demand.
2.	Network shall be designed as per OISD-116 / PNGRB.
3.	Firewater demand & foam shall be calculated as per OISD-116 / PNGRB requirement. Roof sinking case of floating roof tank shall also be considered while calculating fire water demand.
4.	Fire water main network shall be analyzed for 120% of design water rate using "PIPENET" software. The velocity in the system should not exceed 5 m/sec. with minimum residual pressure at hydraulically remotest point as 7 kg/sq.cm g.
5.	Hydrants / Monitors shall be located along road side berms for easy accessibility as per OISD-116 & PNGRB.
6.	Fire hydrants around the tank shall be provided with 4” size pumper connection.

Copyright EIL – All rights reserved

4.3.2 SYSTEM DESCRIPTION

S. No	EIL PHILOSOPHY
1.	➢ Underground ring main network system shall be laid with one meter earth cushion and above ground ring main network shall be laid on sleepers, 300 to 500 mm above FGL, independent of process lines near to road side. In crane movement areas, FW pipes should be protected with concrete/steel encasement. Underground ring main network system shall be done as per OISD 116 Clause No. 5.6.2, 5.6.3 & 5.6.4 ➢ Flushing connection with isolation valve and pressure gauge points shall be provided at critical locations. ➢ Network shall be laid in a closed loop. The firewater header and branch lines shall be laid above ground on independent sleepers for offsite and utilities areas. For road crossings, the fire water header shall be laid underground.
2.	New firewater header and branch lines shall be laid above ground on independent sleepers for units, offsite and utilities areas. OISD-116 shall be used for underground / aboveground firewater header. All the underground firewater header shall have suitable corrosion protection.
3.	The minimum header size for hydrant and monitor branches shall be as under:
	Hydrant connection -4”/6”
	Water Monitor/Foam Monitor connection -6”
	High-Volume Long-Range Monitor Connection -8”/10”/12”
	Minimum Size of Network: 8”- Utility area and Non plant building area. 12”- Process area & Other Hydrocarbon Handling Facilities.
4.	At least 10% of all welded joints shall be radio-graphed and at least 50% of welded joints selected for radiography shall be field joints.
5.	Above ground fire water piping shall be painted as per OISD/ painting specification.
6.	All fire water networks shall be hydro tested to a pressure 1.5 times the shut off pressure of firewater pumps.

Copyright EIL – All rights reserved

4.3.3 ISOLATION VALVES

S. No	EIL PHILOSOPHY
1.	Isolation valves shall be provided at crossings (Junctions) to ensure easy maintenance and uninterrupted water supply in case of break down (as per OISD-116 / PNGRB).
2.	Isolation valve shall also be provided below each monitors and hydrants. Isolation valves shall be provided for all landing valves in technical structures/buildings and at base of riser pipe. Additional Isolation valve shall be provided at tapping points on firewater header if fire equipment is located more than 15m from firewater header.
3.	Isolation valve shall be provided at all tapping points on firewater header.
4.	Additional isolation valves shall be provided in segments where length of segment exceeds 300 m. Firewater pumps should be segregated in two groups by providing an isolation valve on common discharge header of pumps for ease of maintenance.
5.	Only carbon steel valves shall be used. No cast iron valves shall be used. All valves for fire water system shall be Gate Valve. Gate valves more than 16" shall be provided with gear mechanism.

4.3.4 RESTRICTION ORIFICE

S. No	EIL PHILOSOPHY
1.	RO at Hydrant/Landing outlets to reduce the pressure to 7 kg/cm2(g) at ground level wherever required.
2.	RO at tapping of fire water MV spray system and HV spray system shall be provided to keep the system pressure within range of 1.4 to 3.5 bar(g) and 3.5 to 5.0 bar(g) respectively.

4.4 FIRE FIGHTING EQUIPMENT

4.4.1 GENERAL

Hydrants or water monitors shall be located keeping in view the fire hazards at different sections of premises to be located and to give most effective coverage confirming to OISD-116 / PNGRB.

Copyright EIL – All rights reserved

4.4.2 HYDRANTS

Hydrant shall be provided at 30 m of external perimeter of process units, storage tank areas, Gantry area, hydrocarbon pumping station/ house, blending station etc. and one hydrant at every 45 m of external perimeter of utilities & Non-Plant Building area.

Hydrants shall be located at a minimum distance of 15 m from the periphery of storage tanks or hazardous equipment under protection. In case of buildings this distance shall not be less than 5 m and more than 15 m from the face of building.

Hydrants around the tanks shall be provided with 4” pumper connection. Hydrants shall be generally located with branch connection and not directly over main header along road side berms for easy accessibility as far as possible.

Hydrants with two separate landing valves (Type A) with instantaneous female coupling of 2 1/2 " size on 4” stand post (6”stand post for hydrant with pumper connection) shall be used. All Hydrant outlets shall be situated at a workable height of about 1.2 m above ground level. Hydrants connections shall be designed to meet the required flow and volume. Hydrant shall be BIS approved with following detail -

S. No	DESCRIPTION	VALUE
1.	Outlet	Double headed with two separate landing valves (Type A as per IS:5290)
2.	Type	Oblique angle type
3.	Capacity	900 lpm each valve
4.	Approval	BIS

4.4.3 LANDING VALVES

Landing valves (Two numbers of Type A as per IS: 5290) with instantaneous female coupling of 2 1/2 " size on 4” horizontal post shall be provided on the landings of first floor and above at each landing levels on all the buildings / tech structure / platforms etc.

S. No.	DESCRIPTION	VALUE
1.	Outlet	Double headed two separate landing valves (Type A as per IS:5290)
2.	Capacity	900 lpm each valve
3.	Type	Oblique angle type

Copyright EIL – All rights reserved

S. No.	DESCRIPTION	VALUE
4.	Approval	BIS

4.4.4 HOSE CABINET AND HOSE REEL

Hose cabinet shall be installed at every alternate hydrant point and every landing valve. 2 nos. hoses 15m long each shall be kept in each hose cabinet. Hose cabinet shall be installed for every Hydrant below pipe rack in process units. Hoses shall be reinforced rubber lined hose as per IS: 636 (Type 3). Hose reels shall be provided with flanged connection.

S. No.	DESCRIPTION	
1.	Hose Box	
	➢ Type	Type II as per EIL specification
	➢ Hose Size	63 mm & 15 m long
2.	Hose reel	
	➢ Length	40 m
	➢ Bore size	25 mm

4.4.5 MONITORS

Water Cum Foam Monitors shall be located at strategic locations for protection of cluster of columns, heaters, gassifiers and other high structures, where it may not be possible to approach the higher levels. A minimum of two monitors shall be provided for each such area. Monitors should not be installed less than 15 m from hazardous equipment to be protected.

Monitor tip height shall be approachable.

S. No	DESCRIPTION	VALUE
1.	Capacity	500-750-1000 US GPM (Variable Flow)
2.	Nozzle Type	Non-aspirating type with arrangement of jet and spray (aqua fog)
3.	Approval	BIS approved/ UL Listed/FM Approved

Copyright EIL – All rights reserved

4.4.6 FIXED REMOTE / MANUAL OPERATED HIGH VOLUME WATER CUM FOAM MONITORS

Min. 2 nos. of Remote / Manual operated high-volume long-range water cum foam monitors (with JRCP connection / ILBP, as applicable) shall be variable flow type, with foam induction along with foam storage tank (Delivery rates for 10 minutes) to monitor being possible from minimum 60 m distance from the monitor and shall be provided in (as per OISD-STD-116 Clause 5.7.4):

a. Inaccessible areas such as column, reactor and compressor house in Process Units.
b. Critical equipments at higher locations (above 30 m.)
c. HVLRs to be located such that throw of the monitors is safely delivered at the aimed object. Location of monitors shall not exceed 45 m from the hazard to be protected.
d. Tank Farm area

S. No	DESCRIPTION	VALUE
1.	Capacity	1000-2000 US GPM (Variable Flow) and above
2.	Nozzle Type	Non-aspirating type with arrangement of jet and spray (aqua fog)
3.	Horizontal range	As per Data Sheet
4.	Approval	BIS Approved/ UL listed / FM Approved

Note:

i. Localized Fixed Foam system is applicable for tank farm only (New Storage Tanks).
ii. Foam provision not required for elevated monitors located within unit.
iii. Foam Feeding system without foam storage to be consider for monitor located at grade level in and around unit.

4.5 WATER SUPPLY AND STORAGE

S. No.	Description	EIL Philosophy
1.	Supply	Existing
2.	Storage capacity	Existing (New FW Storage Tanks may be added based on the FW Adequacy Report)

Copyright EIL – All rights reserved

4.6 FIRE WATER PUMPS

MAIN PUMPS AND JOCKEY PUMPS

S. No.	Description	Philosophy
1.	Capacity	Existing (New FW Pumps may be added based on the FW Adequacy Report)
2.	Type	Existing

4.7 FIRE WATER PUMP HOUSE

Existing (New FW Storage Tanks / Pumps may be added based on the FW Adequacy Report)

4.8 FIRE WATER SPRAY SYSTEM

S. No	EIL PHILOSOPHY
1.	Water spray system shall be provided on proposed hydrocarbon tanks, process equipment, etc. shall meet the requirements of OISD-116 / PNGRB standards. The rate of water applications & mode of operation shall be as per Sec. 4.8.1 of this document and as per process licensor's requirement.
2.	Water spray on Hydrocarbon storage tanks shall be provided with two tapping's, each for 100% flow from two different main headers. Water spray on equipment, vessel, column, air fin cooler and pumps within the process unit shall have single connection from main header for 100% flow with bypass valve in Deluge System.
3.	While providing water spray on equipment's/ vessels, Air fin coolers, columns, special care shall be taken to provide water spray on flanges of nozzle connected to equipment's / vessels.
4.	Break up flange shall be provided for Water Spray System rings and header for easy replacement as per the requirement.
5.	Firewater spray for storages (Bullets, DWST) shall be provided with two tapping, each for 100% flow from two different main headers.

Copyright EIL – All rights reserved

S. No	EIL PHILOSOPHY
6.	All spray tapping shall be taken from top instead of existing side/bottom tapping to prevent under deposit corrosion in line by stagnant water.

4.8.1 RATE OF WATER APPLICATION & MODE OF OPERATION OF WATER SPRAY SYSTEM

I. OFFSITE

S. No	FACILITIES	MODE OF OPERATION	RATE OF APPLICATION
1.	Hydrocarbon Storage tanks	As per OISD / PNGRB standards	As per OISD / PNGRB standards
2.	Mounded bullets and piping manifolds		
3.	LPG Pump house		
4.	Above ground pressurized storage (Bullets)		
5.	Road Dispatch Facilities		
6.	Refrigerated DWST Tanks		
7.	Hydrocarbon/Hydrogen Compressors		
8.	Condensers heat exchangers, Evaporators and Blender		

II. PROCESS UNIT HANDLING HYDROCARBON

S. NO.	FACILITIES	MODE OF OPERATION	RATE OF APPLICATION
1.	Pumps handling petroleum products class 'A' under pipe rack or above auto-ignition temperature under pipe racks	Auto (Deluge system)	20.4 lpm/sqm.

Copyright EIL – All rights reserved

S. NO.	FACILITIES	MODE OF OPERATION	RATE OF APPLICATION
2.	Other equipment's as per licensor	Manual /Auto (Deluge system)	As per licensor
3.	Tall column of height more than 45 m	Auto (Deluge system)	10.2 lpm/sqm.
4.	Un-insulated vessels having capacity larger than 50 m^3 and containing class A or B flammable liquid.	Auto (Deluge system)	10.2 lpm/sqm.
5.	Air fin coolers in hydrocarbon service located above pipe racks / elevated location	Auto (Deluge valve) up to 182 ℃ operating temp. of process fluid at inlet of air fin cooler Manual, above 182 ℃ operating temp. of process fluid at inlet of air fin cooler	10.2 lpm/sqm.
6.	Hydrocarbon Compressors	Auto (Deluge system)	20.4 lpm/sqm.
7.	Uninsulated Flare KOD	Auto (Deluge system)	10.2 lpm/sqm.

NOTE:

i. All the Automatic Fire water spray system shall have manual start facility in case of failure of auto system.

ii. Booster pump (including standby) shall be provided in case of wherever pressure boosting in firewater line is required.

4.9 FOAM SYSTEM ON NEW HYDROCARBON STORAGE TANKS

S. NO.	DESCRIPTION	EIL PHILOSOPHY
1.	Type of foam	Low and medium expansion Aqueous Film Forming Foam (AFFF) based.
2.	Operation	Manual
3.	System type	Fixed
4.	Application time	As per OISD / PNGRB
5.	Foam solution	3-6% foam

Copyright EIL – All rights reserved

S. NO.	DESCRIPTION	EIL PHILOSOPHY
6.	Foam solution application rate	
	➢ Fixed roof and cone cum floating roof tanks	5 lpm/sqm of liquid surface area of the tank to be protected
	➢ Floating roof tanks	▪ 12 lpm/sqm of seal area with foam dam height of 600 mm. ▪ 8.1 lpm/sqm of liquid surface areas for roof sinking case.
7.	Rim Seal Fire Protection	All Class 'A' External Floating roof Tank

Note: Fixed Foam system shall be provided for New Storage Tanks with localized Foam Pump / Storage as per client requirements.

4.10 CO_2 FIRE EXTINGUISHING SYSTEM

Equipment's (acoustic enclosure-based compressor/ Turbine etc.) shall be provided with CO_2 fire extinguishing system as per NFPA-12.

4.11 DCP FIRE EXTINGUISHING SYSTEM

Automatic Total Flooding Dry Chemical Powder (DCP) System shall be provided for fire extinguishing to TEAL storage area as per NFPA-17/ licensor's recommendations with additional local DCP Hose Reel will be kept for flange joints, piping etc.

In TEAL handling and storage area, DCP powder shall be suitable for TEAL fire. TEAL storage facility should have provision for covering from all sides by shutters or other alternate means so that in case of DCP flooding, oxygen depletion should be as per NFPA-17/ licensor's requirements.

4.12 WATER MIST SYSTEM

The Water Mist suppression system shall be provided for the protection of the Peroxide Storage & Peroxide Preparation Room through zoned application system. The system shall be actuated from the detection panel/junction box, high pressure water mist system will consist of a number of nozzles connected by stainless steel piping to a high-pressure water source either stored pressure (cylinder units) or continuous pressure (pump units).

Fire source must be enveloped by sufficient density of water fog. This shall be achieved by dispersion type nozzle sprayers positioned to give total coverage of the hazard envelope.

The system design shall be as per NFPA-750.

Copyright EIL – All rights reserved

4.13 HIGH EXPANSION FOAM GENERATOR SYSTEM

High expansion foam generators shall be provided on Refrigerated DWST facilities to meet the requirements of OISD-STD-236/OISD-STD-194/PNGRB Regulations.

The system design shall be as per NFPA-11.

4.14 LOCAL FOAM COMPOUND STORAGE

One no. above ground foam storage tank (local) of sufficient capacity with pumping facilities should be provided locally.

4.15 MATERIAL OF CONSTRUCTION

Pipes, fittings	As per PMS
Valves and flanges	As per PMS/ VMS
Spray nozzles	SS-316 (UL / FM / Vds / LPCB Approved)
Deluge valves	Ductile Iron (UL / FM / Vds / LPCB Approved)
Detector piping	As per PMS
Hydrant, landing valves	Stainless steel (Grade IV as per IS:3444) (BIS Approved)
Hose Boxes and Accessories:	Type II as per EIL specification
Hose reels	Hub / Sides: Mild Steel. Hose reel valves and nozzles: Stainless steel (Grade IV as per IS:3444)
Variable Flow Water Monitor/ Water cum Foam Monitors	Stainless steel (Grade IV as per IS:3444 or SS 316 (As per applicable code) (BIS approved / UL Listed/ FM Approved).

Note: For further details regarding MOC, refer respective specification / datasheet.

4.16 CLEAN AGENT FIRE EXTINGUISHING SYSTEM FOR PROCESS CONTROL ROOM / SRR

S. NO.	EIL PHILOSOPHY
1.	Clean agent (Inert gas) fire extinguisher system shall be provided as per NFPA-2001 in Process control rooms and SRR buildings (both blast resistant and non-

Copyright EIL – All rights reserved

S. NO.	EIL PHILOSOPHY
	blast resistant buildings).
2.	The system shall be automatic and detection and actuation shall also meet the requirement of NFPA 2001.

4.17 FIRST AID FIRE FIGHTING EQUIPMENT'S

S. No.	Philosophy (Fire Extinguisher)
1.	Dry chemical powder (DCP) fire extinguishers- 6 kg / 9 kg capacity: The extinguishers shall be located at strategic points at grade and on the platforms of structure based on maximum travel distance of 15 m or at least one fire extinguisher shall be provided for every 250 m^2 of hazardous operating area.
2.	Dry chemical powder (DCP) fire extinguishers- 50 kg capacity: The wheeled extinguishers shall be located at strategic points near hazardous equipment such as transformer area, lube oil tank, turbine generator and hydrocarbon pumps etc. At least one fire extinguisher shall be provided for every 750 m^2 of hazardous operating area.
3.	CO_2 extinguishers- 4.5 kg capacity: To be located in substations, power stations, office buildings, SRR and control rooms etc. The number of fire extinguishers shall be determined based on the maximum traveling distance of 15 m. At least one fire extinguisher shall be provided for every 250 m^2 of hazardous operating area.
4.	Water Mist cum Compressed Air Foam System: 50 liters trolly mounted water mist cum compressed air foam technology should be used to fight fire at critical location such as hot pumps handing fluids above auto ignition temperature.

NOTE: DCP & CO_2 Fire extinguisher of various capacity will be provided as per OISD & BIS standard.

4.18 MOBILE FIRE FIGHTING EQUIPMENT'S

Existing Mobile firefighting equipment. However, client to confirm any additional requirements.

Copyright EIL – All rights reserved

4.19 OTHER FIREFIGHTING EQUIPMENT'S

Firefighting Equipment's given below shall also be considered as per OISD-116 / PNGRB in sufficient quantity.

- Self-Contained breathing apparatus sets for 45 minutes operation
- Hoses - Synthetic hose of Type-III IS 636.
- Portable gas detectors, Emergency lighting etc.
- Chemicals - DCP and foam compound.
- Communication equipment - Manual call Points, Public address System, Fire siren etc.

5 SPECIFIC REQUIREMENTS

a. Powder used in DCP type Fire Extinguishers shall be 90% Mono Ammonium Phosphate (ABC) based and BIS marked.
b. Thickness of body plate used in 9 Kg. Capacity DCP Fire extinguishers shall be minimum 2 mm.
c. Thickness of body plate used in 25/50 Kg. Capacity DCP Fire extinguisher shall be minimum 5 mm.
d. Foam / water type extinguisher shall not be provided. Only DCP/CO_2 type extinguisher shall be provided. Fire extinguisher shall be stored pressure type.
e. All monitors including long-range monitors shall be non-aspirating type with arrangement of jet and spray (Aqua & Fog). Monitors shall have 360^0 rotations.
f. Hose couplings and other accessories (i.e. Jet Nozzle, Universal Branch pipe etc.) kept in hose boxes shall be fitted with stainless steel (Grade IV as per IS:3444).
g. Hose reel (Type B) shall be considered for below pipe rack / Pump slab areas & exchanger slabs in process units.
h. Fire Extinguisher caps & drain cap shall be made of stainless steel.
i. Self-contained breathing apparatus (Carbon Composite) sets for 45 minutes operation (35 minutes working time +10 minutes escape time), carrying harness, face mask and necessary regulator.
j. Booster pump (Electrical Driven) with emergency power supply shall be provided in case of wherever pressure boosting in Fire water line is required on case-to-case basis. One standby booster pump shall also be provided. Suction of booster pump to be taken from two distinct headers. Pump suction pressure of 7 Kg/cm^2 g shall be considered for designing of pumps (If required).
k. Foam storage tank shall be made of stainless steel (SS 316) with all accessories.
l. Sand filled buckets shall be provided near to transformers.

Copyright EIL – All rights reserved

m. In offsite area, additional hydrant outlet shall be provided where fixed foam connection is provided.

n. In water spray system, all the take off's shall have strainers.

o. Process equipments like exchangers, pumps, vessels shall be protected with fire water hydrant and monitors with isolation valve.

p. Cabinets to be provided for Portable Fire extinguishers.

q. Active Fire Protection for Cooling Towers as per applicable clauses of NFPA -214 shall be provided.

r. Fixed Medium Expansion Foam Generator (MEFG) shall be provided for New Tank Farms.

Copyright EIL – All rights reserved

SCOPE OF WORK & JOB SPECIFICATION (ELECTRICAL)

ELECTRICAL HEAT TRACING SYSTEM

PROJECT : **OVERALL PROJECT MANAGEMENT AS MPMC AND PMC/EPCM SERVICES FOR ETHYLENE CRACKER UNIT AND U&O FOR BPREP**

CLIENT : M/s BPCL-BINA REFINERY

CONSULTANT : ENGINEERS INDIA LIMITED

JOB NO. : B957

Rev. No.	Date	Purpose	Prepared by	Checked by	Approved by
A	17.03.2026	ISSUED WITH TENDER	SK	RSR	RSR

Copyright EIL – All rights reserved

1. INTRODUCTION

1.1 The intent of this specification is to define the requirements for the supply of equipment and materials, installation, testing and commissioning of Electrical Heat Tracing system of BPREP Project of M/s BPCL.

1.2 The work shall be carried out in the best workmanship-like manner, in conformity with these specifications, approved drawings and the instructions of the Owner and Engineer-in-Charge.

1.3 The contract scope shall include clearing of temporary constructions, waste materials and loose earth, which might get collected in and nearby the work site consequent to the execution of work under this contract.

2. SPECIFICATIONS & STANDARDS

2.1 The work shall be carried out in conformity with attached EIL specifications and standards.

2.2 In case of any contradiction between various referred standards/ specifications / data sheets/ documents and statutory regulations, most stringent shall govern. Owner's decision in this regard shall be binding & final. It is Contractor's responsibility to bring the same to the notification of EIL.

3. SITE CONDITIONS

The equipment offered and the installation shall be suitable for continuous operation under the following site conditions:

Ambient temp	:	Max. 48ºC, Min. 1.1ºC
Minimum temp. for Heat Tracers	:	1.1ºC
Applicable temp. for Heat Tracers	:	Maintenance temp, operating temp, design temp, exposure temp as per line List/ equipment list attached elsewhere
Design temperature for Other Electrical equipments	:	45ºC
Max relative humidity	:	86%
Altitude	:	Less than 1000m above MSL
Atmosphere	:	Humid & highly corrosive as found in Refineries & Petrochemical Plants

4. SYSTEM CONDITIONS

4.1 415V, 50Hz TPN power supply feeders of adequate rating shall be available in the Owner's switchboard in the Owner's substation for feeding heat tracing system flameproof Power distribution boards (PDBs) / flameproof Load distribution panels (LDPs).

Complete power distribution from owner's substation to 415V PDB / LDP onward including power cables, control cables, heat tracers/ tape, JBs, RTDs, Multi circuit temperature controller, cabling, termination, earthing, FO/CAT-6 cable, necessary connectors etc. is included in Contractor's scope and shall be included in SOR items. Temperature controller provided in LDP shall be connected with central monitoring system (to be located in MCR) through FO/CAT-6 cable for monitoring purpose.

Exact power distribution scheme from substation/ feeders onwards shall be finalized By Contractor in consultation with Owner/EIL during detail engineering based on actual heat tracing load and location of heat tracing PDBs/ LDPs & Owners substation.

4.2 Bidder shall furnish load requirements, details, quantity and rating of LDP and PDB required for feeding the electric heat tracers in the bid. Bidder shall also indicate in the offer, rating & quantity of the owner's feeder(s) required for feeding the offered heat tracing system.

4.3 Bidder shall supply, install & terminate all power & control cables from owner's substation to respective distribution boards (PDBs/ LDPs) and from distribution boards to the user points as per attached cable routing drawing no. B957-999-16-50-01010. Contractor shall use the owner's cable route wherever available; wherever owner's cable route is not available, complete cabling system including trench, cable trays etc. shall be in the scope of the Bidder.

Copyright EIL – All rights reserved

4.4 Bidder shall provide necessary outdoor located flameproof Power Distribution Boards (PDBs) and flameproof, Ex'd' type Load Distribution Panels (LDPs) for receiving & distributing power for the system.

4.5 Bidder shall supply & lay the cables between the owner's substation and PDB/ LDP, between PDB & LDP, and between the LDPs & heat tracing loads. Contractor shall also supply & lay the communication cables between controllers in LDP to central monitoring system in MCR.

The cable route shall be decided during detail Engineering based on the number and location of the Heat tracing panels. Any additional cable tray/ buried trench required for routing the Heat tracing / power cables / control cables/ FO/ CAT-6 cables shall be in the scope of the bidder. Refer Cable layout attached with the tender. It may be noted that this layout is for only estimation purpose any change in the cable route due to site constraint shall be taken care by Contractor without any time and cost implication to owner

5. AREA CLASSIFICATION

5.1 The plant area has mixed areas i.e., Safe Areas, Zone 1 & 2, Gas group IIA/IIB/IIC temperature class T3 areas, as shown in the area classification drawing attached elsewhere in the tender. All equipments, heat tracer and associated accessories/ components, LDPs, PDBs etc. related to electric heat tracing shall be suitable for minimum Zone-2, Gas Group IIA/IIB, Temp. Class T3 for areas indicated as Gas Group IIA/IIB in the area classification drawing. For areas which is indicated as Gas Group IIC (in the area classification layout), the complete heat tracing system shall be suitable for minimum Zone-2, Gas Group IIC, Temp. Class T3.

5.2 All equipments, heat tracer and associated accessories/ components, LDPs, PDBs etc. related to electric heat tracing shall be suitable for minimum Zone-2, Gas Group IIA/IIB/IIC, Temp. Class T3. Exact classification, gas group shall be as defined elsewhere.

5.3 The Power distribution boards (PDBs) / Load distribution panels (LDPs) shall be located at a suitable location as per site conditions and as per directions of engineer-in-charge/ EIL.

5.4 The Power distribution boards (PDBs) & Load distribution panels (LDPs) shall be flameproof type suitable for Zone-2, Temp class T3 irrespective of the area classification layout attached. PDBs & LDPs shall be suitable for Gas Group IIA/IIB or IIC as per area classification layout attached with tender.

5.5 The hazardous area equipment shall have test certificates issued by recognized independent test house (CIMFR/BASEEFA/LCIE/UL/FM or equivalent). All indigenous equipment shall conform to Indian standards and shall be certified by Indian testing agencies. All equipment (indigenous & imported) shall also have valid statutory approvals (CCOE/PESO). All indigenous flameproof equipment shall have valid BIS license and marking as required by statutory authorities.

6. ENGINEERING AND JOB SPECIFIC REQUIREMENTS

6.1 Various equipment (to be supplied by Contractor) covered in this Package, shall be in compliance with the requirements defined in equipment datasheets and specifications attached/referred. Besides these, the requirements as defined in respective clauses for individual equipment, referred elsewhere in this document shall also be considered/ complied with.

6.2 Contractor shall ensure that all electrical equipments shall comply with the site and system conditions, ratings and other technical requirement specified elsewhere with the documents attached with the package.

6.3 CONTRACTOR shall use this specification, datasheet and OWNER/ Consultant's standard specifications for various equipments. For equipments, where OWNER/Consultant standard specifications are not available, have not been attached, CONTRACTOR shall use their own specification, developed based on project specific requirement and good engineering practices prevalent in petroleum industry, so as to ensure satisfactory operation and maintenance conditions.

6.4 CONTRACTOR shall note that data sheets for some of the equipment are not enclosed separately. Equipment data sheets for such equipments shall be prepared by the CONTRACTOR based on relevant codes and specifications and the data sheet shall contain all technical data and information which is essential for the purpose of review and technical acceptability, detailed engineering, installation, testing, repair and maintenance, replacement, etc. of the equipments.

6.5 All equipment shall be subjected to routine and acceptance tests as per applicable specifications

6.6 **Scope of Engineering:**

Copyright EIL – All rights reserved

i) Heat loss calculations & tracer selection

ii) Voltage drop calculations and sizing of all power and control cables

iii) Finalization of optimizing location of PDBs and LDPs considering Owner's substation & heat tracing loads.

iv) Calculations of no. of circuits and length of tracers required

v) Preparation of electrical single line diagram showing distribution and circuit-wise load details

vi) Scheme for connecting the controllers in LDPs to central monitoring system (by others)

vii) Preparation of cable schedules, earthing schedules of equipment

viii) Preparation of cable tray/ trench layout drawing

ix) Preparation of bill of materials for heat tracing, earthing and cabling.

x) Location of PDBs & LDPs in the unit battery limit

xi) Any other document for completion of heat tracing system

7. EQUIPMENT SIZING AND SELECTION CRITERIA

7.1 ELECTRICAL DESIGN BASIS

Details indicated in this specification and attached Engineering design basis, standard specification shall form the basis for basic design and developing detailed design and engineering for electrical heat tracing system.

7.2 EQUIPMENT SIZING

i) The fault level for various voltage levels of Electrical system for this complex shall be limited and provided as under. Accordingly, the associated electrical equipment shall be selected suitable for same: 50 kA (RMS) (1sec.) for 415V

8. SCOPE OF WORK

Bidder's scope shall include design, engineering, supply, installation, testing & commissioning of the complete electrical heat tracing system inclusive of trace heaters with all accessories e.g. End connectors, T-Connectors, Thermostats, splice connectors & junction boxes etc. as per EIL specification 6-51-0095 for pipelines / flanges / valves /instruments / impulse lines, supports, etc., as per the list of lines, list of equipments & other documents attached elsewhere in the MR. For the maintenance temperature, operating temperature, design temperature, steam flush out temperature, insulation thickness and other technical particulars required for the heat tracing design calculations, refer other documents enclosed elsewhere in the package.

- Design & engineering of the complete electric heat tracing system described in this document and package shall be done by "Heat Tracers" vendor.
- Supervision of installation, testing & commissioning of the complete electric heat tracing system shall be done by "Heat Tracers" vendor.

8.1 Scope of Supply

Bidder shall supply all items / equipment required for completion of work except those specifically mentioned in Cl. 8.4 below. The equipment and materials in Bidder's scope shall include but not be limited to the following:

i) Required quantity & rating of Outdoor flameproof & weatherproof Power distribution boards (PDB)/Load distribution panels (LDPs) with adequate no. of outgoing circuits for receiving 415V TPN incoming & distributing power to the electrical heat tracing system.

ii) Trace Heaters with all accessories e.g. End Connectors, T-Connectors, power connector, RTD, Multiple circuit temperature controllers, Junction boxes etc.

iii) Central monitoring system with server, HMI at petchem MCR. All hardware including interconnecting cables along with furniture for HMI shall be in scope of the contractor.

Copyright EIL – All rights reserved

iv) Based on location of LDPs and MCR, complete communication cables (FO/ Cat-6 cable), HDPE duct, connectors, end terminations kits and cabling system etc.

v) 1.1 kV Cu/Al conductor, XLPE insulated, FRLS Power & Control Cables from Substation to PDB/ LDP, PDB to LDP and from LDP to the user points as required. Control cables shall be XLPE insulated, twisted pair individual & overall shielded type, with 2.5mm2 copper conductor.

vi) Double compression Nickel plated brass cable glands & crimp type heavy duty tinned copper lugs.

vii) Flameproof & weatherproof Junction box for heat tracing system, as required.

viii) Cable trays (on pipe racks/ sleepers where customer cable routes are not available) and tray covers including cable tray supports/foundations and RCC cable trenches/ trenching work (wherever required.

ix) Cable identification tags, GI saddles, saddle bars and associated accessories.

x) Complete materials for earthing such as GI earthing strip, wire ropes & earth plates etc. If PDB/LDP is located in a location where plant main earthing grid is not available, 2 nos. earth electrodes shall be provided for PDB earthing as per EIL standard 7-51-0102. Earth connection to be extended to all power JBs installed in the field.

xi) GI pipes, structural steel, MS frames, supports, canopies, brackets, anchor fasteners etc.

xii) Miscellaneous material for civil works such as sand, bricks, cement, sheets, etc.

xiii) Any other material (not covered under Owner's supply at Cl.8.5) and though not specifically mentioned above but required for completion of the work as per specifications, drawings and instruction of Engineer-in-charge.

8.2 **Installation Testing & Commissioning**

Installation, connection, testing and commissioning of all equipment and materials connected with Heat Tracing system supplied by Bidder and free issued by Owner are included in the scope of this package.

8.3 **Other Miscellaneous works**

Other Miscellaneous works in Bidder's scope includes the following:

i) For cable laying in owner’s trenches, contractor’s scope may also include opening of trenches & making good the same after cable laying. If the same is not possible, contractor shall make new trenches for cable laying. New ERCs as required for Contractors cables shall be made by contractor.

ii) Repairing of all civil works damaged during installation of electrical facilities and civil works connected with installation, testing & commissioning of the heat tracing system.

iii) Scope of work under this contract shall be inclusive of civil works necessary for the installation of equipment, materials and making good of the same after completion of work including foundation for outdoor located PDB/LDPs etc.

iv) Obtaining clearance for energizing the complete electrical facilities covered under this tender and approval of installation / drawings from Central Electricity Authority.

v) Supply and installation of all other accessories including structural works not specifically mentioned herein but nevertheless necessary for completion of job.

vi) Engineering and preparation of specifications and drawings for electrical equipment and installation required by the owner for approval.

vii) Preparation of field testing & commissioning procedure as required.

viii) The scope shall also include handling, transportation of equipment/ material from stores/ warehouse to the place of installation and supply of commissioning spares wherever required.

8.4 Co-ordination with other contractors/agencies

It is the responsibility of the contractor to co-ordinate & provide all necessary assistance to other contractors/agencies involved in the complex for proper & timely execution of the works

8.5 **Supply by Owner**

Copyright EIL – All rights reserved

The following items shall be in owner's scope of supply (Free Issue):

i) 415V feeders in Owner's substation.

ii) Owner's Cable trays in S/S, trays & RCC trenches as shown in cable layout drawings

iii) Plant main earthing grid as shown in earthing drawings

9. SPECIAL REQUIREMENTS

9.1 The equipments & system shall confirm to the attached EIL specifications & standards with modifications as per this specification.

9.2 The Heat tracing system shall also confirm to following Indian Standards & IEC.

IEC/IEEE 60079-30-1&2: : Explosive atmospheres - Electrical resistance trace heating

Part-1: General & testing requirements

Part-2: Application guide for design, installation and maintenance

9.3 The location, routing & details of lines/equipments/ instrument impulse line etc. to be electrically heat traced shall be as per other documents as attached elsewhere in the tender.

9.4 The maintenance temperature for electrically traced lines/ equipments shall be as indicated in other documents i.e. line list/equipment list attached elsewhere in tender. Ambient temperature as per site conditions mentioned above shall be considered for heat loss calculation & selection/ sizing of heat tracer.

9.5 The electrical heat tracers shall be low watt density, "Self Limiting Self Regulating" type conforming to BS-6351. Mineral insulated (MI) cables shall only be used if the required temperatures are beyond the capabilities of Self-regulating heaters, and shall only be used with the approval of the Owner/EIL.

9.6 The selection of electrical heat tracers and approach classification shall be as per EIL Standard Specification (6-51-0095). Double insulation technique as mentioned in Sr. no. 3.1.2 (f) of Specification 6-51-0095 shall not be utilized for any case.

9.7 Heat loss calculation, tracer selection calculations, design and engineering of the electrical heat tracing system shall be carried out by selected heat tracer supplier Parent / Indian subsidiary.

9.8 Special glands/precautions shall be taken for sealing the entry portions of heat tracer cables as per the tracer manufacturer recommendation.

9.9 PDBs / LDPs shall be installed outdoor unit area.

9.10 PDB / LDP shall be provided for receiving power from substation & distributing power to the User Points. The PDB shall have 1 no. TPN MCCB as Incomers and required no. of TPN outgoing MCCBs. The MCCB shall be complete with O/L, S/C & E/F protection. The LDP shall have 1 no. TPN MCCB (Short circuit, over load, earth fault releases) as incomer and DP MCB with RCCB and power contactor in the outgoing feeders. 3 Nos. ON type LED indicating lamps shall be provided for incomer & each outgoing feeder of the PDB / LDP.

All MCCBs shall be microprocessor based and shall be with shunt trip. Shunt trip shall be suitable for 240V AC. LOTO Facility shall be provided in PDB/LDP.

9.11 The PDB/ LDP shall have voltmeter & ammeter with selector switches at incomer.

9.12 The flameproof PDB shall generally confirm to EIL spec 6-51-0007 and the flameproof LDP shall generally confirm to EIL spec 6-51-0008.

9.13 The incoming cable size for PDBs / LDPs shall be worked out by Bidder and shall be subjected to review by owner/ EIL during detail engineering. The PDBs / LDPs shall be suitable for terminating finalized cable size. In case JBs are required for terminating of incoming cables, the same shall be provided along with the PDBs / LDPs by Bidder without any time and cost implication to owner.

9.14 The incoming cable for heat tracing power distribution panel shall be with four cores, the neutral conductor being of same size as the phase conductors

9.15 All outdoor equipments including PDB / LDPs shall be provided with FRP canopy.

9.16 Joints shall not be provided in power & control cables.

Copyright EIL – All rights reserved

9.17 All power cables upto 16 mm^2 shall have copper conductor and all cables equal to or above 25 mm^2 shall be with either Copper or Aluminum conductor. All control cables shall be of size 2.5 sq.mm. and shall have copper conductor and shall be twisted pair overall and individual shielded type. Multi stranded cable to be used instead of single strand. Recommended limiting size of multi core cable is 300 sq mm.

9.18 RTD input is required for control and monitoring purpose of Electrical Heat Tracing system.

9.19 Multi circuit temperature controllers (provided in LDP) shall have facility to connect required numbers of RTDs which shall be connected to Central monitoring system (supplied by others). Temperature controller shall have below monitoring and alarm facility as a minimum: -

i) Low Temperature Alarm

ii) High temperature Alarm

iii) Circuit on / off indication

iv) RTD or Sensor failure alarm

v) Ground fault alarm

vi) Current and temperature values

vii) Communications failure alarm

viii) Self-diagnostic feature (watchdog)

ix) Shall have communication capability through FO cable/Modbus TCP/IP

These are in addition to monitoring & alarm facility included in standard specification 6-51-0095.

9.20 Controllers shall be of selected Heat Tracer manufacturer make and sourced from the manufacturer country of origin. Controllers shall be connected preferably in ring topology to central monitoring system with server through FO/CAT-6 cable. All data available in LDPs shall be available at central monitoring system.

9.21 The HMI and servers shall be industrial type and supplied with latest configuration & latest version of Microsoft windows and all software provided shall be suitable for the same. Servers shall be capable for storage of more than 1 year data of all connected LDPs including 20% margin capacity.

9.22 HMI shall have provision for communicating all data to owner DCS on Modbus TCP/IP through FO cable.

9.23 Data mapping format for integration of complete data of central monitory system/ HMI with owner's DCS shall be provided to Heat Tracing Contractor post order and completely filled data mapping format shall be furnished by heat tracing Contractor detailed engineering. Any assistance and co-ordination with DCS Contractor/ other Bidder shall be provided by heat tracing Contractor.

9.24 FIBRE OPTIC CABLES

i) The fibre-optic cable shall be with a minimum of 2 spare fibres. Procedure of data transmission, error control and recovery shall be as per acceptable standards.

ii) All lengths shall be joint free single continuous lengths. Coating and the color of the fibre shall not react with the surrounding jelly. Outer sheath shall be flame retardant low smoke (FRLS) type of "Grey" colour.

iii) Fibre-optic data highway cable shall be suitable for water-submergence duty and high temperature withstand as per the routing requirements in the plant. All lengths shall be joint-free continuous lengths.

iv) Optical fibres shall be coated with UV cured double acrylate resin. It should not have any reaction with cladding or core material.

v) The coatings shall be in various colours in order to facilitate fibre identification. Fibre colours shall correspond to latest revision of IEC publication 60793-2 and 60304. The colours shall correspond reasonably with standard colours and shall readily be identifiable and shall be durable. The colours should have good colour fast properties also in the presence of other materials during the lifetime of cable. The coating and the colour shall not react with the surrounding jelly.

vi) The fibre optic cable shall be protected against damages from termite, rodent, fire, chemicals (such as oil & natural gas, LPG and other petroleum products), moisture and water over the life time of the cable.

vii) Moisture barrier – Polymer coated aluminium tape placed longitudinally over the cable core. The tape shall form a close fit around the cable core with a sealed overlap of 6mm minimum. The thickness of each

Copyright EIL – All rights reserved

polymer layer shall be 0.04 mm minimum. The thickness of fully annealed aluminium foil shall be 0.15 mm minimum.

viii) The armouring of the optical fibre cable shall be of corrugated steel (electrolytically chrome plated low carbon steel) tape both side coated with ethylene acrylic copolymer, applied longitudinally with minimum overlap of 6mm. The thickness of the steel tape shall be 0.15 mm minimum. The thickness of each polymer layer shall be minimum 0.04 mm minimum.

ix) The cable shall have sufficient strength to withstand a load of value T = 9.81×W newtons, where W = mass of 1 km in kg. The load shall not produce total strain exceeding 0.25% in the fibre.

x) The termination enclosures of the optical fibre cable should be dust tight (No dust ingress) and protected against immersion in water (suitable for continuous immersion in water) and should be complete with all accessories including splice cassettes splice protection and all other accessories including accessories for electrical continuity of metallic layers of optical fibre cable and OFC preparation kit along with instruction sheet.

xi) All fibres (including spare fibres) of a cable shall be terminated in the termination enclosure by pigtails. Subsequent connection shall be by patch chords. Supply and erection of termination enclosure, LIU, splices, pigtail, patch chord connection etc. is in vendor's scope. OTDR analysis/report shall form part of the testing activities of the OFC network.

xii) HDPE duct of "Grey colour" shall be supplied for fibre optic cable routing, shall be permanently solid lubricated/ with spiral groove, UV-protected, fire retardant (Class V2 as per UL-94 and with limited oxygen index of 21 or higher as per ASTM D2863), of 40 mm outer diameter (+5.0/-0.0 mm) minimum thickness 3.7 mm, suitable to withstand load of 6 kg/m2.

xiii) All HDPE ducts shall be supplied along with accessories such as push fit coupler, bend and elbow, end plug, simple plug, sonic head, etc. required for blowing cable into HDPE duct by compressed air technology.

xiv) Vendor shall furnish past track record for the selected make of the HDPE duct during drawing review stage. Make of HDPE duct shall be approved by Owner during drawing approval stage

9.25 Testing of cables & FLP Junction boxes shall be as per attached EIL Inspection Test plan 6- 81-1051, 6-81-1052 & 6-81-1061 respectively.

9.26 Supports for cable trays shall be provided at every 3000mm.

9.27 RCCB with 30mA rating shall be provided in outgoing single-phase circuits for human safety. Earth fault protection shall be provided in outgoing three phase circuits in PDB.

9.28 All TPN power cables for Electrical heat tracing loads shall be 4-Core of suitable size. 3 ½ core cable for TPN loads are not acceptable.

9.29 Refer clause 3.1.2 (g) of 6-510095, table for heat tracer selection stands revised as below:

Maintenance temperature	**Operating (Continuous power ON)**	**Exposure/ Intermittent**	**Tracer type**	**Approach**
		Power OFF		**(Product/ system)**
<=121	<=121	<=250	Self-Regulating	Product
From 121 to 150	From 121 to 150	<=250	Self-Regulating	Product/Stabilised (Refer c, d & e)
From 151 to 200	From 151 to 200	<=250	Self-Regulating / Power Limiting	Product/Stabilised (Refer c, d & e)
>200	>200	Any	Mineral Insulation/ constant wattage	Controlled

For controlled approach, redundant RTD shall be provided so as to ensure that T3 rating is complied even in case of failure of one RTD.

9.30 Refer Cl. No. 3.1.11 of EIL Spec. 6-51-0095 and note that maximum steam flushing temperature for periodic steam cleaning of piping & other equipment shall be considered (as per other documents attached with package) for intermittent exposure under power-off condition and offered electric heat tracer shall be suitable for the same.

Copyright EIL – All rights reserved

Contractor shall submit the approval from statutory authority from country of origin indicating the exposure temperature rating of offered tracer.

9.31 Heat tracers shall also be suitable for the complete operating temperature range mentioned in the line list.

9.32 Tracer shall be sized for -10% voltage drop upto tracer JB.

9.33 The PDB / LDP shall have IP-55 degree of protection for outdoor use having separate external enclosure and shall be provided with transparent glass / acrylic windows for viewing the meters & indicating lamps.

9.34 Refer to clause no. 3.1.14 of 6-51-0095, please note that RTD shall be provided for each circuit irrespective of the design load of the circuit.

9.35 Sizing of earthing strips shall be suitable for maximum fault current and for duration of 1 seconds. Maximum fault current shall be 65KA.

9.36 Bidder shall note that bill of material if any furnished with the offer will be retained for information and records only. All materials and components as required to meet package specifications and functional requirement shall be included in the Bidder's scope without any cost and time implication to the owner.

9.37 Bidder is informed that the detailed offers from the equipment manufacturer and assumptions/ clarifications for the electrical heat tracing system is not required to be furnished in the Bidder's proposal at bidding stage. If any such details are furnished by the Bidder in their proposal, these shall not be reviewed or taken cognizance of at the bidding stage. These details shall be treated as preliminary and for reference and record purpose only and shall not be contractually binding.

10. STATUTORY APPROVAL

10.1 The submission of application on behalf of the Owner to CEA or Electrical Inspector along with copies of required certificates complete in all respects shall be done by the contractor well ahead of time so that the actual commissioning of equipment and electrical system are not delayed for want of approval by the Inspector. The Contractor shall arrange the actual inspection of work by the Electrical Inspector and necessary coordination and liaison work in this respect shall be the responsibility of the contractor.

10.2 The Inspection and acceptance of the work as above shall not absolve the Contractor from any of his responsibilities under this contract.

10.3 Any other statutory approval of works required for the electrical installation is also included in the contractor's scope.

11. INSPECTION, TESTING AND COMMISSIONING

11.1 Site inspection, testing and commissioning of electrical installation shall be carried out as per relevant local standards & practices.

11.2 All the equipment installed by the Bidder shall be tested and commissioned.

12. DRAWING

12.1 Construction shall be carried out as per drawings/ specifications issued/ approved by the engineer-in-charge during the course of execution of work.

12.2 After the job completion, Bidder shall prepare 'AS-BUILT' drawings. Final certified 'AS- BUILT' drawings shall be submitted by the Bidder to owner in bound volumes & in soft copies/CDs.

12.3 Bidder shall submit equipment manufacturer's drawing for supply items for the review of Engineer-in-Charge and the approval in writing of the Engineer-in-Charge shall be obtained before commencing manufacture. However, it is to be understood that the review of drawings shall not absolve the basic responsibility of Bidder to check total compliance to specifications included in tender document.

13. TRAINING

13.1 Training for complete Heat Tracing system at site for Owner engineers for minimum 10 days shall be provided.

14. MAKES OF EQUIPMENT AND MATERIALS (refer elsewhere in the Package)

15. Spares

Copyright EIL – All rights reserved

15.1 Mandatory spares:

The following mandatory spares for electrical equipments shall be supplied by the contractor:

S. No.	Part Description	Quantity Required per equipment
1	RTD/Thermostat	1 No. of each Type
2	control fuses/ MCB	5 Nos. of each rating & type
3	Indicating lamps	10% or 2 nos. (min.) whichever is more
4	Indicating lamps covers	5 nos. of each colour
5	Contactor contacts	1 set for each rating and type

NOTES:

a. The word 'TYPE' means the Make, Model no., Type, Range, Size/ Length, Rating, Material as applicable.

b. Wherever % age is identified, Bidder shall supply next rounded figure.

c. The terminology used under 'Part Description' is the commonly used name of the part and may vary from manufacturer to manufacturer.

d. Mandatory spares as indicated above do not cover commissioning spares.

e. Mandatory spares as indicated above do not cover two year O&M spares.

15.2 Erection/Commissioning Spares**:**

All erection/commissioning spares shall be included by the Bidder in the quoted price. The list of such items shall be furnished along with the offer.

15.3 Two Years Operation & Maintenance Spares**:**

Bidder shall provide list of spares required for two years of normal operation and maintenance for all electrical equipment along with unit prices.

15.4 Special Tools and Tackles**:**

All required special tools and tackles shall be included by the Bidder in the quoted price. The list of such items shall be furnished along with the offer.
